FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

50272-101

ZIA URGES JCD WORKERS TO FIGHT FOR NATIONALISM

Dacca THE BANGLADESH OBSERVER in English 25 Nov 80 pp 1, 8

[Text] President Ziaur Rahman on Monday called upon the members of Bangladesh Jatiyatabadi Chhatra Dal to build them up as undaunted warriors of Bangladeshi nationalism for establishing the spirit of nationalism at all stages of the society, reports BSS.

The President was speaking at a reception given by him in the capacity of Chairman of BNP in honour of the nominees of Bangladesh Jatiyatabadi Chatra Dal, who contested and won in hall elections of Dacca University. The President said that the success of JCD in hall elections was a historical event as it had turned up side down the den of foreign inspired spies in the university.

He said, the Baksalites JSD and with them the Chhatra Union had been playing the second fiddle to "foreigners" supported by foreign funds.

President Zia said that the nation had not fought the war of independence to "serve the interest of foreign master." The nation was subjugated for over two centuries to British and Pakistani rules and during the Baksal period from 1971 to 75 due to absence of "spirit of nationalism in the leadership."

The President said that Bangladeshi nationalism the ideal of nine crore people of the country had to be established in the society for 'progressive march ahead upholding the national independence and sovereignty.'

President Zia told the JCD members to wipe out foreignism from the soil and added if the Baksalites want to migrate to the land of their foreign master, we would bear the passage money.

The President said that the Baksalites had been persuing "politics of weapons" and had been trying to plant their 'ism' through arms as they had no connection with the people.

He said, the BNP has brought politics to the people and the people are our weapons for struggle.

The President said that the Baksalites being driven out from the villages had now concentrated in Dacca city and the university. They are to be expelled from these places, he added.

Continuing he said that the trial of the Baksalites would be held in the court of the people. Inshallah we will do it he added.

President Zia told the JCD members that they had to go to the villages next month for participating in the national development activities.

The jampacked auditorium of Sher e Bangla Nagar Community Centre expressed its readiness to join in nationbuilding activities by raising slogan, "President Zia, go ahead, we are with you."

The President told the student gathering that his party had decided to organise JCD on a solid foundation all over the country saying that the students are to build them to take up future leadership.

"We want to hand over the future leadership to your hand and not to the Baksalites, he said.

Speaking on the occasion Prof Badruddoza Chowdhury said that the results of elections in different halls of Dacca University had once again proved that the days of negative politics had ended yielding place to positive politics.

The election had also indicated that birth and flourishing trend of a new politics--politics of nationalism.

Earlier, the elected office-bearers of JCD in different halls of Dacca University were introduced to the President. Besides one hundred students leaders and workers belonging to Jahan girnagar University Chhatra League (JSD) under the leadership of JUCSU Literary Secretary announced their joining to JCD Bulbul Nahar Bakul of Chhatra League (JSD) from Rokeya Hall also formally joined the JCD with fifty students at the function.

PAPER REPORTS PRC ARMS EXPERTS IN BANGLADESH

New Delhi PATRIOT in English 24 Nov 80 p 1

[Text] Calcutta, Nov 23. A group of Chinese experts on light arms and tanks arrived in Bangladesh some time ago, according to well-informed sources. It is said that this visit of the Chinese experts falls into a definite pattern--considering the unusual haste with which President Ziaur Rehman has been making efforts to militarily strengthen his regime.

It is believed that the Bangladesh President is in desperate need of arms for two purposes: (a) for tackling the internal situation, which is reportedly becoming warmed up, and (b) for a calculated confrontation with India.

Mr Ziaur Rehman has been visiting the various countries with the idea of strengthening all the three wings of the Bangladesh armed forces.

Besides China, he has approached the United States and some of the Gulf countries. In China, the Bangladesh official representatives made a special plea for aircraft it is reported.

The Bangladesh President himself is believed to have made the plea to President Carter when Mr Ziaur Rehman had been to Washington at the end of August.

It is further reported that both China and the United States fully approved of the idea of increasing the military strength of Bangladesh. Mr Ziaur Rehman is understood to have come back encouraged with the success of his mission.

It may be mentioned here that Bangladesh economy is in such a shape that the regime cannot purchase arms, it has to depend on gift mainly. In that context assurances by China and USA, and also by Saudi Arabia would naturally be gratifying to Mr Ziaur Rehman, the sources say.

BRIEFS

DEATH OF MP--Syed Habibul Huq, a sitting MP from Laksam in Comilla district, died at the Dacca Medical College Hospital Monday afternoon due to heart attack. He was 50, says BSS. A great grandson of late Nawab Faizunessa Chowdhury of Pachimgaon (Laksham), Syed Habibul Huq was a practising lawyer after being called to the Bar at Lincoln's Inn in 1958. Born in 1930, Mr Huq graduated from Dacca University in 1951 with Honours in English. A confirmed bachelor, Mr Huq was member of Pakistan National Assembly from 1962 to 1965 and was elected to Jatiya Sangsad from Laksham North Constituency (Comilla 17) during the last parliamentary election as a BNP nominee. He was a vice-President of Bangladesh Supreme Court Bar Association for two terms in 1973-74 and 1976-77. As a social worker and patron of learning, Mr Huq was one of the founding members of the Comilla Muslim Institute (now Comilla Women's College). The Nawab Faizunessa Degree College is also an institution established by his singular effort. He visited the Soviet Union and several other European countries in 1964 as a member of parliamentary delegations. [Text] [Dacca THE BANGLADESH OBSERVER in English 25 Nov 80 p 1]

DEMAND FOR EXPORTS--The foreign buyers continue to show interest in importing various Bangladeshi products, says a PID handout. The names of the countries and the items of their interest are as follows: Hong Kong--medium and high grade glassware; Iran 25,000 tents and 100,000 blankets; Niger--construction materials, food products and sanitary products; UK--protective clothing, small hand tools, P.V.C. clothing, footwear and gloves. Interested exporters have been advised to contact the offices of the Export Promotion Bureau at Dacca, Chittagong, Khulna Rajshahi, Sylhet Comilla Barisal and Bogra for details. GANDHI SPEAKS TO NATIONAL INTEGRATION COUNCIL

Calcutta THE STATESMAN in English 13 Nov 80 pp 1

[Excerpt] New Delhi, Nov 12--Mrs Gandhi today reminded the nation that freedom and unity could not be taken for granted. "Eternal vigilance is the prize of our integrity as it is of liberty", she said while inaugurating the newly-constituted National Integration Council.

The Prime Minister posed the question what kind of India "shall we bequeath, whether it should be a strong, harmonious, self-confident India or a feuding, weak, schizophrenic India?"

Forces were at work, she warned, which were exploiting and would exploit any weakness "on our part especially at a moment like this". In many countries divisive groups receive support from outside agencies and sources.

She said: "I am often asked to name the foreign interests who are interfering. It is not always possible to lay your finger on such groups or individuals. It is extremely difficult here or elsewhere. But time and again, years later, evidence has come up which has shown the kind of interference or attempted interference. I am not suggesting for one moment, that our communal or caste troubles and linguistic movements are being instigated by outsiders. Neither I nor the Home Minister have blamed outside forces for the Moradabad, Aligarh and other incidents, although some papers and groups keep repeating that I have said so"

MALAYALAM DAILY PUBLISHES GANDHI INTERVIEW

Bombay THE TIMES OF INDIA in English 23 Nov 80 p 9

[Interview with Mrs Indira Gandhi by MATHRUBHUMI daily on 23 November 1980; place not given]

[Text] New Delhi, November 22 (PTI): The Prime Minister, Mrs Indira Gandhi, has repudiated allegations that she is planning to destabilise the governments of Kerala or West Bengal or Jammu and Kashmir.

Mrs Gandhi said while each party had its objectives and was bound to come into conflict with other parties, the country's interest requires that these should not affect the relationship between governments run by different parties.

"The relationship between the Centre and Kerala are satisfactory and will continue to be so," she added in an interview given to MATHRUBHUMI the Malayalam daily, which is launching its third edition from Trivandrum on November 23.

Apart from Centre-state relations and law and order problems, Mrs Gandhi also clarified her remarks at the lawyers' conference which was called recently for a national debate on the form of government suited to India.

Mrs Gandhi said what she had said was that it would be wrong to equate democracy with a two-party system or to think that two-party societies were superior. How many parties a country had, depended upon its history and circumstances and was not a matter of legislation or prescription by political scientists.

Asked whether the present situation called for constitutional alternatives, Mrs Gandhi said: "It is difficult to speak of institutional alternatives as long as there are individuals who will not let any institution work. We must continue the search for methods to improve our performance and functioning."

Mrs Gandhi said that the promulgation of the national security ordinance had had "some salutary effect on anti-social forces."

She reiterated that there was no intention whatsoever to use the ordinance against political opponents.

While it was part of politics for the opposition to take advantage of government's difficulties, "it is not democratic to create difficulties for the people merely to embarrass government. In the last few months many of our opposition groups are doing precisely that," she said.

On the Centre-state relations, the Prime Minister said that without the most cordial relationship between them, neither would function effectively. "There are enough mechanisms and conventions in our system to resolve whatever differences may arise."

Mrs Gandhi said the Centre could not be expected to approve of every action of every state government especially when any particular state was dissipating its resources. Overdrafts, for example, was a major problem. "The Centre, with its responsibility for prudent management of the national economy, has to ensure that the states too exercise the necessary restraint."

On law and order, Mrs Gandhi said the riots and disturbances recently were due to the "deterioration" in the administration that took place between 1977 and 1979, when people known for secularism and progressive views were weeded out. This had happened earlier under SVD governments.

"Under the Janata Party government, it happened virtually all over the north. Governments calling themselves leftist have, on their part, not hesitated to harass their opponents through strong arm methods. The situation has to be dealt with through new thinking by all parties. The promulgation of the security ordinance has had some salutary effect on anti-social forces."

Mrs Gandhi welcomed the idea of all those who believe in secularism, socialism and an independent foreign policy working together. This would be beneficial to the nation. Many who claim to be inspired by Jawaharlal Nehru, she noted, had acted in ways which were contrary to all that he stood for.

CSO: 4220

GOVERNMENT IMPORT POLICY FOR 1980-1981 REPORTED

New Delhi PATRIOT in English 1 Dec 80 p 7

[Text] Eleven of the 23 main recommendations of the working group on export houses have been incorporated by the Central Government in the Import Policy for 1980-81 reports PTI.

Prominent among the recommendations incorporated are the raising of the value limit per item for import against additional licences from Rs two lakh to Rs five lakh, providing a flexibility to the manufacturer exporter in the use of import replenishment entitlement and making a provision for granting import licences to export houses to the extent of 100 per cent of the value of REP licences earned against their own exports made during the previous year.

The other important changes effected in the import policy are; import replenishment licences issued to export houses on their own exports have been made valid for import of items open to actual user (industrial) under OGL without debit to the value of the import replenishment licence provided, the value of such imports does not exceed the value of the import replenishment licence.

The entitlement for issue of additional licences to export houses against exports of non SSI products has been raised from 5 to 7.5 per cent.

A provision has been made that further Imprest licence can be issued to an export house even though, obligation against two or more such licences is already outstanding.

A provision has been made to allow export houses to provide Industrial Raw Materials Assistance Central (IRMAC) facilities where the export performance is not less than Rs five crore in the previous year to enable the export houses to supply raw materials and components to actual users off-the-shelf against valid import licences held by such actual users.

The maximum limit up to which foreign exchange can be given to export houses without debit to replenishment entitlements has been raised from Rs 5 lakh to Rs 7.5 lakh.

According to official sources, the group had also made a few recommendations which are being processed by the Government in consultation with the concerned departments.

The sources said the Government had granted recognition to 12 State Governments and two Union Territories corporations as export houses.

They are--Andhra Pradesh, Bihar, Rajasthan, Gujarat, Himachal Pradesh, Haryana, Kerala, Madhya Pradesh, Maharashtra, Punjab, Tamilnadu, Uttar Pradesh Union Territory of Delhi and Chandigarh.

The group had also suggested the setting up of a high powered committee to over-see the scheme of export houses.

GOVERNMENT APPEALS TO GATT ON U.S. IMPORT DUTIES

Madras THE HINDU in English 24 Nov 80 p 1

[Text]

NEW DELHI, Nov. 23.

India has taken up with the GATT (General Agreement on Tariffs and Trade) Secretariat the imposition of countervailing duties by the United States on products imported from India without applying the test of injury to domestic industry.

According to official sources, the GATT council, before whom India has filed the complaint against the U.S. has agreed to set up a committee to investigate and report.

The Indian complaint was filed following the failure of bilateral talks to resolve the issue arising from the imposition of countervailing duties on textiles, industrial fasteners and iron casting without applying the injury test as required under the code on subsidies and countervailing duties negotiated as part of the Tokyo round of multilateral trade negotiations.

During the talks, the U.S. had insisted that India should enter into a bilateral agreement with it, committing itself to a firm date by which export subsidies would be phased out.

India was not agreeable to this and contended that the code envisaged phasing out of subsidies by developing countries on their exports in course of time, when the subsidies were no longer consistent with their development and competitive needs. India offered to phase out subsidies when it thought fit. It refused to commit itself to a firm date for this.

While the talks were on, the U.S. conveyed to the GATT Secretariat its decision to invoke the non-applicability clause in the code in respect of products imported from India. This implied that the U.S. was not bound by the provisions of the code and could impose countervailing duties without application of the injury test on Indian products.

THE THREAT EXISTS

Subsequently, the U.S. withdrew the countervailing duty on Indian textiles not because of any change in its stand but on the basis of a ruling by the International Trade Commission that the cash compensatory support given by the Indian Government to textile exports did not amount to "subsidy".

In fact, the U.S. Government made it clear, while announcing the withdrawal of the countervailing duty on Indian textiles in September, that its stand on the code remained unaffected.

India felt that even though at present only industrial fasteners and iron castings are directly affected by the U.S. action, the uncertain trade environment created by the possibility of imposition of duties on other products would have adverse effects on its exports. This was why it filed a complaint before the GATT council.

EDITORIAL SEES HOPE FOR SINO-INDIAN DETENTE

Bombay THE TIMES OF INDIA in English 24 Nov 80 p 8

[Editorial: "Towards a Detente"]

[Text]

The statements on Sino-Indian ties which the Chinese deputy foreign minister, Mr. Han Nianlong, has made in interviews with Indian journalists recently in Beijing are notable for their conciliatory tone. Certainly, those remarks which refer to the Soviet Union must be viewed in the context of the current embittered state of Sino-Soviet relations, even as similar Soviet references to China must be so regarded. For instance, the *Komsomolskaya Pravda* recently reported that China was seeking to create a "buffer state" by helping to effect the merger of Jammu and Kashmir with that part of the state now occupied by Pakistan. It reported, too, that the Chinese were training Afghan *mujahidin* in Pakistan-occupied Kashmir, that the US benefited from the "increasing tension" in Jammu and Kashmir and that "all this arouses the legitimate concern of the government of India". Mr. Han Nianlong was quick to dismiss such reports as "absurd" and to take a propaganda swipe at the Soviet Union in turn. What should interest us, however, is not Sino-Soviet polemics, but that China should feel it necessary and important to reassure us that it has every desire to foster good mutual relations. Such reassurances have been forthcoming not only on Kashmir but also on other relevant issues: reports of Chinese assistance to secessionist groups in the north-east, ties with Indian communists, Chinese military aid to Pakistan, and so on.

Attempts by the journalists interviewing Mr. Han Nianlong to draw him out and pin him down on the long-standing Sino-Indian border dispute were unsuccessful—and not surprisingly. Such occasions are hardly the proper forum for getting to grips with specific aspects of what is a complex issue. Nevertheless, he was at some pains to reiterate that the dispute is "not insoluble" through negotiations and that, in any case, its eventual resolution need not come in the way of greater trade, cultural and other contacts between the countries in the meanwhile. While the recent Chinese efforts to create a favourable atmosphere for the resumption of more normal Sino-Indian ties after a gap of some two decades must be welcomed, they should not occasion over-optimistic expectations. As the Chinese

response to India's recognition of the Heng Samrin government in Kampuchea showed most recently, there are many and big differences in how both countries perceive their own interests and how major contemporary issues affect these interests (Afghanistan is another instance.). But while a Sino-Indian *entente* may be a long way off, there is no reason to discourage, and every reason to encourage, Chinese moves to initiate a *detente*. Mr. Han Nianlong's statements, which are not the first in this vein to have been made by Chinese leaders, indicate that China is seriously interested in breaking the ice in which Sino-Indian relations have for so long been frozen.

PRC FOREIGN MINISTER REPORTEDLY MAY VISIT INDIA

Madras THE HINDU in English 24 Nov 80 p 9

[Article by G. K. Reddy]

[Text] New Delhi, Nov. 23. The President of Burma, Gen. Ne Win, told the Prime Minister, Mrs Indira Gandhi, that the Chinese leaders were keen on improving relations with India despite persisting differences over some issues.

But it is not known whether he had conveyed any message from the Chinese leaders to this effect, or simply indicated that he had returned from his recent visit to Beijing with this impression.

In either case, the reiteration of the Chinese desire for better relations with India coincides with reports of similar feelers to Indonesia sent through Mr Lee Kuan Yew, Prime Minister of Singapore. The Chinese leaders utilise the visits of foreign dignitaries to get across such messages to their counterparts in third countries with which China seeks to improve its relations.

Direct Exchanges Preferred

This is not the first time that a leading Asian statesman of Gen Ne Win's stature has brought such a message or conveyed his own impression. The Indian leaders take due note of these signals, but continue to maintain that delicate messages of this kind should be exchanged directly through their respective Ambassadors in Beijing and Delhi to avoid misunderstanding through misinterpretation.

It is relatively easier for India and China to exchange such messages since they have diplomatic relations, while China and Indonesia are still without embassies in the two capitals after the break during the 1960s. The Chinese leaders have, therefore, availed themselves of Me Lee Kuan Yew's visit to pass the word to Gen Suharto that they are ready for an early resumption of diplomatic relations as a starting point for normalisation.

Mrs Gandhi will have an opportunity to discuss with Gen Suharto, who is arriving in Delhi on December 1 on a State visit, the implications of these Chinese moves for normalisation with India and Indonesia, the two most important countries in the South and South-East Asia regions. The China factor comes in also in the

context of their own efforts for better bilateral relations, since the differing attitudes of India and Indonesia towards Kampuchea have tended to create new strains between them.

If the ASEAN countries have resented the Indian recognition of the Heng Samrin regime in Kampuchea which, in their view, was tantamount to condoning the Vietnamese military intervention, India has been equally unhappy with their totally untenable policy of continuing to deal with the Chinese-supported Pol Pot rump that has brought about all this tragedy on the hapless nation.

The Indian policy is to make an earnest attempt to isolate both the Chinese and Soviet factors from its relationship with other Asian countries by ensuring that differences on issues like Kampuchea and Afghanistan do not mar their bilateral relations.

Two-Pronged Approach

The Government is attaching considerable importance to the coming talks with Indonesia since it could help set the pace and pattern for this two-pronged Indian approach to closer relations with other ASEAN countries which have suffered a setback in the wake of the Indian recognition of the Heng Samrin regime. The Indonesian Foreign Minister, Mr Mochtar Kusumatmadja, has also said that, though India had recognised this regime ignoring the concern expressed by the ASEAN countries, the differences over Kampuchea will not be allowed to come in the way of the Indo-Indonesian desire for closer bilateral relations.

An early resumption of the stalled Sino-Indian dialogue for normalisation, despite their diametrically opposite approaches to the Kampuchean problem, would go a long way in isolating this irritant from the shared desire of India and the ASEAN community for increased economic cooperation.

The Chinese leaders also want to restart the talks with India since it would serve as a useful precedent for a parallel effort to improve relations with Indonesia which remain strained in spite of their common disapproval of the Vietnamese intervention in Kampuchea and strong detestation of the Heng Samrin regime.

Hints From Beijing

There have been some informal hints from Beijing that the Chinese Foreign Minister, Mr Huang Hua, might be able to visit Delhi early next year depending on mutual convenience. The Chinese have apparently not yet come to any firm conclusion whether it would be more opportune to pay this visit before or after the nonaligned Foreign Minister's conference in February next.

They would also like to wait for some time after the Brezhnev visit next month to take a fresh look at Indo-Soviet relations before reopening the dialogue with India under the shadow of the Afghan and Kampuchean situations.

And as far as India is concerned, it has been made quite clear to China more than once that the timing of Mr Huang Hua's visit is entirely a matter of his choice. In renewing the invitation to him, the present Government has at no stage suggested even approximate dates for the visit. It was the Chinese side which, after informally indicating that he might be able to pay the visit some time in October, postponed it indefinitely without offering any explanation.

LARGE DROP IN FOREIGN RESERVES REPORTED

Calbutta THE STATESMAN in English 13 Nov 80 p 1

[Text] New Delhi, Nov. 12.--India's foreign exchange reserves dropped by Rs 964.91 crores in the first half of 1980-81, an average fall of more than Rs 160 crores a month compared to a total drop of just Rs 25.48 crores in the whole of 1979-80. But they were partly bolstered by two loans totalling Rs 812 crores from the International Monetary Fund in August and this brought the reserves to the level of Rs 5,143.30 crores by the end of September.

This is not unhealthy but can by no means be described as comfortable, for the reserves now amount to no more than about nine months' worth of imports and could be even less if the prices of imported crude and fertilizer continue to soar.

Since export earnings are rising slowly--thought to be no more than 8% in the first half of the year--and remittances from Indians abroad are bound to fall because of the Iraq-Iran war, the reserves position could become serious by the end of the financial year.

The fall in the reserves is despite the fact that they have been pushed up by aid disbursement from the world financial institutions such as the World Bank and the IMF and from donor countries on a bilateral basis. Gross aid this year is expected to be Rs 2,560 crores, but this will be eroded by heavy debt servicing.

The precarious reserves situation comes at a time when not only is there a tendency from donor countries to cut aid because of their own economic difficulties but also the danger that loans from the World Bank will be reduced because of borrowing from it by China. The situation is exacerbated by the rise in crude prices and the need to make costly purchases of oil on the spot market because of disruption of supplies from Iran and Iraq.

The total trade gap estimated early in the year was about Rs 3,000 crores because of the massive rise in imports, mainly crude which accounts for nearly 70% of total export earnings and the proportion of which is bound to increase. The trade deficit could now be much larger and eat further into the reserves. There is no move yet to change the relatively liberal import policy, since the revival of industrial production needs imports of capital goods and raw materials.

The fall in the reserves comes in sharp contrast to rise by Rs 1,002 crores in 1978-79 and by about the same amount the previous year. The rapid rise enabled India to pay off all outstanding loans from the IMF. This year is the first when borrowings from the IMF have been made in five years.

DATE OF UTTAR PRADESH BYELECTIONS ANNOUNCED

New Delhi PATRIOT in English 23 Nov 80 p 1

[Text] Uttar Pradesh Chief Minister Vishwanath Pratap Singh said on Saturday that byelections for Lok Sabha and Assembly constituencies would be held in the State in February next year.

Talking to newsmen in the Capital Mr Singh said that he would also contest for an Assembly seat to enter the State Legislature.

He informed that he has requested Mr Rajiv Gandhi to contest from the State in the forthcoming Parliamentary byelections.

NSO Detenus

Mr Singh, who on Friday won the Council seat in the State, said that about 100 persons considered to be 'threat to peace' have been detained under the National Security Ordinance.

Mr Singh said that there was no question of political considerations in these detentions. He refused to say whether there were political workers among those detained, saying that 'we have not classified them in that way.'

Regarding reports that the explosions in the recent past were of 'crackers, not of bombs,' Mr Singh said that he would not like to say anything as ballistic experts report was awaited.

Mr Singh refuted reports of dissensions inside the State Cong-I party and said that his election victory had proved all such reports baseless.

The Chief Minister said there was no question of dropping Mr Lokpati Tripathi from the Cabinet. He also expressed the confidence that guidance of Mr Kamalapati Tripathi, who recently quit the Union Cabinet would be available to him.

PLA STRENGTH IN MANIPUR REPORTED GROWING

Bombay THE TIMES OF INDIA in English 24 Nov 80 p 18

[Article by Sivadas Banerjee]

[Text] Imphal. The most important development in the past year in strife-torn Manipur has been the virtual dissipation of the PREPAK rank and file and their break-up into three distinct and mutually antagonistic groups.

One is identified with Tulachand who had repudiated the PREPAK thesis on the formation of a separate communist state within the framework of the Indian constitution.

The second is popularly known as the MAIPAK group, which allegedly had had links with Mr Dorendra Singh and accounts for the largest number of surrenders so far.

The third group calls itself the Kanglaipk communist party. But all the three taken together mean nothing much today, following "killings and surrenders." Forteen [as printed] rebels have so far been killed in inter-group clashes, according to Mr Singh.

On the other hand, the People's Liberation Army's (PLA) accretion of strength, despite the government offensive against it, has been steady, even though there are people in responsible official positions in Manipur sharing the view that had the administration on especially the police, not been hamstrung, PLA violence might have been contained by now without the help of the army.

Non-Sectarian

The views of Mr N. Bisheshwar Singh, its leader, represents the PLA philosophy. His writings reflect an inflinching [as printed] commitment to the communist political and organisational principles, especially of the Maoist Chinese variety. He says the PLA represents the interest of the people of Manipur, who are "suppressed, oppressed and colonised; we want to be free from the prison of colonialism and starvation."

Unlike PREPAK, the PLA is nonsectarian. Its ultimate object of a communist state envisages the inclusion of entire India, to be brought about with the help of the proletariat elsewhere; hence its abhorrence of the "anti-foreigner"

campaign. It condemns the theory of "Meiteis for the Meiteis, Mizos for the Mizos, Nagas for the Nagas" as being reactionary and the root cause of the failure of their movements. It appeals for a common fight by the Naga, Mizo and Meitei revolutionaries against "our common enemy--the Indian government."

It respects all religions and not disinclined to allow foreign missionaries to come and preach their faiths unless they are proved to be spies of reactionary governments. It has criticised the Naga peace talks as well as Laldenga's efforts for a negotiated settlement with the government of India.

Mr Bisheshwar Singh has since debunked the "revolutionary government of Manipur" (RGM), formed on paper long ago, and traced its failure to its ideologically untenable slogan for an independent sovereign country based on Meitei revivalism. He has also noted RGM's contact with erst-while East Pakistan during 1969-70, the arrest of its adherents and detention in Tripura jail and their falling "a prey" to the government's "rehabilitation benefits" after release.

Mr Bisheshwar Singh and ten others, who have received training in Lhasa, are supposed to constitute the PLA hard core. Five or six of them are believed to have died in encounters or surrendered, cutting down the strength of the front-rank leadership to almost half, though Mr Singh's word is law in the organisation.

Mr Singh is said to be suffering from tuberculosis. After the army's successful raid on a PLA hide-out at Choro, to the south-east of Imphal, early in October, the administration has received information that those injured included Mr Singh himself. But this report is authoritatively discounted and the present belief is that he might have escaped to the Arakan hills in Burma, where the PLA is suspected to have found a sanctuary. The security forces have overrun many PLA encampments, mostly put up near hill streams and villages, and found them deserted.

On their return after training in Lhasa, the PLA leaders followed the typically communist principle of forming small cells, generally with ten people, in organising the insurgent groups. In course of time, an organisational heirarchy has been developed categorised from A to E depending on the length of training, level of devotion, and competence for action.

The recruitment initially was done by the Lhasa-returned group, each of its member organising a cell. After about a year's training, these first recruits were put in "B" category and the first PLA raids or actions are traced to groups comprising one or two hard-core or a "category leader" and those in "B" who had shown promise already. After proper assessment of their performance, the "B" category men were gradually promoted to class "A". But how many have so far been so inducted is not known.

Cells Formed

Recruits come only from the Meiteis. "D" and "E" categories are believed to have begun their initiation and training with such duties as running couriers, carrying stores, procuring rice and such other stores. "C" category people, on

the other hand, are entursted with carrying messages or concealing weapons and allied jobs. Thus, in course of time, the PLA became a highly functional organisation, capable of surprise action, quick dispersal and of hard strike.

The chief minister says that organisationally the PLA is not confined to Manipur alone. It claims followings in Tripura, Nagaland and Mizoram. He believes that real activists in the organisation "are very few." Mostly, it has volunteers. But they have a base in Burma and following army action many might have crossed over there. Official estimates of the total strength of the PLA rank and file, including volunteers, differ. It is variously placed between 300 and 800.

While it has been possible to bring about splits in the PREPAK, the PLA seems to have withstood at least one such effort initiated through the formation of an anti-PLA liberation front, which has a distinct anti-communist character and orientation.

There is still nothing to suggest that efforts are on already to combine and coordinate the pro-Mao PLA and the Naga underground encamping across the international border, in the Arakan hills. The intervening terrain being what it is, physical contacts are indeed difficult. However, given common inspiration, such a possibility is not ruled out.

What initially was an urban insurrection has now become a mixed urban-rural movement. It is said that about a third of the Imphal valley, almost exclusively inhabited by Meiteis, has become infested. This should be a chilling proposition and gives the PLA movement a really menacing look. However, informed sources in the Imphal valley assert that because of their inherent conservatism and attitude to life, the Meitei peasants in the valley have mostly remained unresponsive towards the PLA, though inducting the peasantry into the movement has been one of the main theoretical and organisational principles of the PLA and Mr Bisheshwar Singh.

This undoubtedly has been one of the major weakness of the PLA movement. There is recognition of this weakness in Mr Bisheshwar Singh's writings, but curiously there has been no self-criticism in this regard or attempt to analyse why this should have been so. Yet, it is an officially acknowledged fact that in many villages, the PLA has been successful in enrolling four or five willing converts, and that should be of enough concern for the security forces now trying to flush out the rebels.

BIHAR CHIEF MINISTER REPORTS ON BLINDINGS

New Delhi PATRIOT in English 1 Dec 80 pp 1, 7

[Text] Patna, Nov. 30 (UNI, PTI). Bihar Chief Minister Jagannath Mishra today confirmed that at least 31 alleged criminals had been blinded in Bhagalpur since October 1979.

Talking to newsmen, Dr Mishra said allegations regarding the involvement of the district police being investigated by various committees, and all the 15 suspended police personnel had been removed from the district. Among them were two inspectors 12 sub-inspectors and one DSP.

Fourteen criminal cases have been instituted against policemen against whom specific charges have been made by the "victims" during the investigation by DIG (CID) L V Singh yesterday. All legal actions will be taken on the basis of the CID report, he added.

He informed that the police officials have been suspended on alleged charge of "negligence" of duties, and orders have been issued for immediate deportation of all those officials from the Bhagalpur district and to start departmental proceedings against them.

Describing the incident as "very serious" as well as "mysterious" Dr Mishra said the first "blinding incident" occurred in October last year, second in January, third in April, while the fourth in May this year and it continued till last month. The incident came to light when it was first published in an English daily published from the Capital.

Dr Mishra said that of the 31 blinded criminals 22 were still in jail custody, and the rest nine had been bailed out. A three-man medical team, set up earlier comprising Dr J N Rohathi Dr Chedi Choudbary and Dr A N Pandey--all eye specialists--today rushed to Bhagalpur to examine the victims and to see if their eyes could still be salvaged he added.

All Tight-Lipped

The Chief Minister said that it was strange and beyond his comprehension as to why everybody remained tight-lipped over this "ghastly" affair which had been going on for over a year.

The Opposition, other leaders and the press had earlier failed to raise this issue on any platform. Not a single legislator, local leaders or even "mukhiva" ever drew his attention, though he had been to the district in the past.

Dr Mishra said even during the period (from October 1979 to October 1980) when two elections were held and leaders of different parties compaigned they did not get even give a hint of this "atrocity" it appeared. He asserted, whosoever might have blinded the criminals, they must have had a "social sanction" in view of the menace created by the criminals.

After nine months since the first case occurred, nine prisoners of the Bhagalpur Central Jail had moved a petition on 30 July this year to the District Judge seeking justice and levelling charges against the police.

The court disposed the matter in a routine manner and referred it to the Chief Judicial Magistrate, Dr Mishra said. Only when a petition was sent to the Supreme Court raising the issue, a medical report was sought, and the jail doctor and civil surgeons furnished it.

Asked about the role of the jail superintendent in highlighting the cases following alleged tussle between him and the local police, the Chief Minister said he too could not escape responsibility as the Jail Manual provided that whenever an accused was given to its custody, the authorities must note the condition of the prisoner before admitting him, and if he needed medical assistance this must be reported to the Government and necessary action taken.

Dr Mishra wanted to know why the Jail Superintendent took almost nine months to realise his responsibilities.

The preliminary CID investigation have revealed that the police was guilty of negligence on at least two counts--it had failed to register cases against the accused persons. Whether policemen or villagers, and it had also not provided immediate medical relief to the "victims" as provided under the Police Mannual.

CPI(M) SAID TO ENLARGE BASE IN KERALA

Calcutta THE STATESMAN in English 25 Nov 80 p 9

[Text] New Delhi, Nov. 24--The CPI(M)-led Left Democratic Front Government in Kerala has initiated a number of "welfare measures" in the recent months which, in the long run, will help enlarge the political base of the Marxist party in the State.

According to reports received here, the CPI(M), which has enjoyed the electoral support of 20 to 25% in the last decade, has increased its membership by 25% in the last ten months.

Since the Left Democratic Front Government, led by the CPI(M) Chief Minister Mr Nayanar, assumed power the State Government introduced several welfare schemes for the benefit of backward classes. The agricultural workers' pension scheme brought into force by the LDF Government, at the initiative of the CPI(M) has provided a platform for the Marxist party to enlist the support of agricultural labourers.

The State Government has been helped by the CPI(M) cadres in processing the applications of farm labourers for relief under the agricultural workers' pension scheme. Inevitably, the CPI(M) sympathizers receive a preferential treatment in the speedier processing of the applications for relief from the party's cadres.

Since August 15, the State Government started the "unemployment dole scheme." According to official reports, the scheme has benefitted the unemployed. However, the scheme is proving more beneficial to CPI(M) sympathizers. In order to take advantage of the unemployment relief, workers from other political parties are tempted to join the CPI(M) to take advantage of the State's dole scheme.

The State government has initiated a Headload Workers' Welfare Bill to ensure minimum wages for this class of employees. Private hospital employees, numbering 25,000, are also likely to come under the influence of the CPI(M) following the State Government's decision to introduce minimum wages from September. This new measure has influenced the Catholic church which maintains the bulk of the hospitals.

The fisherfolk in Kerala belonging to Latin Catholics and Arayas, have been the traditional supporters of the Congress. They may now shift their allegiance to

the CPI(M). The State Government has provided transport facility to carry their catch from the beaches to the market.

The Kerala Police Association (KPA) is divided into pro-CPI(M) and pro-Congress groups. The State Government has recently granted recognition to the KPA. This concession has swelled the ranks of the pro-CPI(M) group in the KPA to neutralise whatever influence the pro-Congress elements have in the police organization.

The State Government has decided to recruit 9,000 constables in the Kerala police. This is going to prove beneficial to the CPI(M) because the CPI(M) youth front and other organizations are pressing the State Government to recruit men in the police force from the CPI(M) youth cadres. The CPI(M) leadership in the State Government cannot easily turn down the demands of the party's youth front. The CPI(M) leadership is in a quandary because this demand of the CPI(M) youth front is opposed by the other constituent units in the Government.

DANGE RELATIONSHIP WITH CPI ANALYZED

Calcutta THE STATESMAN in English 25 Nov 80 p 8

[Editorial]

[Text] The recent conference of the All India Trade Union Congress has left the state of affairs in the CPI perhaps more confused than before. Earlier, a split in the AITUC was considered likely especially after some of Mr Dange's supporters, led by his daughter, Mrs Roza Despande, had walked out of the CPI and formed the rival All India Communist Party. The innerparty tussle thus became an open affair and the AICP, following Mr Dange's political line, made no secret of its admiration for Mrs Gandhi. It was believed to be only a question of time before Mr Dange himself severed his links with the parent organization which had virtually forced him to resign from the post of party chairman and prevented him from contesting the last Lok Sabha poll. But nothing of the sort happened. Not only has Mr Dange stayed on as president of the AITUC, but he seems also to have accepted without protest the removal of his supporters like Mr K. G. Srivastava and Mrs Deshpande from important posts in the AITUC and their replacement by his known opponents. Instead of forcing the issue, he has perhaps chosen to lie low for the time being. The reasons can only be speculated upon.

Mr Dange had spent several months in Moscow not long before the AITUC conference and must have had wide-ranging discussions with "fraternal" parties on the "two-line struggle" in the CPI, and these may have influenced his decision. It is also possible that he was disappointed at the failure of the AICP to muster enough support among the AITUC delegates to push through its own candidates. That he remains in the CPI does not, however, mean that he has accepted its present political line; at the AITUC session, referring to the election of Mr Indrajit Gupta as general secretary he remarked that there could be ideological differences between trade union leaders. Presumably therefore, the fight over these differences will continue; and if Mr Dange has stayed on in the CPI it may possibly be because he is still confident of eventual success. Already, the relations between the CPI and the CPI(M) in West Bengal are no longer what they were earlier this year when they fought the Lok Sabha elections together. There has been no change so far in the CPI's official line of opposition to Mrs Gandhi's internal policies. But on international issues the party has made it clear that it will wholeheartedly support her pro-Soviet moves. Some still wonder whether, or how long, the divergence on the domestic front will continue.

CSO: 4220

CONGRESS(I) ACCUSED OF APPROVING BLINDINGS

Calcutta THE STATESMAN in English 25 Nov 80 p 9

[Text] New Delhi, Nov 24--Mr Murli Manohar Joshi, general secretary, Bharatiya Janata Party, today said: "If the newspaper report that the Bihar police has resorted to mass blinding of alleged criminals for the past 10 months is true, then it is a most shocking example of barbarism perpetuated by a Government, professing to be a democracy and is an inhuman act unheard of in any civilized country. It is a re-enactment of Hitler's final solution to the Jewish problem.

"The correspondent deserves full encomiums for this highly revealing investigative report. This is an example where a free Press can indeed become the saviour of the poor and helpless who can be conveniently dubbed as criminals and consigned to the dungeons permanently. This shameful act is not only a crime against humanity, a flagrant violation of fundamental rights, but it is also in all probability a deliberate design to oppress the low caste young, poor Harijans who just dare to demand their basic right to existence," he added.

In a statement, Mr Joshi further said: "If the report that the matter has already been brought to the notice of the Government is true, then one is forced to draw the conclusion that this atrocious, inhuman and ghastly act has the necessary political sanction of the ruling Congress(I). The Sunder episode and connivance of the same ruling party lends credence to the charge that Mrs Gandhi's party will have no qualms of conscience in applying the same tactics to eliminate any political opposition.

"Needless it is to remind that whenever her Government has arrested political opponents they have been dubbed anti-socials and criminals. If the Government wants that such an impression should not go around, then it is the duty of the central Congress(I) leadership to dismiss the Bihar government, suspend the officers involved in these acts and punish the guilty. The correspondent's security is in danger as we had seen in Orissa and I would demand complete security for him."

CONGRESS(I) WINS 10 SEATS IN BYELECTIONS

New Delhi PATRIOT in English 26 Nov 80 p 10

[Text] The Congress-I wrested one more seat on Tuesday with a total tally of ten out of 15 seats for six Assemblies, elections for which were held on Sunday last.

Of the five seats, Janata Party got one and the Lok Dal and the BJP in Baroda and Indore in Madhya Pradesh.

The results also show that the Congress-I has retained six seats--two in Maharashtra, one each in Karnataka, Orissa, Rajasthan and Madhya Pradesh—gained three, (two from the Lok Dal and one from Janata) and lost three (one each to Janata, Lok Dal and BJP).

Similarly, the Lok Dal, which lost two seats, managed to retain two others and the Janata retained one and lost one.

Of the two results announced on Tuesday, Mr Satya Narain Sattan (BJP), who was defeated by the late Chandra Shekhar Vyas (Cong-I) in May, wrested the urban Indore-I by a margin of 4,191 over his nearest Congress-I rival Kripa Shankar Shukla in a nine-cornered contest.

The Congress-I retained the semi-urban seat of Narsinghpur when Col Ajay Narain Mushran (Cong-I) won the seat taken by his late father and State Planning Minister S S N Mushran. He defeated his nearest BJP rival Om Prakash Parihar by 12,234 votes in a four-cornered contest.

Both the Congress-I and Opposition parties expressed satisfaction over the results. While Congress-I general secretaries maintained that the people have by and large reposed faith in the party, the opposition leaders found many silver linings in he outcome.

BJP general secretary L K Advani told newsmen in New Delhi that his party had emerged with added strength. Asked about the massive victory for the three Congress-I Chief Ministers, he admitted that it was somewhat disturbing'. But he attributed the outcome to 'large-scale misuse of official machinery and money" in the three constituencies.

He said the Chief Ministers had the added advantage of choosing the best constituencies.

Both Mr Advani and Janata Party general secretary Subramaniam Swamy admitted that the results proved that mere electoral adjustments among opposition parties would not bring about the defeat of the Congress-I. That had been proved by the victory of the Chief Ministers against whom all major opposition parties had joint candidates.

The Janata leader said that in all urban areas — Baroda, Indore and Bangalore — the people defeated the Congress-I. In due course, the rural areas also would feel the pinch of the economic distress.

REPORTER INTERVIEWS KERALA CHIEF MINISTER

Bombay THE TIMES OF INDIA in English 25 Nov 80 p 13

[Interview with E. K. Nayanar, Kerala chief minister, by K. C. John, reporter; date and place not given]

[Text] Trivandrum, November 24,

The Kerala chief minister, Mr E. K. Nayanar, has called for an early end to the ritual character of the national integration council by developing it into a powerful and functioning machanism [as printed] for national integrity.

In an exclusive interview to THE TIMES OF INDIA, the chief minister said the council should be able to provide direction to economic policy, promote decentralisation of power, recognise all Indian languages and offer a national minimum wage.

The council must be fully representative of all political parties, trade unions, peasants, women, youth and writers. It should become the forum for national unity defending democracy, secularism and freedom, he felt.

Mr Nayanar came out strongly against the "disintegrating tendencies" in the country which, he said, were only attempts to take away even the minimum autonomy of the states.

One of such tendencies was the mixing of religion with politics, he said and substantiated it by citing the instances where the Union minister for communication, Mr C. M. Stephen, was listed among the ministers attending the special "yagna" in the Laxmi Narayana temple in New Delhi!

This was a clear indication of how the present regime was exploiting religion for political gains, he said.

According to him, decentralisation of power, democratisation of administration and secularisation of public life alone would help national integration.

India might be termed a nation of nations. Once the multinational character of the country was unreservedly accepted, the autonomy of the various nationalities would automatically follow. Only such an arrangement could guarantee the economic and cultural development of the various nationalities, Mr Nayanar observed.

In the hour-long interview, the chief minister answered several questions relating to national integration.

Economic Aspect

Q: Is national integration possible without the evolution of an Indian economic community in which the ordinary masses have a stake?

A: I think you are right. Uneven economic development is one of the burdens which is responsible for the spreading of disintegrating tendencies. This is linked with the economic uplift of the masses. A satisfactory solution to both the issues is a precondition for democratic integration.

Q: There seems to be an impression that national integration has all along stayed at the top of discussions between political parties and governments without percolating to the broad masses whose awareness alone will fulfil the task of integration.

A: Some of the political parties think only in terms of a summit-level understanding to solve the problem. For these parties, national integration is more in the sense of concentration and centralisation of power.

Even today, we find that the Centre is against giving recognition to many languages spoken here. Thus, the present policy cannot enthuse or organise a wholehearted integration of all the people.

Q: Or is it that the politicians and even governments have lost credibility because of their double-standards?

A: Though this is generally true, one cannot accuse all of adopting double standards, at least not the CPM which has been realistic to the present situation and has kept its promises.

It is only the general deterioration in the standards of behaviour of individual politicians and parties which has done a great harm to the country and which is responsible for the loss of credibility of parties and governments.

Q: Would you agree that political parties by and large have failed to liberate themselves from the grip of caste and communal influences?

A: Yes. However, communalism is less in parties which accept Marxism as their philosophy. But, even for us, it is a great task to liberate ourselves from the grip of caste and communal influences.

But, never have we been accused of instigating communal trouble and we have always stood for communal unity and for safeguarding the rights of the minorities.

Q: Even scientists and technologists and people wedded to democratic ideals are not immune from narrow sectarian influences in their public life?

A: Yes. But the activities of organisations like the Saathra Sahitya Parishad should not be missed. They are setting the pace and making attempts to inculcate a scientific outlook and spread modern ideas.

Q: Would you agree that politicians and scientists have failed equally to modernise the people's concept of public life?

Change of Concept

A: This is an unfortunate situation. But we have to start somewhere to modernise the people's concept of public life. In fact, casteism, communalism and all types of blind beliefs and rituals have made it difficult for modern thought to spread. But, the change has begun to set in which is reflected in the crisis now facing our society. [as printed]

Q: You are against a communal party for the majority community. At the same time, you support communal parties of the minorities. Won't such differentiation make matters worse?

A: In a country like India, majority communalism is the most dangerous as it would only lead the nation towards facism. On the other hand, minority communal parties have come up to protect their position, democratic rights and traditions.

At times this has led to communal clashes and the only way to end them is to do away with landlordism in the countryside and lift the various restrictions on minority communities in all walks of life.

Q: Do you think the formal democracy of the kind now in practice here would be able to deliver the goods to the common man?

A: Formal, democracy, now in vogue, cannot deliver the goods. It should be developed into a participating democracy of the people which will guarantee voluntary and conscious integration of the various nationalities and people. One may not agree with the behaviour of a particular politician or party. That does not mean that all politicians or parties are bad. In the present situation, state capital, monopoly capital and multinational capital have got intertwined to create the most vicious and anti-democratic situation.

This has bred corruption and power has grown to be confined in fewer hands. This should be eradicated to achieve true integration.

ASSAM DELEGATION LEADERS TALK TO PRESS

Calcutta THE SUNDAY STATESMAN in English 23 Nov 80 pp 1, 7

[Text] New Delhi, Nov. 23.--The Prime Minister is stated to have assured a 28-member all-party delegation from Cachar that the Centre would give the linguistic and religious minorities in Assam all protection and ensure that they were not harmed by the agitation in the State.

The delegation, which met Mrs Gandhi on behalf of the Citizens' Right Preservation Committee, submitted to her detailed memorandum "on the grave situation created by the year-long agitation by the All-Assam Students Union and the All-Assam Gana Sangram Parishad in the Brahmaputra Valley."

Mr Tarapada Bhattacharyya, who led the delegation, told a Press conference today that Mrs Gandhi had given them a "sympathetic hearing" asked them "not to worry" and "assured us about our safety and security."

The delegation told Mrs Gandhi that the Assam agitation was nothing but "secessionist" and that the agitators were displaying posters saying "Indian dogs get out" and that the agitation was being guided by bureaucrats, former Government employees, and in fact, the entire State administrative machinery. Because of the police's connivance with the agitating, the lives and property of the linguistic and religious minorities had become insecure throughout the valley.

More than 50,000 people had been driven out of Assam, of whom 15,000 to 20,000 had taken shelter in camps opened by the West Bengal Government and were leading miserable lives. In the camps, 15 to 20 children were dying every day, they claimed. The delegation demanded immediate overhauling of the State machinery and punishment of delinquent officers.

It urged the Prime Minister to take appropriate steps for holding all pending secondary board and university examinations on time.

The delegation demanded that the Centre stick to the national consensus on the cut-off-year, i.e. March 1971, and confer citizenship to all, if needed by a suitable amendment of the law. They wanted institution of an impartial judicial machinery with people from outside Assam and under the direct control and supervision of the Centre for detection purposes. The basis for determining citizenship of an individual should be the provisions of the Constitution, the law of the land, international pacts and agreements assurances by national leaders at the time of the Partition and humanitarian considerations.

The delegation demanded immediate stoppage of illegal deportation of people by the Assam police. They told the Prime Minister of "inhuman torture meted out to Bengali students, employees, jobseekers and others in the Brahmaputra Valley" and urged her to give them protection. It wanted representation of the Citizens' Rights Preservation Committee, Cachar, in any future discussions for the settlement of the "so-called foreign nationals issue."

Mr Bhattacharyya and others told a Press conference that if 1971 was not accepted as the cut-off-year and a judicial machinery composed of non-Assamese not appointed to decide the issues of detection and deportation, it would help the secessionist movement to grow and "engulf the entire area with dangerous portents for the integrity of India." They pointed out that in Manipur the Government had already pronounced 1951 as the cut-off-year. Meghalaya had likewise declared the year to be 1964 "without caring for the Central Government to finally decide the issue."

Mr Bhattacharyya said: "We have decided that if the Government does not give adequate protection to the linguistic and religious minorities, we shall have no other alternative but to launch a vigorous agitation in Cachar and the Brahmaputra Valley."

He said that members of the delegation would stage a "dharna" on November 24 at the Boat Club and lead a procession from there to draw the attention of the Government to the plight of the linguistic and religious minorities of Assam.

Mr Ashoke Sen, president of the All-India Committee for Preservation of Citizens' Rights, told the Press conference that the exodus of refugees from the West and the East had taken place in a different manner and those who had come into India from the East had been accepted as refugees and given land by the Assam and West Bengal Governments. They could not be called foreign nationals now. He felt that the citizenship law should be changed because it was "unrealistic" as far as the eastern part of India was concerned.

UNI adds from Gauhati: the Assam Government has geared up its administrative machinery to meet the proposed indefinite noncooperation agitation to be launched by State and Central Government employees from Monday.

The Governor, Mr L. P. Singh who is camping here since yesterday, reviewed the latest law and order situation in the State today with his advisers and senior civil, police and military officers and is understood to have had discussions with them on the measures to be taken to maintain uninterrupted functioning of Government offices.

ENERGY MINISTER: NO POWER SHORTFALL IN NATION

Calcutta THE STATESMAN in English 25 Nov 80 p 12

[Text] New Delhi, Nov. 24--The Energy Minister, Mr A. B. A. Ghani Khan Chaudhury, told the Rajya Sabha today that there was no shortfall in power generation in the country, reports PTI.

Replying to a question by the Lok Dal member, Mr Ladli Mohan Nigam, the Minister said that from April to November 67,478 million units of power were generated against the target of 113,000 million for whole year.

The total energy generation during 1980-81, when achieved, would represent 7% more than that of the preceding year.

There were complaints regarding supply of coal and performance of some power stations.

Earlier, Mr Vikram Mahajan told the House that there were some complaints about the 210 MW units manufactured by BHEL, but efforts were being made to rectify these faults.

He said that the 60 and 100 MW units at BHEL were performing well. They were manufactured by an Indian company and could not be ignored because of some minor defects. A technical committee was looking into the matter.

Mr Chaudhury told Mr D. P. Chattopadhyaya that the power shortage in West Bengal, according to the chairman of the State Electricity Board, was only 15%.

Mr Chattopadhyaya said that it was not correct to say that power generation and capacity utilization in the State were the lowest in the country.

Mr Chaudhury admitted that the performance of power station during 1979-80 and 1080-81 had been affected by failure of monsoon in 1979-80 and delay in the stabilization of newly-commissioned units.

The reasons which stood in the way of better performance of the power station had been identified and a number of long and short-term measures taken to improve the total power availability.

ENERGY CHOICES SAID TO HINGE ON TECHNOLOGY

Madras THE HINDU in English 25 Nov 80 p 8

[Editorial: "Energy Choices Hinge on New Technology"]

[Text] It is indeed a bleak scenario that Mr. P.C. Sethi, Union Minister for Petroleum, Chemicals and Fertilizers, drew in a lecture in New Delhi last week. He spoke of the dismal prospects in the outlook for energy resources--of "having to import" about 22 million tonnes of crude oil and seven million tonnes of petroleum products by 1984-85. At prices which are bound to increase, the cost of imports is going to be very heavy. Yet it needs to be said that Mr. Sethi's projection of indigenous crude oil production of 21 million tonnes by 1984-85 is perhaps on the low side, since it would mean an increase of a meagre seven million tonnes, mainly from Bombay High. Development of other sources would take time to become commercially feasible, but certainly much more can be tapped from the offshore wells than is envisaged now. There is, of course, the risk of exhausting some of these underwater fields, but the short term thrust here will be a calculated risk to cover a period which will permit the gestation of other fuel sources and also allow for an accelerated search for new oil fields.

The choices before the country can be divided broadly, in order of importance, to greater reliance on coal, thermal and hydroelectric powerhouses, nuclear plants, biogas, solar energy and wind. Of coal, especially low grade, there is plenty. And for the immediate future the option is to depend on mining and transporting large quantities of this fuel. The consumers may have to pay a higher price to enable the coal industry to thrive. It is said that, in terms of weight, seven tonnes of medium coal could provide the heat equivalent of one tonne of crude. Efforts will have to be made to move coal fast in a non-traditional fashion, for example, in the form of slurry through pipelines so as to reduce the dependence on the surface railway haulage which has proved unequal to the task hitherto. In the long run, the recurring expenses on pumping coal through pipelines will certainly be cheaper than on railway wagons. The capital costs for a pipeline network may be higher than on laying railway lines. Liquifaction of coal for essential uses is no longer too prohibitive in comparison with the high price of crude oil. It was proved technically possible even during the final stages of World War II in Germany. But earlier than that a possibility is the gasification of coal within the mines. This will enable the conversion into energy of all the coal in a mine, compared with the present situation in which nearly half the fuel has to be left unmined as pillars or walls to hold up the structure. The increased output in coal or gas can in turn drive the electricity generators. The power plan will have to be revised to cover a wider range to reach a higher target than so far conceived.

Is biogas the answer for the requirements of the rural areas which are largely dependent on non-commercial fuel? These areas may not be within the reach of centralised power grids. Both the Economic Commission for Asia and the Pacific and the U.N. Environment Programme have endorsed biogas as superior to other energy devices for dispersed use on the countryside. It is not easy to accept wholesale the very optimistic calculations of its total potential by proponents of biogas who talk of both the energy creation and the manure left over. There is the problem of sustaining a huge animal population. Although India began experimenting with biogas earlier, China claims to be many steps ahead with seven million units in use, or ten times the number in operation in India. The Khadi and Village Industries Commission is weighed down by obsolete technology, and biogas also calls for research to develop more efficient designs than those in use now. The KVIC programme plans to install 500,000 biogas plants during the current five-year Plan. This is too small a number to make a significant dent on the national energy requirements.

The nuclear programme is languishing partly for want of political will, and the real breakthrough can come only when fast breeder reactors can be built to use the abundant resources of thorium. That, unfortunately, is a long way off. India is well equipped geographically to try and tap solar energy, an exercise which ought to interest also the oil producing countries which realise that their liquid gold will be exhausted in the not too distant future. In this field perhaps the aim should be to go in for devices having low heat requirements. It cannot be emphasised too strongly that oil will have a relatively diminishing role in the future. Government spokesmen like Mr. Sethi have painted the spectre of the oil crisis as black as can be. But what is the Government as a whole doing to a chart a credible overall energy policy which will provide for economic development?

CSO: 4220

ADVANCE TECHNOLOGY FAVORED TO PROMOTE EXPORTS

New Delhi PATRIOT in English 24 Nov 80 p 5

[Text] The Government has decided to consider favourably the induction of advanced technology in industries which show adequate potential for exports, reports UNI.

As a concomitant of this technology, permission for creation of capacities large enough to make these products competitive in world markets will also be considered, according to Industry Ministry sources.

The Ministry feels that the purpose of introducing such a policy would be not only to encourage exports but also enable industry to produce better quality products at lower costs. This will ultimately benefit the consumers in terms of price and quality.

As a sequel to this decision the Government is considering measures to facilitate the transfer of technology from efficiently operating units to new units.

Companies which have established research and development organisations, and have demonstrated their ability to absorb, adapt and disseminate modern technology will be permitted to import such technology as will increase their efficiency and cost-effectiveness. This will not only lead to saving of foreign exchange but also ensure self-sufficiency and higher foreign exchange earnings.

The Ministry is of the view that the Indian industry has not reached a stage where it must earmark substantial resources for research and development to constantly update technologies for optimal utilisation of scarce resources. The R and D facilities will also help the industry in providing better service to the consumer and achieving greater exports.

Ministry sources said that they proposed to evolve 'modernisation packages which will include all aspects, like appropriate location and optimum use of energy and adoption of the right kind of scale and technology in order to minimise costs and improve efficiency in the use of scarce materials.

It will be Government's endeavour to ensure that the process of modernisation percolates down to small units and the villages. As in the case of large new processes and technologies must replace the old and traditional ones, in the decentralised sector also improved tools and techniques, which will contribute to higher productivity and reduce the drudgery, are an essential ingredient of modernisation.

In all these cases the Government will review the present arrangements in terms of special facilities and incentives such as soft loans, establishing of proper linkages in the field of marketing and exports and strengthening credit facilities, particularly for the decentralised sector.

TECHNOLOGY IMPORT FOR COAL MINES STUDIED

New Delhi PATRIOT in English 26 Nov 80 p 5

[Text] Government is proposing to import foreign technology to modernise coal mines and has already received orders from France, the UK, Poland, Japan, West Germany, the Soviet Union and Romania, reports PTI.

This was stated by Minister of State for Energy Vikram Mahajan in the Lok Sabha on Tuesday.

The Minister also said foreign technology for underground and open-cast mining was being sought only in such cases where the technological expertise available within the country was inadequate.

The Minister said the Coal India Limited had entered into agreements with Poland, France the UK and the USSR for assisting in various aspects of coal-mining industry.

Under a "massive plan" drawn up to increase the production of coal, Government intends to bring it up to 165 million tonnes in 1984-85 from 103.93 million tonnes in 1979-80.

Regarding the report on "coal-to-oil project," submitted by the Dr J.C. Ghosh Committee to the Government in 1956 the Minister said the project had not been implemented but the report was available in Parliament library for members.

To complaints of "widespread discontentment" among senior executives in Coal India, Mr Mahajan said the Fazal Committee report on streamlining the organisation was under consideration.

CSO: 4220

MAJOR INCREASE IN COAL PRODUCTION NOTED

New Delhi PATRIOT in English 1 Dec 80 p 8

[Text] Government has claimed a "breakthrough" in coal production, with the output of the first seven months of the current financial year reaching 59 million tonnes, an increase of seven per cent over the same period last year.

In contrast, the previous three years had shown rate of growth of only one or two per cent, a Government press note said on Sunday.

The production in central coalfields and the western coalfields has been 16 per cent higher than April-October last year. The first three weeks of November have recorded increased production of roughly nine per cent over the same period last year.

The Government feels that target of 113.5 million tonnes for the current year is well within reach, considering the present trend.

To augment power supply to the coalfields, the Government proposes to set up five to 10 mw gas turbine sets as also captive thermal plants in the coalfields. Initially these are to supply 60 mw going up to 120 mw i.e., the total power demand of the coal industry.

Cement allocation of the coal sector is also being increased from 30,000 to 60,000 tonnes in the current quarter.

The total coal stocks were 13 million tonnes at October and against 10 million tonnes last year. The stocks include 2.25 lakh tonnes of soft coke needed by domestic consumers. Last year the stock of soft coke was almost half this.

UNI adds:

The rate of growth would have been still higher but for certain constraints in Bengal-Bihar area in inputs like power, steel, cement and problems of law and order. In the fact the coal companies which are located in areas not affected by these constraints have recorded more than double the growth.

To eliminate the constraints and step up coal production, still further, the Government has taken various steps. Efforts are being made to increase power output which has already risen by nearly seven per cent.

The problem of transportation of coal and availability of wagons is being tackled in coordination with the railways.

INDO-SOVIET SOLAR ENERGY PACT SIGNED

Bombay THE TIMES OF INDIA in English 23 Nov 80 p 10

[Text] Bombay, November 22: A protocol was signed yesterday in New Delhi between India and Soviet Union for cooperation in the utilisation of solar energy under the bilateral programme of cooperation in science and technology. The protocol was signed by Mr Maheshwar Dayal, adviser, department of science and technology, government of India, and Dr B. V. Tarnizhevsky, head of the solar energy laboratory of the Krzshizhanovskiy Power Engineering Institute, Moscow. The three-member Soviet delegation led by Dr Tarnizhevsky, who arrived in New Delhi on November 12, had discussions with Indian scientists.

The protocol provides for cooperation on three projects of mutual interest relating to the development of solar collectors using selective coatings, solar thermo-electric generators, and experimental power packs based on the stirling engine. The projects are to be executed on the Indian side by the Central Salt and Marine Chemicals Research Institute, Bhaynagar, the National Physical Laboratory, Indian Institute of Technology, Bombay, and the Central Electronics Ltd., New Delhi. On the Soviet side, the Krzhizhanovsky Power Engineering Institute and the Uzbek Academy of Sciences will participate in the projects. Completed systems using subsistence developed in India and the USSR are to be assembled by 1982-83, and the testing of the systems will be carried out in both countries.

UNCERTAINTIES OF INDIA'S OIL SUPPLY TOLD

Calcutta THE STATESMAN in English 22 Nov 80 p 8

[Editorial]

[Text] Mr P. C. Sethi's optimism that the country will be able to overcome crude supply problems caused by the Iraq-Iran war is not supported by available statistics. The official reckoning is that no major problem will be faced till the end of December, presumably because a major part of the contracted 11 million tons of crude from Iraq and Iran for 1980-81 has already been delivered. The January-March period may not be equally comfortable; an added reason is that nearly all the efforts being made to tie up supply contracts refer to the 1981-82 financial year. The only firm contract signed so far is for Mexican supplies of 1.5 million tons of crude; the Russians have agreed to give 1.5 million tons, New Delhi requesting an extra million tons. There is no certainty that Moscow will agree; earlier, it had indicated the feasibility of a long-term crude and petroleum products supply deal linked to Indian exports, on a barter basis, of cereals, particularly wheat and coarse grain. New Delhi asked the Russians for 500,000 tons of additional crude for the current financial year, an enhanced quota of oil and petroleum products for the next, and five to six million tons of crude thereafter on a long-term basis. Even if the Russians agree to give 2.5 million tons of crude, New Delhi will have an assured supply of only four million tons, including the Mexican contract. Since even officials agree that, in the event of a cease-fire, there is no immediate possibility of crude supplies being resumed from Iran and Iraq, much more will have to be ensured from other sources. The Union Minister for Petroleum, Chemicals and Fertilizer appears to be attaching some importance to negotiations in progress with countries like Venezuela, Kuwait, Saudi Arabia and the United Arab Emirates. But no one knows how much of the remaining gap of seven million tons they will be able to fill.

The Government has already done some spot buying at prices which are still climbing, but there is no clear indication of the quantity bought. Further, the oil and oil products purchased on the open market are obviously intended to satisfy the current year's needs. Next year's import targets have been set at 17 million tons of crude and 7.5 million tons of petroleum products. This does not take into account the stoppage in supplies because of the Assam agitation. Should the present stalemate extend into the new year, crude imports may have to go up by a further 4.5 million tons, taking the total to 21.5 million tons. Production from the southern part of Bombay High is expected to take off-shore

crude output to 12 million tons a year by 1982 from the present seven million tons. This will improve domestic crude availability, but consumption is increasing at about 10 per cent annually. On top of this, the Government has decided to maintain at all times an inventory of 1.5 million tons of crude, or roughly a month's requirement. The short-term prospects are therefore not bright; the longer term perhaps holds out more hope. By 1983 indigenous crude output may be 21 million tons provided the Oil and Natural Gas Commission succeeds in pushing up production in the Gujarat oilfields to four million tons. This would enable imports to be held down to the current year's level.

OIL, GAS COMMISSION SELECTS EXPLORATION SITES

Bombay THE TIMES OF INDIA in English 23 Nov 80 p 10

[Text] New Delhi, November 22: In its intensified oil exploration drive for next year the Oil and Natural Gas Commission has selected several new locations or starting drilling operations.

In the eastern region attention is being focussed on the completely virgin areas of the Dhansiri valley and Cachar of Assam. Exploration work will be taken up in the northern bank of the Brahmaputra. The commission's share of crude production in this region is proposed to be raised from the present 1.7 million to 3 million tonnes by 1985.

Indo-soviet seismic parties are being planned for Tripura and West Bengal for the next two seasons. Sophisticated equipment is being inducted for these surveys. In the Sunderbans area of West Bengal about 2,000 km. of seismic surveys have been completed in the shallow water zone by a contract seismic party.

In the west, exploration will be started in the prospective shoal areas between the Mahi and Tapti rivers in the Gulf of Cambay and in areas like the Patan-Barmer basin of the Rajasthan-Gujarat area as also in Kutch and Saurashtra.

Drilling is also expected to begin at a new location at Rajole in Andhra Prades.. before the end of the year. In the Godavari area, where the Narsapur structure has given indications of gas reserves, three new locations have been released for drilling operations.

Exploration in the Rajasthan desert is also being resumed by the commission but to supplement its efforts some areas of the region are proposed to be allocated to Oil India, another public-sector concern carrying on exploration work.

OIL DRILLING IN WEST TRIPURA DESCRIBED

New Delhi PATRIOT in English 23 Nov 80 p 4

[Text] Srinagar, Nov. 22--Youth Congress-I president Ghulam Nabi Azad, MP yesterday ridiculed what he described as "absurd suggestion" of Chief Minister Sheikh Abdullah to wind up Congress-I in Jammu and Kashmir.

Addressing a PCC-I organized public meeting at Bijbehara 40 km from here, Mr Azad said that if Sheikh really believed that the ideology and programme of his ruling National Conference and the Congress-I were the same, then the proper course for him is to "wind up the small shop of National Conference and strengthen nationwide organisation of Congress-I. [as printed]

The Sheikh had recently reiterated his old suggestion to wind up the State congress-I unit in view of its ideological affinity with National Conference.

Mr Azad commented that it was absurd to suggest that an all-India party should liquidate itself for the sake of a regional party whose base and influence did not extended beyond the Kashmir Valley. [as printed]

He claimed that the National Conference was not even a State party as it was nonexistent in Jammu and Ladakh regions.

The Youth Congress-I president charged that the Sheikh was again seeking to exploit communal sentiments of the people in Kashmir in the face of failures of his Government. He said this had been a familiar tactic with the Sheikh in the past also when he vainly tried to challenge the accession of the State on religious grounds.

WRITER EXAMINES TROUBLES OF STEEL INDUSTRY

Calcutta THE STATESMAN in English 24 Nov 80 p 15

[Article by Virendra Agarwala: "Demand-Supply Gap Likely To Persist"]

[Text] Production of steel is an index of a country's economic prosperity and it can rightly be regarded as the barometre of a nation's level of industrialization and economic growth. The steel industry forms the nucleus around which develops the various inter-dependent sectors of an expanding economy. The rate of steel production and consumption has a direct relation with a nation's general economic position.

The outlook of steel production is gloomy. Steel output in 1979-80 fell to 4.5 million tons from five million tons in 1978-79, necessitating imports worth Rs 400 crore to meet the demand. Shortage of power and coal which led to a drop of 9.5% in the production of salable steel in 1977-80 has become even more acute. The country will continue to face steel shortage till the end of 1983-84. The demand-supply gap will be to the tune 434,000 tons. The shortage would, however, be met by 1988-89 when 16.52 million tons would be available against the demand of 16.49 tons. The surplus would be obtained as a result of expansion of both the Bhilai and Bokaro steel plants by 1988-89. By that year, the steel plant at Vizag may also go into production.

The Steel Minister has projected an increase of 16% in finished steel output during 1980-81. Against the target of 7.4 million tons in 1979-80, the total output was not more than 6.03 million tons. Thus, the projected improvement during 1980-81 would still mean that the final output would be less than last year's target. The final 1979-80 figures now show that the shortfall in output was more than 20%. But the Steel Authority of India has attributed this decline in output entirely to the shortage of power.

It was a blunder on the part of the Government to allow coal imports because it has been more wasteful to burn a costly imported fuel than to transport a cheap local fuel. The record of public sector plants' performance during March is hardly encouraging, especially in respect of conversion of ignots into salable steel. Capacity utilization in the integrated steel plants in 1979-80 is likely to be around 66%, compared to 75% in 1978-79 and 85% in 1977-78. This trend is not only because of the falling production but also of falling capacity utilization.

It is equally true that the Tata Iron and Steel Company did better than the public sector steel plants during 1979-80, achieving 95.4% of its rated capacity. This has been achieved despite major constraints like acute power shortage, inferior coal and plant and equipment. The marginal shortfall in the output of salable steel was mainly due to the acute power crisis in the eastern region. The loss of salable steel was around 150,00 tons valued at some Rs 45 crores. Profitability of TISCO would have shrunk if there were no captive power plant. TISCO has launched its modernization programme, the cost of which is estimated at Rs 160 crores. TISCO has shown that inspite of constraints, any steel plant can achieve 100% capacity utilization. There is hardly any reason why the public sector steel plants should not show similar encouraging results. If, for any reason, public steel plants continue to show poor results, the Government must explore the possibilities of running them by private management.

Political control and frequent bureaucratic interference denied the public sector management, the autonomy necessary for efficient functioning. Their low output and labour productivity have been partly due to gross overmanning, itself a source of low morale and indiscipline. The need to maximize employment opportunities in a country such as ours is undisputed, but perhaps the worst way of doing so is to over-man capital-intensive industries as has been done in virtually all large public sector enterprises. The power generating and steel industries have to bear heavy financial costs because of the large capital investment, they require. To burden them in addition with excessive labour makes no sense. It is economically suicidal in the long run. Workers must be provided with all living facilities. But the cost should not increase to such an extent that it becomes either unbearable to the community or disturbs the price equilibrium of other commodities. It is not only low capacity utilization but also poor productivity per worker which has paralyzed the steel industry. We have allowed the situation to go out of our grip. Management at the top needs to be so action-oriented that they must produce the results. It must be their primary responsibility to achieve the targets. If the public sector steel units fail to produce quality goods at competitive prices, they should be wound up.

The Steel Development Fund created by the Government in 1978 into which were to be deposited by the main producers, the increase in selling prices of steel totalling Rs 400 a ton announced for 1978 and 1979, is the obvious source of financing modernization projects of the steel industry. This fund has recently granted Rs 100 crores to TISCO. Expanding the capacity of Bhillai and Bokaro and constructing two new plants will cost at least Rs 7,000 crores. This figure excludes the cost of modernizing the older plants and supporting investment in complimentary industries. It is obvious that the fund created for this purpose can hardly meet the growing requirements of the steel industry. In such circumstances, the Government needs to explore further possibilities if petro-dollars could be utilized for expanding steel industry in India. It is not at all worthwhile to depend on imported steel in future, though as a temporary measure we may have no other choice. It is obvious that the most sensible conclusion might be to produce steel indigenously. We have no sound economic grounds for dismissing such a proposal. If TISCO can go all out to modernize its plant, there is hardly any reason why the Government should not succeed in raising its capacity utilization and in expanding its existing capacity.

The production targets of sectors like steel and power cannot be based merely on estimates of consumption. For one thing, these estimates have often turned out to be wrong. For another, implicit in the approach is the assumption that the rest of the economy should set the pace and the core sectors must adjust their targets accordingly. As things are, the steel industry is suffering considerable losses on account of coal and power shortage and its wage bill is rising. This and other unforseen contingencies will place an enormous additional burden on the industry. Thus there is no escape from setting apart more plan funds for the steel sector. In view of this situation the industry can hardly generate new resources for its expansion. The capacity of steel industry remains so limited that the Government will have no alternative but to find its budgetary resources for its development.

It is widely recognized that the Indian Steel Industry has been the victim of inefficient planning, excessive control and lack of proper coordination. In the case of the private sector, there has been a constant threat of nationalization. At the beginning, we hoped that the country would produce 100 million tons of steel by the end of the century. Since the population would reach 9,300 million by then, the per capita crude steel output would be 110 kg. compared to about 13 kg today. By 1976, it was realized that such official optimism was not based on the real situation and the target was reduced by 25 million tons to 75 million tons. Later, it was further reduced and now it is hoped the integrated steel plants will double their capacity by 1988-89 to 24 million tons and the total capacity including the mini-steel plants will rise to about 30 million tons. However, SAIL has assured that despite the fall in production, availability during the current year will be about 8.8 million tons--seven per cent above last year.

The output target for 1980-81 has been placed at 10.6 million tons of steel ingot and 8.6 million tons of salable steel. Since nothing significant will be added to capacity in the course of the year, the fulfillment of this target will depend upon a good monsoon which will hopefully take care of the power and coal shortage. Looking further ahead, the Government has optimistically declared that the country's steel capacity will be raised to 22 million tons by the end of the decade--which is what the demand for steel is expected to be by then--by modernizing Durgapur and Rourkela, expanding the capacity of both Bokaro and Bhillai to four million tons and constructing two coastal integrated steel plants. However, in the steel industry, larger capacity alone does not lead to increased output.

The domestic demand for steel is currently growing at the rate of 15% to 22% which is partly being met through increased production and partly through much larger imports against earlier commitments. The steel industry requires large investments in the eighties and beyond. With the financial constraints we have to adopt a strategy which would give us the additional capacity and production with the minimum investment.

As it is, we shall need to create afresh six to eight million tons ingot capacity within the next five years in addition to Vizag's first phase plus all the existing major steel plants. Liquid resources hardly exist in India to

create such a huge capacity needing an aggregate investment of Rs 5,000 crores or more. The conclusion is that we have to import capital for steel plants expansion. We should bargain for the least cost operations from those countries from amongst those who agree to finance our steel expansion programmes. The corporal institutions need to be encouraged to undertake such responsibilities so that a larger number of mini-steel plants could be set up in different backward districts.

The future looks so bleak that we can hardly afford to be guided by ideological considerations. National interest demands that large business houses need to be associated with an expert committee so that a rational thinking could be developed on his vital issue. [as printed]

What we urgently need today is to upgrade the technical operations of our steel plants. But to do that we must be prepared with our own ideas, the latest information about technical breakthrough made throughout the world. It is this weakness of ours that Russians--and other exporters of steel know-how to India--seek to exploit. We must be aware of those political implications. It needs to be analysed why SAIL's performance was so had in 1979. [as printed] It is the inefficient management at the top of SAIL which was squarely responsible for it.

USSR CONSIDERS AID TO INDIAN STEEL PLANTS

New Delhi PATRIOT in English 1 Dec 80 p 1

[Text] The Soviet Union is likely to provide substantial credit and equipment for the modernisation of steel plants, particularly Bokaro, Bhilai and the Indian Iron and Steel Co. at Burnpur, reports UNI.

This technical and financial aid will be in addition to the USSR assistance for the Visakhapatnam steel plant which will have a capacity of about four million tonnes of liquid steel in two overlapping stages. The project is expected to cost about Rs 2,500 crores.

Steel Ministry sources have said that a major thrust in modernisation of the existing integrated steel plants would be to replace the reliance on use of power and use non-coking coal to the extent of 25 per cent.

The Vizag steel plant's detailed project report is currently under stages of finalisation by the Government. When completed, this plant is expected to be the most modern with higher blast furnace and coke oven battery capacities, and continuous steel casting facility for blooms and billets.

The capacity at the Bokaro steel plant is being geared for producing galvanised sheets, used mainly in construction activities and its cold rolling complex is expected to go into production by 1982.

In view of the financial constraints on the further development of steel industry, it is proposed to plan all future production on the import of 25 per cent of coking coal and 50 per cent buyback arrangements with collaborators.

The working group also considered progress of the expansion schemes in respect of both Bokaro and Bhilai plants. The Bhilai steel plant is being expanded to a four million tonne capacity which will eventually increase further to about five million tonnes. Bokaro is also being expanded to a capacity of 4 million tonnes of steel annually and will eventually be raised to 5.5 million tonnes.

PUBLIC SECTOR UNITS INCREASE PRODUCTION

New Delhi PATRIOT in English 30 Nov 80 p 5

[Text] During April-September 31 public sector undertakings showed an increase in capacity utilisation over the corresponding period last year, the Government said on Saturday.

In the same period the overall rate of growth of industry was 0.7 per cent over 1979, with increased production of minerals and metals, coal, medium and light engineering goods, transport equipment, and textiles in the public sector.

The production of capital goods recorded an increase of 12.6 per cent, and intermediate products 2.7 per cent.

In the capital goods group diesel engines (vehicular), agricultural tractors and railway wagons recorded rise in production in the first half of the current financial year. The main intermediate products marking better production are cotton yarn, newsprint and petroleum products.

The undertakings that have achieved higher output in October 1980 compared to the production in October 1979 are: Bharat Heavy Electricals Ltd.; Burn Standard Ltd.; Bharat Heavy Plates & Vessels Ltd; Richardson and Cruddas Ltd., Bharat Pumps & Compressors Ltd.; Tungabhadra Steel Products Ltd.; Bharat Brakes & Valves Ltd. and Lagan Jute Machinery Co. Ltd.

The undertakings which have achieved more than the target for the month of October 1980 are: Burn Standard Ltd.; Bharat Heavy Plates & Vessels Ltd.; Bharat Brakes & Valves Ltd. and Lagan Jute Machinery Co. Ltd.

EFFECTS OF AGITATION ON ASSAM ECONOMY TOLD

New Delhi PATRIOT in English 1 Dec 80 p 4

[Text] Gauhati, Nov 30 (PTI). The prolonged agitation on foreigners issue in Assam has disrupted both Government work and the life of the common man in this eastern state linked to the national economy in several ways.

The one-year-old agitation, which has already cost the administration and the people alike 'very dearly' in terms of revenue and earnings, has resulted in 'incalculable harm' to the economy of the State, the long-term effects of which will unfold themselves over many years, according to an official spokesman.

The most important was the tremendous damage caused to the investment climate in the State, and it might take years to instil enough confidence among investors to come to Assam again, the spokesman said.

The spokesman said that the tensions created among communities would also be felt in the crippling shortage of skilled and semi-skilled labour for which Assam has been dependent heavily on other States. The panic created among the people from outside working here for decades--some of the families for over 100 years--might result in a 'run' causing serious economic stagnation.

The agitation has also been having its adverse impact on road and rail transport, which adds to the economic chaos. While road operators wanted to pull out their trucks, the railways were cautious in sending wagons for fear of their being locked up for months.

The non-cooperation by oil employees during the last one month led to the closure of two of the three oil refineries in the State. The consequent shortage of diesel paralysed public transport and movement of goods and caused spurt in the prices of commodities.

The students have lost one full academic year. The pace of development has showed down.

Revenue Erosion

Official sources also referred to the serious erosion in the State's revenue because of the loss in royalty on crude oil and forest produce and a steep fall in sales tax collections, particularly after the blockade on various products.

The Assam Government is losing Rs 16 crores a year by way of royalty at the present rate of Rs 42 per tonne and Rs 5 crore by way of sales tax at the rate of Rs 12 per tonne of crude oil alone due to stoppage of the flow of crude since 27 December last year.

The State has been losing Rs 3 crore every day for the last one year when no crude had been flowing outside Assam.

The official spokesman said more than one lakh jute growers in Assam had been adversely affected by the blockade on jute. The traders, who purchased jute on behalf of the jute mill owners of Bengal, had more or less ceased operating in the State, he said.

The State's revenue loss is officially put at Rs 10 crore by way of sales tax, forest royalty, State excise and entertainment tax during the past one year.

SATELLITE LAUNCHING PROGRAM FOR 1981 GIVEN

New Delhi PATRIOT in English 1 Dec 80 p 8

[Text] India's space programme will touch a new height during the Sixth Plan period with the launching of a series of more sophisticated satellites, reports UNI.

The launching of 600 kg class satellite in sun-syncronous for remote sensing by the end of the plan period, will be one of the major programmes of the space department. A beginning has already been made in this direction with the launching of SLV-3 from Sriharikota.

The Sixth Plan also envisages launching of an Indian remote sensing satellite, 150 kg class satellites in near earth orbit using an augmented SLV (Satellite Launch Vehicle) and proto-INSAT spacecraft system for providing the indigenous spacecraft design to eventually replace INSAT-1 procured from abroad.

Meanwhile, data sent by Bhaskara is being used in some of the applications related to forestry, snow melt, land use meteorology and sea surface studies.

According to latest information from the department of space Bhaskara continues to send valuable television pictures of the country and microwave radiometer data.

All the on-board technological sub-systems of the satellite in orbit are functioning normally. The first satellite Aryabhata established India's capability in the design and fabrication of satellites.

India' satellite launching programme in 1981 is:

The APPLE spacecraft to be launched by the third development flight of the European Space Agency launch vehicle from French Guiana sometime in April 1981.

--the Second Earth Observation Satellite (SEC-II) which will be similar to Bhaskara, to be launched around mid-1981 and will carry a TV payload and a radiometer.

As part of INSAT-1 (Indian National Satellite) project, two multi-purpose satellites will be manufactured by the US for India. These multi-purpose satellites will be used for operational need of telecommunication meteorology and later for radio and television.

A series of Rohini Satellites (RS) of the 50 kg class will be launched using the subsequent flights of SLV-3.

The next launch using the SLV development flight is expected to carry a sensor payload. It will be launched in the first half of 1981.

SALT INDUSTRY REPORTED IN CRISIS

Bombay THE TIMES OF INDIA in English 24 Nov 80 p 19

[Text] Visakhapatnam, November 23. The salt industry in Andhra Pradesh is passing through an unprecedented crisis following a glut in the market.

Nearly 200,000 tonnes of this commodity has been lying at various coastal producing centres for lack of takers. More than half of this quantity has been stacked in godowns of Naupada group of factories in Srikakulam district, the main producing centre.

The situation has worsened because of non-availability of railway wagons to move salt to deficit states of Orissa, Madhya Pradesh and Bihar. Wagon shortage is more acute in the South-Central than the South-Eastern railways.

Faced with the huge stockpile, producers are wondering whether to continue on normal scale their occupation this season which has already begun. Non-disposal of stocks on hand besides blocking capital has driven them to financial bankruptcy.

Ironically enough, the state government has drawn up an ambitious programme to produce 700,000 tonnes of salt by 1983, as against the present 350,000 to 400,000 tonnes, by bringing additional areas under salt production in addition to stepping up productivity.

The crisis confronting the Andhra Pradesh salt industry is mainly because of continuance of zonal restrictions on the movement of salt and particularly the ban on its entry into deficit West Bengal and north-eastern states since 1976. So much so, they are obliged to buy their annual requirement of salt for both edible and industrial use of around 500,000 tonnes from far-flung Kerala and Rajasthan by sea, instead of from nearer Andhra Pradesh by land and that too at far cheaper rates.

Restrictions on the movement of salt, according to producers, was "to encourage the shipping conference." They appealed to the Union industries ministry and the salt commissioner to resolve their plight by allowing free trade in salt throughout the country.

In addition, salt export should also be allowed at least on an ad hoc basis. Export of salt was banned in 1977 because of the deplorably low production of 410,000 tonnes in 1976. But India had been exporting this commodity since 1953 to Afghanistan, Japan, South Korea, Taiwan, Thailand, Indonesia, Singapore, the Philippines and several African countries.

If the idle capacity of about 60 per cent was utilised, India could easily become the biggest exporters of salt, both common and industrial--a position now being held between Australia and Mexico.

STATISTICS ON AGRICULTURAL ENTERPRISES TOLD

New Delhi PATRIOT in English 30 Nov 80 p 4

[Text] There are about 10.46 million agricultural enterprises in India at present, according to the provisional results of the 1980 economic census released by the Central Statistical Organisation.

Maharashtra reported the largest number of enterprises--19.54 lakh. The number of persons working in the enterprises in States ranged from 0.30 lakh to 67.91 lakh. The census for agricultural enterprises does not cover crop production and plantations.

The census seeks to remove the data gaps in the unorganised sectors of non-agricultural economy covering unregistered manufacturing, trade transport and services.

Information collected includes the location and description of the activity of the enterprise, nature of operations, type of ownership, social status of the owner, power or fuel used for the activity and the total number employed or hired.

Information on generation of employment opportunities in self-employed enterprises was collected for the first time on a census basis.

The non-agricultural enterprises form 88.6 per cent of all the enterprises in Karnataka and Punjab. In the rural areas of these States, about 57 to 92 per cent of the agricultural enterprises are carried out without employing any hired persons.

PLANNING BODY SETS FOOD PRODUCTION TARGET

New Delhi PATRIOT in English 24 Nov 80 p 5

[Text] Foodgrains production should maintain a four per cent annual compound growth rate to attain the level of production envisaged during the Sixth Plan period, says UNI.

The steering group of the Planning Commission has proposed a target of 153.6 million tonnes of foodgrains in 1984-85, the terminal year of the Plan, over the base level production during 1979-80.

After a record production of 131.7 million tonnes in 1978-79 last year's production is expected to be between 110 and 115 million tonnes.

The 1980-81 foodgrains production is targeted at 135 million tonnes. On the basis of the tentative kharif production at 80 million tonnes the target is expected to be achieved.

To achieve the proposed Sixth Plan target the steering group has suggested an increase in fertiliser consumption from 5.27 million tonnes at the base level during 1979-80 to 9.65 million tonnes in 1984-85.

The area under high yielding varieties of grains is also to be raised from 35.2 million hectares to 56 million hectares.

In the terminal year of the Sixth Plan the cropped area will be 181 million hectares compared to 171 million hectares in 1979-80 and irrigated area 67.6 million hectares against 53.8 million hectares.

The area to be brought under soil conservation will be 30.5 million hectares compared to 23.4 million hectares in 1979-80.

The strategy to attain the target also envisages adequate plant production measures to reduce crop losses, promotion of research and its application and farmers' training and education in improved technology through reorganised and strengthened extension network.

The infrastructure of credit marketing and distribution system for the supply of inputs and services is also proposed to be developed.

The targets of foodgrains production and inputs will be firmed up after the Planning Commission considers them and the National Development Council approves the Sixth Plan.

ALL-INDIA CIVIL LIBERTIES CONFERENCE MEETS

Bombay THE TIMES OF INDIA in English 24 Nov 80 p 9

[Text] New Delhi, November 23. A section of the audience at the all-India conference on civil liberties at the Aiwan-e-Ghalib auditorium yesterday "denied" Mr S. S. Mahapatra, general secretary AICC(I), the liberty to complete his speech.

At the inaugural session, they heckled him and said that he had no right to speak at the conference since his party was responsible for "curtailing" civil liberties.

Even after Mr Mahapatra had declared that the Congress(I) was "dedicated to civil liberties for social progress and change" a group of agitated young men and women in the hall kept shouting anti-Congress(I) slogans.

After Mr V. M. Tarkunde, one of the sponsors of the conference, and some others on behalf of the organisers failed to pacify the hecklers, Mr Mahapatra cut short his speech. The dissenters kept on shouting "Congress hai, hai" and "NSO wapas lo," as the AICC (I) general secretary was speaking amidst interruptions.

This was followed by some exchanges between two sections of the audience--one wanting liberty of speech for all speakers and the other asking the speakers first to announce unqualified support for civil liberties. The organisers appealed to the audience to remain calm.

Mr Tarkunde agreed to a suggestion from some members of the audience that party leaders addressing the conference should refrain from "propagating" their party's ideology or viewpoint.

After this suggestion was accepted, proceedings of the conference went on smoothly, though there were a few interruptions when Mr E. M. S. Namboodiripad and Mr Bhupesh Gupta were speaking.

Among those who spoke were Mr Charan Singh, Mr Y. B. Chavan, Mr Ram Jethmalani, Mr Shahabuddin, Mr. H. N. Bahuguna, Mrs Nayantara Sehgal and Mr Soli Sorabjee.

All the political leaders who spoke expressed their support for preservation of civil liberties and the fight against their curtailment. They promised to lend their party's wholehearted cooperation to any all-India organisation which

might be formed to "safeguard civil liberties in the country now and in the future."

The formation of such an organisation is the main objective of the two-day conference on civil liberties.

Mr. Charan Singh said that it was "futile" to talk about civil liberties in a country where millions of people were living below the poverty line. Indians by nature and temperament were "submissive" and had always respected and obeyed authority. He wanted the "individual's freedom and rights" concept to be explained to the masses.

Mr. Y. B. Chavan said that the basic problem faced by the country today was that of "socio-economic transformation." He welcomed the idea of having an all-India body for safeguarding civil liberties and rights.

Mr. Bhupesh Gupta said the curtailment of civil rights should be a "challenge to one and all" and should be opposed. It was necessary to lend support to any movement for safeguarding civil rights.

Mr. Ram Jethmalani said preventive detention measures were a "blot on the face of the Indian political system."

Mr. H. N. Bahuguna said we must all cherish civil liberties and rights. It was good that an all-India organisation was being formed which would be vigilant and fight for any curbs or curtailment of these basic democratic rights.

Mr. Tarkunde said that the objective of forming an all-India organisation for safeguarding civil liberties was to make the masses aware of their democratic rights.

Such an organisation, he said, would be free from political pressure or influence" and would always work for preservation of civil liberties.

It was also proposed to form "free legal aid committees" in all states which would render help to individuals for the defence of civil liberties.

CENSUS OFFICE REPORTS RISE IN URBAN POPULATION

Madras THE HINDU in English 24 Nov 80 p 16

[Text] New Delhi, Nov 23. The urban population in India during the 1961-71 decade went up by 38.23 per cent, from 78.94 millions in 1961 to 109.11 million, according to the "Census Atlas" brought out by the Census Commissioner.

The urban population in 1971 was spread over in 3,126 towns as compared to 2,700 in 1961.

The increase in urban population was recorded in 236 out of 338 districts. The two districts where it decreased were one each in Andhra Pradesh and Punjab.

The urban population of Nalgonda district (A.P.) fell from 146,576 in 1961 to 121,689 in 1971 showing a decrease of 16.98 per cent.

Ropar district (Punjab) showed a small decrease (9.28 per cent) in 1971 as compared to 1961.

Except for Dadra and Nagar Haveli and Luccadive, Minicoy and Aminidivi islands, all States and Union Territories recorded substantial increase in the urban population during the decade

Highest Increase in Maharashtra

State-wise, Maharashtra recorded the highest increase (4.5 millions), followed by Tamil Nadu (3.5 millions). The increase was between two and three millions each in Andhra pradesh, Gujarat, Madhya Pradesh, Uttar Pradesh and West Bengal. [as printed]

Out of the 357 geographical units, were entirely rural, both in 1961 and 1971, and eight were urban in 1971 but were rural in 1961. [as printed]

The former are found in Gujarat (one), Himachal Pradesh (two), Manipur (three), Nagaland (one) and Arunachal pradesh (two) besides Dadra and Ngar Haveli and Laccadive, Minicoy and Aminidivi islands. In 1971, there were 21 districts where the increase in the urban population was in the range of 100 per cent and above.

Among these were Kohima (161.34), and Mokokchung (182.93) in Nagaland, Baudh Khondmals (221.42) in Orissa, Sikkim (187.21) and Pondicherry Town (199.34).

There were 12 districts where the increase was between 80 and 99.99 per cent. In 27 districts the increase was between 60 and 79.99 per cent in 96 districts between 40 and 49.99 per cent, in 150 districts between 20 and 39.99 per cent, and in 30 districts below 20 per cent.

Eight urban areas came up in 1971 which were entirely rural in 1961. The national average growth rate of urban population was 38.12 per cent. Nine States came below it and 13 States and six Union Territories above this level.

Almost all Union Territories showed high variations: Delhi (54.57), Andaman and Nicobar Islands (86.27), Pondicherry (122.80), Goa, Daman and Diu (125.28), Chandigarh (134.67) and Mizoram (164.85).

There were 163 districts above and 173 below the national average. Two showed loss of urban population, 11 entirely rural and eight which were rural in 1961 became urban in 1971.

As urban birth rates were lower than rural birth rates, internal migration and rapid industrialisation had accelerated the growth of urban population in general, according to the Census Commissioner.--PTI

COMMITTEE STUDIES BACKLOG OF COURT CASES

Madras THE HINDU in English 24 Nov 80 p 1

[Text]

NEW DELHI, Nov. 23.

To expedite disposal of cases pending in the Supreme Court and High Courts, the Union Government is considering measures including the appointment of ad hoc judges exclusively to deal with such cases.

Another proposal before the Government is the appointment of a committee on judicial reforms.

As on December 31 last, a total of 7,223 cases in the Supreme Court and 1,79,450 cases in various High Courts were pending for more than three years.

Of the cases in the High Courts, 86,073 have been pending for more than five years and another 14,970 for more than a decade.

On the other hand, the Government is yet to fill up vacancies in the Supreme Court and High Courts. As on October 20, there were five vacancies of judges in the Supreme Court and five vacancies of Chief Justices in High Courts. Besides, 44 vacancies of judges were to be filled in different High Courts.

The Allahabad High Court tops the list with 37,705 cases pending for more than three years. Of them, 2,131 have been pending for more than a decade.

Calcutta and Bombay High Courts have 33,310 and 21,868 cases pending for more than three years. The Madras High Court has only 4,219 cases, while Karnataka has 12,180 cases pending for over three years.

The pendency (for over three years) in other courts is: Andhra Pradesh (752), Delhi (12,301), Gauhati (2,649), Gujarat (2,320), Himachal Pradesh (1,228), Jammu and Kashmir (832), Kerala (2,308), Madhya Pradesh (11,337), Orissa (1,235), Patna (10,116), Punjab and Haryana (15,731) and Rajasthan (9,251). In the Sikkim High Court there is no pending case.

The Government had made various suggestions in the past to the Supreme Court and the recommendations received from the Chief Justice along with the 79th report of the Law Commission are under examination by an inter-departmental committee of officers.

The report of this committee is expected to be received shortly.

To facilitate quicker disposal of cases the Chief Justice of India and judges of the Supreme Court had suggested in 1978 that all criminal matters barring appeals involving sentence for a term of 10 years or more and appeals against acquittal in respect of offences punishable with death or imprisonment for life or sentence of 10 years or more, should be heard by a single judge.

They had also suggested that every High Court should have at least two ad hoc judges until the arrears are cleared. For these posts High Court judges known for quick disposal could be appointed immediately after their retirement.

WRITER EXAMINES SITUATION OF INDIANS IN IRAQ

Bombay THE TIMES OF INDIA in English 22 Nov 80 pp 1, 12

[Article by J. D. Singh: "Indian Workers in a Dilemma"]

[Text] Baghdad: A casual conversation with a youth from New Delhi's Lodi Colony at the consulate-general's office in Basra brought out the dilemma facing the Indian workers in Iraq today.

The visitor, in his early twenties, has been working with an Iraqi organisation for the past three months. As soon as the war broke out in September, he started receiving urgent messages from his mother in New Delhi to return home. One could see from his face that he has been crying in private.

Asked if he felt insecure, he replied: "not really." He lives with a group of Indian workers in a rented house and does not see any specific danger to his life. "But, you see," he said, "My mother keeps writing to me to return to India. She thinks bombs are falling all over the place. What do I tell her?"

Since he has been with his employers for only a short period, he is not entitled to home leave or a free air ticket. If he resigns his job he will perhaps spoil his prospects in Iraq altogether. Besides, he has yet to recoup through savings the agent's commission of Rs 4,000 he paid to secure the job.

If he remains at his post, he will be able to save some money to send back home. The Iraqi authorities allow repatriation of 75 percent of the wages. And there are instances of Indian workers claiming the full quota and remitting up to Rs 2,500 a month.

Safety Precautions

As for the threat of death, never once during our ten days in Iraq did we find ourselves to be in any particular danger--not even in Khorramshahr on the "live" Abadan war frontier within range of the snipers' gun from across the Karun river. In the early phase of the war, the situation was somewhat different.

Of the 15 Indians killed in bombing raids in Iraq, 11 died on a housing project when they were being evacuated in a truck. One Indian expert was killed in a raid on the Basra petro-chemical complex. A seaman was killed in a direct hit

on a foreign-owned vessel in Basra port while two Indians died in a raid on a cement factory in Mosul town.

Three Indian ships caught in Basra port are described as safe, but one vessel in Khorramshahr was badly damaged. Thirty-three of its crew escaped to safety but one member is missing and is thought to have gone to Iran. Since this last incident on October 4, no Indian casualty has been reported in Iraq, partly because safety precautions have been tightened.

It is worth mentioning that all the 15 Indian fatalities occurred among workers employed by Iraqi or foreign organisations. No casualty has been reported among workers employed by 44 Indian companies working on 56 projects in different parts of Iraq.

The number of Indian workers in Iraqi, foreign and Indian companies being equal, the Indian companies can be said to have been lucky. Indeed a joke going the rounds in Baghdad relates to an Iranian fighter pilot who came low over a project under construction but turned tail on seeing a "friendly" turbaned Sikh there.

With the exception of Engineering Projects India Ltd. all Indian companies in Iraq have stayed put. Even EPI, the largest Indian operator in that country, has modified its earlier unfortunate decision to evacuate all its workers.

It is now agreed to keep four of its six projects going. The original decision would, it is said, have caused irreparable damage to future business prospects of Indian companies in Iraq.

The panic exodus of Indian workers, it is interesting to note, was prompted by the decision of a Japanese company to suspend its operations and send back home all its foreign employees. The Indian employees took advantage of the company's offer of free passage home so that they could be with their families on the occasion of the Divali festival.

Of nearly 26,000 Indian workers and experts in Iraq, about 10,000 have left. Most Indian companies claim that a majority of their workers are still at their jobs. At the NPCC canal project at Amara on the Baghdad-Basra Highway, for instance, only one worker quit his job. All others decided to stay.

The Iraqi authorities, it need hardly be mentioned, could not have been happy about a mass exodus of Indian workers in their hour of need. They are anxious to complete the projects in hand so that the fruits of economic development can be shared by every Iraqi citizen.

The Indian diplomatic missions in Iraq and Kuwait have been the target of much criticism by some of the workers who fled. In the initial stages of the war, it appears, there might have been some lapses. The missions had been caught unawares. But they soon geared themselves up to meet the challenge and we found their staff on both sides of the Iraqi-Kuwaiti border helpful and alert.

A member of the consulate-general in Basra is on hand at the Safwan checkpost to help Indian workers. At the Abdala border on the Kuwaiti side, a whole team from the mission in Kuwait facilitate the customs and immigration formalities for the Indian workers. Free breakfast and lunch and free transport to take them to Kuwaiti airport are provided for anyone in need.

One of the main worries of the Indians in Iraq is the almost complete suspension of mail from back home. Some letters do reach them from the Delhi region after more than a month. But no letters have come lately from other parts of India. Anxious to know the well-being of relatives and friends, the Indian workers we met made a special plea to us to ask the post and telegraph authorities to make arrangements for expeditious despatch of mail.

Some Indian workers also complain of an acute shortage of 'dals' and non-availability of carrom boards, which help them pass their spare time. Certain varieties of pulses are just not available in the Iraqi markets and since an average Indian meal is incomplete without 'dal,' the workers grumble.

On the larger canvas of Indo-Iraqi relations, it is only proper to recognise that in an emotional situation of the kind in which the Iraqis find themselves today, they expect firm and solid support from their friends. They have little use of neutrality.

However, the Iraqi leadership has shown an understanding of India's delicate position on a sensitive matter.

Unfortunately, Algeria's inclusion in the special non-aligned peace group has become a matter of sharp controversy. Iraq has opposed Algeria's membership on the ground that an Arab country must not intervene in matters affecting another Arab country. Algeria's present assignment of looking after Iran's interests in the U.S. since the rupture of relations between Washington and Teheran is understood to be another influencing factor.

Until the war put it in an awkward situation, India's relations with Iraq had shown a remarkably upward swing. Iraq replaced Iran as the leading oil supplier. It gave India a long-term, low-interest credit in partial compensation for last year's hike in OPEC oil prices. India has emerged as the largest importer of non-oil products, like dates, urea and sulphur, from Iraq.

Indian imports from Iraq registered a substantial increase from Rs 332 crores in 1977-78 to Rs 583 crores in 1978-79. However, its exports fell marginally from Rs 51 crores to Rs 47 crores.

Indian contracts under execution in Iraq are worth Rs 1,300 crores and more new contracts are being awarded to Indian companies.

One of the most popular exports from India are Hindi films, which are shown in Iraq with Arabic sub-titles. Quite naturally, the most popular Indian in Iraq, after Mrs Indira Gandhi, is Amitabh Bacchan one of whose films is currently showing in cinema houses there.

SILIGURI BECOMING CENTER FOR SMUGGLERS

Bombay THE TIMES OF INDIA in English 24 Nov 80 p 7

[Text]

SILIGURI, November 23.

NORTH Bengal's borders with Nepal and Bangladesh are now buzzing with smuggling activities while Siliguri, the second industrially-developed town of West Bengal, is fast returning to its old status as a "dumping centre" of smuggled goods in eastern India.

This town has once again become a "smugglers' haven" with a large number of "kingpin smugglers" back in business after a lapse of about six months, according to the customs authorities.

The popularly known smugglers' market — "Hong Kong market" — here in the heart of the town with nearly 100 tiny shops, has once again become a place of "visit" to the tourists. Whoever comes to Darjeeling or Gangtok makes it a "must" to visit this "shrine" to purchase all sorts of electronic goods, like two-in-one (radio and cassette-tape recorders) and cassette tapes, suit-length pieces, watches, typewriters, hot ovens, cameras and the like.

An alarming feature of the recent spurt in the smuggling activities is the reported involvement of a number of local businessmen, including tea-planters who generally go across the border into Nepal for weekly marketing in Dhulabari and Pashupati. The tiny villages which had hardly any population ten years ago, have now become the most thickly-populated places, mainly dominated by businessmen from north Bengal.

"Smugglers in this region are skilful and hard to tackle with. Once get a lead of 20 metres, they cannot be caught," the police officials said. Sometimes, contraband packets were kept at appointed places and the "contact" on this side kept a watch from his "hide". The contacts picked up the packets at night. At the riverine borders, smugglers posed as fisherman, they said.

According to informed sources, the refusal by the West Bengal government to detain the smugglers under the conservation of foreign exchange and the prevention of smuggling activities act (COFEPOSA) has posed a peculiar situation for the customs authorities in the state.

POLICE SET-UP

Smuggling in the Siliguri area recorded a sharp fall after a crackdown on the smugglers by the local authorities during the early part of the year. The new police set-up, with a strong superintendent of police and the district collector at the helms of the affairs led to large seizures of third country goods worth several lakhs of rupees in February.

On the other hand, the Border Security Force (BSF) personnel in West Dinajpur, Cooch-Behar and Malda feel that "smuggling across the border with Bangladesh cannot be stopped. The shortage of equipment and some humane considerations impeded the BSF's operations," they said.

In the north Bengal-Bangladesh Border, an unwritten barter system has been enforced by the smugglers. One kg. of sugar can be freely exchanged with 40 kg. of raw jute smuggled from Bangladesh, while one kg. of the famous "hilsa" fish in any weekly market in border villages can easily be had against four kg. of salt.

"ERRAND BOYS"

"Who are these smugglers?" According to the officials, "they are poor, unemployed youths who try their hands at smuggling to earn a livelihood". "But they are mere 'errand boys' for the 'big fish behind the scene'," the officials said. The arrest of a smuggler seldom led to the arrest of a ring leader.

The state government's refusal to detain smugglers under COFEPOSA was the main cause of the present spurt in smuggling in the region, the officials said.

The sources confirmed that certain businessmen in the Sevoke Road, Khalpara and Hill Cart Road areas in Siliguri were importing consumer and small engineering items and motor parts from Hong Kong, Japan and South Korea across the Nepal border into this region for onward despatch to any destination within the country. The recent seizure of opium from a Calcutta-bound truck at Dinhata in Cooch-Behar has led the customs officials to strengthen their vigil on all long-distance carriers from Siliguri and Cooch-Behar.

PALESTINE SOLIDARITY DAY OBSERVED IN DELHI

New Delhi PATRIOT in English 30 Nov 80 p 10

[Text]

THERE might be no victor in the fight between Iraq and Iran and because of this "unfortunate schism", the Palistine movement "is today facing its gravest crisis ever", Secretary to the Ministry of Foreign Affairs R. Bhandari said on Saturday.

The splintering of the Arab camp could gladen only 'one heart', that of Israel. At this critical juncture, therefore, India reaffirms her support for the Palestinian people Mr Bhandari declared.

He was speaking at a function on the International Day for Solidarity with the Palestinian people at the India International Centre.

"Will the growing complexities of the situation in West Asia sap optimism for the future. We are confident that a response of pessimism and dejection is not called for, for that could bring to an end everything that we have been struggling for"? the Foreign Ministry official said.

What India wished to tell "its Palestinian friends is this: despite the odds, the dangers and the pitfalls that lie ahead, they have to march on. And in this forward march they can count India amongst the front-ranking supporters and well wishers', Mr Bhandari said.

India's friendship for the Palestinian people, he said, was not based on any 'cheap political or economic consideration.'

In suporting the Palestinian struggle, India stood true to the principles and ideals which had been the vital part of the country's ethos Mr Bhandari said.

Dr Agwani of Jawaharlal Nehru University said that the British had created Israel as an integral part of their imperialist strategy. This so-called national Jews' home was later transformed into a sub-division of the US for its political, economic and military interests.

Chief representative of the Arab League Mission in India said that the day was not very far when the US would have to stop ignoring the PLO.

Among others who spoke were director of the India International Centre U S Bajpai and PLO leader Fayeal Aouidha.

BRIEFS

UTTAR-PRADESH CHIEF MINISTER--Lucknow, November 21--The chief minister, Mr Vishwanath Pratap Singh, was today elected to the vidhan paraishad, defeating his lone rival Mr Satya Prakash Malaviya (Lok Dal), former transport minister, by 330 votes to 69. Mr V. P. Singh secured more votes than his party commanded in the house, setting at rest speculation about internal dissensions in the Congress (I) legislature party. The by-election had been caused by the resignation of the Congress (I) member from Kanpur, Mr S. K. Bajpai. Mr Bajpai took this step to enable Mr V. P. Singh to enter the upper house before December 9, and thus meet the constitutional stipulation that any person appointed chief minister should become a member of either house of the legislature within six months. TRADE TALKS WITH ROK--New Delhi, November 21 (PTI)--India and South Korea today agreed that considerable scope existed for their joint ventures in the third countries and for the expansion of bilateral economic cooperation and trade. This was stated by a spokesman of the external affairs ministry after a 40-minute meeting between the South Korean president's special envoy, Mr Choi Kwang Soo and the external affairs minister, Mr P. V. Narasimha Rao, here today. Mr Choi, who is a cabinet minister, met the prime minister, Mrs Indira Gandhi, and delivered a special message from President Chun Doo Hwan. He conveyed an invitation from Mr Chun for Mrs Gandhi to visit South Korea. The envoy also called on the president, Mr N. Sanjiva Reddy. [Text] [Bombay THE TIMES OF INDIA in English 22 Nov 80 p 9]

EMPLOYMENT STATISTICS--Bombay, November 21--There were 15 million educated people on the live registers of employment exchanges in the country and this was 20 per cent more than the population of Australia, according to Dr M. S. Swaminathan, member of the planning commission. He was speaking on "the challenge of unemployment" under the auspices of the Rotary Club of Bombay Central today. Dr Swaminathan clarified that not all the people registered were unemployed since a number of them were only on the look-out for better prospects. Nevertheless, the problem remained a colossal one and it would require more than official cooperation to tackle it. In this context, he appealed to voluntary bodies like the Rotary Clubs to make institutional arrangements to help the unemployed. Dr Swaminathan stressed the need for undertaking district-level surveys of the manpower potential and organising employment schemes based on local resources. Self-employment was one method of tackling the problem. But, the decentralised production should be matched by centralised services like marketing, he added.

He called for the involvement of all the sections of the people, including the academics, in formulating and implementing such programmes. [Text] [Bombay THE TIMES OF INDIA in English 22 Nov 80 p 15]

SOVIET CONSTRUCTION TEAM--Moscow, Nov. 21--A team of Soviet experts will reach Calcutta early next year where the first Indian underground railway is being built with Soviet assistance, reports UNI quoting TASS. The Soviet experts will train Indian workers to operate tunnel shields and concrete laying machines manufactured at a Moscow plant. The equipment will allow them to build 40 metres of tunnel a month on a large part of the complicated stretch of the 16 kilometer-long line passing under the densely populated areas of the city. Plans have been made to build five lines in Calcutta. By 1986, they will make up a single transportation network. Stations and tunnels have been designed by Indian engineers. [Text] [Calcutta THE STATESMAN in English 22 Nov 80 p 5]

WHOLESALE PRICE INDEX--New Delhi, Nov. 21--The fall in the wholesale price index towards the third week of October was evidently no flash in the pan. The index dropped again in the week ended November 8, the third successive week it has done so. The drop is marked enough to bring the wholesale index down by an impressive 3.3% in three weeks, bringing the inflation rate in the past month down to 2.9%, with the annual rate now running below 13%. The wholesale index itself is behaving erratically since, in the same week that it dropped, the "food articles" group rose by 0.9% because of the higher prices of fish, barley, eggs, milk and many other items, although some pulses came down. The "non-food articles" group, however, declined by 0.3%. Among manufactured products, the subgroup "food products" came down sharply by 4.5% because of the lower prices of gur, gingelly oil and groundnut oil. [Excerpts] [Calcutta THE STATESMAN in English 22 Nov 80 p 9]

LOCATION OF INDUSTRIES--New Delhi, November 22--The government has relaxed its policy on the location of industries in the interest of optimum utilisation of installed capacities. The relaxation will also cover the units which qualify for exemption from licensing under the industries (development and regulation) act but are required to obtain industrial licences because of the present locational policy, which prohibits establishment of industries in embargoed areas. The locational policy will not be operative with regard to diversification schemes. Cent per cent export-oriented units could also be set up in the embargoed areas after each proposal is considered and cleared on merit. The government has issued detailed guidelines for industries that can benefit from the relaxation provisions. [Text] [Bombay THE TIMES OF INDIA in English 23 Nov 80 p 7]

MADHYA PRADESH LAND ARMY--Bhopal, November 22--The chief minister, Mr Arjun Singh, has announced that work on establishment of a "land army" will begin in Madhya Pradesh on December 14. Initially, 25,000 people will be enrolled, according to a press note issued by the government yesterday. Ex-servicemen, youths and people with a "progressive outlook" will be included. The "land army" will take up development work in rural areas and help promote national unity, according to Mr Arjun Singh. [Text] [Bombay THE TIMES OF INDIA in English 23 Nov 80 p 7]

ASSAM SEPARATISTS--Shillong, November 21--Leaders of various political parties and organisations of two hill districts of Karbi Anglong and North Cachar Hills of Assam, at a meeting here recently demanded the creation of a separate state comprising these two districts. The meeting adopted a resolution which said that the two districts, which formed part of Assam, had suffered in various ways. It was also pointed out that the current agitation in Assam on the foreigners issue did in no way serve the interests of the two districts and yet their development was allowed to be hampered by this agitation. [Text] [Bombay THE TIMES OF INDIA in English 23 Nov 80 p 7]

INDO-SOVIET HANDICRAFTS PACT—India and the USSR on Saturday signed an agreement for exports from India of handicraft goods worth Rs 20 crore during the current financial year. A separate agreement on Soviet-Indian working programme for cooperation in food processing and canning was also signed. The first agreement was signed between representatives of the Soviet foreign trade organisation 'Novoexport' and Indian firms exporting goods under the aegis of the Handicrafts and Handlooms Export Corporation of India. Mr V. Lebedov represented Novoexport and Mr M. N. Mishra, Chairman of the HHEC represented the Indian side. The second agreement was signed, on behalf of the Soviet Union, by A. T. Makarov, Deputy Minister of Food Industry of the USSR and on the Indian side by B. C. Gangopadhyay, Secretary, Department of Food, India's Ministry of Agriculture. [Text] [New Delhi PATRIOT in English 23 Nov 80 p 10]

'GREEN REVOLUTION' UNSUCCESSFUL--New Delhi, November 23 (UNI)--The green revolution has, by and large, failed to improve the lot of the landless agricultural workers in the country. In recent years, there has been some controversy over the question whether or not the green revolution has been instrumental in pushing up agricultural wages. An International Labour Organisation document on the problem of rural workers quotes a study of 15 districts in Punjab and Haryana which concluded that there was no increase. On the contrary, it records that there was a "slight decline" in real wages between 1960-61 and 1967-68, despite a 60 per cent increase in agricultural production in that area over the same period. Data from the national sample survey for Punjab, Haryana, Delhi and Himachal Pradesh confirmed this finding. Later studies, particularly in Punjab, have demonstrated that there has been a significant increase in real wages as a consequence of the use of imported technology. The ILO document, however, says that none of these studies is conclusive, since the results are very sensitive to the wage series selected, the nature of the cost-of-living index used to convert nominal wages into real wages and the choice of the base year. [Text] [Bombay THE TIMES OF INDIA in English 24 Nov 80 p 7]

CIVIL LIBERTIES PANEL--Nov. 23--Do the ends justify the means? This old question generated a lot of heat on Sunday, the concluding day of the two-day convention on civil liberties held in New Delhi. An all-India body for civil liberties was formed on Sunday with Mr V. M. Tarkunde, eminent jurist, as president and Mr Arun Shourie, well-known journalist, as general secretary. This body would try to bring together all those committed to civil liberties irrespective of their political ideology or differences with regard to the socio-economic system best suited for the country. The trouble arose when it was being discussed as to how the people should defend civil liberties when

concerted attacks were being made on them by the State organs of power. A section of people at the convention insisted that the "means" of fighting injustice and the attack on civil liberties could not always be peaceful. [Text] [Calcutta THE STATESMAN in English 24 Nov 80 p 9]

SECURITY ORDINANCE CHALLENGED--New Delhi, Nov 24--The Supreme Court today admitted a writ petition filed by Mr Than Singh Tyagi, a trade union leader, challenging the constitutional validity of the National Security Ordinance. The court ordered the Union Government to show cause why the detention order passed by the district magistrate, Gaziabad, should not be quashed. Mr R. K. Garg, counsel for the petitioner, contended under Article 123 of the Constitution that the President must be satisfied with the circumstances that existed before promulgation of an Ordinance. Since there existed no special circumstances to issue the Ordinance, the President should not have used his power, the counsel added. Mr Garg said that the grounds mentioned in the detention order "That in order to prevent Mr Tyagi from acting against the public order" is too vague and it was in fact an order of detention against a member of the Communist Party because he differed from the views of the ruling party. The petition was heard by a Bench comprising Mr Justice S. Murtaza Fazal Ali and Mr Justice D. A. Desai. [Text] [Calcutta THE STATESMAN in English 25 Nov 80 p 16]

RECORD OIL TURNOVER-- Ahmedabad, Nov 11.--The Indian Oil Corporation, a public sector undertaking, had a record turnover of Rs 4,476 crores during 1979-80, reports UNI. According to an official release, the turnover had increased by one-fourth over the previous year's Rs 3,564 crores. Gujarat, which is the only shareholder of the IOC besides the Centre, received Rs 1.2 lakhs as dividend on its share. The dividend was yesterday handed over to the Gujarat Governor, Mrs Sharda Mukerjee, by Mr D.N. Sharma, general manager of the corporation's Western region. [Text] [Calcutta THE STATESMAN in English 13 Nov 80 p 11]

MARXIST POLITICIANS ARRESTED--Dhanbad, Nov. 12.--Mr Arun Kumar Roy, M.P. (Marxist Coordination Committee) and Mr Kripashankar Chatterjee, MLA of the same party, were arrested here yesterday under the National Security Ordinance, police said reports PTI. [Text] [Calcutta THE STATESMAN in English 13 Nov 80 p 11]

TRADERS FORM FEDERATION--The formation of a Federation of West Bengal Trade Associations was formally announced at a Press conference in Calcutta on Wednesday. Its president, Mr K.L. Dhandhania, said the main objective was to bring about 500,000 traders under an apex body and maintain close and constant dialogue with the Central and the State Governments. He said that there were about 500 trade associations--big and small--throughout West Bengal. The role of the distributive trade had not been properly appreciated so far and its problems often went unattended. The total trade turnover was of the order of Rs 5,000 crores in West Bengal. Thus, the federation would play a significant role in future to safeguard the interest of the trading community and the consumers, he added. Referring to the high prices of cement on the black market, a spokesman of the West Bengal Cement Dealers' Association, who was present at the conference alleged that bulk consumers, who were lifting cement against permits, often diverted their cement which ultimately found their way to black market. Traders in general should not blamed for this, he claimed. [Text] [Calcutta THE STATESMAN in English 13 Nov 80 p 16]

NAXALITES ACTIVE IN 11 STATES--New Deli, Dec. 5: Naxalite extremists are active in 11 Indian states, and the Union Territory of Delhi, Parliament was told on Wednesday. Mr. Yogendra Makwana, Minister of State for Home Affairs, said in a written reply that state Governments were keeping a close watch on the Naxalite activities and action was taken against those breaking the law. The Naxalites, named after a peasant uprising in Naxalbari village in West Bengal state in 1967, have stepped up activities in recent months in parts of eastern and southern India in armed clashes with police and landlords. Mr. Makwana said the Naxalites were active in Assam, Tamil Nadu, Maharashtra, Delhi Union Territory, Andhra Pradesh, Bihar, Gujarat, Kerala, Punjab, Rajasthan, Tripura and West Bengal. He did not give details of the scope of activity in the different areas.--Reuter. [Text] [Karachi MORNING NEWS in English 6 Dec 80 p 3]

AMBASSADOR TO NORWAY--New Delhi, Nov. 24. Mr. Raj Kumar Dorendra Singh, Chief Minister of Manipur, has been appointed Ambassador of India to Norway. Mr. Singh succeeds Mr. George Gilbert Swell and is expected to take up his assignment shortly, it was officially announced here today.--UNI. [Text] [Madras THE HINDU in English 25 Nov 80 p 11]

CENSUS RELIGIOUS QUESTIONS--New Delhi. The 1981 census will record the religions practised in the country and the languages spoken. There is no cause for apprehension that the enumeration next February will not record this data, says a Government release. The President of Uttar Pradesh Muslim Majlis said in Lucknow last week that the individual slips private by census authorities have no columns to record this data and alleged that the Government was out to show that there are no religious and linguistic minorities in the country. Specimen copies of the individual slips--which have already been printed in sufficient numbers for the February census--show that column six is for "mother tongue", column seven for "two other languages known", column eight for "religion", column nine for Scheduled castes and scheduled tribes and column 10 for the name of the caste or tribe. Nobody will, however, be compelled to disclose his religion. The slip will record "not known" in column eight if an individual declines to disclose his religion.--PTI. [Text] [Madras THE HINDU in English 25 Nov 80 p 22]

FERNANDES, OTHERS ACQUITTED--Nasik, November 24-- Mr George Fernandes, Lok Dal MP, who was arrested on November 15 on the charge of breach of prohibitory orders, was today acquitted by the judicial magistrate here. The magistrate said section 37(3) of the Bombay police act had ~~not been duly~~ promulgated and announcement of the prohibitory orders appeared in loose form in newspapers. It was not carried in an advertisement form and the general public was not aware of it. He was, therefore, acquitting Mr Fernandes and 25 others. [Text] [Bombay THE TIMES OF INDIA in English 25 Nov 80 p 1]

MINISTERS' DUTIES--New Delhi, November 24 (UNI)--Mr Baleswar Ram and Mr R. V. Swaminathan have been appointed ministers of state for rural reconstruction, a communique from Rashtrapati Bhavan said tonight. This is in addition to their responsibilities as ministers of state in the ministry of agriculture, the deputy agriculture minister, Miss Kamala Kumari, will also be deputy minister for rural reconstruction. The minister of state for education, Mrs Shiela Kaul, will also be minister of state for social welfare. [Text] [Bombay THE TIMES OF INDIA in English 25 Nov 80 p 13]

ENVOY TO ANGOLA--Mr Ravindra Tandon, high commissioner of India to Zambia, has been concurrently accredited as the first ambassador of India to Angola with residence in Lusaka. [Text] [Bombay THE TIMES OF INDIA in English 25 Nov 80 p 13]

LADAKHIS DEMAND AUTONOMY--New Delhi, Dec. 11: People of Ladakh district in Indian held Kashmir, on the border with Tibet, have reportedly started a mass agitation demanding "regional autonomy." Indian Parliament Deputy for the region P. Namgyal, told reporters here today that the autonomy demanded was "to be within the framework of the Indian and the Kashmiri constitutions." Indian held Kashmir is the only constituent state having a constitution of its own, as a special case. Mr. Namgyal spoke of Ladakh being discriminated against by the Indian-held Kashmir state administration headed by National Conference party leader Sheikh Abdullah, in development measures.--AFP. PKI COMEBACK FEARED; AUTHORITIES CONTINUE SURVEILLANCE

Jakarta MERDEKA in Indonesian 22 Sep 80 p 1

[Article: "PKI Remnants Preparing for an Uprising Around 1982"]

[Text] Interior Minister Amir Machmud said there were strong indications that G30S/PKI (attempted 1965 coup and Indonesian Communist Party) detainees were busily communicating with one another and holding discussions for the purpose of reviving the forbidden PKI and eradicating the Islamic faith and the Pancasila (founding principles of the Indonesian state).

"They are showing a strong determination to stage an insurrection around the time of the general elections in 1982," said Amir Machmud at a working meeting with Commission II of the DPR (Indonesian parliament) on Saturday afternoon.

According to the interior minister, these communications and discussions among the remnants of G30S/PKI detainees were chiefly taking place in the area of Solo (Surakarta) and the Jakarta Special Capital District.

As for the adoption of countermeasures against the proscribed former political party, the forum on Saturday decided to uphold the standards of the Pancasila since it constituted a way of life adopted already by the people of Indonesia.

"If the PKI is victorious," said the interior minister, "Our red and white national flag need not be altered because what matters are those who stand behind that banner." [as published]

In addition to this, PKI remnants are of the opinion that each of their members and party cadre must convert to the Islamic faith, because in Indonesia 95 percent of the population is Muslim.

As concerns Marxism, according to Amir Machmud, the G30S/PKI remnants are of the opinion that they must conform to conditions in Indonesia that are in accordance with the facts of life.

It is said that this theory of Marxism is not Soviet or Chinese Marxism but is a syncretic merger of Marxist socialism and the teachings of Islam. "This merger," said Amir Machmud, "constitutes an Indonesian Marxism bearing the characteristics of the Pancasila."

Therefore, said the minister, the defense of the Pancasila constitutes a strategy and not just a tactic.

He said that this new Marxism seeks to encompass an economic, social and political Marxism or EPM (Economic, Political Marxism) within a society that has religious inclinations.

Such a strategic pattern, in the estimation of Amir Machmud, has as its purpose the revival of the PKI by riding on the coattails of Islam and the Pancasila because these ideals occupy a place in the hearts of the Indonesian people and furthermore have become a part of Indonesian culture.

"They are deviating from the meaning of the Pancasila so that the universal principles which are contained in it become an accommodation with Marxism in Indonesia," he added.

Profiting from the opportunities presented by the working meeting, Minister Amir Machmud showed two book-like brochures filled with propaganda towards all strata of Indonesian society. The two pocketbooks were entitled "Will of the People" and "PKI Response to KOPKAMTIB (Operational Command for the Restoration of Security and Order)." According to the minister, the contents of the books seek to incite Indonesian society and deprecate the New Order in the eyes of the people.

Subsequently, the interior minister linked some types of recent criminal incidents with fund-raising activities of certain political circles.

He said if such fund-raising attempts consisted of robberies accompanied by violence, they indicated an increased level of activity which was to be feared because it indicated the working methods of the PKI.

He said that it was not impossible for international subversion to be supporting activities in this country. And, he added, such activities could take place if various groups in society were in agreement with the aims of such subversive movements.

As for measures adopted by the government, the minister said the authorities were exercising close and continuous surveillance over former G30S/PKI detainees who had been released and returned to society.

For example, they were not permitted to occupy positions in the civil service, social-political organizations, social agencies etc.

In addition to this, all provincial governors and chiefs of local government were conducting indoctrination of the former detainees. Moreover, the governmental apparatus, from provincial to village level was dedicated to insuring a continuous check and control over ex-detainee activity.

Apart from this, the Department of the Interior was coordinating with other government agencies on matters of physical security, should they be required.

COUNTRY SEEN FACING THREAT FROM NORTH

Jakarta KOMPAS in Indonesian 16 Sep 80 p 12

[Article: "Indonesia Faces a Threat from the North"]

[Text] The general manager of the Ansor Youth Movement (Muslim Youth Organization), H. Chalid Mawardi, declared that our homeland is facing a threat from the north. Because of this, it has become necessary to reexamine the previous assumption that Indonesia will not be involved in an external war in the near future. This was the statement made by H. Chalid Mawardi, Sunday evening at the closing ceremony of the Ansor Youth Movement conference of East Java, held at the Pulosan Athletic Center, in Malang.

The reason for this declaration, said the chairman of Parliamentary Committee I (concerned with the Department of Defense & Security and the Department of Foreign Affairs), is that Indonesia and Vietnam have conducted negotiations on the continental shelf boundary between the two countries. Although such negotiations have been held back and forth at least five times between Jakarta and Hanoi, so far there has been no agreement. Furthermore, said Mawardi, when the Vietnamese foreign minister visited Indonesia in June, affirmed that Vietnam was not in agreement with the Indonesian concept on the Law of the Sea.

According to Chalid Mawardi, we Indonesians are in favor of a continental shelf boundary in accordance with the archipelagic concept, that is, 200 miles out at sea from the closest island. Vietnam, on the other hand, favors a continental shelf boundary measured from a point in the deepest part of the ocean and then carried in a line to the surface. If the Vietnamese method is accepted, the continental shelf boundary will be pushed further south so that Vietnam can lay claim to the Natuna Islands. "In all sincerity, this is no figment of the imagination," declared Chalid Mawardi, who is also a member of Parliamentary Committee I.

In addition to that, declared Chalid Mawardi, Vietnam has signed a treaty of cooperation with the Soviet Union and at the same time has given the USSR the right to conduct offshore exploratory drilling for oil in the region north of the Natuna Islands. In the meantime, Indonesia previously granted similar offshore oil drilling rights to CALTEX in the same area, including the vicinity of islands now claimed as Vietnamese territory.

Based on this agreement with the USSR, said Chalid Mawardi, Soviet ships coming down from Vladivostok and traveling south are now stopping at Cam Ranh Bay, Vietnam. "And if Vietnam uses force to press its demands, we are not in any position to respond in kind," he said.

The capabilities of our armed forces, said Chalid Mawardi, remain extremely limited. Therefore, in order to meet an attack from the north, all the people and the armed forces must rise up and work together. This is another reason that the Ansor Youth Movement welcomes the armed forces "Back-to-the-Village" program without hesitation. "Don't worry. The armed forces are working on constructive projects," he added. "According to Minister of Defense General Jusuf, the armed forces have no mission to compel the people to do anything, other than to participate in party politics."

In connection with this matter, the general manager of the Ansor Youth Movement expressed a hope that there would be understanding on the part of the armed forces if some Ansor members are still nursing ill feelings as a result of previous bitter experiences with the military establishment. Nevertheless, Mawardi declared his conviction that feelings of this type would be quickly dispelled as long as efforts at mutual understanding by both sides continue to be promoted.

The East Java Ansor Youth Movement from 12-14 September successfully chose a chief executive for the region of East Java for 1980-83, with the selection of General Chairman Anwar Idris. Among youth circles in East Java, Anwar Idris is already known as a leading figure in KAPPI (Indonesian Students and Youth Action Front) from the 1966 period. He played a major part in the movements launched by KAPPI and KAMI (Indonesian Student Action Wing) in East Java, especially Surabaya.

INDONESIA TO PAY FOR FINANCING OF DUMAI HYDROCRACKER PROJECT

Jakarta TEMPO in Indonesian 11 Oct 80 p 53

[Article: "Dumai - With Our Own Money"]

[Text] The surplus of Indonesian oil money is finally flowing to the hydrocracker project in Dumai. After many delays and being much spotlighted by the foreign press, it has been decided that the project which is now expected to cost $1 billion - 2 1/2 years ago it was only expected to cost $800 million - will be financed by the government itself.

Originally the refinery to process types of heavy oil was to be build as a joint venture in order not to disturb the national budget. The joint venture was to be between Pertamina [National Oil and Natural Gas Co] and a Spanish-Taiwanese consortium which would control 51 percent of the joint venture's stock.

This new decision is reported to have come from Coordinating Minister for Ekuin [Economics Finance and Industry] Widjojo Nitisastro and has the President's approval. So the famous Spanish petrochemical company Union Explosivos Rio Tinto (ERT) which was to have acted as a partner, has now withdrawn. Before with the guarantee of the Spanish government the ERT company was reported to have been ready to invest stock worth $290 million.

In addition to ERT there was the Cina Petroleum Company the Pertamina of Taiwan that failed to become a partner. Another company named New Hebrides Enterprises Ltd of Hong Kong was also prepared to invest $80 million but also experienced a similar fate. The Hong Kong company works in cooperation with the famous Liem Sioe Liong company in Indonesia.

"The project at Dumai has now been fully returned to the government's hands as were the projects at Cilacap and Balikpapan," said a source at Migas [oil and natural gas directorate]. As is known the government has financed the refinery expansion projects (kinds of hydrocrackers) at Cilacap and Balikpapan at a cost of more than $1.8 billion.

In those cases however not all of the partners had to withdraw. Two Spanish contractors, Centunion and Technicas Reunidas SA were retained. The two private Spanish companies as prospective contractors for Dumai caused some dissatisfaction both abroad and in Indonesia. This was recounted by the Indonesian ambassador to West Germany J. Muskita who doubted the private Spanish companies abilities.

The doubts about the Spanish companies abilities were based on the lack of experience by the Technicas Reunidas company. They have built three hydrocracker refineries. One in Argentina. But the capacity was only 20,000 barrels a day. The refinery in Dumai however is planned to process Low Sulphur Waxy Residue mostly into kerosene, solar and gasoline and will have a capacity of around 85,000 barrels a day.

However, after the Bank of Indonesia guaranteed the project at Dumai, it became clear that the two private Spanish companies will still be used. But with the note: "On the understanding they must be helped by U.S. contractors," said an official of the department of mining. Perhaps what is intended is that the main contractor at Cilacap will be the famous U.S. Fluor Inc and the Bechtel company at Balikpapan.

There is the argument that if the Indonesian government would hire the U.S. contractors directly then the costs would be lower. But a knowledgable source reports that the two private Spanish companies are being retained because they have tried very hard "and it doesn't feel right if they are just shoved aside."

The contract with Spain still hasn't been signed, even though they have indicated their desire to be contractors for a long time. For this the Spanish government will make available for the project export credit totaling $290 million with an interest rate of 7.6 percent for 10 years. However what can actually be provided by Spain will only be known after the Minister for Trade and Cooperatives Radius Prawiro returns from there.

Minister for Trade and Cooperatives Radius Prawiro, who left for Spain at the end of last month, was appointed by the president to head up the planning team for the project at Dumai. Included in this task he was to explore the possibility of getting commercial credit from a banking consortium headed by American Express (Amex) in Europe. But now the task of looking for credit is no longer necessary. It has now been decided that the $200 million lack in funds for Dumai which was expected to come in from Amex will be paid from government funds. "It will be more profitable for Pertamina because if isn't necessary to pay interest," said an assistant of principle director Piet Haryono.

The Indonesian government will also still utilize the Voerst Alpine construction firm from Austria to take part in the hydrocracker project construction at Dumai. The Austrian government will earmark export credit totaling $150 million with interest of 7.3 percent for 10 years.

Like Spain, Austria is not as well known as the U.S. and West Germany for construction of projects as complex as the hydrocracker. The decision to include them as contractors while the government itself fully controls the vital project, is considered as the right step by many observers.

OLD INDONESIAN DEBTS TO ITALY SETTLED

Jakarta SINAR HARAPAN in Indonesian 14 Oct 80 p 11

[Article: "Remaining Indonesian Debts to Italy Settled"]

[Text] Acting on behalf of their two governments, Acting Minister of Foreign Affairs M. Panggabean and Italian Ambassador Elio Pascarelli signed an agreement on the morning of 13 October on behalf of the governments of Indonesia and Italy settling the remaining old Indonesian debts to Italy which were made before June 1966.

These old debts come from the importing of Italian commodities on credit which weren't guaranteed by the Italian National Insurance Agency.

Repayment of the debts was made in the currency agreed on in the contract. This totaled $8.9 million in U.S. dollars or 590.4 million Lira, plus the interest which had been postponed.

The methods of repayment were in accord with the formula as contained in the Paris agreement of 1970 for debts made by Indonesia before July 1966.

With the signing of this agreement all matters relating to the old Indonesian debts to Italy have been settled. The first settlement was concluded at the end of 1971 when an agreement was signed between the two governments on methods of repaying the old debts. This contained a guarantee by the Italian National Insurance Agency.

Following the signature [on 13 October] Acting Minister of Foreign Affairs M. Panggabean on behalf of the Indonesian government presented the Bintang Jasa Utama medal to the Italian Ambassador Dr Elio Pascarelli at the department of foreign affairs in Pejambon. The Bintang Jasa Utama medal was given because of the Italian ambassador's service and his efforts to build cooperation and increase relations between the two countries during the 4 years he has served in Indonesia.

INDONESIAN PETITION SIGNERS FIRED

Jakarta TAMPO in Indonesian 13 Sep 80 pp 9, 10

[Article: "In The Wake of The Petition, Daud Says All Is Settled"]

[Excerpts] On 28 July, Chris Siner Key Timu, 40 years old sent a letter to the president of the University of Atma Jaya indicating that he was resigning from his position as student affairs bureau chief. Chris is the father of three children and had held the position since 1974. "I took the step for the benefit of Atma Jaya," he said.

The resignation of Chris was the result of a series of incidents that began on 9 July 1980 when the president of Atma Jaya was summoned by the inspector general of the department of education and culture who requested the president to take action against Chris. The reason was that Chris took part in the signing of the Petition of Concern better known as the Petition of the 50.

Following the meeting the inspector general of the department of education and culture phoned the president. "But according to internal regulations of Atma Jaya, the president couldn't take any action against me," said Chris. The president asked the department of education and culture to contact the Atma Jaya Yayasan [legal body of university].

"I was appointed president by the Yayasan. I told the inspector general that the Yayasan had the authority to take action against Chris. As a basic principle I am against firing him. If I did it would mean that I had become a political tool," stressed K.S. Gani, 58 years old, president of the Catholic Atma Jaya University.

Chris' resignation would seem to be a way out for Atma Jaya and comes as the result of an ultimatum by the department of education and culture dated 22 July to the board of the Atma Jaya Yayasan. The letter which was signed by the secretary general Sutanto Wirjoprasonto on behalf of the minister threatened to review the status of the university and all aid ever given to it if Atma Jaya didn't take action against Chris Siner Key Timu.

Chris Siner isn't alone. At the end of August Dr Judilherry Justam, 32 years old, was honorably discharged from government employment as assistant middle-grade expert category III/a at the University of Indonesia's doctors faculty. The

decision of the minister of education and culture was dated 7 August and was signed by the secretary general of the department of education and culture. The reason for the dismissal was to simplify an organizational unit and Judilherry was named as the civilian government employee who was superfluous.

"Why was it just not said that I was fired because I signed the Petition of the 50?" was the comment of Judil who graduated as a doctor in 1976. As a student leader at the University of Indonesia he was once arrested because he was thought to be involved in the 15 January incident. He is also well known for having nominated himself to be president shortly before the Parliament's general session in 1978.

Professor Dr Kasman Singodimedjo and Dr Anwar Harjono, both lecturers at IAIN [State Islamic Institute] Sjarief Hidayat in Jakarta who signed the Petition of the 50 have also experienced a similar fate. Since lectures began in September the two haven't taught. According to IAIN president Dr Harun Nasution there is no problem against their teaching but they withdrew. "The reasons aren't clear," he said on 8 September.

Kasman had a different explanation. "I didn't asked to stop but they pressured me to resign."

Minister of Education and Culture Daud Jusuf refused to discuss the matter. According to the chief of public relations of the department of education and culture Haryoseputro the reason was "Mr Daud says everything is settled."

WEST KALIMANTAN REMAINS VULNERABLE DUE TO BORDERS, CHINESE POPULATION

Jakarta MERDEKA in Indonesian 14 Oct 80 p 4

[Article: "Being a Border Area, West Kalimantan Remains in Serious, Dangerous Position"]

[Text] Governor Sudjiman, head of the West Kalimantan province, said that because of its borders as well as its coastline on the South China Sea, all of West Kalimantan continues to be in a serious and dangerous position.

Governor Sudjiman said this to reporters from MERDEKA and a Chinese language daily (HARIAN INDONESIA) in his office on 7 October.

Governor Sudjiman, who had with him the chief of the regional department of the industry office of West Kalimantan Mohamad Taib, said that priority has been given for some time to the border areas of West Kalimantan because of national defense.

"At present we are still giving priority to the border regions because they represent strongholds that we must build so that the national defense of the area can be crystalized, economically, culturally and ideologically," he said.

"We aren't suspicious of Malaysia, but 70 percent of the people here are Chinese," he added.

All along, those who have stirred matters up in the border areas have usually been Chinese.

According to Governor Sudjiman, at the time of the PGRS/Paraku [Sarawak Peoples Defense Forces/North Kalimantan Peoples Forces] 95 percent of the movement's members were Chinese.

"So, if they were to expand Communist ideology from the "North" to West Kalimantan, we would be in a serious and dangerous situation," he repeated.

The West Kalimantan governor also related what took place in the West Kalimantan border and coastal areas some time ago when many Vietnamese refugees were stranded in West Kalimantan coastal areas as well as in Riau.

Meanwhile District Chief Sumardji as head of the Sambas district told MERDEKA that some 85 percent of the entire population of Singkawang, capital of the Sambas district, totaling 61,000 people are Chinese descendants.

In fact, according to District Chief Sumardji, there are several regions in the Sambas district where all of the people are of Chinese descent. These include the villages of Thainan and Pakonan.

"The names still have a Chinese influence," Sumardji said.

Touching on assimilation of those of Chinese descent with the native people, District Chief Sumardji explained that assimilation is working well.

This includes both assimilation through education and other social activities. In this relation District Chief Sumardji gave as an example the fact that many Chinese women are being married to Malays and with government employees and even with members of the Indonesian Armed Forces.

Speaking about the work of those of Chinese descent, Sumardji said that in addition to the many that are involved in trading, particularly those who live in the cities, there are others who work in agriculture (wet rice fields) and plantation work.

"Perhaps the richest people here are Chinese, but they are also the very poorest," he said.

In reply to the question of Indonesian citizenship for those of Chinese descent, District Chief Sumardji explained that with the publication of the Presidential Directive on citizenship, many of those with parents who hold foreign citizenship have become Indonesian citizens.

He said that as many as 67,000 foreign Chinese have become Indonesian citizens up to the present.

UNEMPLOYMENT IN LUMBER INDUSTRY OF EAST KALIMANTAN

Jakarta KOMPAS in Indonesian 20 Sep 80 pp 1, 9

[Article: "DPR Member's Report--Large-Scale Layoff As Result of Labor Relations Decision in East Kalimantan--Lumber Workers Affected"]

[Excerpts] In East Kalimantan, the large-scale effects of a layoff as a result of a labor relations decision taken by lumber enterprises is being felt by the employees.

At the end of last July, the total number of workers affected by this decision was estimated to be 7000 people. This number increased to 10,000 people by mid-September.

This comprised the report submitted by H. Syarkawie, a member of DPR Committee IV, at a hearing of the minister and staff of the Labor and Transportation department with the parliamentary committee in Jakarta Monday evening.

The large-scale layoff is the result of the promulgation of a joint governmental decision by three ministeries dated May 15, 1980. This decision induced a paralysis of activity among some entrepreneurs who held timber exploitation permits.

The joint decision by the three ministries (Agriculture, Industry, Trade and Cooperation) imposes an obligation to undertake the processing of wood which has been cut, in order to develop a domestic plywood industry. The decision is related to the export of logs and especially unsawn wood which is not affected by export prohibitions. However, the export of such unsawn wood can only be carried out by entrepreneurs who are recognized by the ministry of trade and cooperation.

According to H. Syarkawie, the largest number of workers affected by the layoff are day laborers or temporary help provided by a contractor. Such workers are deliberately utilized by entrepreneurs in the lumber sector because of economic reasons. They can be fired easily and the entrepreneurs are not obligated to provide any severance pay.

A different member of the DPR Committee IV, Djaffar Siddik indicated that the joint ministerial decision had been drawn up in haste and had not been prepared carefully beforehand. The result was that the ministerial decision which had a positive objective had unforeseen negative side effects.

The problem of worker protection and welfare was the topic of discussion by the minister of labor and transportation and his staff with Committee IV of the DPR, Thursday afternoon and evening. About six members of the legislature pressured the labor and transportation minister and the director general for the management of labor relations and worker protection to come to grips with the problem in a more serious manner.

It seems that attention to the matter of worker safety and protection arose as a result of the case involving the Eureka Aba paper factory in Mojokerto in which eight employees were killed.

DPR members generally were of the opinion that work regulations and labor laws as well as the administrative apparatus of the department of labor and transportation (directorate general for the management of labor relations and worker protection) were too weak to come to grips with labor problems. The result has been that a number of entrepreneurs, impelled only by the quest for higher profits, have displayed a tendency to adopt highly arbitrary measures to exploit workers who are powerless.

Noting this view, the director general for the management of labor relations and worker protection, Oetojo Oesman S.H., indirectly acknowledged that neither government agency charged with labor matters nor the department that he headed were up to their tasks which were becoming increasingly broad and complex.

He said, "In East Java alone, the number of firms that need to be supervised is around 12,000. To perform this task, there are only 73 inspectors in the region. Looking at the overall picture, the inspectors are able to accomplish only 35 percent of the work they should be doing.

The secretary general of the labor and transportation department, Urip Widodo S.H., stated that beginning in fiscal year 1980/1981 and subsequently, the directorate general for the management of labor relations and worker protection would receive a greater proportion of the budget than previously. In September and October of this year, several hundred new two and four-wheeled vehicles are being provided to increase the activities of the directorate general for the management of labor relations and worker protection.

CONTRACT FOR LNG PLANT EXPANSION

Jakarta KOMPAS in Indonesian 19 Sep 80 p 2

[Article: "The Government Will Handle Directly the Tender for the Expansion of the LNG Project at Bontang--Japan Angered Because Bechtel the Winner"]

[Text] The government will handle directly the tender for the expansion of the natural gas (LNG) project at Bontang, East Kalimantan. Pertamina in no way will be involved in the project.

This was the statement released by Pertamina to KOMPAS yesterday.

This expansion, which will double the capacity of the Bontang natural gas project, will require an expenditure of about 844 million dollars US, including about 600 million dollars US to enlarge the production units. The winner of the tender for this project was Bechtel Corporation which previously was responsible for constructing the natural gas project at Arun, Aceh.

According to the KOMPAS source, the tender for the expansion of the Bontang project was signed by the government procurement team for equipment and supplies, since the cost of the project would exceed 500 million rupiah. Responsibility for the decision was placed in the hands of the team, based on Presidential Instruction no. 10 for 1980 (dated January 23, 1980), when it was determined that the business deal would amount to 650 million rupiah.

The governmental decision was verified by the KOMPAS source responding to questions concerning the award of the tender to Bechtel Corporation. Bechtel's success created in turn some hard feelings among the firms that lost out on the project, as well as among the nations to which these firms belonged.

The ASIAN WALL STREET JOURNAL of September 16 offered the view that the decision taken by the Indonesian government declaring Bechtel the winner of the tender aroused some ill feelings among the private contractors as well as among Japanese diplomatic representatives in Jakarta.

JGC, a Japanese firm which lost out on the tender although its bid was lower than Bechtel's, became angry because Indonesia selected Bechtel whose bid was twice as much. As a result, it was reported that the Japanese ambassador in Jakarta, Masao Sawaki, suggested to his government in Tokyo that relations between Japan and Indonesia be allowed to cool in protest.

Japan at present buys all the LNG produced by Indonesia and intends to invest in a larger share of such projects. Nevertheless, LNG plants presently operating in Indonesia were constructed by Bechtel and a large number of the subcontractors were American.

JGC has made great efforts to uplift itself to the rank of a construction firm able to challenge the supremacy of the United States on energy projects. The firm had hoped to be awarded this contract to strengthen its position in Southeast Asia. In the meantime, JGC, with the Pullman Kellogg Division of Pullman Inc., has been selected as contractor for the erection of an LNG project costing $1 billion in Sarawak, Malaysia.

The expansion project in Bontang was long postponed because perspective buyers in Japan and officials in Indonesia failed to reach final agreement on marketing, payment and price-setting policies for the LNG produced from the project that would be subsequently developed. The result has been that the timetable for completion of the expansion was pushed back from 1983 to 1984.

According to plans, the expansion project will double the annual capacity of Bontang to 6.4 million metric tons. Discussions concerning the expansion have been held since 1978 between Pertamina and four prospective buyers from Japan: Chubu Electric Power Co., Kansai Electric Power Co., Osaka Gas Co., and Toho Gas Co. The four firms sought to tie down a 20-year sales agreement which would have gotten them access to the increased production of LNG.

Tenders concerning the project became controversial because of the great disparity that arose among the bids that were submitted. JGC offered a bid of $45 million, more or less; Bechtel $85 million and Procon $80 million.

According to the ASIAN WALL STREET JOURNAL, Pertamina wanted to choose JGC for the project but had to give in to the government. On the other hand, according to Bechtel, the great difference in the bids indicated that the Japanese contractor did not understand the complete nature of the work required for this project. In other words, Bechtel already had the experience of building two LNG plants in Indonesia. These plants that are now in operation have exceeded the production capacity projected for them beforehand.

In the meantime, a news source told KOMPAS yesterday that the Japanese government would be the loser if it followed the suggestion of its ambassador in Jakarta to permit a "cooling off" of relations between Japan and Indonesia. "What is this expansion project compared to other Japanese capital invested in Indonesia?" said the source.

The ASIAN WALL STREET JOURNAL itself reported that the Japanese disappointment would not influence the decision to award the experimental construction contract to Bechtel. The firm of Bechtel at the present time is compiling the data requested by Pertamina.

In the meantime, the initiative to complete the final arrangements on the contract remains impeded by the price-setting policy for the LNG that will be produced after the expansion of the plant is completed. According to Japanese sources, the

agency having the right to conduct negotiations with Indonesia is the Japanese Ministry for International Trade and Industry (MITI) and not the individual buyers. The Japanese buyers have stated that in the end a compromise will be reached. There is, however, little hope that an agreement will be reached with Pertamina in the coming months.

FERTILIZER IMPORTS, REQUIREMENTS DISCUSSED

Jakarta KOMPAS in Indonesian 20 Sep 80 pp 1, 9

[Article: "Next Year--Indonesia Must Import Fertilizer Again--Domestic Production Not Keeping Up with Requirements"]

[Text] In order to fulfill requirements for urea fertilizer in 1981, Indonesia has no recourse but to resort to imports because domestic production will not be sufficient. While fertilizer was exported beginning in 1976, it stopped in 1979. In 1981, the situation of the late 1970's will reverse itself and fertilizer will have to be imported once again.

This was the statement uttered by H. Hasan Kasim, the chairman of the Indonesian Association of Fertilizer and Petrochemical Producers at a hearing of Committee VI of the DPR (Indonesian parliament) presided over by Amir Judowinarno last Friday.

Hasan Kasim declared that urea fertilizer requirements for 1980 are expected to reach 1.8 million tons. This means a 20 percent increase over 1979 (1.5 million tons) while in 1981 requirements are expected to go up another 12 percent. An increase of 20 percent in fertilizer requirements is truly beyond previous estimates and exceeds the average annual production increase of 15 percent. In addition, the production for 1980 and 1981 cannot be increased further.

Urea fertilizer production by PT Pupuk Sriwijaya (Pusri) reached 1.3 million tons in 1979 and 1.4 million tons in 1980. Production by PT Pupuk Kujang reached 437,000 tons in 1979 and 456,000 tons in 1980. According to these calculations, production will equal requirements in 1980.

In the meantime, fixed reserves (iron stock) this year amount to 650 tons (sic) and cannot be drawn down. Total production amounting to 1.85 million tons this year constitutes the maximum quantity that can be produced and cannot be expected to increase until PT Pupuk Kaltim goes into operation around the end of 1982.

Keeping the above figures in mind, Hasan Kasim expressed the opinion that in order to guard against the possibility of a precipitous increase in requirements in 1981, and to increase present fixed reserves, the government would need to import fertilizer. Imports are considered the only recourse because the expansion of urea factories cannot be done with celerity.

The area occupied by PT Pusri is already fully occupied and no further expansion can be undertaken after the completion of Pusri IV. In the meantime, it is uncertain whether the completion of the PT Pupuk Kaltim factory, which at maximum capacity may produce 500,000 tons annually, will be able to solve the domestic fertilizer shortage. In 1982, it is certain that there will be another sharp escalation in fertilizer requirements.

"To solve the problem of domestic fertilizer production, the best remedy is to increase the number of factories. Because of this, every 3 years we have to build another new urea fertilizer plant," said Hasan Kasim.

According to Commercial Director Dalil Hasan SE, the increase in urea fertilizer requirements can be explained by the rise in agricultural production. Although it can only be seen indirectly, the influence of fertilizer on production gains is quite pronounced. This can be seen by the fact that farmers now like to use such fertilizer for their crops. Rice production in 1978 amounted to 17.6 million tons; in 1980, as a consequence of fertilizer use, production leaped ahead to 19.6 million tons tare weight.

The principal reason for the increase in fertilizer utilization is the "Insus" (special enrichment) system of the Department of Agriculture which is using urea on a large scale in massive quantities. Of all the regions in Indonesia, the biggest consumer of fertilizer is East Java. Previously, only about 180 kilograms of fertilizer were used per hectare. This has now jumped to 300 kilograms per hectare.

Drs Rachmat Mulyomiseno, deputy chairman of DPR Committee VI, considering these figures, told KOMPAS that he did not believe the information released by Hasan Kasim. According to Rachmat, this information was not based on credible data. The figures which account for fertilizer exports for 1976 to 1979 were based on contrived data and not on actual requirements. The explanation is that a jump in fertilizer requirements for certain cannot be known in advance, and above all, cannot be estimated beforehand. Rachmat also did not accept that there had been a jump in fertilizer requirements.

"Before the government made an official statement concerning the shortage of fertilizer, I did not believe it; nor can I accept the statement of the Fertilizer and Petrochemical Producers," said Rachmat.

In the meantime, Dalil Hasan SE, in his testimony before DPR Committee VI, stated that the jump in fertilizer requirements was difficult to pin down precisely. There are five foreign consultants investigating the data on this subject and it is evident that they are coming up with figures at variance with one another. Furthermore, the Department of Agriculture has its own different set of figures. With data that is so difficult to compile, it is not surprising that projections on production are not consistent with projections concerning requirements. Projections of production itself, on the other hand, are easily calculated.

Indonesia imported fertilizer in 1975 during the Middle East crisis. At that time, fertilizer production in Indonesia was only 350,000 tons a year, while reserves accumulated from imports amounted to 2 million tons. To draw down these reserves,

exports were started in 1976. These exports came to a halt in 1979 after the jump in domestic fertilizer requirements became known. The last exports in 1979 amounted to 200,000 tons.

In the matter of fertilizer distribution, the difficulty that must be confronted at present is the shortage of shipping vessels. Pusri owns four ships but they are not sufficient and the firm must charter additional vessels. As for the matter of land transportation in railroad flat cars etc, Hasan Kasim acknowledged that Pusri, as a producer doubling as distributor, had performed its latter role poorly. That, however, was a legacy of the past, dating back to when the World Bank had extended credit to PT Pusri to establish channels for distributing its fertilizer.

To dispense urea fertilizer, PT Pusri at the present time has 220 warehouses, many of which it owns outright, in 22 provinces. Distribution in the various regions is carried out by 72 dealers, among them Pesero Niaga, private firms and Puskud (Center for Village Cooperative Units). The recipients consist of 4000 village cooperative units and 3000 private firms.

PELITA III CALLS FOR 120,000 NEW HOMES

Jakarta PELITA in Indonesian 10 Oct 80 pp 1, 7

[Article: "Vice Minister Cosmas: Perumnas to Build 24,000 Houses Each Year"]

[Text] Vice Minister in charge of public housing Cosmas Batubara said that during Pelita III [Third 5-Year Development Plan] Perumnas Ltd has been given the target goal of building 60,000 simple houses and 60,000 basic units so that it will have to build 24,000 houses each year.

He said this on the night of 9 October in Jakarta while giving a speech to the extended family of UNTAR (University of Tarumanegara) during celebration of the 18th anniversary of the school and the conferring of degrees by the university.

In addition to the UNTAR extended family, the speech was attended by a number of government and real estate officials, professors from several universities and a number of invited guests. The speech was followed by a period of questions and answers.

According the Minister Cosmas, in order to meet the first point of the development triology, which is the equal distribution of development and its benefits, construction ought to be targeted for all urban areas. But, because of limited capabilities, construction will only be carried out in those cities given priority during Pelita III.

The provisional criteria being used includes all the province capitals, the regional development centers which had a population of 50,000 in 1971, the district capitals what had a population of 100,000 in 1971 and the second largest cities in a province if only one city in that province meets the requirements.

Using this criteria there are 77 cities which meet the requirements to receive allocations during Pelita III. These include 27 province capitals, 33 regional development centers, 17 district capitals that aren't regional development centers but which have populations in excess of 100,000.

30 Reserve Cities

In addition allocations have been set aside for approximately 30 other cities, which for certain reasons should be helped with housing construction programs. For example there are cities which have had natural disasters and those which find it difficult to develop because housing is hard to find. If housing was available it is thought that these cities would develop more quickly.

According to Minister Cosmas, included in the construction of simple housing is the construction of multi-storied apartments in the larger cities such as Jakarta, Bandung and Surabaya in conjunction with efforts to upgrade these cities.

In addition, the improvement/fencing programs for village housing will continue to be implemented during Pelita III and coverage will be increased from 1,000 villages during Pelita II to 6,000.

Concerning implementation of programs to develop safe environment, he said efforts would be increased to make pure water available to around 150 smaller cities. In addition the health of 3.5 million people in the cities will be improved through kampung [here section of a city] improvement programs.

To encourage participation by the public sector, opportunities will be extended to housing constructors outside Perumnas Ltd to build simple houses by getting credit from the National Savings Bank in accord with existing regulations.

It is hoped that this group will be able to build more than 30,000 units of simple housing, according to Vice Minister in charge of public housing Drs Cosmas Batubara.

ACEH TERRORIST MOVEMENT THOUGHT DESTROYED

Jakarta MERDEKA in Indonesian 10 Oct 80 p 1

[Article: "Hasan Tiro Thought To Have Been Killed"]

[Text] The Hasan Tiro terrorist movement has been destroyed and its leader Hasan Tiro is thought to have died somewhere in Aceh Pidi. This information was given to MERDEKA by Commander of Military Region I/Iskandar Muda Brig Gen R.A. Saleh on 10 October 1980.

According to the commander there is evidence indicating that the leader's death occurred on 30 September 1979 during a [search and] destroy operation carried out by units of the Indonesian Armed Forces [ABRI] in Aceh Pidi.

He now feels that the terrorist movement is no longer important even though one of its leaders, Ismail Lebei, hasn't been captured.

He also issued a call to the members of the terrorist movement who still haven't surrendered to quickly do so. If any are caught in an ambush by ABRI units, it won't be the responsibility of the commander or of the ABRI units. He said that operations to wipe out the terrorist movement will continue until all members of the Hasan Tiro movement are destroyed in the region.

Gen Saleh gave his assurances that the people of Aceh are both safe and calm. He feels that security is quite good and consequently hopes that newspaper editors will continue to help build up a sense of security among the people.

According to the general two kind of situations can arise which threaten security. There are direct threats to security and indirect ones. As an indirect threat he mentioned for example conflicting reports in the newspapers which can cause unrest among the people, even if the reports aren't true. He feels these are indications of the occurrence of threats to the security of the people.

BRIEFS

NEW CABINET APPOINTMENTS--Minister Sudharmono said that he did not know if there would be a reshuffle of the Third Development Cabinet in the near future. Sudharmono's answer was given today at the Bina Graha Building in response to the question whether it was true that Mudjono, the present minister of justice, would shortly be elevated to the chairmanship of the Supreme Court. He also responded that he did not know when he was asked if the candidates for minister of justice were Ali Said and A.Y. Kanter. Minister of Justice Mudjono, who was encountered at the same time, said he knew nothing concerning the post of Supreme Court chairman and added that until the present time, he had not been approached by President Suharto or Secretary of State Sudharmono concerning filling that office. Minister Sudharmono also stated he did not know, when he was asked if it was true that the government would appoint former Deputy Commander of the Armed Forces General Sumitro as a resident expert to the defense industries which are presently headed by the minister of the state secretariat with the ministers of defense and industry as members. Sudharmono verified that President Suharto had already formed a department of defense and security industrial team with a chairman and members as indicated above. INDUSTRY, TRADE, BANKING ACTIVITIES NOTED

Savannakhet Lumber Mill

Vientiane BULLETIN QUOTIDIEN in French 18 Sep 80 p 2

[Text] Vientiane (KPL). From the beginning of the year on the personnel of the 21 May No 3 lumber mill in Savannakhet Province have been meeting their tasks; so far they have processed 394 cubic meters of logs, produced 205 cubic meters of lumber and sold 126 cubic meters.

The transport sector shipped 1,766 cubic meters of logs to lumber mill No 6, 360 cubic meters to No 3, and 93 cubic meters to the Muong Phain Lumber Mill.

Savannakhet Bank Deposits

Vientiane BULLETIN QUOTIDIEN in French 18 Sep 80 p 2

[Text] Vientiane (KPL). In the month of July the officials, military, and workers and the polyethnic population of the Atsaphangthong and Sepone, Savannakhet Province, deposited their savings totaling 41,263 kip, of which Sepone accounted for 32,800.

Luang Prabang District Trade

Vientiane BULLETIN QUOTIDIEN in French 19 Sep 80 p 2

[Text] Vientiane (KPL). Since the start of the year the state store of Phonexay District, Luang Prabang District, have sold to the working population over 5,000 meters of fabric, 400 pieces of clothing, over 3,000 cooking pots, 5 tons of salt, hundreds of kilograms of sugar, and dozens of cases of condensed milk along with other cultivation and school equipment.

Furthermore, they purchased from the population 23 tons of hulled rice and a number of forestry products.

Khammouan Electrification

Vientiane BULLETIN QUOTIDIEN in French 22 Sep 80 p 3

[Text] Vientiane (KPL). On 12 September the Khammouan Province State Electric Power Company shipped to Mahaxy District a 30 kilowatt/hour generator, materials and installation equipment, accompanied by four technicians.

Khammouan Bank Deposits

Vientiane BULLETIN QUOTIDIEN in French 29 Sep 80 p 3

[Excerpt] Vientiane (KPL). In September the cadres, the military, the members of the agricultural cooperatives, and the population in Nongbok District, Khammouan Province, deposited their savings in their state bank account totaling 109,205 kip.

Saravane Food Sales

Vientiane BULLETIN QUOTIDIEN in French 30 Sep 80 p 4

[Text] Vientiane (KPL). From July to the end of August the provincial food supply services in Saravane have sold the population 85 tons of hulled rice, 27 tons of sugar, 32 tons of salt, and 15,700 cans of condensed milk, among others, totaling 140 tons of foodstuffs.

LEADERS STUDY PROPOSED CONSTITUTION CHANGES

Bombay THE TIMES OF INDIA in English 22 Nov 80 p 12

[Article by Mavin Kurve]

[Text] Kathmandu, November 21: A draft of proposed constitutional reforms in Nepal has been circulated among former Prime Ministers and senior panchayat leaders for their comments and suggestions, it is learnt.

The former Premier, Mr Tanka Prasad Acharya, confirmed he had received a copy but comment was not available from another former Premier Mr B. P. Koirala, who is abroad.

As many as six Nepalese dailies and weeklies have published what they say are details of the constitutional changes proposed. Since they all agree on most essentials, it appears to be a "convenient leak."

If these reports are accurate, it means that the right to dissent has not been granted to the supporters of the multi-party camp in the referendum. It also means that demand of 19 Terai districts for a more equitable representation in new legislature has been ignored.

Two weeklies, JAMMA-BHOOMI and MATRU-BHOOMI, reported that while the election will be on an adult franchise basis, in future only those who affirm loyalty to a reformed partyless panchayat will be eligible to stand for election.

No Alien Links

New rules require candidates to sign a pledge to that effect and also to be compulsorily a member of one or another "class organisation." Further, the new statue forbids candidates to be members of any international political movement such as socialist international or Commintern. [as printed]

Daily SAMAJ and weekly MATRU-BHOOMI said that the new statute provides for a unicameral legislature and a national co-ordination council headed by King Birendra himself. This council will have under him three statutory organisations--(1) the council of ministers headed by an elected Premier; (2) panchayat and planning council of 14 members headed by a deputy Prime Minister; and (3) evaluation and inquiry council of 14 members headed by another deputy Premier.

The elected legislature will have to elect a panel of three members by single transferable votes for the Prime Minister from which the King will select one. Twentyfive per cent of the members of the national legislature will be nominated by the King himself.

It would appear that the draft along with comments will be placed before a joint session of Raj Sabha standing committee and panchayat steering committee before it is given final shape.

Most periodicals said the reforms would be announced by King Birendra on December 11 or 12 and come into effect from December 16 or Nepal's constitution and late King Mahendra memorial day.

The former Premier, Mr Acharya, confirmed press reports on reported restrictions on multi-party camp people though he refused any reaction.

Many multi-party leaders feel aggrieved that not much weightage has been given to those favouring a multiparty system in Nepal. They say that the proposed changes cater mainly and only to the ruling victories partyless panchayat side.

TYPES OF NEWLY ELECTED COUNCILS DESCRIBED

Islamabad THE MUSLIM in English 27 Nov 80 Special Supplement pp c, d

[Excerpts]

After a decade and a half Local Council elections were held in 1979 on adult franchise basis and thereby the new Local Govt. system was evolved. In Sind elections of Local Councils were completed in September 1979. During October/November, 1979 the elected Councillors in turn elected their Mayors/Chairmen and Deputy Mayors/Vice Chairmen.

New Councils are of following categories:-

A – RURAL COUNCILS

i) UNION COUNCILS: One Union Council for population upto 15 thousand in rural areas.

ii) PANCHAYAT: One Panchayat for each electoral unit whose Head is an elected Councillor and its other two members have been elected by the councils themselves. (Same case also for urban areas).

iii) TALUKA COUNCIL: It comprises of Chairmen of all Union Councils and District Councillors of Taluka.

iv) DISTRICT COUNCIL: One for each district.

B – URBAN COUNCILS

i) TOWN COMMITTEE: For towns with population between 5 thousand to 25 thousand.

ii) MUNICIPAL COMMITTEE: For cities with population upto 5 lacs.

iii) MUNICIPAL CORPORATIONS: Municipal Corporations for Hyderabad and Sukkur. A Metropolitan Corporation for Karachi exists because of its size and special position.

Different institutions of Local Government and numbers of their members are as follows:-

Council	Number	Number of Councillors	Number of Panchayat Members (excluding Councillors)
Municipal Corporations (including KMC).	3	261	522
Municipal Committee	22	509	1018
Town Committees	93	971	1942
Union Councils	562	6719	13438
District Councils	13	782	–
Total.	693	9242	15920

The following is the number of Councillors representing special interest. Minorities directly elected their Councillors while Councils chose peasants, workers and women are indirectly elected by the respective councils.

Council	Minorities Seats	Peasants Tenants Seat	Workers Seats	Women's Seats
Corporations	8	–	13	13
Municipal Committees	38	–	22	22
Town Committees	68	–	93	93
District Councils	55	37	13	37
Union Councils	411	1122	–	–
Taluka Councils	49	–	–	–
Total	629	1159	141	165

COORDINATION COMMITTEES

Divisional and District Co-ordination Committees consisting of elected members have been set up at the Divisional and District levels in Sind Primarily to co-ordinate activities of all Councils and nation building departments.

There are in all three Divisional and twelve District Co-ordination Committees constituted in Sind. The District Co-ordination Committees consist of eleven members elected from urban and rural areas on population basis. Members representing rural areas are elected from the Taluka and District Councils. Those representing urban areas are elected from the Town and Municipal Committees and Corporations. The Chairman is elected from amongst these members.

Divisional Co-ordination Committee consists of Chairman of District Council or District Headquarters Municipality, Mayor of Corporation or Chairman of District Co-ordination Committees and an elected Chairman from among these members. Only in case of Karachi, there are thirteen elected members from KMC, two elected members representing KMC in KDA Governing Body and two elected members from Karachi District Council besides the Mayor of KMC and Chairman. District Council Karachi.

All Government functionaries, both at the divisional and district level have been nominated as non-voting official members of the Divisional or District Co-ordination Committees.

The District and Divisional Co-ordination Committees have been associated in preparation and approval of development schemes financed from the provincial Annual Development Plan.

Schemes prepared by Union Councils, District Councils and Municipal Committees are first considered by the District Co-ordination Committees. Their recommendations are sent to the Divisional Committees. The provincial government is providing development funds from block funds to the schemes recommended by the Divisional Co-ordination Committees. Even the strategy of allocation of development funds based on backwardness, population, income per capita was, endorsed by the Divisional Co-ordination Committees.

NUMBER AND MEMBERSHIP OF CO-ORDINATION COUNCILS/COMMITTEES IN SIND

Type of Council/Committee	Number	Number of members
Divisional Co-ordination Committees	3	55
District Co-ordination Committees	12	132
Taluka Councils	71	1227
Total	86	1404

PANCHAYAT SYSTEM

Punchayats have been constituted in each urban council or Union Council electoral constituency in urban and rural areas of Sind. At present there are 8460 Panchayats in the Province which have 25160 members.

Panchayat is headed by the elected Councillor representing the concerned electoral unit and its other two members are residents of the area selected by the Concerned Council.

PANCHAYATS PERFORM THE FOLLOWING JUDICIAL FUNCTIONS: (i) All offences under the Sind Local Govt. Ordinance, 1979. (ii) Cases under the Muslim Family Laws Ordinance, 1961. (iii) Sind Standard Weights and Measures Enforcement Act, 1975.

The Government is considering allocation of additional judicial

functions to the Panchayats particularly those falling under the Conciliation Courts Ordinance, 1961.

Under the Sind Local Govt. Ordinance, 1979, a panchayat may award punishment of imprisonment upto six months and/or fine not exceeding one thousand rupees.

Panchayat also performs local and social welfare functions which are as follows:

i) Supervision of mosques
ii) Motivating the Muslim population to order its life in accordance with Holy Quran and Sunnah
iii) Promotion of mosques
iv) Teachings of Holy Quran
v) Promotion of adult education
vi) Promotion of welfare schemes for the care of orphans and destitutes.
vii) Arrangement for Eid Prayers and other religious gatherings.
viii) Campaign for discouraging social evils and juvenile delinquency
ix) Keeping record of persons residing in the Panchayat area.
x) Social boycott of habitual criminals
xi) Maintain records of births, deaths, marriages and divorces.
xii) Dissuading people from lavish spending on marriages and other ceremonies.
xiii) Watch and ward of the Mohalla or the Village
xiv) Maintenance of important statistics and
xv) Any other functions of a Council entrusted to Panchayats by the Councils or the Govt.

COMMITTEES AND SUB-COMMITTEES OF LOCAL COUNCILS

For the performance of its functions, every council elects Committees or Sub-Committees including for finance, works, health, social cultural and sports activities, Katchi Abadies, land control, property management, water and sewerage, information and public relations, education, naming of streets, institutions and other places, food and agricultural development, legal affairs, establishment and Co-ordination and Supervision.

These Committees are elected under the proportional representation system for a tenure of one year each so that every section of the Council is represented in them and each Councillor serves in at least four Committees before he completes his term of office.

FINANCES OF LOCAL COUNCILS

For their income, Local Councils depend upon their taxes, commercial projects and government grants.

Various types of taxes, which Local Councils can levy, are specified in schedule V of the Sind Local Government Ordinance, 1979. Part I of the Schedule lists taxes, rates, tolls and fees which may be levied by a Metropolitan Corporation. Part II is for Corporations, Municipal Committees and Town Committees and Part III deals with Dist. Councils and Union Councils.

Government of Sind also shares the receipts of its following taxes with the Local Councils to the extent given below:-

i) 85 % receipts from property tax.
ii) 85 % receipts from Betterment tax.
iii) 50 % receipts from fines and penalties levied on municipal offences.
iv) 85 % proceeds from auctions of minor minerals.
v) 85 % receipts from fishing rights.

Local Councils' income from taxes in Sind has increased from Rs. 427.9 million in 1977-78 to Rs. 556.2 million in 1978-79, Rs. 740.8 million in 1979-80 and (estimated) Rs. 910.3 million in 1980-81. Thus overall estimated income of Local Councils from taxes works out to Rs. 108.3 per capita as against the national average of Rs. 19 in 1978-79.

Grants-in-aid in the Province of Sind have increased from only Rs. 9.1 million in 1977-78 to Rs. 41.2 million in 1978-79, Rs. 94 million in 1979-80 and Rs. 1 4.2 million in 1980-81. In the current year grant-in-aid constitutes 16% of the income of the Local Councils in Sind as compared to the national average of 5.3 % in the country during 1978-79. Government of Sind gives weightage to rural areas and small town in allocation of grants-in-aid. Consequently 84% of grants have gone to them during 1980-81.

Local Councillors are being encouraged to undertake remunerative projects to increase their income. Initial grants and loans are being extended to them for this purpose.

Budgetary allocations of Authorities and Organisations charged with providing local infrastructure in Sind have shown a marked increase during the last two years. Incomes of K.D.A, and H.D.A. and allocations for public health engineering works have gone up from Rs. 479.4 million in 1978-79 to Rs. 652.3 million in 1979-80 and Rs. 1298 million in 1980-81.

During 1978-79 Physical Planning and Housing Sector received only Rs. 170.4 million which was 20 % of the Provincial A.D.P. In the current financial year this Sector has been received the highest allocation from A.D.P. which is 25.4 % (Rs. 246.7 million).

It will appear that in the area of local development a sum of Rs. 2352.3 million is available to the Local Councils and Authorities during 1980-81 as against Rs. 1487.1 million in 1979-80 and only Rs. 1076.6 million in 1978-79.

FUNCTIONS OF LOCAL COUNCILS: Functions of Local Councils are specified in Schedule II, III, and IV of Sind Local Government Ordinance, 1979, Part 1 of Schedule II lists the functions to be performed by the Metropolitan Corporations. Functions assigned to Councils including Corporations are divided into two parts. Some functions are compulsory and some are optional. They are separately listed for Corporations, Municipal Committees and Town Committees (Part II of Schedule II) and District Councils (Schedule III) and Union Councils (Schedule IV).

Councillors have also been delegated powers to perform some of the functions of other government Department which are listed in the following pages.

ROLE OF COUNCILLORS IN GENERAL ADMINISTRATION: Chairman and Councillors have been associated by the Government of Sind in general administration and affairs of nation building departments. Some of the Govt. functions and finances have also been allocated to Local Councils. The following is a list of areas in which Councils and Councillors are being associated:-

AGRICULTURE SECTOR: (i) Chairman or a Councillor representing District Council is ex-officio member of:

i) Sind Rice Board.
ii) Sind Sugarcane Board.
iii) Sind Wheat Board.
iv) Sind Sugarcane Cess Development Committee.
v) Market Committees.
vi) District Agriculture Advisory Committee.

(ii) Divisional and District Co-ordination Committees oversee distribution of agricultural inputs. iii) District Councils supervise agricultural extension work.

COMMUNICATIONS SECTOR: (i) All urban roads (except specified arterial roads) have been assigned to Councils. (ii) Supervision of construction and maintenance of

COMPARATIVE REVENUE INCOME OF LOCAL COUNCILS IN SIND

(Rupees in Million)

rural roads has been assigned to District Councils.

EDUCATION SECTOR: (i) Chairmen District Coordination Committees, District Headquarters, Municipalities and District Councils are ex-officio members of District Education Committees on admission policy. (ii) Local Councillors have been included in the Intermediate and Secondary Boards of Education in Hyderabad and Sukkur. (iii) Chairman District Council are ex-officio Chairman of District Education Cess Committees. (iv) Location and construction of rural primary schools funded from ADP have been assigned to Rural Councils. (v) Repairs of primary schools (funds provided by the Provincial Government) have been assigned to Local Councils. (vi) Supervision of government primary schools is now exercised by Local Councils.

FOOD SECTOR: Chairman of Councils are ex-officio members of District Allotment Boards for Ration Depots.

LAW AND ORDER: (i) Chairmen or Representatives of Councils are ex-officio members of District and Sub-Divisional Crime Control Committees. (ii) Councillors who are Matric or equivalent have been appointed as Justice of Peace. They are authorised to attest documents and make arrests in specific cases. (iii) Action will be taken by Deputy Commissioners on Chairmen of Local Councils' report about instances of police high-handedness. (iv) Action will be taken by Deputy Commissioners on Chairmen of Local Councils' report about non-registration of cases of cognizable offences.

HEALTH SECTOR: (i) Location and construction of rural health dispensaries have been assigned to Rural Councils. (ii) Supervision of dispensaries and M.C.H. Centres in urban areas and Rural Health Centres, Basic Health Units, dispensaries and M.C.H. Centres in rural areas have been assigned to Councils.

HOUSING AND PHYSICAL PLANNING SECTOR: (i) Local Councils have been authorised to launch and undertake housing schemes in areas where a Development Authority does not exist. (ii) Councillors representing Karachi Metropolitan Corporation and Hyderabad Municipal Corporation have been included in the Governing Bodies of Karachi Development Authority and Hyderabad Development Authority. (iii) All completed housing schemes of KDA and HDA will be transferred to K.M.C. and H.M.C.

INDUSTRIES SECTOR: (i) 85 per cent proceeds of minor minerals have been transferred to District Councils. (ii) Local Councils have been assigned promotion of investment in industry in private sector and encouragement of rural craft. (iii) Local Councillors can inspect small industries' training centres.

IRRIGATION SECTOR: (i) Divisional Coordination Committees have been associated in water management and distribution. (ii) Councillors have been included in Water Course (Karia) Committees. (iii) Councillors have been authorised to inspect and forward Inspection reports/observations on the performance of field staff to the Departmental Officers in respect of the equitable distribution of water for irrigation through outlets water courses.

LOCAL GOVERNMENT AND RURAL DEVELOPMENT SECTOR: (i) Fully elected Divisional and District Coordination Committees have been constituted to coordinate the activities of all Councils and all nation building departments in the division or district. (ii) Disputes arising between two or more Councils are now decided by Coordination Committees. (iii) Taluka Councils consisting of Chairmen of Union Councils and District Councillors representing the taluka have been constituted to coordinate development activities of District Council and Union Councils and all nation building departments in the taluka. (iv) 'Markaz' or I.R.D. Centres of Rural Development Department have been replaced by Taluka Councils and these elected bodies now perform the functions of Markaz. (v) All functions and buildings of the Rural Development Department have been transferred to Rural Councils. (vi) Chairmen of Divisional Coordination Committees have been co-opted in the Sind Local Government Board. (vii) Local Councils empowered to sanction commercial schemes (Sec. 43) reject highest bid, enter into contract without inviting offers (Sec. 45) sanction levy of taxes (Sec. 60) modify budget (Sec. 72) and approve schedules of establishment (Sec. 80). (viii) Representatives of K.M.C. will be included in the proposed Karachi Rabita Council. (ix) Mayor, K.M.C. is ex-officio member of the Lines Area Redevelopment Board and National Institute of Cardiovascular Diseases. (x) 50 per cent income from fines and penalties on municipal offences is now transferred to Local Councils. (xi) 85 per cent income from Property Tax and Betterment Tax is now transferred to Local Councils.

PLANNING AND DEVELOPMENT: (i) Divisional and District Coordination Committee fix priorities for Council's development schemes and recommend criteria for allocation of A.D.P. Funds. (ii) Coordination Committees select and recommend schemes prepared by local councils for government funding. (iii) Councils select locations of schools, health centres and identify development needs. (iv) Chairmen of Councils have been included in the Divisional Development Boards for Thar, Nara and Kohistan areas.

W.A.P.D.A.: Chairman of Councils have been included in the Electrification Advisory Committees.

SOCIAL WELFARE SECTOR: (i) Functions of Social Welfare Department at field level have been entrusted to the Local Councils. (ii) Completed projects will be transferred to the Local Councils.

VETERINARY, FISHERIES AND LIVESTOCK SECTOR: (i) Supervision of Veterinary Dispensaries has been assigned to District Councils. (ii) 85 per cent income from fishing rights is now transferred to District Councils.

MANPOWER: Mayors, Karachi, Hyderabad and Sukkur are ex-officio Chairmen of Divisional Employment Advisory Committees.

GOVERNMENT, WORLD BANK SIGN COMMODITY LOAN

Karachi MORNING NEWS in English 12 Dec 80 p 1

[Text] Islamabad, Dec 11: A syndicate of 36 international commercial banks operating all over the world will extend to Pakistan a loan of dollar 200 million to finance commodity imports.

A delegation, comprising senior members of the management of the syndicate, is arriving here tomorrow afternoon to sign the loan agreement.

The Gulf International Bank and Morgon Guaranty of New York lead the syndicate. The lead banks were given a mandate by the Government of Pakistan to float the loan originally for an amount of dollar 100 million. The loan has been oversubscribed three-fold to a record amount of dollar 300 million. However, Pakistan has agreed to accept dollar 200 million.

The last debt rescheduling arrangement with Consortium ended in 1978. Coupled with rising debt service liabilities, the imported inflation aggravated the balance of payments problems for Pakistan. The Government, therefore, had to go to Euro dollar market to meet its emergent balance of payments needs.

It was against this background that the Government had asked the Gulf International to syndicate the loan.

The loan will be utilised to finance import of commodities like wheat, POL, fertilizer and edible oil.

RESHAPED IMPORT POLICY EXPECTED SOON

Islamabad THE MUSLIM in English 10 Dec 80 p 1

[Article by Ashraf Hashmi]

[Text] Country's import policy for June-July 1980-81 would be reshaped soon in order to give it a more liberal colour, it was officially learnt here today.

Official sources told THE MUSLIM that the measure was aimed at lifting all restrictions, imposed in October, 1977, on the import of raw material, machinery and spare-parts. The restrictions, they claimed had been affecting the local industry adversely.

It is also stated that raw-material and spare-parts for the local industries were either not available or had become expensive because of heavy duty.

The restrictions on the free import of these items, they said, were imposed in October, 1977 because of the drastically falling foreign exchange reserves. Now it is felt such restrictions should go. A decision in this respect may be announced within this month.

The decision may also lead to some further adjustments in the present free list comprising 439 items. They agreed that the present import bill of 5 billion dollars would further go up as a result of the new measures, obviously widening the gap of 2 billion dollars of present deficit in the balance of payments.

CSO: 4220

STATE BANK GOVERNOR SEES GRIM ECONOMIC SITUATION

Islamabad THE MUSLIM in English 10 Dec 80 p 1

[Excerpt] Lehore, Dec. 9: A. G. N. Kazi, Governor of the State Bank of Pakistan, stated here today that economic situation in Pakistan was very grim as the corporate bodies, a significant source of savings, had suffered a serious erosion. The capital retention, of these bodies amounting to Rs. 1,310 million six years back, had declined to Rs. 34 million, he added.

Delivering his presidential address as a three-day national seminar on "resource mobilisation" at the Pakistan Administrative Staff College, the SBP Governor said it was high time to formulate "more realistic policies" for mobilising resources and efforts should be concentrated on encouraging voluntary domestic savings.

Giving a comparative picture of Pakistan's economy with special reference to the domestic savings linked with the Gross National Product (GNP) Mr. Kazi said the ratio of national savings to GNP, which was at the rate of 13 per cent in 1977-78, met with a setback in 1978-79 as the same fell to 11.5 per cent.

However, some improvement has been recorded in 1979-80, as the ratio to GNP improved marginally to 11.9 per cent, and 71.1 per cent of investment was also financed from domestic resources, he added.

About national savings, he said without the remittance of overseas' workers, the picture would have been "more dismal" as the ratio of domestic savings to GDP in 1978-79 was only 4.5 per cent as compared to the ratio of national savings to GNP provisionally estimated then at 10.9 per cent.

Mr. Kazi said though it was evident that overseas workers' remittances were partly used for consumption, it was unlikely that in the recent past domestic savings had been significantly higher than 7 per cent.

Urging upon the need for accelerated investment to achieve a reasonable growth rate, the SBP Governor said Pakistan was a low-income developing country with a population growth rate of 3 per cent per annum. Efforts should be made to attain growth rate of around 6 per cent. Even if best development strategy was followed, the same would involve a continuing investment rate of 15 to 20 per cent of GNP, he emphasised.

A. G. N. Kazi stated that public savings declined in absolute terms from 1972-73 to 1974-75 and were in fact negative over the period.

The savings increased somewhat to 0.8 per cent in 1975-76 and rose to the peak of 2.4 per cent in 1976-77.

This was followed by a reversal trend when the ratio came down to 1.3 per cent in 1978-79. Significant improvement had been witnessed during 1979-80 which had carried the rate to the highest level of 2.8 per cent recorded so far.

He said except in the recent past, public sector had not made any significant contribution towards national savings.

The national private sector savings, which stood at the level of 11.5 per cent of GNP in 1972-73 dropped to as low as 6.5 per cent in 1974-75. Thereafter, it might have grown slowly because of remittances of workers from abroad and rose to 11.4 per cent in 1977-78. Since then, he said, the same remained between 9 to 10 per cent.

DRAWBACK OF DUTIES FOR EXPORT PROMOTION

Islamabad THE MUSLIM in English 29 Nov 80 p 7

[Text]

An important incentive which is fairly in common use in most of the developing countries for the purpose of encouraging and facilitating exports of manufactured goods, is exemption of duties and levies on the imported raw materials and components which may be used in the manufacture of goods meant for exports.

The developing countries generally export simple manufactures in which the value-added comprising labour and profits is relatively very low. As a result, there is very little scope for downward adjustment in prices. Further, the manufacturers depend on imported raw materials, to a considerable extent while import duties in many cases are high. In view of this, the cost of manufacture goes up and makes it difficult for the local manufacturers to compete in the export market.

In view of the above, it would look desirable that manufacturing units, engaged in the production of exportable goods should be allowed the facility of importing duty-free raw materials and components. However, the common method adopted by a large number developing countries, including Pakistan, is the refund of duties paid on raw materials and components, to the manufacturer, on that portion of manufactured goods which is exported. This system is known as "drawback" of duties.

An ideal drawback scheme should take into account the refund of all duties and levies borne by imported raw materials, components and packaging materials. In certain exportable items, packaging's role is considerably significant in so far as the representation of a product in sophisticated, protected and attractive forms in the export market, is concerned. Secondly, the cost of packaging in some items is higher than the actual cost involved in the the use of duty-paid raw materials. Exporting such products abroad would be impossible if duty drawback on packaging is not allowed.

In Pakistan, 48 exportable items are entitled to duty drawback while in the case of seven items, excise duty is refundable. Almost all the known manufactured goods enjoy exemption of import duty on raw materials and where there is no element of imported raw materials there is facility for refund of excise duty and sales tax in case these items are exciable in the domestic market. For instance excise duty on salt used in producing tanned leather and excise duty on leather gloves and leather gloves with textile backs, excise duty on soda ash used for tanning leather, excise duty on paints and varnish used in tennis racket and excise duty on cotton yarn are exempted and rebate is available if these items are exported.

The manufactured items figuring prominently in the list of exportables are cotton, yarn, cloth, carpets, leather, sports goods, surgical goods, POL products etc., while the overall range is yet to be broadened despite the availability of a number of facilities.

It cannot be denied that duty drawback facility continues to contribute significantly to the impressive increase in exports during the past two to three years. But it is difficult to quantify how much portion of exports of semi-manufactured and manufactured goods was backed up directly by exemptions and rebates on import and excise duties.

It appears that the standard rates of duty drawbacks in several items need to be revised upwards in view of the rising inflationary pressures resulting particularly from increases in wages, salaries and benefits and in the tariffs of power and gas. It is true that the duty drawback is directly related to rates of import duty and excise duty but other cost-increasing elements should also be taken into account for determining a fixed rate of drawback for promoting the exports of a wider range of manufactured and semi-manufactured goods.

It may be pointed out that among the country's exportables, primary produce continues to hold a prominent place. For instance, the increase in the exports of primary goods during 1979-80 worked out to as high as 79.7 per cent to Rs. 9.8 billion and constituted 42 per cent of total as compared to 32.3 per cent in the previous year. As against this, the exports of manufactured and semi-manufactured goods increased by 18 per cent to Rs. 13.6 billion over the previous year's Rs. 11.5 billion but their share in total exports dropped to 58 per cent from the previous year's 67.7 per cent.

IRON ORE RESERVES INCREASED

Karachi BUSINESS RECORDER in English 10 Dec 80 p 6

[Text]

LONDON, Dec. 9: Pakistan's known reserves of iron ore have increased, according to Chinese experts working in the Chagai district in Baluchistan.

They have confirmed deposits of 29 million tonnes of iron ore, with a 60 per cent high grade iron content.

This has been stated in a report published here in an English weekly. It said exploration work in Chagai continues and further discoveries were expected.

Government sources, according to the report, said that over 500 million tonnes of iron ore deposits have been established in Pakistan, the Punjab and Baluchistan.

Over 300 tonnes are deposited in the Makarwal area of western Punjab, where intensive coal mining is already well underway. The iron ore content is reportedly between 32 and 36 per cent.

Another 65 million tonnes of ore have been confirmed near Abbottabad, in the NWFP and another 100 million tonnes just 48 km from the capital, Islamabad.

The Chagai iron ore will probably be supplied to the Russian-built Pakistan Steel Mills in Karachi. The Chinese have been asked to set up another mini-steel mill in Chagai, utilising the same iron ore.—PPI.

RICE CROP SHORTFALL EXPECTED

Islamabad THE MUSLIM in English 8 Dec 80 pp 1, 8

[Article by Ahmad Bashir and Asar Sheikh]

[Text] LAHORE, Dec.7: A senior spokesman of the Department of Agriculture told The Muslim in an interview that the Basmati yield was up to expectations and procurement target would be easily met. However, Irri-6 had run into trouble, but the Province did not face any extraordinary situation. The pest problem had not been serious but not very grave.

A junior spokesman, a field worker, on the other hand, described the situation as not very good. He agreed that the Basmati had done well, but Irri-6, Pakistan's major foreign exchange earner, had been badly hit. How badly? Details were not available, but he said that on the basis of what he himself had seen, the production loss would be of the order of 12 per cent, if not more.

The Rice Corporation, monopolist procurers of rice, in the meanwhile, lowered their sights and reduced their procurement target for Irri-6 from 350,000 tonnes, a previous year achievement to a bare 100,000 tonnes. The procurement target of 3,50,000 tonnes for Basmati remains unaltered. In actual terms, this means that the current year's procurement of Irri-6 will be only 28.57 per cent of the original target—a shortfall of 61.43 per cent.

This does not mean that the Punjab has in all produced only 350,000 tonnes of Basmati and 100,000 tonnes of Irri-6. Rice dealers are allowed to keep a quantity of Basmati equal to one-tenth of all supplies made to the Corporation for local consumption at rates of their own fancy. The bonus for Irri-6 is 25 per cent of the total supply. This means that actual yield of rice is definitely 10 to 25 per cent above the procurement target and more.

Shortfall in the production of Irri-6 could be in the range of 12 to 61.43 per cent and it is a disastrous situation whether senior official spokesmen admit it or not. But one could be charitable and say that since various agencies are involved with their 'exclusive' facts and files, no single spokesman possibly knows the whole truth. Again a very "normal" situation with us.

The area under Basmati according to earlier estimates was to be 29,15,000 acres. Actual figures are not yet available. Again, 18,00,000 tonnes of paddy were expected this year but this expectation has no basis in reality.

In 1978-79, 29,20,000 acres, produced, 16,80,000 tonnes, and it was a year of exceptional good fortune. The rate and distribution of rainfall was made to order, being 1.36 inches in May, 18.47 inches in July, 4.67 inches in August, and 3.10 inches in September. The borer attack was minimal and the hopper did not bother to the extent it did later.

Against this, 29,25,000 acres produced 14,94,000 tonnes in 1979-80 because of a near-drought situation. Rainfall in the rice areas was 1.27 inches in May, 0.94 in July, 4.67 in August, and 1.94 in September. Then there were other factors. Input costs had begun to rise and to operate against the farmer. So had the dreadful hopper – teela to the local peasant – an almost casual visitor in the past, but, henceforth, a ruthful enemy on the kill. These factors were man-made, especially the hopper which we owe to an American rice expert, a guest of the Government who used Pakistan as a guinea pig. Under these circumstances, there was no justification for any expert agencies to fix the current target at 18,00,000 tonnes from a cultivated area only 10,000 acres in excess of the previous year.

There was no reason for feeling so sure of timely rains, and mechanised irrigation, on account of the constantly rising cost of diesel oil and electricity, had gone out of the reach of the average farmer. To crown it all, State spray of pesticides and all kinds of subsidy on inputs was withdrawn. It was a tall claim to begin with. It was an impossible target if one works out the cost of the production per 40 kilogram of paddy and compares it with its procurement price.

According to the department of Agriculture, the cost of the production of 40 kilograms of Basmati comes to Rs. 75.61 and of Irri-6 to Rs. 40.98. These figures have so far not been made public for obvious reasons. The irrational, illogical, and completely unrealistic procurement prices, which have been fixed at Rs. 75.00 for Basmati, and Rs. 38.00 for Irri-6 and are below production costs Where is the incentive, then for increase in production? Government agencies are aware of the situation, but they are depending on the farmer's helplessness. He can afford inflated input costs and he may not include in the cost of production the cash value of his own and his family's labour. He has no option. He must work, even if its amounts to slave labour but he must save enough to feed the family. He naturally cut down on inputs this year. Rainfall also let him down, being nil in

May, 3.81 inches in June, 9.1 in August, and 2.00 in September. The worst was yet to come.

This was in the nature of a hopper invasion. The hopper was not new to the rice areas, but it was localised and always under control, until the Government decided to import a so-called rice scientist. This expert stayed here for four years. The cost? An estimated Rs. 3 million, but the total cost of his experimentation on rice in Pakistan and the damage he did by leaving behind the hopper epidemic as a permanent problem, cannot be accurately measured. The hopper used to be very largely destroyed by our natural conditions until the 'expert' set up his 'experimental farms' at Gujranwala, Sheikhupura, Daska, Hafizabad, Kamoke, and Lambrey, in Narang Mandi.

In his quest for evolving on early variety and for introducing double cropping, he fed the soil excessively with water and fertiliser. We do not yet know about what he got for his pains. He left Pakistan last week and may submit his findings later. But his intensive experimentation changed the natural conditions of the soil and the weather, made it convenient for the hopper to multiply on an unprecedented scale and eat into the vitals of the crop. It is now everywhere and out of control, especially after the withdrawal of State spray under pressure from the International Monetary Fund autocrats. Our financial agencies were concerned with getting more loans to balance their budget, and had no understanding of the farmers' economic compulsions.

The farmer, on the other hand, could not believe that his own Government would withdraw from the field so completely, and throw the rice crop, Pakistan's number one foreign exchange earner, at the mercy of private sector pesticide dealers who put up prices sky-high. Five different commercial enterprises with foreign interests held in pesticide monopoly and could act as a cartel to squash the farmer. And this is just what they did. Their annual sales are estimated at Rs. 100 million. The protection of their business is one of the reasons given casually by a senior pesticide expert of the Punjab Government, when he justified the withdrawal of the spray facility. "They would have to close down their factories", he said.

According to the same source, these companies sold their product at Rs. 19.99 per kilogram as against the Government rate of Rs. 12 for the same quality from its own stocks. The Punjab Government released for sale through its Agricultural Field Assistants 400 tonnes, to supplement the quantity made available by the private sector but half of it remained unsold. The farmer could not simply afford it. He could not get the requisite credit and he had no cash savings. We have a situation at the end of the rice year of the government having 300 tonnes of unsold and unused stocks, which would lose their potency in three years from the date of manufacture even under careful maintenance conditions. How much time is left? Today we have a badly-hit harvest, a broken farmer, and a very happy rice hopper. *(To be concluded)*

BRIEFS

NORWAY AID INCREASED--Islamabad, Dec 11: The Government of Norway plans to increase its bilateral aid to Pakistan and in 1981 Pakistan will receive 75 million kroners, it was learnt here today. According to Government proposal designed to keep official development assistance's share of the Gross National Product (GNP) constant at one per cent, Norway's official development assistance will increase to 2,969 million kroner in 1981 compared with the 1980 total of 2,550 million kroners. In addition, the Government proposal includes outlays for refugees and for assistance following natural disaster.--PPI. [Text] [Karachi DAWN in English 12 Dec 80 p 18]

GAS MEETS THERMAL REQUIREMENTS--Almost 98 per cent of the fuel requirements of thermal power plants in Pakistan are met by natural gas, according to a hydrocarbon digest. The rest 2 per cent is provided by furnace and diesel oils and coal. At present Pakistan has an installed electric power generation capacity of more than 3400 mw, of which more than 50 per cent is accounted for by thermal power plants and nearly all of them are based on natural gas. The 48 mw plant at Quetta uses coal and one of two very small old units use diesel oil. A study of the use of natural gas by thermal power plants from 1955 shows an almost continuous upward trend. There was marked increase in the use of gas by thermal power units in the financial year ended on June 30, 1980. This was due mainly to the fact that thermal power added to make up the shortfall in hydel power generation caused by poor rainfall.--PPI. [Text] [Karachi DAWN in English 13 Dec 80 p 8]

CHAKWAL SOLAR POWER UNIT--Pakistan is about to enter the solar age as its first solar electrification unit is expected to go into production within the next few months, it was learnt from official sources. The unit, to be installed in Chakwal region in Rawalpindi district, will cost Rs. 1.2 million including Rs. one million in foreign exchange. The unit will generate five K.W. of energy, enough to provide power to 100 houses having two points each in addition to 20 street lights. It will also provide energy for a pumping set with a capacity to pump 28,000 litres of water. Experts believe that Pakistan, which needs alternative sources of energy badly, is very rich in respect of the supply of solar energy. It has been estimated that if only 10 to 15 per cent of the sun falling over Sind is harnessed efficiently, it can supply more than the combined electricity supplied by Tarbela, Mangla and Karachi nuclear power station.--APP. [Text] [Karachi DAWN in English 13 Dec 80 p 10]

FIFTY-THREE PERCENT UNDER WHEAT--More than 53 per cent of the total target area has so far been brought under wheat cultivation in Sind province during the current rabi season. Wheat sowing is vigorously going on in both lower and upper parts and

it is expected that sowing will cross the target of 25.37 lakh acres of land from which production of 19.40 lakh metric tons will be achieved. In Hyderabad division, wheat has been grown on 66 per cent of the total area, while in Sikkur division where sowing starts a little later, 30 per cent of the area is under the crop. Meanwhile, cotton of the Kharif crop continues to pour in the ginning factories from different cotton fields. According to the latest reports, cotton weighing over 13.23 million maunds has so far arrived at the various ginning factories. From this 5.46 lakh bales of cotton has so for been pressed at the factory. [as published] Cotton during the Kharif season was sown on 14.56 lakh acres against the target of 13.59 lakh acres of land while the production is 14 lakh bales.--PPI [Text] [Karachi DAWN in English 13 Dec 80 p 10]

DANISH LOAN APPROVED--Copenhagen, Dec. 9: The Danish Parliamentary Committee has recently approved the fifth loan to Pakistan worth 40 million kroner and the loan agreement is to be signed shortly. Disclosing this to a group of Danish economic students here, Pakistan Charge d'Affaires Tariq Usman Haider said the sixth loan being currently discussed between Pakistan and Denmark, is in a preliminary stage of negotiation. Mr. Haider said Danish economic assistance to Pakistan began in 1964 and credits provided so far totalling U.S. dollar 58 million had been fully utilised by various development projects. Most of the loans were being used by WAPDA, PICIC, State Cement and Shipping Corporations. Loans were interest-free involving no down-payment and the long-term repayment invariably included grace period of 5 to 10 years. Generous Danish terms meant that 85 per cent of Danish loans were in fact a grant, Mr Haider said and added that the Danish Govt. had already waived a part of the outstanding debt liability. Most loans (dollar 33 million out of total dollar 58 million) had been extended to Pakistan after 1976 when Pakistan first opened its Embassy in Copenhagen. General Danish contribution to Pakistan's economic development reflected the well-established and friendly relations between the two countries, Mr. Haider told the students and pointed out that Denmark was one of the few developed countries which had reached United Nations target for development assistance.--APP [Text] [Islamabad THE MUSLIM in English 10 Dec 80 p 8]

BIO-GAS PLANT PLANS--The energy resources cell of the Federal Petroleum and Natural Resources Ministry plans to set up 1,200 bio-gas plants in the country during next three years, it was learnt. So far a total of 100 bio-gas projects have been set up in the country of which, 75 were subsidised. The government has allowed a subsidy of Rs. 2,600 on a family size bio-gas unit. In Punjab, the Appropriate Technology Development Organisation has undertaken to instal 40 bio-gas plants in various parts of the province. Of these, 20 were installed till September in districts of Gujrat, Gujranwala, Faisalabad, Sahiwal, Vehari and Rahimyar Khan. ATDO provides technical assistance and know-how and also bears a part of expenditure in the installation of the plants. Some of such plants have the capability of generate 125,000 kilowatts per hour of electricity every year, which is sufficient to electrify a village having 100 to 500 houses.--PPI [as published] [Text] [Karachi BUSINESS RECORDER in English 8 Dec 80 p 1]

MORO LIBERATICN FACTIONS INCREASE RIFT

Jiddah ARAB NEWS in English 7 Dec 80 p 3

[Text] The Supreme Council of the Bangsa Moro Liberation Organization (BMLO) of the Philippines has condemned the statements made recently by another liberation leader, Nur Misuari, who is claiming independence for the Muslim majority regions of the country. A statement issued by the BMLO's Chairman, Sultan Harun Al Rashid Lucman said Misuari who is leading a rival Muslim party, had claimed that he will ask the Third Islamic Summit, due to be held in Taif next month, to support the self-determination and independence of the Muslims.

The BMLO said that such statements were ridiculous as they were made by a man who had lost 90 per cent of his top military commanders and 70 per cent of the territories that his party used to control.

The BMLO statement comes as a response to statements MNLF leader, Nur Misuari, made to *Arab News* when he visited Habib Chatti in Jeddah in late August.

Misuari was in the Kingdom to meet Chatti, the secretary general of the 40-member Organization of Islamic Conference, and review the situation of his people before the third Islamic summit. Misuari said he will ask the conference for humanitarian and material support and to bring the problem to the United Nations.

In addition, Misuari said that the MNLF has changed its claim from autonomy to total independence. The MNLF leader said that a meeting in Jakarta on Nov. 15 between the Filipino government and the MNLF did not take place because President Marcos wanted to include in the government's negotiating panel Muslim renegades.

However, in response the BMLO said, "while it is a fact that the great majority of the Moro Muslims are for genuine freedom, an Islamic society and a structure that will enforce their right of self-determination, this sentiment can only blossom under the correct Islamic leadership and not with the MNLF of Misuari for he has fragmented the Moro movement through treachery, lies, leftist policies, corruption, tribalism and worse — to be a mere agent of Libyan dictates. Even the food he eats and his clothes are provided by the Libyans," the BMLO statement said.

"The surrender of military commanders including Jamil Lucman of the BMLO is due to the fact that they have been exhausted logistically. The other Moro leaders who have collaborated with the Marcos regime have done so because of the refusal of Misuari to expand the MNLF to encompass all sectors and unite the Moro into one movement. The leftist policies have dashed all hopes of unity which the Organization of the Islamic Conference, the Rabita Al Alam Al Islami and the Motamar Al Alam Al Islami have been striving to achieve for the past three years.

"The Moro could have won years ago if only the original structure was not sabotaged by Misuari and the unity of the Moros not subverted by foreign powers. How can a minority of five million people in a nation of 40 million and divided into factions expect to attain independence?

"As for the refusal of Misuari to attend the Jakarta meeting between MNLF and the Marcos government, the real reason is that Misuari will be highly embarrassed by the fact that Marcos organized a panel composed mostly of his former cohorts in betraying BMLO and he has only two or three original members of the MNLF with him. He knows that such panel will unmask all his pretensions.

"The BMLO has declared in the Islamabad conference through a position paper that we no longer feel negotiation is possible with the Marcos government since it it a government on the way out. The Moros also can not trust

Marcos. We asked that the Moro question be submitted for decolonization to the United Nations by the Islamic conference and at the same time economic sanctions be applied on the Marcos regime. This U.N. move can only succeed if there is a united Moro movement in order to insure total support of the Moro masses and that we can win in a free election. This is the lesson we can learn from the deliberations of the U.N. on the Eritrean independence in the 1950's.

"It is now incumbent on the Islamic Secretariat and the Committee of Four to take effective steps to this end or else all the resolutions on the Moro question will only tighten the noose around the neck of the Bangsa Moro people. If it is for Islam that the Muslim world is concerned about the plight of the Moro people then the Islamic organizations must follow Islamic rules in the struggle.

"The continued support for Misuari without looking into the charges of other groups and meeting officially with our representatives is a violation of the Kuala Lumpur resolution that states, 'negotiations must be between the Muslim leaders and the MNLF and the Philippine government.' If this was followed from the start, Misuari would not have been able to subvert the Moro Islamic movement and convert it into the "Moro national struggle based on Moro nationalism".

"We further ask the Muslim governments to review their policies and we are willing to discuss our position in the presence of Misuari and his Libyan masters. If our proposal is accepted we challenge Misuari and others to go to our homeland with us and lead our people and struggle on the spot. We have made this offer to the World Muslim League three years ago and we stand by it.

THIRD WORLD FAIR--Colombo, Nov 21--Over 100 developing countries will participate in the first-ever Third World fair to be held here from April 29 to May 4 next year, it was announced here yesterday, reports UNI-DPA. The main purpose of the fair called "TECHEX 81" which is expected to draw over 2,000 participants from the world over will be to provide a forum for the exchange and adaptation of Third World technology. An exhibition committee headed by the Sri Lankan Foreign Minister, Mr Shamshul Hameed, has already been set up. One of the objectives will be to promote joint ventures among Third World nations, particularly in the field of alternative energy sources and in the industrial sectors. [Text] [Calcutta THE STATESMAN in English 22 Nov 80 p 5]

CABINET 'LEAKS' OPPOSED--Colombo, November 21-- The Sri Lanka government has decided to use the provisions of the press council law to prevent any unauthorised publication of cabinet news by newspapers, according to a cabinet spokesman, Mr Ananda Tissa de Alwis. Mr de Alwis told a press conference here recently that unauthorised publication of cabinet memoranda, proposals and decisions had now become frequent and it might be necessary to take action against the offenders. The press council law was enacted by the former Premier, Mrs Srimayo Bandaranaike's government in 1973 in the face of strong criticism by the United National Party led by Mr J. R. Jayewardene. The UNP then described the law as being "undemocratic." But, in the wake of several leaks of cabinet news, the present UNP government decided to resort to the same law, observers noted. Under the law, offenders could be fined to an extent of Rs 5,000 or imprisoned for two years or both. [Text] [Bombay THE TIMES OF INDIA in English 23 Nov 80 p 12]

TAMIL WOMAN MP--Colombo, November 22--The Sri Lankan president, Mr Jayawardane's United National Party (UNP), has chosen Mrs Ranganayaky Pathmanathan as the party's nominee for the Pottuvil parliamentary seat which fell vacant on the death of her brother, Mr M. Canagaratnam. Mrs Pathmanathan will thereby become the first Tamil woman member of parliament since independence. She will take her oath of office on Tuesday. The nomination has been made in terms of the new constitution which allows for vacancies in parliament created by death or resignation of sitting members to be filled by nominations made by the political party to which that member belonged. Mrs Pathmanathan, a graduate in history, economics and Tamil, is the wife of a civil servant who is now an additional secretary in the ministry of state. OPTIMISM VOICED ON PRC HALT TO SUPPORT FOR CPT

Bangkok SIAM RAT in Thai 3 Nov 80 p 5

[Editorial: "'Good News' From the Prime Minister"]

[Text] General Prem Tinsulanon and his entourage returned from a trip to the People's Republic of China the middle of last week. In a newspaper interview at the Bangkok airport, the prime minister disclosed several results of this trip. But, in our views, the most important thing is the matter of the Communist Party of Thailand, or the CPT.

Concerning the problem of the CPT, General Prem stated that he and the Chinese prime minister had discussed this matter frankly as friends. He told him about the difficulties that have been encountered in fighting the Communist Party of Thailand for many years and he is sure that he understands and sympathizes. We asked China to consider the activities of the communist party in our country as an internal affair of our country.

This is the "good news" of the prime minister.

The deterioration of the country's administrative system is something that we must admit has been taking place for a long time. The undemocratic administrative system has given rise to oppression, monopolies and various forms of fraud against the people and government. These exist in Thailand's system and they have become so common that people have struggled to find a way to deal with and change these evils. It is these things that have caused the various administrative ideologies, some of which are dangerous to Thailand's basic administrative system, to become matters that some Thais have used with the hope of halting this deteroriation, building the nation and building the country in the form that they themselves dream of. It is the use of such ideologies that gave rise to the Communist Party of Thailand, a party that has not been legally recognized by the government and that has always opposed Thailand's present system of government.

These differences in views and ideals of the various sides have led to many Thais being killed or wounded.

This long conflict certainly shows that they have constantly received support from abroad and this outside support has been given with the hope of Thailand's becoming an international communist [country] and of establishing friendship between mutually supportive countries. Another factor is that this will build a path and generate benefits for those who provide support from outside. But when the political strategy between countries changes and becomes a stable means of contact at the government level, it is only natural that there be a call for an understanding about "internal affairs' in the conflict between differences in ideals.

The "good news of the prime minister" is not the best news. The terrorism carried out by the Communist Party of Thailand is a problem that is closely linked to another important matter and that is whether, in the daily lives of the Thais, the people are governed in a just way or not. [The degree to which] a society that is still filled with corruption, both private and public, and unjust oppression indicates the level of "difficulty" in the fight against the communist party. The government must continue to wage this fight until this problem is really solved and it must solve the problem as quickly as possible. And it is the task of General Prem to follow things through after receiving this "good news" about this from Peking.

The fact that China has admitted that the struggle between the Communist Party of Thailand and the government side, a struggle that has been carried on for decades, is an internal affair of Thailand means that, from now on, the conflicts that take place between the two sides will be conflicts that arise from internal support, with each side obtaining the base of support and weapons that it should and winning victories using various means. The people will be the ones to decide what the ideals will be. However, we believe that each side has a single goal and that is to build [a country in which there is] happiness, well-being, independence and freedom from outside influence.

EDITORIAL CALLS FOR FIRMER ACTION BY PREM ON ECONOMY

Bangkok SIAM RAT in Thai 1 Nov 80 p 5

[Editorial: "A Criticism That Must Be Listened To"]

[Text] On Thursday, 30 October, the Executive Committee of the American Chamber of Commerce issued an analysis of Thailand's existing political and economic situation and seemingly warned the Thai government that if the economic problems are not solved immediately this will affect the political security of the government of General Prem Tinsulanon.

Concerning the economic problems confronting Thailand, the report mentioned above stated that Thailand's balance of trade deficit has reached 64 million baht. At the same time, the inflation rate has risen to 20 percent. This has proven to be true. This can be seen from the price of consumer goods at the markets, which have skyrocketed in price 25 to 75 percent. And what is important, the price of some necessities such as powdered milk for babies has risen almost 50 percent. In particular, in the south, such as in Songkhla, powdered milk can no longer be purchased at the markets.

The fact that the government has let the price of some goods float may be beneficial in the long term. But the government is not prepared to solve the short-term problems by setting controls or providing "Thai products" to replace [imports]. Thus, the troubles concerning the cost of living are increasing and it can be said that people with small incomes face hardships.

The American Chamber of Commerce pointed out the weaknesses of the government and stated that one reason that the economy has not grown is the "lack of cooperation and coordination between the ministries and departments, which compete with each other. Decisions are not made resolutely in government operations (which would take too much space to explain in detail). This is because of political pressure from parliament, business groups and the military. This pressure has caused economic improvement to come to a sudden halt."

And that is not all. The report also points out in particular that "economic decline awaits Thailand in the future" and, from what has been observed, this cannot be denied. When this is considered in addition to the present activities of the government, it becomes very worrisome that, if the government does not immediately reform the administration of the country to strengthen it, whatever is done may be too late.

We agree 100 percent with this frank analysis and we do not feel that this is interference in our internal affairs.

The problem about this is that the country's leaders, especially the prime minister himself, should be more resolute.

If the prime minister does not use his existing power to solve these problems as soon as possible, the good people who have talent and who are sincere about governing the country will all become discouraged and leave. And in addition, a situation that should not arise may arise and the result will be that the entire country will face even more problems.

Concerning the position that General Prem Tinsulanon holds, we believe that he has the power to do what he wants since the country is only semidemocratic. Thus, if the prime minister does something that is right and that helps improve the economic situation, we are certain that all sides and all the people will give their full support.

According to Thai customs, such consideration for others is a good custom, but if a leader shows too much consideration for others, he will not be able to govern the country.

If the prime minister does not quickly take advantage of this opportunity to solve the problems, who will solve them? Or we can wait for some dishonest person to take control of the country and it can be said that such people are waiting for such an opportunity.

From what has been written, please do not think that this is an attack on the government or that it is "hitting the snake for the crows to eat." We are only giving a warning with good intentions for the mutual benefit of all Thais in the country.

PREM WARNS MILITARY ON RELEASING CLASSIFIED INFORMATION

Bangkok SIAM RAT in Thai 2 Nov 80 pp 1, 14

[Article: "Military Ordered to Be Strict In Releasing Information"]

[Text] Prem has ordered the army to be strict in releasing military information to the mass media because too much information is being released, especially concerning the movement and transfer of units in the field and the use of weapons. This enables the enemy to estimate our fighting strength, which should be a secret. At the same time, the army is also asking the newspapers to cooperate by preserving the secrets of the military.

A news report of 1 November stated that General Prem Tinsulanon, the preim minister, issued, in his capacity as commander in chief of the army, a warning to the various units in the army to be careful about releasing information to the mass media and he ordered the commanders of certain military units to be careful about granting interviews. The warning concerns releasing information about the deployment and movement of forces, the weapons of the army and other items of information that are secret and that may allow the enemy to learn our plan of action, the deployment of our forces and the size of our military forces. This would be damaging to our country and army. Thus, orders have been given to be strict about this. It is strictly forbidden to release such information to people who do not need to know. The order repeated that information is to be released strictly in accord with paragraphs 9 and 10 of the army regulation issued in 1979 that deals with the release of information.

Furthermore, Colonel Narutdon Detpradiyut, the deputy secretary of the army, sent a letter to the editors of all the newspapers requesting them to exercise care about publishing classified information. He stated that [the enemy] searches for important information in government circles in order to help obtain an advantage so that they will always have the advantage on the offensive. The enemy obtains important data each time pictures or information are published. Thus, they are being asked to cooperate, to help discuss things and to strictly refrain from publishing important government information or pictures [whose release] would be dangerous to the country.

STUDENTS SEE GOVERNMENT AS DICTATORSHIP

Bangkok SIAM RAT in Thai 28 Oct 80 p 7

[Thoughts From the News column by Prachuap: "A Good Government In the Eyes of the Students"]

[Text] The weekly journal PATTINYA has published the results of a study on the views of students from Thammasat, Ramkhamhaeng, Kesetsat and Chulalongkorn universities concerning domestic politics. They were to make a choice between differing views:

a. To have a good government, it is not necessary for the people to elect the government even though this is not democratic. If the people involved are good people, if they are honest and if they use their power resolutely good results will be obtained in solving the country's problems quickly.

b. Thailand has constantly been governed by dictators. The country has constantly experienced the problem of people using their power and seeking profits in dishonest ways. The real way to solve the problem is for the people to have rights and a real voice in setting and stipulating government policies so that the policies serve the people.

The results [of the survey] showed that 30 percent of the students selected choice "a" -- to have a good government, it is not necessary that it be elected by the people -- while 70 percent of the students selected "b" -- the government should come to power by democratic means.

Besides this, they were also instructed to choose between the following:

a. When the military becomes involved in politics, it gives the government stability because the military has a secure and strong base of power. It has the power to quickly make decisions and order things carried out.

b. The military should not become involved in politics,even if it gives the government stability. When the military forms a government,

it often cooperates with businessmen in order to exchange favors for mutual profit. This causes the military to divide into different groups because of conflicting interests.

The results showed that only 34 percent of the students thought that the military should play a greater role in politics for the stability of the government and thus selected "a." At the same time, 66 percent selected "b"; that is, 66 percent thought that military involvement in politics causes more conflicts.

This study, or survey, of the views of students from these four universities was carried out by the research committee of Dr Somchai Rakwichit, or the Phithak Pracha Company, which is a private company and not a government unit or an affiliate of any political party. Thus, it is my understanding that this was carried out with the intention of obtaining scholarly results rather than obtaining political or other results. The results of the study should, therefore, tally closely with the feelings of most university students.

Because the students at these universities believe that they are members of the intelligentsia and that they are free and are not bound by prejudice or various interests, or only slightly so if at all, they thus feel that they are sincere in their views or opinions concerning the various problems in the country. They want people to feel that they are sincere and they want the influential people in government circles to listen to them because, at least, this will help somewhat to develop democracy in the country.

In reality, concerning the problem of democratic government in Thailand, even if it is generally accepted that this is the desire of most of the people and even though it is felt that this is in harmony with the lives of the people and that a democratic system will help solve the various problems in the country better than some other form of government, it appears that there is still great confusion among the various classes of people. That is, there are still many people who feel that Thailand is not ready for real democracy. And some people express the view that the various disorders that have arisen in the country stem from the fact that the form of government, as prescribed in some of the constitutions, is too democratic.

In my opinion, even though the administrative change that took place almost 50 years ago was the idea of only a few groups and not the people in general, today it is recognized that a democratic form of government, especially one with the king at its head, it a form of government that is in harmony with the lives and needs of most of the people. But the democracy implemented here has its ups and downs and is not perfect as in other democratic countries where the people are free to choose or change their government as they wish. But we have come too far to return to the original form of government.

Thus, the problem that is presently challenging or confronting the Thai people is the problem of how to discover the real reasons, or obstacles, that are keeping the country's form of government from becoming a proper and perfect democracy.

There should be no thought of bringing back the old form of government, which is now outdated and which is disappearing from the world, or of using some other form of government, about which we do not know how long it must be tried out before we can be sure that it is in harmony with the lives of the people and that it can solve the various problems in the country better than a democratic system.

If we consider and review the past course of democracy in Thailand since the beginning, that is, from the revolution of 24 June 1932 until now, the problem that is still argued and for which no solution can be found is whether most Thais are ready to choose a government in accord with their wishes, which is an important principle of democracy. Concerning this problem, most of the people who control the forces and weaspons and who prefer to solve the problems in the country by staging a revolution or a coup d'etat cite similar reasons for using force, that is, [they say] they want to solve the problems for the people and that the previous system of government was not democratic and that new changes had to be made. But after the revolution or coup, almost all of them say the same thing. They say that the situation in the country is not ripe for the people to elect a government to govern the country and that the people who used force to carry out the revolution or coup must be the ones to control the use of power in governing the country. It is temporarily not necessary to consider the wishes of the people. Along with this, it becomes apparent that they intend to give special powers to the government, claiming that this is being done in order to be able to solve the various problems quickly.

Because the form of government that is used in Thailand often becomes a dictatorship that is created through a revolution or coup d'etat and power is used resolutely to solve the problems, confusion is created in the minds of the people as to whether administering things in this way is another form of democracy. And so when some problem arises, they go and appeal to the government to use its force resolutely and do not consider whether this is just or whether it will affect the rights and freedoms of others.

For these reasons, when I saw the results of the study on the political views of the students at four universities and saw that 30 percent support an administrative system in which the government does not have to be an elected government and that they believe that if there are good people who are honest and who will use their power resolutely, this will help quickly solve the problems in the country, I became very depressed since some students still support a system of government in which the government does not have to be elected by the people. It may be true that the hope of having a proper and

perfect democratic form of government may still be a long time away from becoming a reality since it is these students who must carry out important duties in the future or be the intellectual leaders of the people. But I am somewhat relieved by the fact that most students still hold to principles or support an administrative system in which the people elect the government.

I admit that a government that has not been popularly elected may be a good government, if the people involved are good people who are honest. But when we consider such governments of the past, we discover one fact and that is that such governments are rather hard to find because, usually, when people take power and they do not have to rely on the support of the masses or when they can use their power resolutely, these people almost always use this power for their own benefit and for their own security and prosperity. At the same time, they hold up the benefits of the country or of the people in general as a shield. Thus, the country falls into an economic crisis or some other crisis. Today, it can be said that such crises stem from governments such as this.

The democratic system stipulates that the government must be elected, or that the people have the right to elect the government they want, since, at the very least, there is the guarantee that if the government governs the country improperly or uses its power improperly, the people have an opportunity to make a change or elect a new government. But as for the type of government discussed above, the people do not have a chance to make any changes at all. They can only wait until someone thinks about using force, or weapons, to overthrow the government. This person then sets himself up as the ruler of the country instead and the cycle repeats itself over and over again.

Stated simply, if the people are allowed to have a real voice in setting and stipulating the policies of the government, there will be fewer rumors about the country's being lost than if there is a government that has not been elected by the people.

THAI PROFITS ON KAMPUCHEAN AID SAID TO BE MASSIVE

Paris LE MONDE in French 21 Oct 80 p 7

[Article by R.-P. Paringaux, LE MONDE Southeast Asia correspondent: "Humanitarian Assistance Operation Sinking in Murderous Anarchy"]

[Excerpts] Bangkok. One year after the financing of the humanitarian assistance operation in Kampuchea began it has become in Bangkok the object of scandalous revelations. Along the Khmer-Thai border it is sinking into a state of murderous anarchy fed by black market and waste.

This situation reveals quite clearly the extent to which the policy of international organizations could be influenced by the governments which financed them and by the groups and companies with which they contract for their purchases. For example, for the past year the Suisindo has been the privileged intermediary between the United Nations organizations and private and governmental Thai circles for the purchasing and delivery of food and other products for the Kampucheans.

Severe Delays

The Warner affair is prolonging and risking to trigger another aid scandal involving the FAO (the sister organization of the PAM) or, at least, some of its officials. In both cases investigations are underway and could lead to new revelations and even to the detention of officials. Last June the Thai government, while proclaiming its desire to help to save the Kampuchean people, decided to take for itself the lion's share and take over from the private companies the sale of seed rice to the international organization. It imposed upon the FAO exorbitant transactions which cost the organization over $2 million and which resulted in severe delays in deliveries of 15,000 tons of additional seed rice to Kampuchea.

Until then the PAM had paid from $225 to $240 for a purchase of 23,000 tons of seed rice worth on the local market between $150 and $175 per ton, or, at a profit to be shared by the various middlemen ranging between $65-$75 per ton; this deal alone yielded a profit of $1.5-$1.7 million.

The meager returns to the government on such transactions did not exceed 3 percent. "There was a great deal of money to be split. Why should the government be satisfied with 3 percent when it could make $100 per ton," recently explained Banhan, minister of agriculture, in an interview granted the local press. The government decided, therefore, that the FAO would henceforth do all

its purchases and related activities through a governmental agency. Alas, it soon became apparent that this bureaucracy lacked the means of the private sector for carrying out this entire project within the proper time.

"Pure and Simple Theft"

To sum up the complex process (involving forged documents, faked figures, pressures from the private sector and errors on the part of bureaucrats on both sides), suffice it to point out that, in the final account, the FAO accepted to pay fees, bonuses and royalties which had not been previously imposed and which raised the price per ton to $370. Furthermore, the government granted an export permit after $750,000 was paid on previous purchases and $1.2 million on fees and handling charges for the 15,000 additionally needed tons. Not without opposition, it is said, the FAO settled a bill which, in terms of the maximum price paid in April by the PAM, represented an increase of some $2 million. "A theft, pure and simple," a high international official commented. Added to this is $300,000, the cost of holding in the port of Bangkok four barges for nearly 2 months while the dickering was going on. Finally, only 7,500 tons were purchased here. They reached Kampuchea after the FAO stipulated deadline.

While denying any guilt, the minister of agriculture did not deny allegations of corruption. Quite to the contrary. Nevertheless, he was not specific. This being said, the fact that the Thais have tried to make their virtual monopoly as profitable as possible in the aid operation, which has surprised no one here, does not imply that the FAO is lending itself to an operation which some United Nations officials classify as "extortion." Sources close to the organization have emphasized that this was due to the impasse, the lack of seed in the area, the higher prices elsewhere, and the fact that time was pressing. Meanwhile, recently exposed to the same type of pressures, the PAM purchased 26,000 tons of rice from Burma and India.

It is unquestionable, today, that these two deals enabled a number of Thai and foreign officials and intermediaries to fill their pockets. Warner's detention proves it. "This is merely the tip of the iceberg. A number of other scandals might surface soon," a high United Nations official told us. The operation, however, has been a disaster for the Kampucheans and the suppliers of aid funds.

The latter, however, whereas quite justifiably displaying a very punctilious attitude in terms of controlling aid to the pro-Vietnamese regime, for equally clear political reasons are displaying a great deal of tolerance in the face of the rackets on this side of the border. This encourages those who have no scruples in seeking advantages from the misfortune of some and the charity of others and undermines the principles and even the very motivations of international aid. These scandals, however, pale when compared to what goes on along the border which has become a huge black market. It is estimated that thousands of Kampuchean and Thai merchants who meet there and who have all the necessary protection make deals exceeding $1 million every day.

Both goods and briberies are flowing freely. Everyone, merchants as well as civilian and military officials, are showing extensive profits. Everyone, that is, except the international UNICEF and CICR officials in charge of aid distribution in a sector which has been converted into a market with growing cases of

theft, insecurity, and threats. Today they find it impossible to determine the share of people who still vitally need assistance, what is the factual share of the aid reaching its destination and what is the part, believed to be important, which immediately goes to feed the black market. Even though limited, the operation must be maintained for political reasons affecting both sides which fear a resumption of the food catastrophe in Kampuchea.

SHARP RISE IN POLICE STRENGTH PLANNED

Bangkok SIAM RAT in Thai 3 Nov 80 pp 1, 12

[Article: "Police Intend to Increase the Strength of the Police Force to One For Every 500 People"]

[Text] The Police Department intends to greatly increase the number of policemen and has set a ratio of 1 policeman for every 500 people as the target.

Police Lieutenant General Narong Mahanon, the deputy police director-general for suppression, has stated that, at present, the Police Department has targeted the above ratio of police to people for around fiscal year 1981. The present ratio of police to people has not reached this proportion, the present ratio being 1 policeman for every 700 people.

However, the deputy director-general of the Police Department stated that, even though the budget of the Police Department has been increased greatly from that of last year, it will not be possible to improve the various aspects of the police force -- manpower, weapons and communications equipment -- very much since, at present, the price of things has increased greatly. Emphasis will be placed on the quality of the existing items in order to increase efficiency, and maintaining the weapons and communications equipment will also be stressed.

The deputy director-general of the Police Department also stated that at present the commissioner of the Commissioner's Office of the Provincial 4 is considering transferring police stationed along the southern border. This stems from a conference convened by the Security Council in order to solve the southern problem. But it may not be possible to carry out the transfer immediately because this must be considered very carefully. This is because policemen can easily be framed or charged falsely. If things are not considered carefully, this may have a very bad effect on command.

HYDROELECTRIC POTENTIAL OF SALWEEN DAM CITED

Bangkok DAO SIAM in Thai 3 Nov 80 pp 3, 14

[Article: "The Salween Dam -- A Joint Thai-Burmese Project"]

[Text] The National Safety Operations Command has stated that the Thai and Burmese governments are considering jointly building a multipurpose dam in Mae Hong Son Province in the area where the highway crosses the border into Burma. The dam will block the Salween River for the benefit of both Thailand and Burma in the areas of power production, irrigation and fishing.

The Thai and Burmese governments will soon officially agree to cooperate in building this large-scale, multipurpose dam in order to make joint use of the natural energy. The size of the proposed Salween dam is similar to that of the Phamong dam, which dams the Mekong River between Thailand and Laos.

Furthermore, the National Energy Administration has considered this project and stated that the Salween dam construction project will be beneficial in several ways. For example, it will be possible to generate electricity for use. The dam will be able to hold back much water for agricultural use. To the north of the dam, which will form a large reservoir, it will be possible to develop the area as a place for raising marine life for fishing. Besides this, the dam will also facilitate the development of water transportation.

In stipulating the cost of constructing the Salween dam, costs were based on 1980 construction costs. The cost of construction materials has been estimated at approximately 53,536 million baht. This includes the cost of installing electric generators, high-voltage power lines to transmit the electricity to the various communities and irrigation equipment.

The Salween dam project will be able to generate electricity that can be used instead of having to build power plants in Thailand, which [otherwise] must be built in order to generate electricity to satisfy the ever-increasing needs.

INTERNATIONAL SHIPPING LINE SET UP

Bangkok SIAM RAT in Thai 3 Nov 80 pp 1, 12

[Article: "The First International Shipping Line Has Been Established"]

[Text] A former deputy commander in chief of the navy has joined with Thai businessmen to establish the first [Thai] international passenger shipping line. A large passenger ship has been purchased from Japan, and preparations are being made to open a route between Bangkok, China and Europe.

A news report has stated that Admiral Anan Netrot, a former deputy commander in chief of the navy, has, together with several other Thai businessmen, invested in opening the first passenger ship route. The name of the company is the First Asian Line.

This company, which has its offices at the common market building in Bangkhen near the Bangkhen cooperative, has purchased a passenger ship, named the "Sakura," from Japan. It has a displacement tonnage of 13,000 tons. It is the company's first passenger ship, and it can carry 2,500 people. It is five stories tall, the entire ship is airconditioned and it is decorated like a first-class hotel.

According to Admiral Anan Netrot, the ship's maiden voyage will take place during the Chinese New Year period. The ship will carry travellers from Thailand to China for its auspicious beginning.

At present, the crewmen and captain are on their way to Japan to take possession of the Sakura. They are scheduled to arrive in Bangkok at the beginning of January. Very grand welcoming ceremonies will be held.

STEAM, NATURAL GAS POWER PLANT IS UNDER CONSTRUCTION

Bangkok SIAM RAT in Thai 25 Oct 80 p 4

[Withaya Parithat column: "The Bangpakong Steam and Gas Turbine Power Plant Construction Project"]

[Text] More than 80 percent of the present electricity generating plants must use oil as a fuel to generate electrical power and production has encountered difficulties because the price of fuel oil has increased steadily. This has caused production costs to rise too and shortages have also been encountered. Thus, in order to reduce the amount of electrical power generated using fuel oil, the Electricity Generating Authority of Thailand is trying to find alternate sources of fuel. For example, it made plans to construct power plants that use atomic energy. But this project has had to be postponed and if the construction of new power plants is not carried on quickly to immediately replace these atomic plants, there will be shortages of electricity in the near future.

The Electricity Generating Authority of Thailand has, therefore, discussed matters and made plans to build the Bangpakong steam and gas turbine power plant in order to satisfy energy needs and to help develop the natural resources discovered in the country since test drilling has shown that there is natural gas in the Gulf of Thailand. The Natural Gas Organization of Thailand is carrying on construction in order to use the natural gas in industrial and public utility operations. This is a good opportunity to use this type of fuel for such projects.

The Location

The Bangpakong steam and gas turbine power plant construction project is located along the banks of the Bangpakong River in Bang Saem and Bang Nang villages, hamlets 16 and 17, Bangpakong Commune, Bangpakong District, Chachoengsao Province. By river, it is approximately 11 kilometers north of the Gulf of Thailand or approximately 2.5 kilometers north of the Thephatsadin Bridge. The project construction site is approximately 69 kilometers from Bangkok.

Project Targets

The Bangpakong steam and gas turbine power plant construction project is an urgent large-scale electricity generating construction project. The basic plan of the project is to install the electric generators, with a total power generating capacity of 2,360,000 kilowatts, by dividing construction into two phases:

In the first phase, four gas turbine generators, each with a capacity of 60,000 kilowatts, will be installed. They use both diesel fuel and natural gas. The first two generators are targeted to be completed by the end of 1980 and the other two will be completed at the beginning of 1981.

Besides this, a 120,000-kilowatt combined cycle heat system powerhouse will be built to distribute electricity in conjunction with the four gas turbine generators mentioned above. The heat given off from the four gas turbines will be used to generate more electricity without having to use more fuel. Generating electricity by using the combined system of gas turbines and steam generators will increase electricity production 120,000 kilowatts, or approximately 40 to 50 percent over that of the power gas turbines. The completion date has been set for the end of 1981.

In the second phase, four steam plants will be constructed, each having a generating capacity of 500,000 kilowatts. In the first period, one generator will be installed first. The completion date has been set for 1983. [The generators] can use both heating oil and natural gas.

Benefits

1. When the first phase of the construction of the Bangpakong steam and gas turbine power plant project has been completed, we will have a total power generating capacity of 860,000 kilowatts. The amount of electricity generated each year will average 6 billion kilowatt-hours. When the full project has been completed, the total power generating capacity of this project will be 2,360,000 kilowatts. The amount of electricity generated each year will average approximately 18 billion kilowatt-hours, using either oil or the natural gas in the country.

2. Because the estimates of the electricity requirements, concerning both high-[voltage] electricity and the amount of electricity, have increased at a very high rate, this project will help solve the problem of a power shortage, which is expected within the next 2 to 3 years.

3. The steam energy power plant of this project will be a new base load energy supply source in the production system. It will provide security and it will be more efficient.

4. The power plants that will be built in accord with the plans of this project will use the natural resources, that is, the natural gas that exists in the country, so these resources provide greater benefits, especially for the country's economy and for the production of electricity.

5. This project will be one place in Thailand where modern scientific knowledge will be pooled. In particular, skilled Thai workers who have more knowledge and expertise will be produced.

6. This project will produce more jobs in the country.

7. This project will be beneficial for the surrounding communities and cause them to grow and make progress.

8. This project will be a place that is beneficial for visual education and for trips by students and tourists.

Studies On the Effects of the Project

The Bangpakong steam and gas turbine power plant construction project is a large-scale source of electricity using heat energy and there is much equipment. The use of the generators may, therefore, produce various effects because of the smoke and gas that come from burning fuel. Heat will be released from the power plants, operations will be noisy and so on. These effects must be considered seriously and they must be used as data in the engineering design.

So that the construction of this project proceeds in accord with the targets set, the Electricity Generating Authority of Thailand has conducted a survey to study the effects on the environment -- which includes the land, water, air, crops and animals -- the economic and social conditions and the customs and traditions in the project area in order to obtain clear data about the potential problems and the potential benefits and dangers to the environment. The data has been studied and analyzed in order to stipulate ways to solve the problems that arise or to limit the bad effects as much as possible. This will benefit the public in general.

Summary

The Bangpakong gas turbine and steam power plant is the first power plant in the country that has been designed to be capable of making beneficial use of the country's resources. It will save the country

much money on oil purchases. When construction is completed, this power plant will be a place where scientists, technicians and manual workers work together in a more useful way. And it is a project that will immediately increase electricity production in accord with the needs of the country.

This is, therefore, a suitable project and it can yield benefits that will cover the financial costs.

NSC ORDERS STEPUP IN SUPPRESSION OF PIRATES

Bangkok SIAM RAT in Thai 1 Nov 80 p 3

[Article: "The Ministry of Interior Has Ordered the Suppression of Pirates Who Rob Refugees to Be Stepped Up"]

[Text] Mr Damrong Sunthornsarathun, the undersecretary of the Ministry of Interior, has discussed the suppression of pirates. He stated that the Ministry of Interior has received a policy [statement] from the National Security Council or the committee in charge of solving the pirate problem. Thus, the Ministry of Interior is taking special interest in this since the problem that has arisen is very broad. The actions taken by the Ministry of Interior concerning the matter of pirates have been taken in cooperation with the navy. Aircraft have also been used to carry on operations and three joint checkpoints have been set up in Chumphon, Surat Thani and Nakhon Sithammarat provinces. At each checkpoint, river police are the main force but there are also land officials. Besides this, some fishing boats are being used to patrol the Gulf of Thailand in order to prevent robberies by sea. Because this problem does not affect Thailand alone but affects the entire world, there has been much talk about it. In particular, at the Geneva Conference on the refugee problem, there were questions about this and there was interest in protecting the refugees.

The undersecretary of the Ministry of Interior disclosed that, concerning the problem of pirates, actions must be carried out continuously and seriously. At the recent conference of provincial governors, the Ministry of Interior requested that the provincial governors of coastal provinces take a special interest in this matter and take responsibility, together with the police and administrative sector, for inspecting the fishing boats and the fishermen.

BRIEFS

ELECTRICITY FROM LAOS--The Electricity Generating Authority of Thailand (EGAT) and the Power Authority of Laos have reached an initial agreement in principle concerning a contract for the purchase of electricity. This resulted from the discussions held during the middle of this month between Mr Khammun Thonkaeo, the head of the Power Authority of Laos, and Mr Kasem Chatikavanit, the head of EGAT. The news report has stated that the essence of the principles agreed on are contained in four statements: (1) The Power Authority of Laos will contine to sell electricity to EGAT after the expiration of the present contract. (2) EGAT will purchase more electricity from Laos and even more will be purchased when the new electric power plant of Laos that is presently under construction and that will have a power generating capacity of 30,000 kilowatts, [is completed]. (3) Concerning electricity rates, the Asian Development Bank will be entrusted with the task of studying the data as a basis for research on electricity. (4) If the studies, the discussions on the new electricity rates and the construction of the new power plant of Laos are completed before November 1981, both organizations must hold discussions in order to make a new electricity purchasing contract, even if the old contract has not expired. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

NEUTRALIZATION OF SOUTHEAST ASIA SEEN AS AID TO REGIONAL STABILITY

Kuala Lumpur BUSINESS TIMES in English 8 Nov 80 p 6

[Article by Tan Siok Choo]

[Text] THE proposal by Australian Prime Minister Malcolm Fraser, after the regional Commonwealth meeting in India in September, that the five-power defence arrangement between Malaysia, Singapore, Australia, New Zealand and Britain would be revived, seems on the face of it worthwhile in an increasingly troubled world. But closer scrutiny shows that it does not offer an answer to Asean's needs.

For one thing, the defence arrangement involves only two of the five Asean countries and is, as such, totally inadequate for the defence of the region as a whole.

Moreover, linkage with pro-western powers in the form of a military alliance would only serve to damage Malaysia's and Singapore's credibility as non-aligned countries, without bringing with it any tangible benefits.

The five-power defence arrangement does not make it obligatory for either Britain, Australia or New Zealand to defend either Malaysia or Singapore in the event of an externally organised or supported armed attack or a threat of attack. The five-power defence arrangement merely states that the five governments, in such a situation, would consult together for the purpose of deciding what measures should be taken, either jointly or separately.

To merit serious consideration, as Mr Fraser tacitly acknowledged in his statement, the five-power defence arrangement will have to be substantially reinforced. As it now stands, Britain has already withdrawn its forces from Singapore, except for a small contribution to the integrated air-defence system, although Australian and New Zealand's military contingents still remain in Singapore and Malaysia.

Australia's apprehensions about the security of the Asean region are understandable in view of the signing of the Friendship and Cooperation treaty between the Soviet Union and Vietnam in November 1978 and the subsequent invasion of Kampuchea by Vietnam one month later — an invasion, which would not have been possible without the massive support and approval of the Soviet Union.

Not surprisingly, therefore, there is the fear, not only in Canberra, but also among other Pacific powers, that Vietnam, now totally dependent on the Soviet Union for military, financial and economic assistance, may become a proxy for the furtherance of Soviet ambitions in the region.

There is no denying the fact that Vietnam has the military capability to dominate the region. According to *The Military Balance 1980-1981* issued by the International Institute for Strategic Studies (IISS) in London, the Vietnamese armed forces total over a million as against only 893,400 in the case of Asean countries.

Moreover the 181,000 strong Indonesian army — the largest by far among the Asean five — is forced to divert one-third of its military personnel for civil and administrative duties.

Additionally, the armies of the other Asean countries are handicapped by the fact that their military experience is limited to coping with largely domestic insurgencies — quite unlike the Vietnamese who won their spurs, fighting first the French and later overcame one of the most sophisticated military machines in the world — that of the United States.

Another legacy of the war in Vietnam is the arsenal of weaponry left by the Americans after the fall of Saigon in 1975, which together with the battle-hardened Vietnamese soldiers, make Vietnam one of the strongest military forces in Southeast Asia.

Singapore's Prime Minister Lee Kuan Yew summed up the situation by saying "the unhappy admission we must make is that for at least 10 years, there is no combination of military forces in Asean that can stop or check the Vietnamese army in any conflict."

This conclusion, however, has not prevented the Asean five from strengthening their military forces, with the long-term objective of achieving self-sufficiency in the defence of this region.

The re-arming of Asean has taken two forms:

- the purchase of sophisticated military hardware from the US and Europe, leading to the possibility of greater standardisation of weaponry, combat aircraft, field and infantry armaments — thus enabling one Asean country to send reinforcements to another beleaguered member state, in the event of an external attack, and
- greater bilateral cooperation in logistics, and the coordination of ground troops through joint military exercises, thus laying the foundation for multilateral military cooperation should this become necessary.

In the long run, the security of the Asean five lies in their ability to project a combined military capability that would make would-be aggressors think twice, and in the capability to defend national boundaries and sea-lanes, and monitor the movement of forces within the region. This realisation has led to an upsurge in military spending.

According to the IISS, the combined military expenditure of the Asean countries has mushroomed since 1975 from US$2.849 million to US$5.968.3 million in 1979, an increase of 47.7 per cent.

Barring the option of self-defence, the Asean countries are left with two other choices in the short term: Asean can either opt for a military alliance with America, or enter into a formal defence treaty with Britain, Australia and New Zealand (an enlarged version of the five-power defence arrangement) or alternatively try to persuade all the superpowers to endorse the concept of the neutrality of Southeast Asia — that is, the Malaysian proposal for a zone of peace, friendship and neutrality (ZOPFAN) which has been adopted in principle by the Asean states.

In the aftermath of the Vietnam war, a military alliance with the United States is not feasible for the simple reason that public opinion and the American Congress would be extremely reluctant to entangle themselves in another Asian war.

Moreover, there is the danger that by aligning themselves with the United States, the Asean region could be drawn into a superpower conflict that would be detrimental to its own national interests.

Linkage with America could have domestic repercussions, since it runs counter to the rising tide of nationalism in Southeast Asian countries. For example, the American naval and air base in Philippines is a bone of contention between the Filipino government and the opposition amidst charges that President Marcos has allowed American air and naval contingents to be stationed in the Philippines in return for tacit support for his authoritarian regime.

The idea of an enlarged five-power defence arrangement is an attractive one. Assuming that Vietnam has hegemonistic designs, the arrangement would serve to restrain Vietnamese expansion, but there is no denying the fact that only the military might of a superpower would be sufficient to deter or repel the inroads of another superpower. That leaves Asean with only one last strategy — the neutralisation of Southeast Asia.

However, the main objection to the declaration of Southeast Asia as a neutral zone, is whether any of the three major powers — China, the Soviet Union and the United States — as well as Vietnam will respect it.

Although history is replete with examples of the fate suffered by so-called neutral countries in a war — that of being ravaged by all the combatants instead of perhaps only one warring state — there are, nevertheless, some cogent reasons why the neutralisation of Southeast Asia may succeed in guaranteeing the stability of the region in the short term.

The neutralisation of Southeast Asia would most probably find ready acceptance in the United States, although there may be some hesitations since acceptance of the concept may bar the United States from maintaining its naval and air base in the Philippines.

Would the neutrality of Southeast Asia also require the severance of America's treaty obligations to Thailand?

Australian commentator Bruce Grant in a paper *The Security of Southeast Asia* argues that there is no reason why, even in a neutral Southeast Asia, America cannot retain its treaty obligations with Thailand or its naval and air bases in the Philippines.

Citing the varied membership of the non-aligned movement (members of the Soviet bloc, for example, Cuba are members of the non-aligned group), Bruce Grant said that "the definition of neutrality is flexible" enough to accommodate alliances with one of the superpowers.

He also pointed out that with the reversion of Subic Bay and Clark Field to the "national control" of the Philippine government (and consequently the cessation of American extra-territoriality in these places), the Philippines may have now "become acceptably neutral."

Although critics have pointed to the inability of the Soviet Union and China to agree on "anything", Bruce Grant rebuts this by pointing out that the two communist giants may agree on "something if that something has the support of all the states of Southeast Asia and does not offer benefits to either China or the Soviet Union to the disadvantage of the other."

It may be the recognition that a neutral Southeast Asia would be advantageous to both Moscow and Peking that would facilitate the adoption of ZOPFAN, particularly at this juncture when Soviet forces are deployed in Eastern Europe, along the Sino-Soviet border as well as in Afghanistan in addition to the continual need to buttress client states like Vietnam and Cuba.

ZOPFAN would be particularly welcome to Peking which is now in the midst of its modernisation plan. ZOPFAN would enable Peking to exclude the Soviet Union from the region, without the need to increase its defence expenditure, although this advantage would also accrue to the Soviet Union vis-a-vis Southeast Asia.

However, for the Asean states, the main problem with China is the tendency of Peking to differentiate between party-to-party relations and state-to-state ties — which enables Peking to continue its support of local communists in Asean countries.

Bruce Grant admits that "it cannot be supposed that China or any other external power could be prevented from supporting rebel or dissident groups in every sense at all times." He points out that at present, China makes a distinction between ideological and material support, which is an improvement on its previous position of whole-hearted backing for friendly communists in the Asean five.

"In particular, Peking's concern that the United States should not vacate the field for the Soviet Union gives it an interest, however complex, in the stability of governments well disposed to the United States." In conclusion he says that it is possible that a neutral Southeast Asia would be attractive to China as a means of stabilising the region and that "the deflation of insurgency, without its abandonment in principle, could be a price worth paying."

Critics are also quick to point out the folly of trusting Vietnam after its invasion of Kampuchea (despite Premier Pham Van Dong's liberal assurances to Asean governments on Vietnam's policy of non-intervention in affairs of other states), and its brief incursion into Thailand in June this year.

However, Bruce Grant suggests that a neutral Southeast Asia would be beneficial to Vietnam; by ensuring the non-interference of superpowers, it would give Vietnam the needed breathing space to rebuild its still shattered economy.

Experts are also of the opinion that the invasion of Kampuchea was a result of Vietnamese perception of Kampuchea under Pol Pot as a direct threat to Vietnamese security. The removal of Pol Pot, and with it, China's toehold in the Indochinese peninsula, was therefore an overwhelming necessity (to the Vietnamese), whereas a neutral Southeast Asia would not be regarded as a threat by Hanoi.

In any case, experts also feel that a direct Vietnamese attack on the Asean five may be ruled out — particularly in view of the fact that despite its military superiority, the Vietnamese economy, buffeted by inclement weather and poor harvests, cannot sustain the impact of another war.[9]

Therefore, even though the benefits of a neutral Southeast Asia are of a negative nature, this in itself may be sufficient to persuade Vietnam to endorse this principle.

As for the three major powers, it is not possible to predict with certainty, the degree of adherence of each to the principle of neutrality. However, in the words of Bruce Grant, "while it may be unrealistic for Southeast Asian states to try to *exclude* external influences (which, in any case, they do not really wish to do), it is perhaps not unrealistic for them to hope to *regulate* the influence of the external powers.

SINGAPORE LEADS ASEAN PARTNERS IN FAMILY PLANNING

Kuala Lumpur BUSINESS TIMES in English 8 Nov 80 p 11

[Article by Estela Carreon in Singapore]

[Excerpt]

THIS tiny island nation is leading the way for its four other Asean partners in family planning.

Singapore's contraception rate of 71 per cent is, in fact, the highest in South-East Asia, says the latest world population growth indicator released by the Washington-based Population Reference Bureau (PRB).

And the high rate of contraceptive use is the major reason why Singapore has become the first developing country to achieve the below replacement level fertility. Replacement level implies births equalling deaths.

According to the PRB report, of the Singapore women acceptors, only 9 per cent use the traditional methods (rhythm, withdrawal, abstinence). A high 41 per cent use reversible methods (IUD, pills) and 21 per cent, sterilisation.

Thailand comes in second in contraceptive use in the Association of South-East Asian Nations. Its rate is also a high 53 per cent broken down into 27 per cent for reversible methods, 17 per cent for sterilisation and 8 per cent for traditional methods.

A far third is the Philippines with 37 per cent. A notable aspect is that because of strong church influence, a good majority of Filipino women acceptors (21 per cent) prefer the traditional contraceptive methods. Only 12 per cent use the reversible methods and 4 per cent, sterilisation.

Rounding up the Asean five are Malaysia with 33 per cent and Indonesia with 26 per cent. In the case of Malaysia, 20 per cent opt for reversible methods, 9 per cent, traditional and 4 per cent, sterilisation.

Indonesia, the most populous Asean nation with close to 145 million, has 23 per cent of its women acceptors going for reversible methods and only 3 per cent, traditional. No figure is available for sterilisation.

COAL AGREEMENT WITH JAPAN--Tokyo, 8 Dec (KYODO)--A Japanese company announced Monday it has signed an agreement with Australia's Victoria state government on the promotion of a project to liquefy brown coal deposits in the southeastern Australian state. Under the agreement, Nippon Brown Coal Liquefication Co. (NBCL) said, the Victoria state government will supply brown coal free of charge to a pilot liquefying plant to be constructed by the Japanese firm by the end of March 1982. NBCL, a joint venture of 5 Japanese companies, said the project, calling for construction of the 50-ton-a-day plant, will be promoted as a "national project" of the Japanese and Australian federal government. Investments in the project are estimated at yen 40 billion. Under the agreement, the Victoria state government will also supply brown coal at prices yet to be fixed to a 5,000-ton-a-day verification plant and a 30,000-ton-a-day commercial plant to be built later by NBCL. The verification plant will be completed in 1986-87 and the commercial plant in 1988-1989. [Text] [Tokyo KYODO in English 1113 GMT 8 Dec 80]

INDIAN CLAIM TO TALPATTI ISLAND REJECTED

BK201638 Dacca Domestic Service in Bengali 1430 GMT 20 Dec 80

[Text] A foreign office spokesman today made it clear that Bangladesh does not accept the unilateral claim of India over the newly emerged island in the estuary of border-river Hariabhanga. Expressing surprise over the statement made by the Indian foreign minister at the Rajya Sabha yesterday on the ownership of the island, the spokesman hoped that the problem will be peacefully solved in the light of understanding reached between the foreign ministers of the two countries at an early date.

The spokesman noted that the foreign ministers of Bangladesh and India at their Dacca meeting in August last discussed the issue of South Talpatti Island in the estuary of Hariabhanga River and agreed to settle the issue peacefully after the two governments exchange and study further information in support of their respective claims. He said that the Bangladesh Government is still awaiting additional information on the island, which the Indian side promised to supply in support of their claim over the island.

In the light of the understanding reached between the two countries to settle the matter peacefully through negotiations, Bangladesh was surprised at the statement of the Indian external affairs minister. Bangladesh is still standing firmly by the understanding reached between the two foreign ministers on the subject and hopes that the problem will be settled through understanding, the spokesman added.

BALANCE OF PAYMENTS HARDLY WORTH MEASURING

Kuala Lumpur BUSINESS TIMES in English 4 Nov 80 p 6

[Article by Kathryn Davies]

[Text] WHEN the tiny oil-rich sultanate of Brunei reluctantly throws off the final vestiges of British colonial rule at the end of 1983, few of its citizens hope for or expect major changes. With a Gross National Product of US$1.06 billion (according to World Bank figures for 1976) and a per capita income of US$6,620, together with foreign reserves of US$4 billion, the newly-independent state is unlikely to be short of funds. And there are no signs of an effective challenge from within to the political control exercised by the highly conservative Sultan Sir Hassanal Bolkiah and his family.

Brunei once had an empire of its own. It embraced most of Northern Borneo and a large part of the Philippines. The ruling family is proud of that history. By the time Brunei became a British protectorate at the end of the 19th century, that empire had shrunk to two small enclaves, 5,800 square kilometres in all, separated by the Limbang Valley, now part of the Malaysian state of Sarawak.

But the Sultan had retained perhaps the richest part of his domains. The oil fields, discovered 30 years ago, produce an average of 250,000 barrels a day, modest enough by world standards but enough to sustain the growing prosperity of Brunei's 200,000 people and earn the country some $US1.6 billion a year.

Fifty years of oil exploitation have transformed Brunei from economic insignificance — as a producer of low-grade rubber — to South-East Asia's largest oil producer after Indonesia.

Several oil companies took part in early prospecting; only Shell stayed, to discover the onshore Seria field in 1929. Offshore production began in 1964, and is now the main activity of Brunei Shell Petroleum (BSP), which since 1975 has been jointly owned by Shell and the government.

There is also natural gas. Since 1969, a company owned by Shell, the Brunei government and Japan's Mitsubishi Corporation has been running one of the world's biggest natural gas liquefaction plants, at Lumut. The Brunei government also has a substantial stake in Brunei LNG and Coldgas, as well as in Brunei Shell Marketing, which sells petroleum products, lubricants and chemicals throughout the state.

Brunei LNG buys the gas from BSP, liquefies it and sells it to a trading company — Brunei Coldgas — which in turn supplies it to three Japanese customers on 20-year contracts. Seven French-built gas carriers deliver over 5 million tons of liquefied gas to Japan every year — 250,000 million cubic feet. Earnings from gas alone amount to some US$690 million annually.

Some secrecy surrounds the activities of a fifth company operating in the oil industry — Saberu — which late last year signed a one-year contract with BSP to buy 50,000 b/d of crude oil which Saberu then sold at a premium through a Japanese trading corporation on the Singapore spot market. Under Brunei company law, private companies with fewer than 50 shareholders are exempt from some conditions and limitations of the Companies Enactment 1956. In particular, they do not have to file their accounts with the register of companies.

When the spot market was buoyant earlier this year, oil experts estimated that Saberu's shareholders, who are thought to include Prince Mohammed, one of the Sultan's brothers, and Datuk Harris bin Mohammed Salleh, the Chief Minister of the neighbouring Malaysian state of Sabah, had netted around US$500,000 profit on their contract. More recently, the arrangement has appeared less profitable and some of the crude oil has simply been burned in Singapore power stations. Shell declines to discuss the Saberu arrangement but is believed to be unhappy about it.

Accurate statistics about other aspects of the Brunei economy are also sometimes hard to come by. Bankers confess themselves baffled by the lack of information on net capital inflows. Funds are "onlent" from Singapore and offered by tender to the local banks three or four times a year. But individual banks have no way of knowing whether the total amount of money offered is in fact available, and the results of tenders are not published.

Some balance of payments figures have been made public — in 1978 these amounted to a surplus of US$1.778 billion — and an economist seconded from the United Nations is working with the Economic Planning Unit to set up a system of national accounts.

But some bankers and government officials argue that precise statistical data is almost irrelevant in determining Brunei's overall economic strategy. "The balance of payments is hardly worth measuring — it's so overwhelmingly in our favour," says Pehin John Lee, the chief financial officer (Pehin is a Brunei title somewhat akin to a life peerage).

Pehin Lee presides over a budget in which less than half oil and gas income is used to cover recurrent and development expenditure, the balance being invested overseas.

Roughly a third of government expenditure goes on defence — most on the Royal Brunei Malay Regiment and the 650-strong British Gurkha battalion, paid for by the Sultan. There is no personal income tax in the state and virtually all services — gas, electricity, telecommunications, health and education — are heavily subsidised. Companies, apart from those in the oil industry, are taxed at a rate of 30 per cent on income "derived or accrued" in the state, so foreign income not remitted to Brunei is not taxable.

So far there have been few major development projects outside the gas and oil industries, partly because the government has seen little need to diversify the economy and partly because the local work force prefers the safety of government employment to more speculative private enterprise.

"Diversification must now lie in agriculture, forestry and fisheries," says Pehin Lee. Brunei produces only a quarter of the rice it needs, and the government allocated US$4.5 million in 1979 to prepare land for its own rice-growing project.

An agricultural training centre, sponsored by BSP, is training young farmers in modern techniques, and Mitsubishi has set up a cattle breeding project to serve as a base for a livestock industry to supply the local market.

But there is little sense of urgency, even though no one is sure how long Brunei's oil will last. BSP is confident that new techniques will enable oil to flow uninterrupted for at least 10 and probably 20 years. Mr Peter Everett, BSP's managing director, reassured Shell employees recently that they could "still expect to have a full and satisfying career and retire from what will still be an active industry.

"It will undoubtedly be a different scale of operations, producing less in volume, but it will still be a viable industry, responsive to changes." However, some local businessmen and bankers worry that not enough is being done to prepare for the day the oil runs out.

Others, perhaps closer to the ruling family, say that when this happens, the foreign reserves will be sufficient to keep the economy afloat, without any alternative industries at all. — FT

BURMA-BANGLADESH BORDER AGREEMENT SIGNED--The Ministry of Foreign Affairs has announced that the governments of the Socialist Republic of the Union of Burma and the People's Republic of Bangladesh today signed the bilateral border demarcation and cooperation agreement in Dacca. The agreement was signed by Minister of Home and Religious Affairs Brig Sein Lwin, who is in Dacca on a goodwill mission, on behalf of the Burmese Government and Bangladesh Home Minister Mustafizur Rahman, on behalf of the Bangladesh Government. The signing ceremony was attended by the representatives of Burma and high-ranking officials of the Bangladesh Government. The draft of the agreement was initialled in Dacca on 24 August 1980 by Deputy Minister of Foreign Affairs U Tin Ohn and Secretary of the Bangladesh Foreign Ministry Kibria. The agreement has now been signed by the home ministers of the two countries. The agreement consists of four main parts: the first part concerns border authorities; the second part is on border ground rules; the third part concerns governmental-level meetings; and the fourth part is on general provisions. COOPERATION AGREEMENT SIGNED WITH UAE

GF211720 Dubayy KHALEEJ TIMES in English 21 Dec 80 p 1

[Text] New Delhi--An agreement was signed here yesterday between the UAE and India for promoting technical and economic cooperation between the two countries, at the conclusion of their Joint Commission meeting.

Mr Rashid 'Abdullah, minister of state for foreign affairs, signed the agreement for the UAE, while Mr Narasimha Rao, the Indian external affairs minister, signed for India.

The agreement aims at increasing economic cooperation, facilitating trade exchanges and preparing studies on setting up joint ventures between the two countries besides promoting cooperation in petrochemical industry. Technical knowhow and technology will also be exchanged under the agreement.

Efforts will be made to step up cooperation in the fields of health, labor, security, education and culture as well.

The next meeting of the Joint Commission will now be held in Abu Dhabi in 1981.

In a statement after signing the agreement, Mr 'Abdullah expressed his satisfaction over the outcome of the meeting and said that the UAE would do its best to implement the accord.

Earlier, at the meeting of the Joint Commission, the two countries agreed in principle to take up several joint projects worth millions of dollars, mostly involving UAE financial resources and Indian expertise. Some of them were: gas-based sponge iron plant in the UAE and a 12-million-ton capacity oil refinery and some hotel projects in India.

The investment in India, particularly in hotel projects, will be made by the UAE through the Abu Dhabi Fund for Arab Economic Development (ADFAED) which will conduct feasibility studies in accordance with the scope of the agreement.

During the talks, Mr Rao was assisted by Mr Romesh Bhandari, secretary of external affairs, Mr Lalit Mansingh, Indian ambassador in the UAE, and senior government officials.

Mr 'Abdullah was aided by the 19-member UAE delegation.

Mr 'Abdullah assured the Indian side at the meeting of the Joint Commission that the UAE was prepared to consider increasing fuel supplies to India on a "long-term basis."

The Commission decided to set up a joint Indo-UAE investment corporation and the opening of an office by the India Investment Center in the UAE.

Besides, the two sides reviewed the conditions of the Indian community in the UAE. Mr Rao appreciated the UAE government's role in promoting its welfare.

Mr Rashid 'Abdullah later had a closed-door meeting with Mr Rao.

During the meeting, Mr Rashid 'Abdullah explained the UAE's viewpoint on keeping the Gulf and the Indian Ocean clear of superpower influence. Mr 'Abdullah said the forthcoming meeting of the foreign ministers of the non-aligned states in Baghdad also came up for discussion. The talks covered appraisal of the current regional and international situation. He said their viewpoints were identical on most of the international issues.

Mr 'Abdullah said that the Indian foreign minister assured his country's full support to the Palestinian cause and the right of the Palestinian people to an independent state.

Mr Rashid 'Abdullah also extended an invitation to his Indian counterpart to visit the UAE. He said that his visit would accelerate the pace of increasing cooperation between the two countries.

DELHI CONFERENCE VIEWS EXPANSION OF OANA

BK171640 Hong Kong AFP in English 1457 GMT 17 Dec 80

[Text] New Delhi, 17 Dec (AFP)--Heads of Asian news agencies meeting here in a UNESCO-sponsored conference on communications have agreed in principle to launch a news exchange network under the auspices of the Organisation of Asian News Agencies (OANA), conference sources disclosed today.

The decision would be forwarded to the UNESCO with the suggestion that the exchange project be given top priority for the international programme for development of communication.

The PTI News Agency, which is expected to be the South Asian anchor for the project, said the name OANA would be amended to read the Organisation of Asia-Pacific News Agencies.

The statutes and working procedure of the new exchange network are expected to be finalised when OANA, formed 20 years ago with UNESCO support, holds its general conference in Kuala Lumpur next year, according to the PTI.

Under the recommendation, conference sources said, each agency, which is assigned the task of receiving and transmitting news, would handle the reception of news from selected agencies and transmit them to another group.

The New Delhi meeting, which began on Monday, will continue its sittings till Friday. Among the participants are India, Afghanistan, Bangladesh, China, North Korea, South Korea, Indonesia, Japan, Laos, Malaysia, Mongolia, Pakistan, Vietnam, Sri Lanka and the Soviet Union.

OANA is at present headed by Indonesia's Antara News Agency, while PTI is its vice-president.

The New Delhi meeting is part of the second UNESCO-sponsored consultation as a follow up to the inter-governmental conference on communication policies in Asia and Oceania held in Kuala Lumpur in February 1979.

Meanwhile, the PTI yesterday took the first step in computerisation of its news operations with a demonstration organised here on electronic editing by computer and channeling the news through an automatic switching system.

DOMESTICALLY DEVELOPED 'MAGNETO HYDRO DYNAMIC' GENERATOR DESCRIBED

New Delhi LINK in English 23 Nov 80 p 32

[Article by Ramkrishna Sinha]

[Text]

OF LATE, India achieved an elegant breakthrough on energy front when its Magneto Hydro Dynamic (MHD) generator was successfully tested in Moscow. The installation is coal-operated and the first of its kind in the world. It is entirely based on Indian know-how and independently designed and built by Indian specialists. No doubt, it is a major step in the direction of finding an alternative method of power generation.

In the conventional methods of power generation, chemical (potential) energy of the fuel is converted into electrical energy via mechanical stage. The energy conversion process is completed in four stages: First, chemical energy (fuel) is converted into thermal energy (by combustion) which is used to raise steam. Steam is then fed to a turbine to get mechanical energy which, in turn, is converted into electrical energy with the help of a generator. As the conversion process involves thermal energy stage, it obeys the laws of thermodynamics. These laws impose an inherent limit on the conversion efficiency of the plant. The overall conversion efficiency of a conventional steam power station is nearly 40 per cent.

The techniques that bypass the mechanical energy stage responsible for the major drop in the maximum efficiency due to the losses in the mechanical link are known as direct energy conversion process since they convert thermal energy directly to electrical energy without requiring mechanical stage. The efficiency of these processes are, however, still limited to some extent as they involve the thermal stage. All the same direct energy conversion devices offer very high efficiency and this explains why great effort has been made during the past decade to exploit these techniques.

MHD generator is one of the various direct energy conversion techniques, others being thermo-electric, thermionic and fuel cell (which bypasses both the thermal and mechanical energy stages). This (MHD) technique has drawn considerable attention of the scientists during the last ten years. It is based on a simple discovery of Faraday that when a conductor moves across a magnetic field a voltage is induced in it which produces a current. In the conventional generator, the conductors are made of copper whereas in the MHD generator the solid conductors are replaced by an ionised gas moving at a very high speed. The current is drawn by suitably placing electrodes in the stream of the gas passed through a powerful magnetic field. To obtain high electrical power, high values of magnetic flux density, gas conductivity and gas velocity are required. Fortunately, the development of superconducting magnets (with a high value of magnetic flux density) offer an economic solution to this kind of power generation.

Research projects on MHD generators are underway in USA, Japan and USSR on a large scale. The Soviet Union's pilot plant working on the MHD will soon pave way for commercial production of energy. Its MHD generator is oil-based.

India has the world's largest coal reserves estimated at 83 billion tonnes. Thus the ample supply of coal will make the power generation by MHD attractive here. Now, having tested its MHD generator successfully, India is likely to establish a pilot plant, to be followed by a full-fledged commercial power plant at Trichur in Tamilnadu.

BRIEFS

ENVOY TO ICELAND--Raj Kumar Dorendra Singh, ambassador-designate of India to Norway, has been concurrently accredited as ambassador of India to Iceland with residence in Oslo. [Text] [BK170317 Delhi ISI Diplomatic Information Service in English 1614 GMT 15 Dec 80]

CINEMATOGRAPHIC COOPERATION WITH USSR--Soviet Minister for Cinematography F.T. Yermash has said that the India-Soviet relations in the field of cinema have reached a stage where it is necessary to give a new impetus for bilateral cooperation. Speaking to newsmen at the Delhi Airport before leaving for Moscow, he said the protocol signed a few days ago will provide all possibilities of cooperation between the two countries in every branch of cinematography, including coproduction of films. BELGIAN, JAPANESE AID FOR SHIPPING INDUSTRY

Jakarta HARIAN UMUM AB in Indonesian 18 Oct 80 pp 1, 9

[Excerpts] The Belgian and Indonesian governments yesterday signed a treaty of cooperation to develop an Indonesian shipping company called PT. Industri Kapal Indonesia (PT IKI) or Indonesian Shipping Industry, Ltd. Belgium was represented by Ambassador Jacques I. D'Hondt, while Suhartoyo, director general of Basic Metal Industry, signed for Indonesia.

The aid from the Belgian government will take the form of training of managerial and technical shipping personnel of PT IKI scattered in Ujung Pandang, Padang, Gresik and Bitu.

To this end, three Belgian experts in management and shipping technique will make a study of PT IKI's organization at the latter's dry dock and make suggestions about work methods for a shipping enterprise, while four Indonesian experts will receive training in the same field in Belgium.

In his press statement following the signing of the agreement, Director General of Basic Metal Industry Suhartoyo said that Belgium is most experienced in shipping industry.

He said that this is not the first time that Belgium has rendered aid to Indonesia. Previously, Belgium has helped Indonesia in the Metal Industrial Development Center project and also in making a feasibility study concerning some machinery project.

Besides Belgium, Japan is also helping Indonesia in the field of shipping industry and is presently completing a feasibility study about expansion of a PT IKI's dry dock located in Ujung Pandang.

Ir Ayub Yunus, director general of PT IKI told the press that PT IKI's dry dock is capable of repairing vessels of 500 to 1,000-ton capacity.

After the completion of the Japanese feasibility study, which forms part of their cooperation with the Indonesian government, the capacity of the said dry dock in Ujung Panjang will increase to 5,000 tonnage.

On the average, the Ujung Pandang dry dock repairs about 60 vessels annually, the one located at Bitung about 50 vessels (capacity 300 tons), and the dry docks

located at Gresik and Padang can repair 25-30 vessels and 15-20 vessels, respectively.

One of the difficulties faced by PT IKI in repair work is that there are too many different types of machinery used by the ships under repair, and so it is not easy to obtain the necessary parts.

Therefore, he suggested that ships use machinery which are common in Indonesia, such as Deutz or MWM brands.

Of the government plan to build 104 ships, PT IKI has won an allotment to build 17 for its 4 dry docks.

AGREEMENT WITH SINGAPORE ON DEVELOPMENT OF BATAM ISLAND

Kuala Lumpur BUSINESS TIMES in English 1 Nov 80 p 12

[Text]

SINGAPORE, Oct. 31

SINGAPORE and Indonesia signed an agreement here today to help speed up the development of the Indonesian island of Batam as an industrial and free trade zone.

The agreement, signed by Singapore Minister for Trade and Industry Goh Chok Tong and Indonesian Ambassador Sudjatmiko, was designed to facilitate the movement of capital, machines and workers to Batam, officials said.

The pact provides for cooperation in various fields, including trade, industry, banking, communications, taxation, Customs and immigration, which is aimed at improving the investment climate on the 415-square-kilometre (160-square-mile) island, about 20 kms (12 miles) southeast of Singapore.

No specific details were disclosed, and newsmen were given only a statement broadly outlining areas of cooperation under the agreement.

A system of joint marketing of goods and services would be worked out under the agreement which also calls for the maximum use of transhipment and warehousing facilities in Batam.

Under the agreement, the two parties would facilitate the availability of capital and banking services needed for the development of Batam. They also would exchange advisers, experts and technicians.

"Both parties agree to take measures in the field of taxation which will encourage investment in Batam, including application of tax administration procedures and methods for the avoidance of double taxation," the statement said.

Customs and immigration procedures would be streamlined to help the flow of goods and people between the Indonesian island and Singapore, it added. The agreement would be in force for five years and could be extended for five more years, it said.

Except for minor changes, the agreement closely followed a draft agreed upon by Indonesian President Suharto and Singapore Prime Minister Lee Kuan Yew last July, officials said.

Mr Lee has made it clear that there will be no direct Singapore government investment in industrial enterprises on Batam, but officials said the agreement would lead to a large investment stake for Singapore companies on the island.

Mr Goh said after the signing ceremony that Batam would complement Singapore's economic development.

"There will be some competition in some areas but competition is good for the soul of development when carried out within the market framework," he said.

Economic experts here said that Batam would provide an ideal location to some of the labour-intensive industries which would be phased out in favour of high technological enterprises under Singapore's new economic policy.

Mr Sudjatmiko, who also spoke after the signing said: "Batam as an industrial region has five objectives to attain — transhipment activities, an industrial area, an export processing zone, marshalling yard for big projects and a tourist resort.

"Since the development of Batam island at the early stage is focused on labour-intensive industry, it will not compete with a capital-intensive industry which characterises Singaporecy . Indeed, they will be complementary." — Reuter

PLAN TO DOUBLE OIL REFINING CAPACITY BY 1983

Kuala Lumpur BUSINESS TIMES in English 7 Nov 80 p 6

[Article by Richard Cowper in Jakarta]

[Text] INDONESIA has the somewhat doubtful distinction of being not only the largest oil and gas exporting nation east of the Gulf but also one of the region's biggest oil importers. The country's antiquated refinery structure — one unit dates back to 1922 — has been unable to keep pace with soaring domestic consumption of oil products which in the 1970s grew at an average rate of nearly 14 per cent.

At last, however, the government has taken the bite between its teeth and embarked on plans at least to double refining capacity by 1983, from the current 400,000 barrels per day to 800,000 b/d. Contracts recently signed with Bechtel Corporation of the US to build a 200,000 b/d extension to the refinery at Balikpapan in East Kalimantan and with Fluor, also of the US to build a similar 200,000 b/d extension to the Cilacap refinery in central Java should make Indonesia largely self-sufficient in refining by 1983. Together the two projects will cost Indonesia an estimated US$1.6bn.

The country's third largest refinery project, at Dumai in central Sumatra, now looks as if it may at last go ahead next year as the government seems finally to have made up its mind to perform a U-turn and offer state-backed financial guarantees for the US$300m project.

The speed at which the refineries at Cilacap and Balikpapan have been initiated has largely been thanks to a surge in oil and gas revenues which brought Indonesia record earnings in 1979-80 of close on US$11bn. The two extensions will be managed by Pertamina, the state oil company, and financed through the Indonesian government.

If most experts expressed surprise at the speed with which the government has moved on Balikpapan and Cilacap the reverse has undoubtedly been true of the controversial expansion of the Dumai oil refinery in central Sumatra. The on-off hydrocracker — badly needed to distil low sulphur waxy residue (LSWR) into middle distillate for the local market — had become almost a by-word for how to avoid building a project while giving the impression that the construction stage was just around the corner.

Conceived in the heady days of General Ibnu Sutowo's flamboyant leadership of Indonesia's state-owned oil company in the early 1970s, the project was shelved after Pertamina brought Indonesia almost to the brink of bankruptcy with debts of over US$10bn in 1975. The hydrocracker plan was revived again nearly three years ago, but, despite persistent reports to the contrary over the last six months, it is now clear that both the financing and the ownership of the refinery have yet to be completely sorted out.

The key problem which has held the project up for so long has stemmed from the government's refusal until now to provide official government guarantees for the financing. After the Pertamina crash, Indonesia's technocrats were understandably worried at the growing demand for debt servicing. Wherever possible they tried to get large scale projects built with the minimum of direct government financial involvement.

The result of this attempt to get Dumai built through so-called off-balance sheet financing was that the project ran into all kinds of financing difficulties. With output from the hydrocracker due to go to the domestic market, bankers were extremely wary of lending such large sums of money without official government guarantees. At the same time leading contractors were reticent because they feared that with government controlled domestic pricing the project might not be economically viable.

Thanks to the boom in oil prices, however, Indonesia's financial position is now almost the reverse of three years ago. Indonesia's technocrats, their coffers full to overflowing with reserves of well over US$8bn, now appear to be ready to put an end to an experiment with off-balance sheet financing that has undoubtedly been more trouble than it has been worth. This change will certainly ease the financing for the project.

According to Indonesia's Minister for Mines and Energy, two Spanish construction companies, Technicas Reunidas and Centunion have been awarded the contract to engineer and build the 85,000 b/d hydrocracker with Voest Alpine of Austria assisting on much of the construction.

The government is now in the process, however, of revising the ownership and financing side of the package, and it seems likely that the project might go ahead next year with Pertamina — and therefore the government — taking a controlling interest.

Even if construction starts in early 1981, for the next three years at least Indonesia's cracking capacity (49,500 b/d) will be totally inadequate to deal with the residual oil surplus.

The crux of the problem is the peculiar quality of some 70 per cent of Indonesian crude with its low sulphur, heavy fuel oil characteristics. Because most of the refineries date from an era when export of products, rather than crude, was the rule, they are situated

at the producing fields themselves, with neither intake nor location taking account of the domestic market. Only three — the existing refineries at Dumai (100,000 b/d), Plaju (110,000 b/d) and Cilacap (100,000 b/d) — can process even small amounts of non-Indonesian crudes. The rest produce an excess of low sulphur waxy residue (LSWR) from distillation of the mainly parafinic, waxy local crudes.

There is little doubt that the decisions to go ahead with Cilacap and Balikpapan took some of the urgency off the Dumai project, but even though the need to distill LSWR for the domestic market is now not so pressing officials at Pertamina are still keen to go ahead with the hydrocracker.

No one doubts however that Indonesia needs to move fast on expanding its refining. Although the country has around 400,000 b/d in refining capacity the range of products it can make does not reflect existing consumption patterns which are heavily geared to diesel oil and kerosene.

Though the country was the world's tenth largest exporter of oil last year with exports of 411m barrels of crude and LSWR, the increasing cost of importing refined products and Middle East crude coupled with growing domestic demand (currently growing at over 10 per cent a year) have been seriously worrying the nation's economic planners.

Domestic consumption of petroleum products grew from 270,000 b/d in 1977 to 347,000 b/d last year and is projected to increase to around 600,000 b/d by 1985. Without the new refineries Indonesia's Minister for Mines and Energy, Professor Subroto, estimated that the country's refining capacity shortfall would widen to 50 per cent by 1985 from 46 per cent this year. The country's crude oil and product import bill makes disturbing reading. Last year it was US$2.4bn, but this year it is expected to jump 75 per cent in value to US$4.2bn.

These reasons alone were enough to persuade Pertamina that decisions on new refineries had to be finalised this year. That the Dumai affair looks as if it will not be resolved until the end of this year, or the early part of next, undoubtedly caused considerable dismay within the national oil company, though they must now be secretly happy that the government has finally been forced to do it their way. — PT

OIL AGREEMENTS SIGNED WITH SIX FOREIGN COMPANIES

Kuala Lumpur BUSINESS TIMES in English 15 Nov 80 p 1

[Text]

JAKARTA, Nov. 14

THE Indonesian government today signed oil and gas production sharing agreements with six foreign companies involving a total investment of US$233 million (M$100.95 million) in exploration over the next six years.

Areas to be explored by the companies are in offshore locations in the Java Sea, according to the state-owned Pertamina Oil Company.

The foreign companies also agreed to pay a total of US$135 million (M$75.25 million) bonus for data compensation to Pertamina.

The American Continental Oil Company (Conoco) Java Sea Inc was awarded a 17,000 square km offshore area known as the Karimun Block.

The Union Oil Java Sea Ltd, also an American company will work in 17,340 square km area offshore of Madura Island, while Atlantic Richfield Bali Inc has chosen a 18,085 square km area offshore Kangean Island, north of Bali.

The Italian Agip (Overseas) Ltd, in joint venture with Union Oil Texas Bali Inc and the Yugoslavian Ina Naftalin Company will be working in 18,926 square km area north of Sakala Island, northeast of Bali Island.

If oil is found, sharing split will be 85-15 in favour of Indonesia. For natural gas it will be 70-30, a Pertamina official said. — Reuter

INDONESIANIZATION OF FOREIGN COMPANIES

Jakarta KOMPAS in Indonesian 25 Oct 80 p 2

[Excerpts] In 1980 the Foreign Investment Coordination Agency [FICA] took two important measures within the framework of Indonesianization of enterprises with foreign capital facilities, according to its provisional chairman, Ismail Saleh.

The two major FICA steps involve the Indonesianization of shares and of work force, so that the foreign companies will reflect an Indonesian image and trait. Nevertheless, although the majority shares will be in Indonesian hands, the legal status of the enterprises concerned remains foreign.

In order to present an Indonesian image and characteristic, the first phase involves the transfer of shares ownership. It has been stipulated that after a period of 10 years, foreign capital must decrease and majority shares must be owned by the Indonesian side.

However, FICA will now no longer wait 10 years for the transfer of shares ownership. Instead, it will ask for the transfer in stages as time passes in line with the companies' category and viability. For example, a foreign company may have transferred a certain percentage of its shares to the Indonesians after 4 years. Later the percentage will be increased after 6 years of existence, so that by the 10th year all shares will have been transferred to the Indonesian side. It is hoped that foreign enterprises can utilize the money market for the transfer of foreign shares to the Indonesians.

Apart from the step-by-step transfer of shares, FICA will also tighten the rules for the utilization of foreign experts. Foreign personnel is going to be restricted. As long as Indonesian work force is available to do the same job done by foreigners, the former should be given preference.

Foreign personnel will be restricted not only at the ordinary work level, but also at the management level, and even the board chairman and chief executive officer. In order to solve the problem of utilization of Indonesian work force, each foreign company is obliged to conduct a training and practice program. This program has existed on paper, but has never been implemented; therefore FICA will press on the matter.

Within the framework of transfer of foreign work force to the Indonesian side, FICA plans to draft a list of priority scale. On this list will be specified

categories of work which still require foreign experts and others which should be done by Indonesians, which would eliminate the unnecessary utilization of foreign experts.

Through the above-mentioned measures, the process of Indonesianization will proceed smoothly as expected, so that foreign companies will be able to reflect an Indonesian image and trait.

FAMILY PLANNING PROGRAM TERMED HUGE SUCCESS

Kuala Lumpur BUSINESS TIMES in English 12 Nov 80 p 6

[Article by Richard Cowper in Jakarta]

[Text] INDONESIA'S first President, Sukarno, was not in favour of family planning. He firmly believed that contraception was a threat to the country's morals and his motto was "the more (children) the better." General Suharto, never had any doubts about his country's desperate need for a well-organised family planning programme.

Just four years after he came to power in the wake of an abortive coup attempt in 1968, Indonesia has got its first family planning board. Directly answerable to the President himself it was allocated US$1.3 million by the government and more than US$3 million by foreign donors.

Today more than US$50 million a year is spent on the programme and Indonesia has been so successful at reducing its fertility rate that demographers from all over the world are having to revise their most fundamental assumptions about the best way of implementing such programmes in the light of the Indonesian experience.

There is little doubt that Indonesia needs all the family planning it can get. With the current population estimated to be around 150 million souls Indonesia is the fifth largest country in the world, and every year there are more than 2.1 million new mouths to feed, and two million new jobs to be found.

With a GNP per head of less than US$400 a year Indonesia is classed by the World Bank as one of the "low income" countries, and though estimates vary considerably it seems certain that at least 30 per cent of the population is living below the poverty line.

The overwhelming task of attempting to feed the current population would undoubtedly have been far worse had it not been for the ingenuity of a group of young and bright family planners. With the personal support of the President they have brought Indonesia's fertility rate (births minus deaths) down from around 2.4 in 1970 to an estimated 1.9 per cent today — a 20 per cent decline within the space of 10 years.

The government is now so confident that it can continue its remarkable inroads into that holy of holies, the large family, that it has brought forward its target of reducing the fertility rate to one per cent by the year 2000 to the year 1990 — a task that five years ago would have seemed like banking on miracles.

That family planning can be so effective in a society which largely consists of rural illiterate poor has called into question the hitherto widely held belief that fertility decline calls for huge changes in what sociologists call "modernisation attitudes."

For example Indonesia's rural poor, it seems, do not cling to the idea that a large number of children is a form of old age insurance. Until recently this belief was widely held to be the cause of the failure of Indian efforts to reduce the birth rate.

Some experts in Jakarta say that the failure in other countries to develop a successful family planning programme has resulted in "excuses" like this, when in fact it was a question of bad planning and a failure in communication.

After just over 10 years of sustained development Indonesia's programme has met with a success beyond the wildest dreams of its originators. On the ever-crowded island of Bali, for example, a world fertility survey conducted in 1976 found that fertility rates had declined 34 per cent in the first five years of the programme. In 1971 Balinese women were producing on average around 5.5 children. By 1976 this number had fallen to 3.8. Today the target is the two-child family.

In a recent study demographers Terence and Valerie Hull and Masri Singarimbun called Indonesia's programme "a success story unrivalled in family planning history."

They described Indonesian efforts as a "story

of total government commitment, strong foreign donor support, flexible and innovative approaches and enthusiastic community involvement which together make for one of the richest object lessons of all attempts to institute birth control on a mass scale."

One of the keys to its success has been that it has been run by a man of enormous talent and flexibility who has been able to set up a completely new department unencumbered by the dead weight of Indonesia's bureaucratic tradition.

Around him Haryono has attracted a young, dedicated and talented staff for whom innovation has become a way of life. Haryono — a man equally at home with babies and computers — realised early on that the programme would only be as effective as its weakest link.

The result has been brilliant planning down to village level, recruitment of local part-time field workers on a massive scale and the co-opting of village religious and administrative leaders.

The number of family planning clinics in Java and Bali alone increased from 116 in 1967 to around 3,000 at the end of last year, while more than 7,000 full time field-workers have been recruited along with some 30,000 part-time volunteers who have set up village contraception distribution centres.

Today more than 30 per cent of married women of reproductive age in the overcrowded islands of Java and Bali are using some form of contraception while around 20 per cent have used contraception at least once in their lives.

Much remains to be done however — in particular on the other islands. If this much larger area is taken into account only 17 per cent of Indonesia's married women are using contraception. Put another way, 4 million women of reproductive age are using contraception, 13 million still need to be contacted and 8 million lapsed users need to be drawn back into the fold — an enormous task by any standards. — FT

LARGE LABOR FORCE AVAILABLE IN JOB MARKET

Jakarta PELITA in Indonesian 16 Oct 80 pp 1, 7

[Text] During the 3rd Five-Year Plan (Pelita III), about 1.3 million people enter the job market every year, bringing the total of labor force to an additional 6.5 million by the end of the Five-Year Plan.

Add to this the 3.5 million people who could find no employment during the 2nd Five-Year Plan (Pelita II), and the total of work force by the end of Pelita III would mean an addition of 10 million people.

Dr S. Subagyo, public relations officer of the Department of Manpower and Transmigration, said recently that the total labor force throughout Indonesia was estimated at 56,078,723 for the year of 1979, as compared with the 1976 figure of 48,430,954 people.

He did not give the work force statistics for the year of 1980, but he explained that the available laborers ranged between 10 and 40 years in age. He added that prospective workers who will enter the job market will cover the ages of 18 to 40 years.

With regard to the unemployed, he said that 1,124,717 people were registered jobless in 1976. The number of unemployment during the 2nd Five-Year Plan was estimated at 2.23 per cent of the total 10 million labor force that was to enter the job market, or 2.3 million people.

Add to this figure the balance of the unemployed during Pelita II, which numbered more than 1.1 million people, and we will arrive at the figure of 3.6 million unemployed by the end of Pelita III, he said.

Subagyo said that the government has set up skill training centers in an effort to distribute the available labor force.

So far 12 industrial vocational training centers have been set up in Jakarta, Bandung, Yogya, Semarang, Solo, Surbaya, Singosari (East Java), Ujungpandang, Jayapura, Medan, Padang and Palembang.

Seventeen new training centers are being constructed, plus 90 small-scale training centers, in various counties throughout the country.

Furthermore, there are also vocational training centers in the field of agriculture located in Central Java, West Java and East Java. A forestry training center has been set up in East Kalimantan, and a welding training center is also available at Condet, Jakarta.

Other training centers for other skills, such as management, have been formed in Medan, Jakarta, Yogyakarta, Surbaya, Semarang and Jayapura, according to Subagyo.

LABOR LEADERS REVIEW 'RIGHT TO STRIKE' ISSUE

Jakarta SINAR HARAPAN in Indonesian 17 Oct 80 pp 1, 12

[Excerpts] The impression as if the Indonesian labor movement rejected the right to strike on account of foreign investors' pressure and demand is entirely not true, stated Agus Sudono, chairman of the central committee of All-Indonesia Workers' Federation (FBSI).

The FBSI general chairman commented last Thursday that such an impression is a slander that would evoke wide-ranging influence.

He was commenting on an editorial of a certain Jakarta newspaper published on 13 October which said: "We wish to remind labor of just one thing which apparently has not been known to the Indonesian people, and particularly its labor force. That is, that during a meeting among Western entrepreneurs and industrialists held in Geneva in 1966 under the sponsorship of Henry Luce, publisher of TIME magazine, in an attempt to mobilize the investment of industrialized countries' capital to help Indonesia, one proposal was brought up. According to this proposal, the foreign capitalists demanded that if they were to invest in Indonesia, the Indonesian side must guarantee them one thing: There shall be no labor strike or complaint from the Indonesian laborers."

Agus Sudono remarked that this "Geneva consensus" was not known to him until its publication by the said newspaper. He demanded a clarification from the said paper as well as the government based on facts available to them. If the reported consensus were true and if the government were to use it as a principle to prohibit labor strikes, then the FBSI's central committee urged that the said consensus be revoked. Sudono added that FBSI is prepared to hear criticisms openly on conformity with democratic principles which his organization supports highly, but he would not accept slander. He explained that since the founding of FBSI, this labor federation has invariably upheld and defended the most basic rights of Indonesian laborers, including the right to strike as regulated in Article 13 of Law No 14/1969 concerning Fundamental Provisions Governing Manpower.

Thaheransjah Karim, chairman of the standing central committee of FBSI, stressed that the right to strike represents a basic right for laborers, which is an universal as other human rights.

What is important in Indonesia is for us to avert labor disputes which could goad labor leaders to resort to their right to strike.

Up till this moment there is no prohibition against strikes, except prevention against strikes and lock-outs in vital enterprises, agencies and organizations as regulated in Presidential Decree No 7 of 1963. This decree was subsequently followed by Presidential Decision No 132 of 1963 concerning a list of 60 vital bodies and enterprises, most of which are state-owned for public interest. Outside of these 60 enterprises, the right to strike is still regarded legal and lawful, he said.

He continued that the rule of the right-to-strike game is in fact implicitly regulated in Article 6 of Law No 22 of 1957, which stated that if labor or management wants to stage a strike or a lock-out, they must formally inform their intention in writing to the chairman of the Regional Committee for Resolving Labor Disputes.

The author of the letter must state that negotiations involving major problems of the controversy between labor and management, that intentions for negotiation have been rejected by management or labor, or that one party has not succeeded in inviting the other party to the negotiation table twice within a period of 2 weeks.

Thus, we may infer that it is not necessary to ask for and obtain a permit for a strike from a government agency, but merely to inform it, said Thaheransjah Karim.

In reply to a question concerning the existence of the "1966 Geneva consensus," he said that is something incredible. The consensus reportedly mentioned that foreign investors would invest their capital in Indonesia only if Indonesian laborers would refrain from staging a strike and other actions.

According to Karim, this does not make sense, because Geneva, as headquarters of international movements, invariably fight for human rights, including laborers' right to strike.

Even if the said consensus existed, it was entirely wrong, unless it was wilfully created by opponents of human rights, he emphasized.

It is apparent that the Indonesian government has not acquiesced to the demands of foreign investors, even assuming that the government has been abiding by the "1966 Geneva consensus." The fact is that Law No 14 was promulgated in 1969, and its Article 13 recognized the existence of the right to stage a strike, demonstration and lock-out at enterprises. However, although the said law is already 11 years old by now, there is no execution regulation governing the use of the right to stage a strike or demonstration, Thaheransjah Karim said.

S. Subagyo, chief public relations officer of the Department of Manpower and Transmigration, explained to this paper Thursday that the laborers' right to strike is, in fact, not in conformity with Pancasila Labor Relations. Anyway, there is now a sense of awareness among laborers to emphasize productivity in the interest of national development. Even so, Indonesia's regulations still make it possible for labor to utilize their right to strike.

Commenting on the "1966 Geneva consensus," he explained that at that time Indonesia had already withdrawn itself from the International Labor Organization and did not rejoin with organization until 1967.

The right to strike is justified in the ILO convention, and as an ILO member Indonesia is obliged to abide by it, said Subagyo.

SANUSI RESIGNS FROM PDI'S CHAIRMANSHIP

Jakarta KOMPAS in Indonesian 17 Oct 80 pp 1, 12

[Excerpts] Moh. Sanusi Hardjadinata yesterday afternoon announced his resignation as general chairman of the Indonesian Democratic Party (Partai Demokrasi Indonesia = PDI). He made this unexpected announcement in a press conference held at the PDI Headquarters, Jl. Diponegoro 58, Jakarta.

"It is not my intention or desire to desert my comrades in struggle, but as a human being I have to take care of my health. I'm afraid that I'd lose my mental balance after more than 5 years of tension in carrying out the mission assigned me by the Chief of State," he told this paper at the residence of Mrs D. Walandouw (PDI's treasurer) last night. "There is a limit to patience, judgment and perseverance. If I lose my mental stability, I won't be able to exercise good judgment."

This inner voice of Sanusi Hardjadinata represented an elaboration of his explanation during the press conference which was attended by Prof Usep Ranawidjaja (chairman of the standing committee), Aberson MS (deputy secretary general), G. Sani Fenat (general treasurer), Mrs D. Walandouw, Mustafa Supangat, Rusli Dahlan (all three are treasurers), and Dr M. B. Samosir (deputy secretary general). None of these central committee officers had any foreknowledge of Sanusi Hardjadinata's resignation from the party's topmost position during the press conference.

In a prepared statement, Sanusi explained the role he had played in the leadership of the party, that is, to respond to President Suharto's call in February, 1965 to lead the Partai Demokrasi Indonesia which was then in disarray due to internal squabbles and in-fighting among certain leaders of former elements of Partia Nasional Indonesia (PNI = Indonesian Nationalist Party).

As a PNI member, Sanusi said, I feel obliged to help create harmony within the body of ex-PNI elements for the well-being of the PDI, especially among national-level leaders. Based on this sense of moral obligation, I accepted President Suharto's appeal.

He explained that he has served PDI as general chairman for 2 terms, the first time was when he took over the leadership from Mh. Isnaeni till the convocation of PDI's first congress in April, 1976, and the second time was the continuation of that leadership until now.

He repeatedly explained that the disharmony among former PNI leaders has become the main factor for the protracted disarray within the PDI, plus other extraneous factors.

In subsequent developments, however, he was able to announce on 6 September 1980 that the central leadership of PDI was functioning formally and effectively. In fact, for this show of unity, he described the central leadership as the "United" one. Viewed from the harmony recovery of former PNI leaders, the functioning of PDI's central leadership carried with it a determined will to cement the friendship which has been broken for 6 long years. One and all sat together in an atmosphere of unity and solidarity to resolve the problems facing them. As the disarray within the body of PDI originated from the disharmony among former PNI leaders, the 6 September announcement represented the birth of a new era for PDI, thus said Sanusi Hardjadinata.

After citing a number of complex problems, Sanusi said that we need certain human virtues to solve them, such as perseverance, stamina, wisdom, patience and particularly mental balance. "For the past 5 years, I have been trying my utmost to put these qualities into play. I have been persevering, patient and wise enough, I think. But no man is perfect, and there is a limit to his ability, particularly the ability to be patient and persevering," he said. "The time has come for me to state sincerely and openly that my ability to be patient and persevering has been taxed to the limit. So please allow me to free myself from the PDI leadership activities to which I have been bound for the past 5 years."

WORK ON CENGKARENG AIRPORT WILL BEGIN EARLY 1981

Jakarta KOMPAS in Indonesian 28 Oct 80 p 2

[Excerpts] Last 27 September the Indonesian government decided to award the tender to build the new international airport at Cengkareng, Jakarta to Sainrat et Brice, one of the 5 all-French participating contractors. The decision was announced before all participants on 29 September at the office of the Jakarta International Airport Cengkareng project in Tangerang.

In his press statement last Monday, Wasito, chairman of the International Tender Committee for the Construction Work of the Jakarta International Airport Cengkareng, said the value of the contract is 340,815 billion rupiahs. Actual construction will begin at the beginning of 1981. In this project, Wasito, who is secretary of the Directorate General of Air Communication. concurrently acts as secretary of Development Authority of the Cengkareng Airport which is under the chairmanship of the minister of communications.

Sugiri, the director general of communications who led the press conference at Cengkareng last Monday, said that the amount of the contract will be renegotiated for a reduction in price. This is already known by the tender winner who is prepared to negotiate on the matter again. Administrative matters will be completed by the end of this year, so that actual construction of the airport may start early next year.

The first state of the project will be completed in 1984, when Jakarta's air space will no longer be adequate to accommodate its air traffic tempo. Consequently, if the center of aviation activities is not shifted to the better-equipped Cengkareng airport, the condition is likely to endanger air travel and jeopardize air safety, expecially during take-offs and landings of innumerable planes, besides reducing efficiency to all concerned.

The other 4 French contractors who lost in the tender bid offered varying expenditures for the airport project from 304,754 billion rupiahs to 486,004 billion rupiahs. All these five French contractors had been invited to take part in the bidding because the French government provided credit for the development of the international airport at Cengkareng.

In reply to newsmen's questions, Director General Sugiri said that it has been agreed to accept a loan from the French government amounting to French Fr 900 million or about 129,150 billion rupiahs for a period of 4 years. The remaining funds will be provided by the Indonesian government.

It is hoped that no obstacle will be met along the way, so that the airport will be in operation by 1984, said Director General Sugiri. The Cengkareng airport will have 2 parallel runways separated from each other by 2,400 meters. The southern runway, which is 3,660 long, will be reserved for international aviation, while the northern runway, measuring 3,050 meters long, is for domestic flights. Each runway is 60 meters wide, in conformity with the current and future aviation requirements.

The international parking apron and shelter can accommodate 7 Boeing 747's or its equivalents, while the domestic apron and shelter can accommodate 14 Airbus A 300's. The parking pad on the far side can handle 8 Fokker F 28's in position, and its cargo pad can handle 4 Boeing 747's in position.

SPK REPORTS HUN SEN'S 28 NOVEMBER NEWS CONFERENCE IN BUDAPEST

BK300943 Phnom Penh SPK in French 0411 GMT 30 Nov 80

[Text] Phnom Penh, 30 Nov (SPK)--There is no "Kampuchean problem" except the one concocted by the slanderous propaganda of reactionaries as a pretext for calling a conference so as to interfere in Kampuchea's internal affairs, declared PRK Foreign Minister Hun Sen during a press conference held in Budapest on Friday [28 November].

For nearly 2 years now, he said, aside from working to improve the living conditions of our people, we have only occupied ourselves with defending our western borders against infiltrations of the Pol Pot-Ieng Sary bandits hiding in Thailand.

The minister added: The people's revolutionary power in Kampuchea has been consolidated from top to bottom and general elections will be held early next year. The Kampuchean people warmly welcome this good situation and are proud of it.

Hun Sen stressed that it is necessary to end the n puj rab by China which colludes with the United States and uses Thailand as a springboard to sabotage the PRK. This, he said, will not only do Kampuchea a good turn but also make a great contribution to stability and peace in Southeast Asia.

In conclusion, Minister Hun Sen expressed his gratitude to the Hungarian people, party and government for their support for Kampuchean people's just cause.

BRIEFS

INDUSTRY MINISTRY POLITICAL COURSE--Phnom Penh, 11 Dec (SPK)--The Ministry of Industry recently concluded an intensive political course for 150 cadres. Acting Industry Minister Nuon Sareth highly appraised the results of the course and instructed the cadres to improve their knowledge, strictly observe discipline and contribute to the training of personnel in various local factories. [Text] [BK150555 Phnom Penh SPK in French 1434 GMT 11 Dec 80 BK]

PRK, HUNGARIAN LEADERS TALK--Phnom Penh, 28 Nov (SPK)--KNUFNS and KPRC President Heng Samrin on Thursday [27 November] held talks with First Secretary of the Hungarian Socialist Workers' Party Central Committee Janos Kadar at the party Central Committee's office. Also present on the occasion were Kampuchean Minister of Foreign Affairs Hun Sen and Kampuchean ambassador to Hungary Khuon Ran. Hungarian Minister of Foreign Affairs Puja Frigyes also attended. The talks proceeded in a cordial and friendly atmosphere. On the same day Kampuchean Minister of Foreign Affairs Hun Sen and his Hungarian counterpart Puja Frigyes held talks at the Hungarian Ministry of Foreign Affairs. [Text] [BK300700 Phnom Penh SPK in French 1448 GMT 28 Nov 80] Phnom Penh, 30 Nov (SPK)—According to a report from Budapest, important documents have been signed at the end of the talks between the KNUFNS and KPRC delegation and a delegation of the Hungarian party and government on Thursday [27 November]. The two delegations signed the joint Kampuchean-Hungarian declaration, agreements on cooperation in sanitation; financial and economic assistance; scientific and cultural cooperation; and a consulate agreement. The Kampuchean delegation was headed by KNUFNS and KPRC President Heng Samrin and the Hungarian delegation was headed by Gyorgy Lazar, member of the Politburo of the Hungarian Socialist Workers' Party Central Committee and chairman of the Council of Ministers. [Text] [BK300708 Phnom Penh SPK in French 0409 GMT 30 Nov 80]

RADIO DELEGATION RETURNS--Phnom Penh, 9 Dec (SPK)--The delegation of the "Voice of the Kampuchean People" National Radio led by its director general Un Dara returned to Phnom Penh on Monday [8 December], ending its 17-day visit to the SRV. During its stay, the Kampuchean delegation exchanged experiences with the leaders of the Vietnam Radio and Television Commission and attended a meeting held in its honor by the commission's personnel. The meeting stressed the militant solidarity and friendship between Kampuchea and Vietnam, especially the cooperation between the "Voice of the Kampuchean People" Radio and the Vietnamese Radio and Television. The Kampuchean delegation had a talk with Tran Lam, chairman of the Vietnam Radio and Television Commission. The two sides discussed the implementation of the agreements signed between the two services. [Text] [BK111309 Phnom Penh SPK in French 1445 GMT 9 Dec 80]

ART TROUPE IN LAOS--A Kampuchean artistic ensemble led by Pich Tum Travel arrived in Vientiane on Saturday [29 November]. On Sunday it gave its premiere in a soiree attended by Premier Kaysone Phomvihan, Lao President Souphanouvong and other Lao leaders. [BK041425 Phnom Penh SPK in French 1437 GMT 2 Dec 80 BK]

MEDICAL SCHOOL INAUGURATION--A medical school was inaugurated in Phnom Penh on Saturday [23 November] by Vice Minister of Health Chey Kanha. The first batch includes 177 students, 121 of whom are midwives, nurses and 1st grade pharmacists. [Text] [Phnom Penh SPK in French 1425 GMT 24 Nov 80 BK]

RELIEF AID DISTRIBUTION--The Phnom Penh People's Revolutionary Committee distributed on Sunday [30 November] 6 tons of relief items to 637 families in the Phnom Penh Thmey commune. The relief items include 2,589 kg of rice, 1,900 kg of green beans, 1,268 kg of flour and other useful items such as mosquito nets, blankets and mats. [Phnom Penh SPK in French 0400 GMT 1 Dec 80 BK]

SOVIET JOURNALISTS VISIT--Phnom Penh, 13 Dec (SPK)--The USSR Union of Journalists delegation leg by Albertas Laurinchyukas, editor in chief of the paper TIESA, secretary of the union and chairman of the Union of Journalists of the Lithuanian SSR, left Phnom Penh on Friday, ending its 5-day visit to Kampuchea. The Soviet delegation was seen off by Chem Snguon, permanent deputy secretary general of the KNUFNS Central Committee, and other personages. Also present were staff members of the Soviet Embassy in Kampuchea. During its stay, the Soviet journalists visited the Tuol Sleng torture center; the mass graves in Dangkao district, Kandal Province; Orphanage No 1; and hospitals, schools and ricefields in Kompong Speu Province. The delegation was warmly received by PRK Foreign Minister Hun Sen; Vice Agriculture Minister Kong Samol; Un Dara, vice chairman of the Kampuchean Journalists Association and director general of the "Voice of the Kampuchean People" National Radio; and Dith Munty, deputy director general of the press agency, SPK. COLUMNIST DESCRIBES GOOD ATMOSPHERE OF BOAT RACES, RELATIONS WITH THAILAND

Vientiane VIENTIANE MAI in Lao 5 Nov 80 pp 2, 4

[Article in "Talking Together" Column by S. Thipthiengchan: "A Friendship That Cannot Be Forgotten and Will Never Die Out"]

[Excerpt] The long-standing friendship and understanding of the peoples on the two sides of the Mekong River are now being expanded and improved. The thousands of residents of Nong Khai who were waiting greeted us with a cheer in friendly fashion. We understood well and felt a boundless joy in the heart. Such touching friendship between our two people will never see a day that breaks them apart. The hearts of the people of Vientiane now are full of friendship, in the words of Mr Phao Phimphachan who wrote "We have bathed together, eaten together, travelled together, dined on fish together. The right bank is like the daughter-in-law, the left bank the son-in-law." This is in our hearts and will be such to the end.

Mr Kuson Santitham [Nong Khai governor] said "The affection of the people on the two banks and the beautiful traditions of our people come from ancient times, from a time before our birth. So no one can change or break their unity."

It is very true that Vientiane and Nong Khai are like the same land. The people of the two provinces are used to trading with each other. They live together like a family. That bank is the uncle, this one the aunt; that one is the daughter-in-law, this the son-in-law. Therefore, the descendants who followed said that we are people in the same family, brothers who share the same blood since ancient times. A woman who sold goods on the bank of the Mekong River near the Tha Sadet dock [Nong Khai] said to me "My mother was from Watai [Vientiane]. My grandparents and many relatives live at Watai. Then it was like now. My mother and family used to visit together regularly. My mother never thought that there was a right bank, a left bank. She thought they were the same. She was a Lao who came to live in Nong Khai. That was a long time ago and since then they had children and grandchildren all over." These words make us proud of other things. What can be compared to this? She added "Our friendship cannot be forgotten and will never die out." We are brothers, love each other, and live together in peace like brothers and people within the same family.

Moving in this intimate atmosphere on the banks of the Mekong River at Tha Sadet now many people are enjoying themselves. Near the dock that is contiguous to Tha Sadet the row boats of the Vientiane side are stopped in a line to wait for the friendly race.

In the middle of the river is the Arts Troupe from Vientiane using a large sampan as a little stage. They are singing revolutionary music joyously. The floating stage will move up and down slowly to create a happy atmosphere for the brothers of Nong Khai. The floating stage moves along the bank. Wherever it stops, they cheer all along the right bank. The troupe cheerfully selects songs that will really please the masses. Sometimes this made the Thai brothers draw their boats up and have a good time dancing with our musicians in a friendly manner. The slogan attached to our boat said: "Hail the Vientiane-Nong Khai Friendship Boat Races." This has a substantive meaning and stuck in the hearts of those who saw it in a way that will be difficult to forget.

At this time, the male boat races got underway. The atmosphere on the banks of the Mekong was cheerful and lively. Great numbers of people concentrated their gaze on the races underway, with applause and cheers as the boats passed by. As the hours passed and 1600 hours came around, various ceremonies started. The floating stage of the Vientiane Masses Art Troupe parked at the Tha Sadet Dock once again to sing so as to create a happy atmosphere for the brothers of Nong Khai and the many honored guests from Vientiane who got up to dance in a happy and friendly manner.

An atmosphere such as this and [done] in this manner is not easy to create, but it was achieved. It passed with happiness and with the sincerity of the people of Vientiane who presented it as a memory to the Thai people on the right bank who will remember it as a real spirit of friendship on the part of the people of Vientiane Province in particular. Overall, it is the Lao people who at all times have a strong desire for friendship, peace and peaceful co-existence as brotherly neighbors with friendship towards each other in the spirit of the joint Lao-Thai communique signed last year.

POSTAL INSPECTORS MAY OPEN LETTERS, PACKAGES

Vientiane VIENTIANE MAI in Lao 5 Nov 80 p 3

[Article in "Conversations With the Editor" Column]

[Text] Greetings, brother Gn. in Sikhoktabong. You asked about the postal service. We have investigated in detail the subject of the post office and fees.

Some of your four questions are vague and have no clear objective. Nevertheless we tried to combine the sense of the questions to answer them rather inadequately. You then wrote again.

Speaking in general the post office does not have the right to open letters that people have mailed, whether they are from abroad or within the country. The international regulation is the same. This is one element of human rights. But in special cases where the post office has the right to inspect letters, it is for a greater and more important good. When such circumstances occur, there are strict orders. Every nation in the world does the same.

If the mailman delivers a letter to you and you notice that the letter was tampered with, you then advise the post office that you are not willing to accept it. Also take a witness to inform the post office immediately. The post office will investigate the circumstances and take corrective measures according to its rules.

If you have accepted it and complain, this is not right. It is not patriotic. You are using the right of ownership in the wrong way. You will fall into the position of being accused of being a trouble-maker.

Now on the subject of packages, a package might be broken in transit. A package sent from one country to another far distant must pass through changes of vehicles and many hands. Each time a parcel comes to Vientiane, whether from inside the country or abroad, it passes through a group of officials who open the large bags, "mail sacks." Then they must look at it if the box is broken or torn; others will record it. Then they will inform the owner. If necessary, there are other steps for further correction.

In sending packages in every country there are regulations prohibiting some items and others that are liable for duty. If you are going to send anything, you should ask the officials about it first. Concealing valuable articles like silver or gold in packages is illegal.

When we receive packages (upon notification by the post office) there will be a tax inspector present to watch us open the package to examine it for any hidden item or illegal goods. This is not a top to bottom ssarch; he has the right to follow the rules. But if there is anything suspicious or ususual he has the right to give a closer examination. When he finds a sample of silver, gold or other valuables which are contained in the package against regulations, he does not have the right to take it for himself. He will fill out a form in your presence to turn it over to the bank. The bank will determine who is the owner. In some cases the owner will be fined or the articles confiscated by the state.

Brother Gn. in Sikhottabong, we hope you have gained some insight and better understanding about the postal service. We are sure to hear from you again.

FACTORY SELF-DEFENSE FORCE ACTIVE IN PLANT SECURITY

Vientiane VIENTIANE MAI in Lao 4 Nov 80 pp 1, 4

[Text] On the morning of 2 November 1980 at the Sok Pa Luang Power Plant, Vientiane capital, the committee responsible for the self-defense force of the Lao Electric Company, which is subordinate to the Electric Power Department, Ministry of Industry and Trade, arranged a ceremony to summarize the results of the activities for defense and internal security in the factory during the past year, with all the workers and armed force in the company attending. Present were Vanthong Litsomphou [as published], the acting minister of industry and trade, Thongsavat Gnammani, the secretary for the party committee on party and government, Bounkeut Khamphaphong, deputy minister of industry and trade, Souphi, chief of the committee of teachers training the national independence parade group of the Ministry of Defense, along with committees and departments of several ministries.

After Khammon Phonkeo, chief of the board of directors of the Lao Electric Company, gave a report on the purpose of the ceremony, Hasai Inthasai, deputy director of the basic technical school for electricity, also on the committee for the Lao Electric Company self-defense force, stated in the year's report that all the workers in the armed self-defense force performed many duties for the protection and internal security of the factory. The company was safe and enjoyed a peaceful atmosphere. This guaranteed illumination and other socially-related work.

Then Vanthong Linsomphou gave his exhortation. First of all he praised all the self-defense members and workers of the Lao Electric Company who had achieved victory and complete success in the performance of their duty for the nation in the past year. He also spoke of world conditions, of Southeast Asia and Indochina, especially the situation in Laos. He pointed to the dark deceit and trickery of the Beijing expansionists and other imperialist and reactionary factions, who want to create confusions and destroy us. He called upon each worker to understand anew the party policy, to strengthen and develop himself with greater knowledge and skills, to build and improve the armed force to a high level of effectiveness, in order to do his duty in protecting the nation and preserving a peace, in a timely fashion, to have awareness as masters of the nation, owners of the factories, to defend the essence of their own revolution with increased concern for production, boosting production for creating an independent, self-masterful economy, raising the living standards of the people more every day.

SAVANNAKHET AGRICULTURAL, ECONOMIC DEVELOPMENT ANALYZED

Statistics Noted, Productivity Increases

Vientiane SIANG PASASON in Lao 4 Nov 80 p 2

[Excerpt] Crops

With reference to the special aims and policy of the party and state, the party committee and the provincial administrative authority concentrated on giving close leadership to this task, thus inspiring the farmers to be even more joyous of their own livelihood. In the past 5 years Savannakhet Province was able to clear almost 16,000 hectares for new rice fields, which increased the total area throughout the province to 116,288 hectares. Besides this they were able to raise their production per hectare from 1,100 kg in 1975 to 1,200 kg today. In addition to the annual rice they worked only 382 hectares of dry season rice in the year 1975-1976. In 1979 they had expanded this to 2,437 hectares.

Along with the expansion of the rice area and the increased productivity capacity, through the aid from the administrative authority, some 430 families of the mountain regions, who formerly practiced shifting cultivation and each year had to clear a very great section of the forest, have begun to work the rice fields. This has resulted in a drop of shifting cultivation to 19,000 hectares and compared to 1975 this is a 65 percent reduction.

From this production they gradually raised the living standards of the population of Savannakhet Province, who in the past had rice shortages for several months each year, so that on the average each person, both child and adult, had over 300 kg of unhusked rice per year.

Livestock

Besides cultivating rice fields the people of Savannakhet Province paid more attention to raising livestock. At present in the province there are more than 197,300 water buffalo, 70,000 more than in 1975; 164,000 head of cattle, an increase from 1975 of 40,000; 133,000 pigs, 20,000 more than in 1975; about 700,000 fowls in different kinds, 130,000 more than in 1975.

The statistics clearly confirm the increase in livestock raised by the people of Savannakhet Province. This is because the administration, that is the responsible

sections, gave their attention to the task, encouraged and helped the populace in raising livestock, particularly in disseminating new knowledge in husbandry and preventative vaccines. They themselves showed perseverance, diligence, and made full application of the lessons.

On the basis of these figures today one household on the average has two or more draft animals and the living standards for the people in Savannakhet Province have been greatly improved.

Irrigation, Livestock Raising

Vientiane SIANG PASASON in Lao 5 Nov 80 p 2

[Excerpts] In all of Savannakhet Province the irrigated area is 2,200 hectares or 2.3 percent of the total cultivated rice.

State Settlements

The Savannakhet provincial administration, besides other work, gave attention to establishing and supervising four state stations and settlements. The Pak Bo small-livestock station has 4,370 brood hens, producing 3,000-3,500 eggs per day; 25 hatchery ponds, producting 3,000 kg of fish per year. They expanded the hog breeding stock to 65, of which number there are 19 boars and sows. The newly built KM4 small-livestock breeding station has begun experiments with 56 brood hens, 600 kg of fish spawn, 75 pigs bred for meat, with two boars and 16 sows, and seven foreign breeding cattle, to increase the stock. The Tak Rai large-livestock station in Phin District has 279 head of buffalo and cattle. In addition the settlement of Nong Louang, under construction since 1979, has a potential area for cultivation of 4,500 hectares. Today they have been able to open up and plant 35 hectares.

MERCHANTS PAY SPECIAL TAXES, OPPOSITION NOTED

Vientiane VIENTIANE MAI in Lao 23 Oct 80 p 2

[Column: "Conversations With the Editor"]

[Excerpts] [Question] 1. The cleanup charge of 80 kip for 1 month is too high. 2. Why does one who has many watch-repair stalls pay a great deal in cleanup charges? Why does he not pay once, collected at one rate since his is the sole owner? 3. A watch repairman in 1 month must pay 100 kip in tax, pay 50 kip rental for his location and 90 kip for trash removal. When these are added up, it is very expensive. Please explain. I hope that the editor can answer and pass this on to the responsible committee for its investigation. Writing a letter is troublesome at this time. I do not make destructive criticism but state this for the public interest.

[Answer] 1. In addressing specifically the charge for trash removal, Comrade Sisouphan Chanthalangsi, chief of the committee for food service, also addressed the matter of collecting the market tickets and the trash in the market, whether the Morning Market or the Evening Market. He spoke as follows. "The trash collection charge now is divided into three categories: 1. 90 kip for people who sell retail. If you calculate it on a daily basis, they must pay the cleanup charge and the market ticket as follows--two kip a day for the market ticket--one kip a day for trash. This comes to three kip a day or 90 kip a month.

2. 120 kip for those who sell retail in small stores: two kip per day for the market ticket--two kip for trash removal. Four kip total or 120 kip per month.

3. 150 kip for those who sell retail in large stores and handle expensive goods, per day three kip for the market ticket, two kip for trash removal or five kip per day, 150 kip per month.

Therefore, it is felt that your watch repair stalls fall in the category of selling inexpensive goods retail because on the average you pay only three kip in market ticket and trash fee daily. You income must exceed that by ten times.

2. Normally or according to regulations [fees] are collected on a per stall basis. If a person has several stalls, he pays several times because it is based on income just like it is for others. But one watch-repair stall for one person or ten stalls for one person, means that however many there are, the more his income increases and he takes up more space. The trash increases more than ordinarily.

3. The payment of various taxes, according to the answer of the services concerned, is right and not a great amount. Why then is this complaint made? Compare your income figures per month with that of others. For example, in one day of watch repair you make 50 kip, that is 1,500 per month; then subtract rentals and taxes of 90 minus 100 minus 50 equal, 1,260 kip. You have an income that covers cost of labor or whatever; you have 1,260 kip. This is calculated at a low level. I believe you earn much more than this as real income. Don't say it is expensive. You contribute very little to the state. Think of it as your contribution for the nation. The funds that the government units concerned get are not wasted. Every kip enters the capital funds of the state.

Finally if you communicate with the service involved directly they will explain more fully. Also the service concerned gives guidance to the people trading in the Morning Market, especially the watch repairers. So do cooperate with our officials! In the past when they have gone to collect fees, they have been given the run-around; getting told that "this stall isn't mine." Doing that is not correct. You should tell your friends this. How can they work together to help the state in development in a cooperative effort? How would you be helping if you used this money for your own pleasure?

DEFENSE, INTERNAL SECURITY SPENDING TO RISE 45 PERCENT

Kuala Lumpur BUSINESS TIMES in English 11 Nov 80 p 6

[Article by Reg Gratton]

[Text] MALAYSIA'S planned massive increase in defence spending next year illustrates its eagerness to become capable of withstanding a conventional war.

Defence and internal security spending next year take the largest chunk of government expenditure for the first time, amounting to 22 per cent out of a total budget of $23.1 billion.

This increase, coupled with the decision in September of Prime Minister Datuk Hussein Onn to take personal charge of the defence portfolio, shows his increasing concern over the political instability in South-East Asia, according to Western diplomats in Kuala Lumpur.

Datuk Hussein Onn, outlining an ambitious and rapid expansion programme earlier this year said: "We will acquire more up-to-date training centres, increase the numbers of officers and personnel and upgrade our skills and capability in conventional and non-conventional warfare."

He added: "We are in a politically disturbed region and this requires us to strengthen our defence."

This amounts to doubling the strength of the regular army, navy and air force by 1983, according to defence officials.

Since independence in 1957, the growth of Malaysia's forces has been influenced largely by internal security directed mainly against members of the Communist Party of Malaya (CPM). An estimated 2,000 guerillas are still active in Thai and Malaysian border districts, about 500 in Malaysia itself.

But the military build-up planned over the next few years reflects the shift in emphasis from anti-guerilla measures to conventional warfare methods.

The government announced in its budget last month that total spending on defence and internal security for 1981 would be $5.1 billion or 45 per cent more than the allocations for this year.

Spending on defence development alone would go up nearly 120 per cent next year from $910 million this year to $1.99 billion.

Under this expansion programme, according to Deputy Defence Minister Abu Hassan Omar, the government would purchase Skyhawk jets for the air force, vehicles for the army and new ships for the navy, as well as build naval and air bases, infantry camps and army training centres.

More than 30 Skyhawk fighter bombers begin arriving from the United States early next year augmenting the air forces two squadrons of US-made F-5E jet fighter bombers and giving it an effective strike capability.

The air force will be building three new bases, one of which costing about $1 billion would also serve as a training school.

Under the expansion plan, Malaysia's navy will increase its manpower from 7,000 to 15,000 by 1983. A deep harbour and naval base and dockyard warships is under construction at Lumut on the Straits of Malacca, at a cost of about $130 million. The navy is also getting a new base in Kuching and its elderly minesweepers are to be replaced.

It recently commissioned a second squadron of missile-armed strike craft to help prevent any seaborne invader from landing on the peninsula in strength.

The army remains the backbone of national defence with a force of about 35,000 combat soldiers, and in increasing its strength, the government has said that more infantry battalions would be formed plus an armoured regiment. However, full details of the army programme have not been released.

The budget announcement on defence spending coincided with the visit here of senior Australian defence officials to discuss the revitalising of a Five-Power Defence Arrangement (FPDA) linking Australia, Malaysia, Singapore, New Zealand and Britain.

Though the initiative to strengthen the 10-year-old agreement came in September from Australian Prime Minister Malcolm Fraser, Malaysia's agreement, along with the other partners, to put more muscle in the arrangement reflects its new perception of an external threat.

Under the FPDA, Australia maintains Mirage jet fighters at Butterworth and New Zealand has ground troops in Singapore.

However, except for one major joint military exercise in 1979, the defence grouping has confined its activities to air exercises — one has been held last month — and occasional consultations on security matters.

The recent meeting between Malaysian and Australian defence officials agreed to recommend to their governments the holding of joint air, sea and land exercises under the FPDA.

While the Malaysians emphasised that the exercises were merely for training and had nothing to do with the political situation in the region, Australia has said that it sees the development of the FPDA as an important contribution to regional stability. — Reuter

PRIORITY TO GAS, HYDRO RESOURCES FOR POWER GENERATION

Kuala Lumpur BUSINESS TIMES in English 3 Nov 80 p 1

[Text] MALAYSIA is diversifying its energy sources with a view to ensuring that the nation's economy is not vulnerable to the vagaries of oil supplies, the Minister of Energy, Telecommunications and Posts, Datuk Leo Moggie, said yesterday.

He said that though Malaysia had oil resources, it would be a delusion to think that "we are completely insulated from the effects of increases in oil prices."

In a speech read out by his political secretary, Mr Nelson Liap Kudu at an "energy seminar" organised by Jaycees Malaysia at the Dewan Tun Abdul Razak in Kuching, he said Malaysia would become a net importer of oil in six to seven years given the present rate of petroleum consumption.

As such the government had decided that priority be accorded to the development and utilisation of gas and hydro resources for power generation.

The Bersia, Kenering and Kenyir hydro schemes in Peninsular Malaysia, the Tenom Pangi scheme in Sabah and the Batang Air scheme in Sarawak were in various stages of implementation, Datuk Moggie said.

Feasibility studies on the hydro potential of the Pelagus rapids as well as another bigger potential project in the Balui river, both in Sarawak, had been undertaken.

A German consultant firm was studying the possibility of taking electrical power from these sources to Peninsular Malaysia.

Datuk Moggie said that the development of mini hydro schemes to augment rural electrification programmes would be given considerable attention under the Fourth Malaysia Plan.

In Sarawak alone 10 such schemes were expected to be implemented.

In Peninsular Malaysia the National Electricity Board (NEB) would utilise gas from substantial natural gas reserves off the east coast of Peninsular Malaysia for its gas-fired combined cycle power station in Trengganu, expected to be commissioned in 1985.

He noted that Petronas had recently announced that it would work out a master plan for the utilisation of natural gas in the country.

Datuk Moggie said the study was expected to be used in the planning and proper management of gas resources as gas was expected to be the key energy source to tide the country over the transition from oil.

The Minister also stressed the need to conserve energy by eliminating waste and ensuring efficient utilisation of energy.

Projects aimed at increasing public awareness on the need to conserve energy should be undertaken, he added. — Bernama

CHIEF OF GENERAL STAFF PROMOTED TO FULL GENERAL

Kuala Lumpur NEW STRAITS TIMES in English 1 Nov 80 p 1

[Text]

KUALA LUMPUR, Fri. — The Chief of General Staff, Leftenan Jeneral Tan Sri Mohamed Ghazali bin Datuk Mohamed Seth (above), has been promoted to full Jeneral.

His deputy, Mejar Jeneral Datuk Zain Mahmud Hashim, has been promoted to Leftenan Jeneral.

The Yang di-Pertuan Agong has approved the promotions, effective Oct 1.

In a statement today, the Deputy Defence Minister, Encik Abu Hassan bin Omar, said the promotions were in line with the expansion of the army and its heavier responsibilities.

Jeneral Tan Sri Mohamed Ghazali, 51, the man behind the recent series of "Gonzales" exercises, joined the army as a recruit in 1950.

He rose from the ranks to become the Chief of General Staff in 1977, following the appointment of Jeneral Tan Sri Haji Mohamed Sany bin Abdul Ghaff as Chief of Armed Forces.

Leftenan Jeneral Datuk Zain Hashim, 50, joined the army in 1950 and was commissioned in 1962, undergoing his cadetship in Sandhurst, Britain.

INDEPENDENT PANEL ON MUSLIM PROBLEMS SOUGHT

Kuala Lumpur NEW STRAITS TIMES in English 7 Nov 80 p 11

[Text]

KUALA LUMPUR, Thurs. — The government has been urged to set up an independent commission to study the current problems associated with Muslims in the country.

This was one of the six resolutions adopted by the Pan Malaysian Islamic missionary council, the Majlis Syura Dakwah Malaysia, at its meeting on Monday here.

In a statement today, council chairman Tan Sri Syed Nasir Ismail said the commission should be vested with authority and be represented by various quarters, including the missionary bodies.

Tan Sri Syed Nasir, who is also the president of the Islamic Missionary Foundation, said the study should cover two related aspects:

● DEVIANT teachings, occult trends, the art of self-defence using Islamic religious elements, and in particular the bloody incident at Batu Pahat recently; and

● LOCAL political and socio-cultural background that might give rise to tension and violent acts from the Muslims such as the growth of vice centres in a locality.

Regret

He said other factors that might provoke tension in a locality included the growth of permissive arts and culture, a negative impression towards Islamic activities given by the mass media, weaknesses in the Islamic religious institutions and political bickering between the Muslims.

Tan Sri Syed Nasir said the council expressed deep regret over the bloody incident in Batu Pahat.

The council, he added, also regretted the interpretations (which were not based on factual information) made by various quarters which had resulted in confusion among the public.

Tan Sri Syed Nasir said the meeting also feared the use of labels like "fanatik Islam" (Muslim fanatics) and "pelampau agama" (religious extremists) might affect the image of Islam and Islamic missionary activities.

Tan Sri Syed Nasir said he also feared the Batu Pahat incident might be used by certain quarters to hamper the development of Islam in the country.

The council appealed to all quarters in the Muslim community to place the interest of Islam above all other interests to protect the sanctity of the religion and the unity of its adherents.

REACTION TO NEPAL CONSTITUTION AMENDMENTS

BK171647 Hong Kong AFP in English 1503 GMT 17 Dec 80

[Text] Katmandu, 17 Dec (AFP)--Reaction has been sharp to the recent amendment announced by Nepal's western educated king in the constitution introducing three major political reforms.

K.P. Bhattarai, former speaker and acting president of the outlawed Nepali congress, described the third amendment as undemocratic and not enough to meet the aspirations of the people today.

It is unworkably incomplete because lots of laws and bye-laws are yet to be enacted and no one knows how draconian they could be, Mr Bhattarai added. Therefore it is not worthy of our welcome.

Meanwhile B.B. Thapa, former chairman of the National Panchayat and former vice chairman of the Council of Ministers, said that there had been a crisis of confidence and therefore the multi-party supporters should not be the prisoner of indecision. He regreted that the king had failed to fulfill his assurance to respect the minority who had supported the multi-party of government [as received] in the national referendum.

The supporters of the partyless Panchayat system however have widely welcomed the amended constitution.

Former Prime Minister Kirti Nidhi Bista, while heartily welcoming the third amendment, said the king has graciously granted the reform in recognition of the wishes of the people.

He said the amendment has come as the first significant reform within the partyless Panchayat system.

Dr K.I. Singh, former prime minister who has resigned from the National Panchayat membership in order to campaign in support of the multi-party system of government, said the present reforms the king has introduced through the amendment of the constitution are the best and most useful among the reforms made so far under the partyless Panchayat system.

Meanwhile another hardliner Panchayat leader and former premier Dr Tulsi Giri said that he would accept the reforms under the constitutional amendment with no reservations. He said the third amendment of the constitution announced by the king had brought out the clear cut political values of Panchayat system. Dr Giri also hoped that the Panchas (cadres of the partyless policy) would have the ability to retain the partyless character of democratic Panchayat system despite the proposed amendment for the evolution of a different political system in the country.

BRIEFS

AID TO NEPAL--Tokyo, 6 Dec (KYODO)--Japan will extend a grant aid up to yen 600 million to Nepal to help carry out a rural water supply project, the Foreign Ministry announced Saturday. It said notes to this effect were exchanged in Katmandu Friday between Kazuo Aichi, Japanese vice foreign minister, and Madan Bahadur Pradhan, Nepalese assistant minister for food and agriculture. Nepal is short of sources of water for drinking and other uses, and the people are using underground water mixed with surface water, resulting in chronic epidemics, the ministry said. It also said Japan will give a grant aid up to yen 2,000 million to Nepal for purchase of fertilizer and materials needed for improvement of irrigation facilities. In Nepal, it said, more than 90 percent of the working population is engaged in agriculture but productivity remains at a low level. Because of this, the Nepalese Government has worked out an agriculture development plan to increase food production especially of rice, the ministry said. Extension of a grant aid to Nepal of up to yen 1,080 million in Thai rice was also pledged by the Japanese vice minister, the ministry said. There is a serious shortage of food caused by last year's bad weather in Nepal and the Nepalese Government has requested such an aid from Japan, it added. ACCUSATION OF AIR FORCE EXPANSION--Pakistan has undertaken a massive program of expansion of its air force bases. It is planning to add five more squadrons of the latest fighter aircraft by the end of next year. UNITED NEWS OF INDIA, quoting military experts, says that Pakistan has secretly commissioned 12 air bases and is expanding facilities at several others. Its air force now has 40 air bases, almost double the number in 1971. Besides seven main air bases, Pakistan has set up a large number of emergency dispersal bases from where its aircraft can operate for a short period. REGIMENTS REPLACED IN JAMMU-KASHMIR--Jammu, 15 Dec (UNI)--Pakistan authorities have withdrawn "Azad Kashmir" regiments from the line of control in the occupied areas of Jammu and Kashmir and replaced them with regular army regiments, according to official sources. The major concentration of the Pakistan army is on the Khauta-Hajipir area of occupied Kashmir, the sources said. The Pakistan army has been holding exercises across the entire international border and line of control for the past few days, the sources added. [Text] [BK231644 New Delhi INDIAN EXPRESS in English 16 Dec 80 p 1]

PAKISTAN LOCOMOTIVE AGREEMENT--Lahore, 5 Dec (KYODO)--Pakistan Railways and the Japanese company Hitachi signed an agreement here Thursday for the manufacture of diesel electric locomotives in Pakistan. Under the agreement, Pakistan will produce 25 locomotives every year with 50 to 60 percent locally manufactured parts within 6 years. This is the first agreement of its kind signed by Hitachi with any country. Explaining the agreement at a news conference, the Pakistan Railways chairman, Gulzar Ahmed, said that the project would cost some $80 million with a foreign exchange component of $50 million. The factory is being built in Islamabad in phases and the allocation for this year stood at $45 million. Ahmed said Pakistan had 492 diesel locomotives and 42 steam locomotives. He said the steam engines were obsolete because spare parts were not available and also the energy conservation rate was very poor, making maintenance costs too high for the railways. The country needs about 296 diesel locomotives by the year 1982. The railways chairman thought that with the help of Hitachi, Pakistan would be able to meet domestic requirements and also to export. SITUATION UNDER MARTIAL LAW ASSESSED

Kuala Lumpur BUSINESS TIMES in English 14 Nov 80 p 6

[Article by Philip Bowring]

[Text] THE Philippines is a country where style is often more important than substance, where music takes precedence over philosophy, where extravagance is a virtue, and where hyperbole is omnipresent. As a result, it is a country which doesn't fit readily into the descriptive mould of daily newspaper and agency despatches.

Insofar as other countries, apart from its South-East Asian neighbours, think about the Philippines at all, they may conclude that it is a nation wracked by bombings and on the brink of revolution; a people cowed by eight years of martial law; a government up to its neck in foreign debt and beholden to the depredations of international capitalism; a country ruled by a first family as acquisitive as the Somozas and as arrogant as the Pahlavis.

Such an image isn't just a product of the propaganda of vociferous US-based opponents of President Marcos. It is almost as easily created by the news from Manila itself, even the statements of minister. It is more a reflection of Philippine sense of theatre and rhetoric than it is of reality, and also a direct result of the wide measure of freedom enjoyed by foreign correspondents.

The factors which take much of the sting out of martial law and one-man rule are the same ones which help to create the unfavourable image from which the Philippines and its government suffer overseas.

There may be martial law but the government remains a civilian one. The army, thankfully, is conspicuous only in the few areas where there are Muslim or communist insurgents. The Press may be captive but there is no lack of freedom of speech — and even the Press retails some of the town gossip about graft in government.

Foreign Pressmen have an unaccustomed measure of freedom. There have been no open and honest elections since martial law, but there has been just enough freedom to allow a few opponents of the government to squeeze into the National Assembly. Laws are altered by presidential decree and civil rights often removed by administrative actions. Yet there remains a commitment to legalistic forms, and government is occasionally rebuffed by the courts.

At root the society remains too indisciplined, too addicted to gossip and discussion to be cast into a rigid authoritarian mould. It is a society accustomed to unscrupulous politicians but unwilling to accept them — conscious of the need to keep political conflict within some kind of humanitarian boundaries. Mr Marcos may be unscrupulous but he is not especially ruthless: torture and murder are not the norm here.

This is not to deny that recent bombings and a revival of opposition activity within and without the country have made the Marcos regime less sure of itself than at any time since the declaration of martial law in 1972. Nor to deny that energy prices, and world recession pose serious problems for the Philippine economy.

The maldistribution of income, which is creating economic as much as social problems, cannot be forgotten either. Nor can the envy and anger excited by high-level corruption. And it cannot be pretended that discipline and dedication in some quarters of the armed forces and civil service do not reflect some unpleasant characteristics of the leadership.

But the essential facts about the Philippines at present are two-fold. First, politically the Marcos regime, now 15

years old, eight of which have been martial law, is still very much in charge. Serious medium to long-term political problems do exist — notably the question of succession — but for now the country is politically fairly stable.

Opposition is an irritant but far from being a threat. Indeed, President Marcos probably gives more thought to how to keep at bay his political allies, new oligarchs, his wife's family — than he does to keeping at bay his opponents, notably Benigno Aquino.

Second, the economy is not in crisis, either GDP growth could fall to 5 per cent this year and be even lower next year as the lagged impact of recession makes itself fully felt. But even with terms of trade deteriorating growth is still just about sufficient to keep average real family income from falling. The foreign debt is large and growing rapidly but is still manageable. Debt service costs are quite modest by Latin American standards.

Within the economy are to be found many of the paradoxes of martial law. After eight years there is much cynicism towards the President's "new society" but there is still in many areas of government not so much idealism but an honest pragmatism. This says that despite glaring faults good things are being done under martial law which were not possible before. For every official selling, for example, tax breaks, there is another striving to plug the holes in the tax net.

Income distribution has probably improved under martial law as a result of government infrastructure spending in rural areas which has created employment and generated very creditable production gains. Meanwhile, grain prices to farmers have been kept in line with other price rises.

Rural spending has been made possible not just by big infusions of aid but also by significant increases in tax revenues, resulting from improved administration.

The dark side of infrastructure spending has been in the award of and pricing of some contracts.

The losers from changes in income distribution have been (mostly urban) wage earners whose wages have often fallen behind price rises, especially outside Manila where minimum wage awards often have little force.

The large Manila middle class, with an American addiction to education and consumer durables, has not always done well. This has excited some middle class hostility to the martial law; the new oligarchs whose business empires have been rapidly advanced through high-level connections.

Favouritism has not enhanced efficient use of resources in commerce and industry. The regime has encouraged investment, local and foreign, and is generally favoured by the business community. This has often meant that it has not always encouraged efficient management and competition. Industry remains high cost and over-protected.

However, showing its liking for paradox, the government — prodded by its technocrats and with encouragement from inter-national agencies — is now embarking on a radical tariff reform and import liberalisation programme. Politically, the programme carries risks and is the sort of reform which could probably never have been contemplated by a less authoritarian regime.

Some local businessmen, long accustomed to high protection and easy profits, will get hurt.

The reform is brave because the political allegiances of the business community have a tendency to be fickle. One of the few identifiable policies of the main opposition, the Laban Party which is linked to Aquino, is a rather virulent strain of highly protection-minded economic nationalism. It finds its focus partly in an attack on multinationals, said to be offering unfair competition to local companies.

More importantly, it also has a high racial content. Labans claim the economy is passing into the hands of "aliens," for which should be read Filipino citizens of Chinese origin. However, it must also be said that the opposition groups' predilections remain essentially capitalist if perhaps more narrowly nationalist.

In the same way opposition criticisms of President Marcos' acceptance of US bases on Philippine soil, does not imply that a change of leadership would mean a sharp turn to the Left in foreign policy.

Economic and political realities in South-East Asia, the Philippines links with Asean, its trade with Japan, its historical and emotional ties with the US — all make radical shifts in policy unlikely even if Mr Marcos should come to grief. — FT

OPPOSITION PARTIES SAID TO BE BLOCKED OUT OF POLITICAL MAINSTREAM

Kuala Lumpur BUSINESS TIMES in English 5 Nov 80 p 6

[Article by Paul Wedel in Singapore]

[Text] SINGAPORE'S general election campaign has not yet officially begun but one thing already is clear — the ruling People's Action Party will sweep to another overwhelming victory.

Prime Minister Lee Kuan Yew's well-entrenched party has ruled the island republic for more than 20 years and has taken every single parliament seat in the last three general elections.

It has put down, outmanoeuvred and outperformed the opposition parties until they hardly exist.

Weakened by internal dissension, lack of funds and their own ineptitude, the five main opposition parties cling to the hope that they will be able to win even one out of 75 seats.

"Winning just one seat will change everything," Workers Party leader J.B. Jeyaratnam said. "It will break this wall of government dominance that people feel can never be broken. It will lead to a new confidence in the opposition, more money, more support. Who knows where it will go from there?"

But the odds against winning even a single seat are high.

For one thing, Mr Lee's party holds the advantage of knowing when the election will be held. Singapore law requires only nine-day's notice before election day and most analysts are betting on mid-December.

In the meantime, opposition leaders complain they are hamstrung by not being able to plan for a specific date. The opposition's best publicity device — the mass rally — also is illegal until the campaign officially starts.

Aside from the election date tactics, the government party is riding high on its undeniable success in providing housing, raising the nation's productivity and eliminating unemployment.

A year-long campaign to promote the speaking of Mandarin Chinese on the multi-racial island also has boosted the ruling party where it once was weakest — among citizens educated in Chinese-language schools.

A scheduled trip by Mr Lee and a large contingent of politicians to Peking in November will further strengthen the same appeal just before the election's expected date.

One of the opposition's major rallying cries is that the fruits of Singapore's success have not been fairly distributed. Many lower income people, they say, are actually worse off than previously because of rising living costs.

Opposition leaders say the people dare not voice their dissatisfaction because of a second great obstacle — fear of government power.

Internal security and anti-narcotics laws, though sparingly applied of late, allow indefinite detention of almost anyone without trial. Bureaucratic control extends into many areas of day-to-day life such as car ownership, population control and littering.

On the political front, the government used to simply arrest opposition leaders and hold them indefinitely without trial. Now the government critics say Mr Lee uses more subtle techniques — but with much the same effect.

All opposition leaders complain of petty harassment — difficulties in finding printers for their pamphlets, candidates losing their jobs and supporters being questioned by police.

Laws against slander also have been effective. Two United Front candidates were jailed and fined for slandering Mr Lee during the 1976 election campaign.

Although he does not comment on it because an appeal is pending, a similar slander action against Mr Jeyaratnam for US$600,000 has seriously hurt his personal and party finances.

The party that has suffered most is the left-leaning Barisan Socialis (Socialist Front), which was once perhaps the strongest party in the country.

Barisan secretary general Dr. Lee Siew Choh acknowledges that a series of party blunders combined with shrewd government suppression have left his group "completely crippled — short-handed and short-funded."

The party's nationwide network of 30 offices has dwindled to one grimy fourth floor walk-up and the white-haired doctor said even this may go since the party is having difficulty paying the US$200 monthly rent and upkeep.

The Barisan Socialis will field only four candidates in the election and altogether the opposition parties are unlikely to be able to field a candidate for all 75 constituencies.

The government shows no sign of embarrassment over its success in completely blocking the opposition parties out of Singapore's political mainstream.

With the government's characteristic bluntness, Defence Minister Howe Yeen Cheng said: "Bleating about no opposition in parliament is not something that deserves consideration." — UPI

UP TO 2-YEAR DELAY IN COMPLETION OF HYDROCRACKER COMPLEX

Kuala Lumpur NEW SUNDAY TIMES in English 9 Nov 80 p 9

[Text]

SINGAPORE, Sat. — Shell's $400 million hydrocracker complex on Pulau Bukom scheduled to start operations next year, will be delayed by up to two years because of sub-standard concrete structures.

A full-scale investigation has been ordered and technical experts from Shell's head office in the Hague have been flown in to check the structures reported to be "below design strength."

The South-East Asian Area Co-ordinator for Shell International Petroleum, Mr C.A.J. Herkstroten, also arrived from London to head the investigation team.

In a circular to the staff, Dr Richard Hu, chairman and chief executive of Shell companies here said:

"Comprehensive tests on the concrete structures of the complex showed the concrete in all the main structures was below design strength and therefore insufficient to carry the full load of steel and mechanical equipment which would be placed on them.

"All sub-standard concrete structures will have to be demolished and rebuilt.

"This will entail dismantling and removing substantial steelwork and mechanical equipment already installed and regrettfully could delay completion of the hydrocracker by up to two years, with resulting loss of production capacity."

The hydrocracker, a highly-sophisticated addition to the refinery complex at Pulau Bukom — designed to convert heavy fuel to more valuable light fuels like diesel, kerosene and gasoline — was to have been completed by the end of next year.

Work on the complex began in September 1978. Three weeks ago, all work was suspended.

A spokesman for Shell said a technical team has suggested shoring up the main structures to remedy the problem.

He dismissed speculation that Shell might shift the project to another nearby island or to New Zealand.

PETROCHEMICAL PROJECT HITS ENVIRONMENTAL SNAG

Kuala Lumpur BUSINESS TIMES in English 1 Nov 80 p 12

[Text]

SINGAPORE, Oct. 31

SINGAPORE's $1 billion petrochemical project here has hit a snag with environmental authorities insisting on firm anti-pollution safeguards, official sources said today.

The issue was how to dispose of unwanted hydrocarbons without causing health hazards when the $2 billion petrochemical plant went into operation in about two years' time, the sources said.

The petrochemical complex is a joint-venture between the Singapore government and Japanese firms headed by Sumitomo Chemical Corporation of Japan. The construction of the giant plant, on an offshore island here, is under the management of Sumitomo.

The sources said that environmental authorities here had rejected a Sumitomo plan to build an elevated flare system, similar to the ones used in oil refineries, to burn off hydrocarbon waste as an insufficient safeguard against pollution.

Instead they had asked the planners to construct an enclosed ground level flare system, and if this was not possible, to suggest an alternative method that would not endanger the environment, the sources said.

Sumitomo officials were not happy with the stand taken by the authorities because they felt that a ground level flare system would cost over $7 million, almost three times more than the elevated scheme, the sources said.

The Japanese firm also felt that by offering the elevated flare system, it was meeting its obligation to Singapore not to build a petrochemical complex which would be rejected in Japan for pollution reasons, they added.

"The elevated flare system will add to air pollution through incomplete combustion of the unwanted hydrocarbons and will be too noisy," said a senior official of the Ministry of Environment.

A Sumitomo official told *Reuters* that he was confident that the problem could be solved through further negotiations.

Meanwhile, the English-language *Straits Times* newspaper called on Sumitomo to be more reasonable. "Strict anti-pollution controls have to be rigorously enforced by the authorities of course because of the potential hazards involved," it said.

"It does not appear unreasonable to have the Japanese petrochemical company follow our anti-pollution regulations to the letter when the additional costs involved are not large compared to the total $2 billion capital investment.

"Compromises may have to be made every now and then to ensure the smooth construction of the petrochemical complex. In this instance, the Japanese are in a much better position to do so than we who have to live with the consequences of a polluted environment," the *Straits Times* said. — Reuter

FRANCE PLANS TO ESTABLISH TECHNOLOGICAL INSTITUTE

Kuala Lumpur BUSINESS TIMES in English 11 Nov 80 p 18

[Text] FRANCE is taking a calculated risk in investing about $20 million in the Singapore-French Institute of Technology.

Establishment of the institute, France's "biggest investment and transfer of technology" in Singapore is "an act of faith that the project will succeed," said French Ambassador Henri Chollet.

"We have faith in the future of Singapore," he said in an interview with the *Straits Times*.

The Singapore-French Institute, the most important in terms of amount invested and provision of technical expertise to be set up by the French government, will nearly double French investment here.

The present total of French investment in Singapore is about $37 million.

Mr Chollet promised that France would invest still more money in Singapore even though the economies of France and other European nations were facing difficult times.

French aid to the institute, which will start courses in 1983, will be in the form of supply of sophisticated machinery and the sending of French technical experts, including its first director, to teach at the school.

In addition to the $20 million aid, the Singapore government will spend $23 million in providing the land, building and equipment for the institute which will train 500 technicians and highly skilled technical managers and staff in the first five years.

It will conduct courses in computer science, electronics, high-precision engineering and other technical subjects.

Students will have to study French.

The institute will give training in the fields of electro-technology and electronics, with special emphasis on instrumentation, automation, industrial control, computer and microprocessor applications.

Initially it will conduct a full time two-year course leading to a diploma in electro-technology. There will also be a four-year advanced diploma course for technical managers.

Part of the training for the advanced course will include six-month attachments to leading French factories.

The French teachers and experts will be supplied by the Ecole Superieure d'Ingenieurs, a highly rated institute run by the Paris Chamber of Commerce and Industry.

Mr Chollet gave four reasons why France was investing in the institute:

■ Singapore provided the right climate for investment because of its political and economic stability.

■ The project was expected to lure more French investments, including electronics and high-precision engineering computer projects here.

■ Establishment of the institute could lead to an increased flow of French experts to Singapore. Last year, Singapore exported $671 million worth of goods to France and imported $485 million worth of French goods.

■ The project was expected to lead to more French firms tendering successfully in big government and private projects here.

The memorandum of understanding on the establishment and operation of the institute was signed on Oct. 23 by Mr Chollet, Mr Pierre Peilier, president of the Commission for Education representing the Paris Chamber of Commerce and Industry and Mr Paul Sallebert, representing the Federation of Electrical and Electronic industries. Mr Chia Cheong Fook, permanent secretary of the Ministry of Foreign Affairs, signed for Singapore.

Speaking at that ceremony, Mr Chia said the agreement reflected the growth in trade and cultural relations between France and Singapore. He noted that bilateral trade more than doubled from $497 million in 1974 to $1.16 million in 1978.

Pointing out that France's shares of Singapore's external trade was only 1.5 per cent, Mr Chollet expressed hopes that the agreement would stimulate more exchanges and that more French enterpreneurs would invest in Singapore, particularly in the electrical and electronic industries. — AFP

JAYEWARDENE WARNS OPPOSITION AGAINST DIVISIVENESS

BK211131 Colombo International Service in English 1045 GMT 21 Dec 80

[Excerpt] President Jayewardene yesterday warned the opposition that any attempt to rock the government would imperil millions of lives and lead to the erosion of democracy. In such an event, he said, democracy would have to be protected by methods undemocratic governments could not normally use. [sentence as heard] He said this is not only a warning but the pledge given to the people by the government party during the last election.

The president, who was addressing the 26th Annual Conference of the United National Party at the (Sugatadasa) indoor stadium in Colombo, said: The recently announced oil price increase would mean an addition of another 800 million rupees to the country's import bill. Nevertheless, the government was determined to go ahead with its development plans while preserving the democratic freedom of the people. The opposition should endeavor to desist from antisocial activities, such as strikes and sabotage, which would hinder production and delay development.

The president also referred to escalating costs, pointing out that the accelerated Mahaveli Development Program, originally estimated to cost 9 billion rupees, would now cost 3 times as much. But all development projects would be implemented with the support of the international community. He said in a few years the situation should improve. There was hope of better times ahead.

Addressing a public rally at Kolonnawa, President Jayewardene has emphasized the supremacy of parliament in a democratic set up. He said besides legislative authority, it also has judicial power. He cited the case of former U.S. President Nixon being forced to tender his resignation when the congress planned to hold an inquiry into his conduct. Parliament at the same time, the president said, had to protect the rights of members as had been proved in attempts to insult Foreign Minister Hameed and Kaduwela member of parliament M.D.H. Jayewardene.

BRIEFS

TRADE AGREEMENT WITH PHILIPPINES--A trade agreement was signed in Colombo 8 December between Sri Lanka and the Philippines providing a framework for the development of trade and economic relations between the two countries. It also provides the most favored nation treatment in trade. Both governments will grant temporary exemptions on the payment of important duty and taxes on items for display at fairs and exhibitions in each other's country. The agreement will come into force when letters are exchanged confirming its ratification. [Text] [BK170319 Colombo International Service in English 1045 GMT 9 Dec 80]

AGRICULTURAL LOAN--The International Fund for Agricultural Development, based in Rome, has agreed to provide a loan of 270 million rupees for the Anuradhapura dry zone agricultural project. The loan will be given on a very small interest rate and repayable in 50 years. [Colombo International Service in English 1045 GMT 17 Dec 80]

TRADE PROTOCOL SIGNED--The Sri Lanka-China trade protocol for 1981 was signed in Colombo yesterday. This is the fourth annual contract negotiated under the sixth 5-year trade agreement between the two countries signed in Beijing in October 1977. In terms of the protocol for 1981, Sri Lanka will export a total quantity of 20,000 tons of rubber to China. In exchange, China will supply 80,000 tons of rice to Sri Lanka. In addition to rice, items such as diesel oil, kerosene, chemicals, textiles, light industrial products, mineral products, machinery, knitting products and other commodities will be exported by China. Sri Lanka will export coconut oil, cocoa, indigenous medicinal herbs, rubber, tea, precious stones and other commodities. The agreement was signed at Bandaranaike Memorial International Conference Hall by Secretary to the Ministry of Trade and Shipping W.L.B. De Mel and visiting Chinese Vice Minister of Foreign Trade Jia Shi on behalf of the two governments. [Text] [BK201137 Colombo International Service in English 1045 GMT 20 Dec 80]

LEADING FIGURES IN COMMUNIST PARTY SURRENDER

Kuala Lumpur BUSINESS TIMES in English 12 Nov 80 p 6

[Article by Wirasak Salayakamond]

[Text]

THE growing detente between Thailand and China has created a serious dilemma for the Thai Communist Party (CPT) which depends on Peking's support in its struggle against the government.

The Thai underground party had cast its ideological fortunes with China against the Soviet Union long before the Moscow-backed Hanoi regime dominated South Vietnam and installed the Heng Samrin government it Kampuchea.

When Vietnam invaded Kampuchea, China started soft-pedalling its anti-Thailand policy and, eventually, an ill-defined alliance between Peking and Bangkok was formed.

This unexpected twist of political fortunes left the CPT out in the cold.

Government sources said the CPT leadership has been rent by dissensions over its future course. These sources said some CPT leaders favour seeking the support of the Soviet Union, but others are strongly against it.

This analysis of the CPT leadership split has been strengthened by the recent surrender of former student activist Seksan Prasertkul and his wife Jiranan after six years of anti-government activities.

Seksan himself has refused to talk on the reported leadership struggle buffeting the CPT. He merely said that he had some disagreement with the CPT leadership "on ideological issues."

He insisted that he would not betray his comrades by leading government forces to their jungle lairs, but neither would he serve as their instrument to fight the government.

"I am now a ruin of history, unable to do what I wanted to. I would like to lead a normal life as any average man in society," he said glumly after he surrendered.

Seksan's surrender was a major psychological victory for the administration of Prime Minister Prem Tinsulanonda. Gen. Saiyud Kerdphol, armed forces chief of staff and director of the Internal Security Operations Command (ISOC), triumphantly declared that Seksan's surrender was most welcome and that the former rebel could be useful to the country.

Prime Minister Prem was also jubilant over Seksan's surrender. He said Seksan and other former activists who joined the CPT would be eligible for pardon under the Amnesty Act signed by former Prime Minister Kriangsak Chomanan on Sept. 16, 1978.

Ten days after Seksan surrendered last Oct. 3, former labour leader Therdphum Chaidee was arrested in Nongkhai province.

But, undoubtedly, Seksan is the bigger catch of the two former underground leaders. A former political science student of Thammasat University and an exchange student under the American Field Service programme, Seksan became a prominent campus firebrand.

He organised students from various colleges and universities to stage a series of violent demonstrations against the hardline Thanom-Prapass-Narong regime until its downfall in October 1973.

After the fall of the Thanon government, Seksan tried to form a united front of students, farmers and workers. Unable to strike the political combination that he wanted formed, Seksan teamed up with Therdphum Chaidee to organise a labour federation among textile workers in Samut Sakorn province.

By this time, the conflict between Thailand's rightwing and leftwing elements had reached an unbridgeable stage. Seksan was constantly under surveillance. Fearing that his life was in danger, he went to Paris. From there, he went to Peking and Hanoi and finally joined the CPT in the Northern Thailand jungles.

Seksan was not the first of former campus activists to surrender. The other prominent surrenderees include Chalaythorn, a former student leader of Ramkambaeng University; Pridi Boonsue, of the

Thammasat University; Jit Jongjit, a leader of the communist guerillas of the southern province of Surathani; and Thongpak Piangket, former deputy leader of the defunct Socialist Party of Thailand.

When Boonsong Chalaythorn emerged from the jungles in April 1979, he declared: "I am not the first one to surrender, nor will I be the last."

His prophecy proved remarkably accurate. A number of former student activists, many of them only minor participants in the anti-government movement, have surrendered.

Boonsong, who was granted amnesty, had put out a political weekly magazine Sen Tarng (Ways). In his writings Boonsong castigated the CPT for its rabid pro-Chinese policies. He also advocated the recognition of the Heng Samrin regime in Kampuchea.

After a stormy partnership with the CPT, Boonsong and his group left the CPT. "The policies, the fighting strategy and the ideology of the CPT are the same as those of the Communist Party of China (CPC)," he said angrily.

He added: "When China turned its face towards America, the CPT even modulated the tone of its criticism of US imperialism. When China was engaged in a border war with Vietnam, the CPT also cut off its relations with Hanoi. CPT also obeyed Peking's order to close down its Voice of Thai People Radio."

The capture of Therdphum Chaidee, although less significant than the surrender of Seksan, has also removed one big thorn from the government's side.

Therdphum played a key role in numerous labour disputes in Bangkok between 1973 and 1975, before he joined the CPT. ISOC officials said that before his capture, Therdphum had also deserted the CPT and had set up his own pro-Soviet group in Vientiane, Laos.

Therdphum, 36, was arrested while crossing the Mekong River from Vientiane into Nongkhai with a party of Laotians. He was carrying a Laotian border pass under the name of Thao Im Tong. He was arrested when an immigration officer recognised him.

He said he was on his way to surrender to the Nongkhai governor, but authorities were not convinced.

The Vietnam-China conflict has further weakened the CPT, but it remains to be seen whether the surrender of some of CPT's top leaders will bring about the final collapse, or just a temporary setback to the movement. — Depthnews

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

BRIEFS

ECONOMIC, TECHNICAL AID--Romania is to provide economic and technical assistance worth $500 million to Bangladesh in the next 5 years. This was stated by Deputy Prime Minister Jamaluddin Ahmed in Dacca today on his return from a 4-day visit to Bucharest. He said the Romanian Government has agreed in principle to extend the credit in response to a Bangladesh request during his talks there. The minister said the new areas of bilateral cooperation identified during the talks covered oil exploration, mining, a cement plant, the power sector, including a mini-hydropower plant, the assembly and manufacturing of trucks and buses and agro-based and agro-supporting industries, deep sea fishing and trawler manufacturing. 'VOPB' REPORTS COMBAT NEWS FROM VARIOUS STATES, AREAS

Sadon, Lauhkaung, Kutkai

BK191423 (Clandestine) Voice of the People of Burma in Burmese to Burma 1200 GMT 18 Dec 80

[Text] Combat news from Sadon-Lauhkaung area located east and northeast of Myuitkyina:

On 17 November a small people's army guerrilla force blew up an enemy bridge located near (Mannaung) village. An enemy vehicle was destroyed by mines while three enemy soldiers were killed and two wounded.

On 27 November, a small people's army guerrilla force launched a mine attack against mercenaries of the military government's mercenary 15th infantry regiment as they left the (Nilanku) camp. The attack killed one enemy soldier and wounded another.

On 23 and 28 November, mine attacks were launched against the military government's mercenary 15th infantry regiment between (Kha Baw) police station and (Hti) and at (Hawlaw), killing eight enemy troops and wounding some. On 29 November, the people's armed forces clashed with mercenaries from the military government's mercenary 15th infantry regiment near (Nga Maw) stream. The mercenaries retreated with some wounded.

Combat news from the Kutkai area:

On 18 November, a small people's army unit planted a mine at (Khwet Kyong). Two enemy soldiers were killed when they stepped on the mine.

On 21 November, a small people's army unit clashed with the enemy at (Lewaing). The enemy fled and some shells were seized from the enemy.

On 2 December, a small unit of the people's army clashed with mercenaries from the military government's 4th Kachin rifles regiment at (Mae Wai) which is near the 105th mile marker on the Lashio-Mu-Se highway. An enemy medium-range (?machine gun) was destroyed and hand grenades, mortar shells and some ammunition were seized from the enemy.

Shan, Kachin

BK240900 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 24 Dec 80

[Text] Combat news from Central Shan state: On 15 October and 8 November, small units of the people's army made two attacks--one at (Hsi-Om) village, southeast of Hsihseng, and one at (Htee) camp in Hsihseng region--on the military government's mercenary 76th infantry regiment, killing three mercenaries and wounding two others. On 14, 24 and 25 November, small units of the people's army conducted guerrilla raids and staged mine attacks on the military government's mercenary 105th light infantry regiment around Ho-Hko in (Hkak-Sawng) region, around Loi-Hsang between Kunhing and Namsang and around (Hsai-Bo) on Kunhing-Namsang road. The attacks killed seven enemy soldiers and wounded several others. A military vehicle was also destroyed. On 3 December, mines planted by the people's army near (Lamaing-On) on Mong Nawng-Lai-Hka road destroyed another military vehicle of the enemy.

Combat news from Eastern Keng Tung: On 23 November, a small unit of the people's army made a surprise attack on the (Pangyat) enemy camp and killed one enemy soldier. One G-4 and some ammunition were seized from the enemy. On 4 December, a small unit of the people's army dynamited and destroyed the enemy's (Yangmo) bridge in Keng Tung district.

On 10 December, one enemy soldier was killed and two others were wounded in an attack by the people's army at a place between Mong Yawng and Man Tung. The enemy fled when attacked. One G-4 was seized from the enemy.

Combat news from Northeastern Myitkyina: On 2 December, a small unit of the people's army ambushed the military government's mercenary 29th infantry regiment near Chipwe which had sallied out from Sawlaw. The ambush killed two mercenaries, wounded three others and forced the enemy to flee. One G-2 and some ammunition were seized from the enemy. On 8 December, a people's army unit attacked between (Chisint) and Sawlaw a platoon of the 2d company, mercenary 15th infantry regiment, and killed two enemy soldiers and wounded another. The people's army seized 1 G-4, 1 stengun, about 300 rounds of ammunition and other military supplies from the enemy soldiers who fled.

ENVOY TO TUNISIA--Joseph Thomas Kallurkaran, ambassador-designate of India to Tunisia, on 19 December morning presented his letter of credence to President Habib Bourguiba in Carthage Palace. [Excerpt] [BK271205 Delhi ISI Diplomatic Information Service in English 0857 GMT 22 Dec 80]

ENVOY TO ETHIOPIA--P.K. Budhwar, ambassador of India to Ethiopia, presented credentials to Megistu Haile Mariam, chairman, Provisional Military Government of Socialist Ethiopia on 20 December. [Excerpt] [BK271205 Delhi ISI Diplomatic Information Service in English 1506 GMT 26 Dec 80]

FOODGRAIN PRODUCTION--Foodgrain production in the country this year is expected to be around 135 million tons. This will be better than the earlier record production of 131.8 million tons achieved during 1978-79. This was stated by Union Minister of State for Agriculture Smainathan at a press conference in Coimbtore today. Sugar production this year will be about 4.5 million tons. This will also be a record. With this it will be possible to export about 400,000 tons of sugar this year after meeting the entire domestic needs, the minister added. [Text] [BK241018 Delhi General Overseas Service in English 1000 GMT 24 Dec 80]

DRILLING MACHINES TO USSR--The public sector Hindustan machine tools is to export to the Soviet Union radio drilling machines worth 14.6 million rupees. According to an official press release, a contract for this has been signed between the two countries. The concern has so far supplied machine tools worth 21.5 million rupees to the Soviet Union. [Text] [BK250910 Delhi Domestic Service in English 0830 GMT 25 Dec 80]

OIL IMPORT PLANS--India is expected to import 16 million tons of crude and 6.4 million tons of petroleum products next year. This will cost about 60,000 million rupees in foreign exchange following a 7 to 10 percent hike in oil prices announced by OPEC recently. Negotiations are on in this regard with several countries. Algeria is expected to supply over half a million tons of crude oil to India. An official delegation is leaving New Delhi for Algiers next week to sign the contract for the crude oil supply. Another delegation is also expected to go to Caracas shortly to sign an agreement with Venezuela which has already promised 1.5 million tons of oil to India. A delegation is already in Libya to sign an agreement for the supply of about 1 million tons of crude next year. [Text] [BK261026 Delhi General Overseas Service in English 1000 GMT 26 Dec 80]

BJP OPPOSITION--The First National Convention of the Bharatiya Janata Party [BJP] opened at (Samtanagar) in Bombay today. Hoisting the party flag BJP President Vajpayee said the party's aim is to make India a strong nation free of all types of social and economic discrimination. He said he is against allowing a personality cult in the party. A political resolution to be taken up at the plenary session reaffirms the Bharatiya Janata Party's opposition to any move for replacing the parliamentary system by the presidential form. [Text] [BK280917 Delhi Domestic Service in English 0830 GMT 28 Dec 80]

POLICE KILL PARTY LEADER--New Delhi, 28 Dec (AFP)--A top ranking leader of the Pro-Beijing Communist Party of India, Marxist Leninist (CPI-ML) or Naxalite as the party is popularly known, was shot dead by police in the South Indian state of Tamil Nadu (formerly Madras) today, Press Trust of India (PTI) news agency reported. Mr Kannamani was killed in an "encounter" with the police, PTI said. At least six police officers were injured when Mr Kannamani opened fire with a muzzle loading gun, the agency said quoting a police press release. [Text] [BK281457 Hong Kong AFP in English 1222 GMT 28 Dec 80]

AUTONOMY MOVEMENT--Lama (Lokdam) of the Ladakh Buddha Vihar [Monastery] in Delhi has urged the government to depute a central team to Ladakh to study its problems and suggest their solution. He told newsmen in New Delhi today that Ladakhis will continue their peaceful agitation demanding what he called more autonomy within the state. Lama (Likdam), who is also a member of the high-powered panel of minorities, scheduled castes and tribes and other weaker sections alleged that the [Kashmir] state government has been neglecting the region. AICC-U [All India Congress Committee--U] joint secretary Bhim Singh has also condemned the police action against demonstrators in Ladakh. In a statement in New Delhi today, he demanded the release of the people arrested on immediate instructions of the union home ministry to redress the grievances of the people in Ladakh. President of Jammu and Kashmir State Congress-I Mufti Mohammad Syed has accused the state government of trying to turn a deaf ear to the genuine demands of the Ladakhi people. Addressing a news conference in Jammu today, he condemned the police action against demonstrators of Ladakh action committee and demanded a judicial inquiry into it. The president of the state Lok Dal, Sheikh Abdul Rahman, has urged the center to intervene in the Ladakh situation. He suggested scheduled tribe status for Ladakh. Meanwhile, according to an official spokesman in Jammu, the situation in Ladakh is under control. Jammu and Kashmir Chief Minister Sheikh Abdullah today called on Governor L.K. Jha. Agency reports say they discussed the Ladakh situation. [Text] [BK301625 Delhi Domestic Service in English 1530 GMT 30 Dec 80]

AUTONOMY MOVEMENT CONTINUES--Reports reaching Jammu from Leh says Dharna [picketing] by the Ladakh action committee continues. Official sources say the situation is under control. Meanwhile, a spokesman of the Jammu and Kashmir government has denied allegations made by a Congress-U legislator in a statement about the arrests and police action in Ladakh in connection with the agitation for more autonomy for the region within the state. The spokesman said the government is willing to have talks with the agitation leaders, he said the charge of not allocating sufficient funds to Ladakh is not based on facts. He added that (?provincial) status for Ladakh will complicate matters instead of solving any problem. [Text] [BK310748 Delhi Domestic Service in English 0240 GMT 31 Dec 80]

UN DARA RECEIVES SOVIET DELEGATION, CSSR ENVOY

BK141238 Phnom Penh Domestic Service in Cambodian 1230 GMT 12 Dec 80

[Text] At 0800 on 12 December a delegation of the USSR Union of Journalists, led by Comrade Albertas Laurinchyukas, secretary of the union, paid a courtesy call on Comrade Un Dara, director general of the Voice of the Kampuchean People and vice chairman of the Kampuchean Journalists' Association, at the office of the Voice of the Kampuchean People. During the conversation, Comrade Albertas Laurinchyukas stressed that the USSR Union of Journalists would invite Kampuchean journalists to attend a press conference in Moscow next September.

The comrade director general of the Voice of the Kampuchean People expressed deep thanks to the USSR Union of Journalists and to Soviet press services such as NOVOSTI, TASS and NOVOYE VREMYA for helping to disseminate news about the Kampuchean situation for the information of world public since Kampuchea's liberation from the genocidal Pol Pot-Ieng Sary-Khieu Samphan clique of traitors.

At 1430 the same day, the comrade director general of the Voice of the Kampuchean People received and held talks with (Hzanusek), charge d'affaires and second secretary of the Czechoslovak embassy in Phnom Penh. On that occasion the comrade charge d'affaires said that the CSSR Government and people would create broad conditions to provide aid for the Voice of the Kampuchean People in all its needs.

In reply, the comrade director general of the Voice of the Kampuchean People expressed profound gratitude to the Czechoslovak Government and people for helping the Kampuchean people during the current difficult circumstances.

The conversation proceeded in a cordial atmosphere of revolutionary fraternity.

GUERRILLA ATTACK IN SISOPHON REPORTED

BK060752 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 3 Dec 80

[Text] On the night of 28 November, our army and guerrillas in Sisophon District [Battambang Province], with the active support and participation of the people, successfully raided the defense system of the Vietnamese regiment command post along Route 5 west of Sisophon. The system included the following positions:

1. The position at (Kouk Toch) which was the command post of the 16th Regiment of the enemy's 5th Division, protected by a regiment;

2. The position at (Put Ta Soth), which was a company position to protect this command post; and

3. The position at (Sophy) station which was also a company position for the defense of the command post.

At 2300 our guerrillas opened fire simultaneously with support from our artillery. We completely destroyed the (Kouk Toch) and (Put Ta Sok) positions, while damaging half of the position at (Sophy) station. At (Kouk Toch), the Vietnamese troops suffered 27 killed and 32 wounded, including a one-star colonel, a member of the staff of the regiment command, dead. At (Put Ta Soth), we killed 15 and wounded 23 Vietnamese soldiers. At (Sophy) station, the Vietnamese casualties were five dead and seven wounded.

In all, we put 109 of the Vietnamese enemies out of action, including the killing of a one-star colonel of the staff of the command of the 16th Regiment, 5th Division. We destroyed 20 barracks, 18 AK's, 8 drum-magazine guns, 2 B-40's and 2 C-25 radios. We seized 2 drum-magazine guns, a Goryunov gun, 7 AK's, 5 crates of Goryunov ammunition, 57,000 rounds of AK ammunition and a C-25 radio. We also captured a quantity of other war materiel, mungbeans, peanut oil and fish cans from humanitarian aid.

Long live the valiant army, guerrillas and people on the Sisophon battlefield!

COMMUNICATIONS MINISTER PRESENTS AWARDS FOR 1980

BK160506 Phnom Penh Domestic Service in Cambodian 1100 GMT 15 Dec 80

[Summary] "According to our station correspondent, a ceremony was held at the office of the minister of communications, transport and posts on the afternoon of 13 December 1980 to present awards and citation certificates to cadres, personnel and workers who made outstanding achievements in transporting goods to the people in 1980. The ceremony was held in the presence of Comrade Khun Chhy, vice minister of communications, transport and posts. Also attending the ceremony were cadres, personnel and workers of the ministry and Soviet and Vietnamese experts attached to the Ministry of Communications, Transport and Posts."

After Comrade (Chhoeung Seng), deputy head of the office of the minister of communications, transport and posts and vice chairman of the Third Goods Campaign Commission, praised cadres, personnal and workers for their outstanding achievements and the brilliant outcome of the campaign, awards and citation certificates were presented to outstanding cadres, personnel and workers.

"On behalf of the KPRC, the Third Goods Transportation Campaign Command and the Presidium of the ceremony, Comrade Vice Minister Khun Chhy expressed congratulations to the great success of the third goods transportation campaign. He stressed that the successful outcome of the campaign was achieved due to the firm solidarity among the Kampuchean, Soviet and Vietnamese workers. Moreover, this success was achieved due to the fact that our cadres, personnel and workers have had firm confidence in the correct line of the KNUFNS and have thoroughly grasped the difficult situation of our people due to shortages left behind by the genocidal Pol Pot-Ieng Sary-Khieu Samphan clique. In conclusion, the comrade vice minister exhorted cadres, personnel and workers to continue to strive in order to fulfill all tasks well and achieve more victories in the future."

In conclusion, a representative of workers pledged to fulfill all tasks assigned by the KPRC. The ceremony ended in a joyful and intimate atmosphere.

CSO: 4212

KHUN CHHY PRAISES ROAD, BRIDGE CONSTRUCTION

BK110302 Phnom Penh Domestic Service in Cambodian 1230 GMT 8 Dec 80

[Text] On 5 December, Comrade Khun Chhy, vice minister of communications and posts, paid a visit to Batheay Bridge [Kompong Cham Province] on Route 6. He was accompanied by Comrade Sar Kheng, deputy chief of cabinet of the party Central Committee; Comrade (Chan Chum), assistant to the minister of communications, transportation and posts; and many cadres of the ministry.

Upon his arrival, the comrade vice minister received a warm welcome from the workers, personnel and cadres of the Overland Bridge and Highway Department, from the People's Revolutionary Committee of Cheung Prey District and from the local people.

The director of the Overland Bridge and Highway Department gave a report on the brilliant success achieved by our workers who have strived to build and repair bridges and roads damaged by flood waters in September 1980. He pointed out: With the assistance of the revolutionary state power, our workers have constructed 131 meters of bridge, thus enabling traffic to resume since October 1980.

Vice Minister Khun Chhy congratulated the achievements of the workers of the Overland Bridge and Highway Department to reestablish traffic on Route 6, thus facilitating the transportation of various goods from the central commission to various localities in accordance with the goals of the third transportation campaign of the KPRC. He stressed: Despite the shortage of materials, but based on the spirit of independence and mastery of the revolution and on the spirit of unswerving struggle our workers have successively achieved good feats in repairing roads and bridges on various routes.

On this occasion, a comrade representing the district people's revolutionary committee also pledged to actively participate in national reconstruction, particularly in fully maintaining bridges and roads to ensure the prompt transportation of goods to the people.

CSO: 4212

BRIEFS

GDR COMMUNICATIONS DELEGATION--A delegation of the GDR naval and air communications led by Comrade Doctor Rentner, minister of communications [name and rank as heard], arrived at noon on 12 December 1980 for a visit to our country at the invitation of the Ministry of Communications and Posts. On hand to welcome the delegation were Comrade Khun Chhy, vice minister of communications and posts; Comrade (Chan Chim), assistant to the vice minister; Comrade Rolf Dach, GDR ambassador to Kampuchea; and many cadres and personnel of the Ministry of Communications and Posts. [Text] [BK150333 Phnom Penh Domestic Service in Cambodian 1230 GMT 12 Dec 80]

DELEGATION RETURNS FROM SRV--After successfully completing a visit to Vietnam, a delegation of the Voice of the Kampuchean People, led by Comrade Un Dara, director general of the radio, arrived at Pochentong Airport at 1105 on 8 December. Greeting the delegation at the airport were female Comrade Som Kim Suor, deputy director general of the Voice of the Kampuchean People; Comrade Chan Min, deputy director general of the newspaper KAMPUCHEA; Comrade (Nguyen Van Tho), deputy head of the Vietnamese experts attached to the radio; and several cadres, personnel and workers of the Voice of the Kampuchean People. Also on hand was Comrade Ngo Dien, ambassador extraordinary and plenipotentiary of the SRV to Kampuchea. [Text] [BK090928 Phnom Penh Domestic Service in Cambodian 1230 GMT 8 Dec 80]

WESTERN REGION BATTLE REPORT--In November our comrades in arms on the western region battlefield put 212 Vietnamese aggressors out of action, including killing a one-star colonel. We destroyed a C-25 radio, a quantity of assorted weapons, a company position, three barracks and a quantity of war materiel. We seized 3 B-40's, 6 AK's, 3 AR-15's, an M-79, 14 B-40 rockets, 420 rounds of AK ammunition, 14 M-79 grenades, and a quantity of war materiel. As for the system of primitive weapons, we made and planted 1,310,000 spikes and dug 1,700 punji pitfalls. [Excerpt] [BK210802 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 20 Dec 80]

GUERRILLAS AMBUSH VIETNAMESE--At 1100 on 13 December, our army and guerrillas ambushed a 150-hp motorboat of the Vietnamese enemy carrying troops from Koh Kong town to (Chhay Dach) on the Koh Kong Leu battlefield. When the motorboat reached the point of our ambush, our army and guerrillas fired at it with assorted guns, destroying both the motorboat and 107 Vietnamese troops aboard. Long live our valiant army, guerrillas and peolpe on the Koh Kong Leu battlefield. [Text] [BK191111 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 18 Dec 80]

CENTRAL REGION BATTLE REPORT--In November, our comrades in arms on the central region battlefield put out of action 575 troops of the Vietnamese aggressors, including the killing of a major and a platoon commander; destroyed a jeep, an M-79, a B-40, a drum-magazine machinegun, 9 AK's, 2 military barracks, and 4 trenches; and seized 2 B-40's, a drum-magazine machinegun, 5 AK's, 920 AK rounds, 32 B-40 rockets, 30 cans of humanitarian food aid and a quantity of other materiel. In their efforts to build a primitive weapons system, our comrades in arms produced and planted 634,800 new punji stakes, dug 750 punji pitfalls and made 470 automatic crossbows. [Excerpt] [BK190828 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 18 Dec 80]

EASTERN REGION BATTLE REPORT--In November our comrades in arms on the eastern region battlefield put 101 Vietnamese aggressors out of action and destroyed an M-79. We seized an M-79, 14 M-79 grenades, 8 B-40 rockets and a quantity of other materiel. Regarding the system of primitive weapons, we made and planted 81,700 new spikes and dug 410 punji pitfalls. [Excerpt] [BK200855 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 19 Dec 80]

GUERRILLA ATTACK IN PAILIN--At 0400 on 30 November our commandos on the Pailin battlefield raided the position of a Vietnamese company at the Kandie Hao banana plantation west of Pang Roloem on Route 10. After an hour of fighting we completely liberated and occupied this Kandie Hao position, killing 27 Vietnamese, including a two-star lieutenant commanding the company, and wounding 32 other Vietnamese troops. The survivors fled in disorder from the position. We destroyed 9 military buildings, 19 assorted weapons--including an 82-mm mortar, a 60-mm mortar, a 12.7-mm machinegun, a B-40 and a B-41--and seized 3,600 rounds of AK ammunition, 28 B-40 and B-41 rockets and some war materiel. Long live our courageous army, guerrillas and people of the Route 10-Pailin battlefield! [Text] [BK070350 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 4 Dec 80]

AMMUNITION DEPOT RAIDED--On 1 December our special guerrillas raided a Vietnamese enemy ammunition depot that was part of the enemy's position in Phkoam village, 28 km east of the Thmar Puok District seat. In a lighting attack we killed 16 Vietnamese troops. The survivors deserted their position. We blew up the ammunition depot in the position, which caused a fire that burned for 1 hour. After successfully completing this mission, our special guerrillas pulled out and returned to their base. Long live our courageous army, guerrillas and people of Thmar Puok District, Battambang Province! [Text] [BK070752 (Clandestine) Voice of Democratic Kampuchea in Cambodian tO Kampuchea 2330 GMT 6 Dec 80]

BATTAMBANG BATTLE REPORT--Following the successful liberation of the Vietnamese defense system at the Samlot district office, our army and guerrillas continued their attacks to cut the enemy's communications lines and to besiege Vietnamese positions. Our army and guerrillas raided four Vietnamese positions along the Samlot-Route 10 path at 2300 on 28 November, at (O Roka), at (Kbal Prolien), at (O Chak Khnea) and at Boeng Ampil or (Re Dek). During these attacks, we killed or wounded 52 with 27 bodies left in various places.

We destroyed a 60-mm mortar and a 12.7-mm machinegun, and seized a quantity of ammunitions and war materiel. We completely liberated and controlled a portion of this road, thus totally disrupting the enemy's communications line between Route 10 and Samlot. It should also be noted that another portion of this road joining (Troung Khla) to Samlot had previously been cut. Long live the valiant army, guerrillas and people on the Samlot battlefield, Battambang Province! [Text] [BK060926 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 3 Dec 80]

SRV COMPANIES DESERT--In November, two Vietnamese companies deserted their ranks from the Western Leach District battlefield [Pursat Province], fled along Route 6 and arrived in Siem Reap Province on 26 November. [Excerpt] [BK060922 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 3 Dec 80]

GREETINGS TO THAI KING--To His Majesty King Phumiphon Adunyadet of the Kingdom of Thailand, Bangkok: Your Majesty, on the propitious celebration of your birthday, on behalf of the Kampuchean people and the government of Democratic Kampuchea, and in my own name, I am very elated to extent to you my warm congratulations and sincere regards. I wish Your Majesty good health, longevity, happiness and more successes to your noble mission. I wish the Kingdom of Thailand lofty prestige, and the Thai people prosperity and well-being forever. Availing myself of this precious opportunity, I would like to reiterate my most heartfelt and profound gratitude to your majesty, to the royal family, to the royal government, and to the Thai people for their successive and comprehensive efforts in support of the just national cause of our Kampuchean people. May the traditional and centuries-old bond of friendship between our two countries and peoples grow forever stronger. Please, Your Majesty, accept my regards. Democratic Kampuchea, 2 December 1980 [Text] [BK050745 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 4 Dec 80]

SAMLOT BATTLE REPORT--In November our comrades in arms on the Samlot battlefield in Battambang Province killed or wounded 1,450 Vietnamese aggressors' troops; smashed 3 trucks, 3 82-mm and 5 60-mm mortars, a 12.8-mm and a 12.7-mm machine-guns, 7 M-30 machineguns, 6 drum-magazine machineguns, 9 Goryunov guns, 5 M-79's, 30 B-40's and B-41's, 67 AK's, 5 AR-15's, a C-25 radio set, 3 command posts and 86 military barracks; and seized a 60-mm mortar, 9 mines, 3 crates of AK rounds, 25 B-40 rockets and a quantity of various items. Moreover, our comrades in arms destroyed 20 big and small positions of the Vietnamese enemy, liberated and took control of 3 enemy positions and totally cut and took control of the stretches of road from Route 10 to Samlot and from Samlot to Trung Khla. Compared with the 1,000-enemy-loss-a-month plan, our comrades in arms carried out 145 percent of the plan, that is, over-fulfilled it by 45 percent. In the building of a primitive weapons system, our comrades in arms produced and planted 879,600 new punji stakes, dug 900 punji pitfalls, made 400 automatic bows and felled 370 trees to block roads. [Excerpt] [BK111145 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 10 Dec 80]

WESTERN LEACH BATTLE--In November our comrades in arms on the Western Leach District battlefield put out of action 805 Vietnamese troops, including a battalion commander killed; destroyed an 82-mm and a 60-mm mortars, 5 M-30 machineguns, 3 drum-magazine machineguns, 11 B-40's and B-41's, 18 AK's, an M-79, a pistol, a command post, 17 military barracks, 26 trenches and a telephone set; and seized 12 AK's, an M-79, 2,000 AK rounds, 6 M-79 grenades, 27 mines and a quantity of various materiel. In their efforts to build a primitive weapons system, our comrades in arms produced and planted 2,538,200 new punji stakes, dug 500 punji pitfalls and made 800 automatic bows and 520 snares. [Excerpt] [BK111143 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 9 Dec 80]

GUERRILLAS RAID AIRFIELD--At 2000 on 3 December, our guerrillas raided a Vietnamese position at the O Sralau airfield on the Sisophon south of Route 5-Bavel battlefield. We put 71 Vietnamese troops out of action while the remainder fled in disarray, leaving behind 31 dead, including 2 members of the battalion command, a Goryunov gun and 3 drum-magazine guns. We destroyed five ammunition, rice and war materiel depots; the ammunition depot exploded throughout the day. We also destroyed 11 trenches and seized 3 AK's, 13 cans of humanitarian food aid and a quantity of other materiel. We controlled the position until 0300 the next morning, and then withdrew to our base. Long live the valiant army, guerrillas and people on the Sisophon south of Route 5-Bavel battlefield! [Text] [BK110322 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 8 Dec 80]

KOH KONG-KOMPONG SOM BATTLES--In November, our comrades in arms on the Koh Kong-Kompong Som battlefield put 2,974 Vietnamese troops out of action, including killing a battalion commander, 3 three-star lieutenants, a two-star lieutenant, a one-star lieutenant, 3 company commanders and 3 commune leaders. We destroyed 4 trucks, a motorcycle, 5 DK-75's, a DR-82, 10 82-mm mortars, 10 60-mm mortars, 6 12.7-mm and 12.8-mm machineguns, 3 M-30 machineguns, 13 M-79's, 13 Goryunov guns, 15 B-40's and B-41's, 355 AK's, 2 drum-magazine guns, and 3 C-25 radios. We also destroyed a 150-hp and 2 37-hp motorboats, an ammunition depot, 56 barracks and 22 trenches as well as 9 train cars and a quantity of war materiel. Our comrades in arms seized 2 DK-75's, a DK-82, an 82-mm mortar, a 60-mm mortar, 19 B-40's and B-41's, 16 drum-magazine guns, 8 M-79's, 16 Goryunov guns, 137 AK's, 301 Soviet A-2 mines, 15 handgrenades, 85 B-40 rockets, 55 AK magazines, 44 crates and 1,500 rounds of AK ammunition, 30 bags of rice, 270 cans of humanitarian food aid and a quantity of war materiel. We also liberated a battalion position, three company positions and fully controlled the Lateritic Road from Trapeang Rung to Andong Toek. Compared with the 1,500-enemy-loss-per-month target, we achieved 148.26 percent, or over 48 percent above the plan. Regarding the primitive weapons system, we made 1,874,300 new spikes, planted 734,700 punji stakes, dug 250 punji pitfalls, set 130 snares and planted 450 landmines. [Excerpt] [BK110422 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 8 Dec 80]

EASTERN REGION BATTLE REPORTS--In November, our comrades in arms on the Eastern Region battlefield put 530 of the Vietnamese aggressor troops out of action. We destroyed a rifle and an AR-15, and seized an M-79, an AK, 12 M-79 grenades, 16 B-40 rockets, 12 landmines, 500 rounds of AK ammunition, 20 handgrenades and a quantity of other materiel. Compared with the monthly plan for 300, we achieved 176.66 percent or almost 77 percent above the target. Regarding the system of primitive weapons, we made and planted 1,208,000 spikes, dug 250 punji pitfalls, set 480 snares, and felled trees to block a number of significant roads. [Excerpt] [BK170822 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 16 Dec 80]

BATTAMBANG AMBUSHES--At 2200 on 12 December our army and guerrillas raided a Vietnamese position at Phum Kanhchang on the Samlot battlefield in Battambang Province, killing 5 Vietnamese troops, wounding 15 others, destroying 2 military barracks and 5 trenches, and seizing a 60-mm mortar, a B-41 and 3 AK's. The survivors fled in great panic from the Kanhchang position toward Anlung Puok. At a little distance from Kanhchang, they ran into our first ambush. We detonated mines, killing 33 of them on the spot and destroying 3 B-40's, a B-41, 2 drum-magazine machineguns and 4 AK's. The survivors fled on toward Anlung Puok but fell into our second ambush. We killed 20 of them, including a two-star lieutenant company commander, wounded 10 others and destroyed a 60-mm mortar, a drum-magazine machinegun and 15 AK's. The rest fled into the Anlung Puok position. An hour later, a Vietnamese company moving from the Anlung Puok position to O Reang Khen ran into our third ambush. We detonated mines, killing 40 Vietnamese troops, wounding 30 others and destroying a 60-mm mortar, a B-41, 4 B-40's, 20 AK's and a C-25 radio set. At 1000 on 13 December, a Vietnamese platoon moving from the position at the Samlot District seat to the artillery command post at (Kampout Don Rong) ran into our ambush. We detonated mines, killing five of them and wounding seven others. In sum, we killed or wounded 165 Vietnamese troops. After controlling the Kanhchang position for one whole night and the next morning, we withdrew back to our base. We totally protected our forces. Long live our valiant army, guerrillas and people on the Samlot battlefield in Battambang Province! [Text] [BK170408 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 16 Dec 80]

PREAH VIHEAR BATTLEFIELD--In November, our comrades in arms on the Chhep-Choam Khsan battlefield in Preah Vihear Province put out of action 918 troops of the Vietnamese aggressors, including the killing of a company commander; destroyed 2 trucks, a DK-82, an 82-mm mortar, 2 B-40's, an M-79, 3 M-72's, a drum-magazine machinegun, 15 AK's, 3 C-25 radio sets, an ammunition depot, 5 warehouses, all the weapons in 15 military buildings, 42 military barracks, 5 trenches and lines of the enemy defense system; and seized an 80-mm mortar, 7 B-40's and B-41's, 18 AK's, 4 M-79's and a quantity of war materiel. Compared with the 800-enemy-loss-a-month plan, our comrades in arms carried out 114.75 percent of the plan, overfulfilling it by almost 15 percent. In their efforts to build a primitive weapons system, our comrades in arms produced 992,500 new punji stakes, dug 880 punji pitfalls and made 760 automatic bows and 510 snares. [Excerpt] [BK160744 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 15 Dec 80]

PAILIN BATTLE REPORTS--In November, our comrades in arms on the Route 10-Pailin battlefield put 1,350 Vietnamese aggressor troops out of action. We destroyed a truck, 3 82-mm mortars, 4 60-mm mortars, a 12.7-mm machinegun, an M-30 machinegun, 25 B-40's and B-41's, 31 AK's, 9 M-79's and 4 drum-magazine guns, as well as 80 trenches and 45 barracks. We seized a 60-mm mortar, a 12.7-mm machinegun, an M-30 machinegun, an M-79, 6 B-40's and B-41's, a drum-magazine gun, 81 B-40 and B-41 rockets, 11,930 rounds of AK ammunition, 29 handgrenades, 702 Soviet mines, 28 M-69 mines, 3 crates of humanitarian food aid, and a quantity of other materiel. We also liberated and took control of six enemy positions. Compared with the 800-enemy-loss-per-month target, we achieved 168.75 percent, surpassing the target by almost 69 percent. Regarding the system of primitive weapons, we made and planted 961,300 new spikes, dug 500 punji pitfalls, set 400 automatic bows, and felled 380 trees to block roads. [Excerpt] [BK140342 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 11 Dec 80]

BATTAMBANG BATTIEFIELD REPORTS--In November our comrades in arms on the Sisophon-South of Route 5-Mongkolborei-Bavel battlefield in Battambang Province put out of action 1,245 troops of the Vietnamese enemy, including the killing of a one-star colonel and 3 captains; destroyed 2 pistols, 7 M-79's, 9 B-40's, a Goryunov gun, 12 drum-magazine machineguns, a truck, 2 C-25 radio sets, 14 trenches, 25 military barracks, 6 rice and ammunition depots and a bridge; and seized a 60-mm mortar, 2 Goryunov guns, an M-79, 5 B-40's, 9 drum-magazine machineguns, 24 AK's, 16 AR-15's, 9 CKC's, 20 M-79 grenades, 1,240 Goryunov rounds, 18 crates and 438 rounds of AK ammunition, 147 B-40 and B-41 rockets, 10 Claymore mines, 429 R-2 mines, 50 handgrenades, 2 C-25 radio sets and a quantity of various documents and materiel. Our comrades in arms liberated and took control of an enemy position and captured 10 enemy troops alive. [Words indistinct] 1,500-enemy-loss-a-month plan, our comrades in arms carried out 83 percent of the plan. In their efforts to build a primitive weapons system, our comrades in arms produced and planted 3,841,000 new punji stakes, dug 2,300 new punji pitfalls, made 180 new automatic bows and felled 630 trees to block roads. SIEM REAP ANGKOR ATTACK--On 2 December our guerrillas ambushed and set ablaze a truck of the Vietnamese enemy on a road in the big circle of the Angkor complex in Siem Reap Province, killing 15 Vietnamese troops, wounding 10 others and destroying 20 assorted weapons and all the materiel aboard the truck. Long live our valiant army, guerrillas and people in Siem Reap Province! [Text] [BK121254 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 10 Dec 80]

SIEM REAY-ODDAR MEANCHEY BATTLES--In November our comrades in arms on the Siem Reap-Oddar Meanchey battlefield put out of action 813 troops of the Vietnamese aggressors, including the killing of a company commander; destroyed 3 trucks, 20 B-40's, 33 AK's, 2 M-79's, 4 AR-15's, an ammunition depot, 18 trenches and 15 military barracks; and seized 3 drum-magazine machineguns, 16 AK's, an M-79, 17 AR-15's, 13 B-40 rockets, 1,480 AK rounds and 92 mines. Our comrades in arms liberated nine villages in Banteay Srei and Svay Leu districts of Siem Reap Province. In their efforts to build a primitive weapons network, our comrades in arms produced and planted 867,850 new punji stakes, dug 1,500 new punji pitfalls, made 500 automatic bows and 300 snares, and felled a number of trees to block roads. [Excerpt] [BK150740 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 14 Dec 80]

AMBASSADOR TO BULGARIA--On 20 November 1980, Mr Meas Samnang, ambassador extraordinary and plenipotentiary of the PRK, presented his credentials to Mr Todor Zhivkov, president of the State Council of the People's Republic of Bulgaria and first secretary of the Central Committee of the Communist Party of Bulgaria. In his cordial talks with the Kampuchean ambassador, the Bulgarian president affirmed that the establishment of diplomatic relations between the two countries permits the consolidation and development of the relations of friendship and cooperation in all fields between the two peoples. He praised that the militant solidarity of the three Indochinese countries is a great force in the safeguarding of lasting peace and stability in this region and the rest of the world. On 17 November, Meas Samnang met with Bulgarian Foreign Minister Petur Mladenov. The Bulgarian minister noted that the Chinese expansionists, in collusion with the U.S. imperialists and other reactionary forces, have created various difficulties to the Kampuchean people in their national reconstruction and sought to undermine the Kampuchean revolution. But, he added, these difficulties will be surmounted and their (?dirty lies) are doomed to meet with failure, because the Kampuchean people are not alone in the struggle for independence, sovereignty and territorial integrity. Laos, Vietnam, Bulgaria and other brotherly countries and the peace- and justice-loving people in the world are always by the side of the PRK. SIHANOUK REJECTS ALLIANCE--Beijing, 13 Dec (AFP)--Former Cambodian head of state Prince Norodom Sihanouk today again ruled out any possibility of an alliance with the ousted Khmer Rouge regime, which two weeks ago asked to meet with the prince to discuss ways of overthrowing the current Vietnam-supported Phnom Penh regime. However, in a statement to Agence France-Presse from his home in the North Korean capital of Pyongyang, the prince said he "morally supported all patriotic forces that are struggling against Vietnamese colonialism." "My divorce from the Khmer Rouge is total and irreversible," Prince Sihanouk said. The prince said his statement was meant as a formal response to a proposal made by the Khmer Rouge, in the form of an interview given a fortnight ago to the NEW CHINA NEWS AGENCY by Ieng Sary, a Khmer Rouge leader. MOSCOW RADIO INTERVIEWS KAYSONE PHOMVIHAN

BK041248 Moscow Radio in Lao to Laos 1430 GMT 1 Dec 80

[Interview with Kaysone Phomvihan, general secretary of LPRP Central Committee and premier of LPDR, by Vientiane-based station correspondent; date not given--recorded]

[Text] Dear Soviet friends, I am very pleased to have an opportunity to speak over Soviet television prior to the great festival of the Lao people--the fifth anniversary of the establishment of the LPDR.

On 2 December 1975, the National Congress of the People's Representatives declared the establishment of the LPDR. In realizing their earnest aspirations, the Lao people have achieved an historic success after going through a difficult struggle full of sacrifices under the leadership of the LPRP.

Following the establishment of the LPDR, the Lao revolution entered a new stage, that of socialist transformation and construction. The LPDR has become another member of the socialist community and its outpost in Southeast Asia. In the past 5 years our party led the people to concentrate all their strength on simultaneously carrying out two strategic tasks, that is, defending the country and building socialism. During this period, we scored achievements which are worthy of our pride in our first steps on the road toward socialism.

On the agricultural front, thanks to the expansion of our material foundations the acreage for rice cultivation has increased by as much as 4 percent as compared with that in 1975; the grain output has increased by 31 percent and the number of animals has increased by 35 percent as compared with 1977. The acreage for industrial crops cultivation has increased by twofold. The movement of setting up agricultural cooperatives has developed. Though lacking experience, some outstanding cooperatives have emerged.

In the industrial sphere, hundreds of factories have been restored and have resumed normal production. Some important new factories have been constructed. The networks of state-run shops and cooperatives has developed. The communications and transport branch has increased its service capability and built more material foundations.

The task of primary education, the elimination of illiteracy and cultural training, has rapidly developed. Today, 94 percent of all cantons throughout the country have done away with illiteracy. The number of school children and students attending colleges has increased by threefold as compared with the period before the liberation of the country.

Free medical services have reached cantons, villages and even the most remote areas. Never before has our country gone through such profound changes so rapidly in such a short period of time.

Under the new system, the people have resolutely concentrated all their strength and intelligence on consolidating the revolutionary administration, strengthening the all-people national defense, maintaining public order in the country and defeating subversive schemes of the enemy.

Our entire people are celebrating the fifth anniversary of the establishment of the LPDR with joy and happiness and are very proud of the achievements they have scored. At present, in factories, plants, agricultural cooperatives and construction enterprises, enthusiastic and extensive movements have been launched to emulate in scoring achievements to welcome the historic day. The Lao people are now entrusted with great and heavy tasks. We firmly believe that with their spirit of loving the country and socialism, with the spirit of unity among the Lao people of all nationalities throughout the country, with the special relationship and all-round cooperation, and with the fraternal assistance of the Soviet Union and other socialist countries, the Lao people, however, under the leadership of the LPRP, will surmount all difficulties, safeguard the gains of the revolution and win them successes on the path of building a prosperous, socialist Laos.

Our party, the government and all the Lao people know well that all successes of the Lao revolution won during the resistance struggle against the U.S. imperialists in the past and in the current cause of national defense and socialist construction cannot be separated from the precious, great, prompt and effective support and assistance of the CPSU, government and fraternal people of the Soviet Union.

We are happy and greatly rejoice at learning that after the establishment of the LPDR new contents and qualities have emerged from the Laos-USSR friendship. The multilateral cooperation between the two fraternal countries and our two peoples has been strengthened and developed with each passing day. Soviet assistance has rapidly given us the strength to build socialist foundations and to strengthen our national defense potentials.

The Lao-Soviet summit meeting held in Crimea this August is a new symbol of the mutual understanding and close cooperation between our two countries.

Under the present situation in which the reactionaries in the Beijing ruling circles and colluding with the imperialists and reactionaries of all types to counter and sabotage the three countries in Indochina and create tension in Southeast Asia, it is impossible to safeguard peace, stability and security in this region of the world without the strengthening of solidarity and cooperation with the Soviet Union and other fraternal socialist countries.

I take this opportunity to extend fraternal salutations and to express profound gratitude to the CPSU, government and fraternal people of the Soviet Union led by esteemed Comrade Leonid Brezhnev for giving their lofty international assistance and unswerving support to the Lao revolution.

I wish the Soviet people fine success in their Tenth Five-Year Plan and glorious achievements in their emulation to welcome the forthcoming 26th Party Congress.

PRODUCTION, EXPORT FIGURES FOR ELECTRICITY, WOOD REPORTED

Vientiane NOUM LAO in Lao 1-15 Oct 80 pp 4, 14

["Letters Answered" column"]

[Excerpt] The third letter comes from a Lao student at Sofia University in Bulgaria, who asks what the total kilowatt production of Nam Ngeum Dam is. How much is sent to Thailand? What country buys most of the coffee and cardamom? What kinds of wood sell well? What is the total annual revenue from electricity, export of coffee, cardamom, and wood?

Answer: The total production of Nam Ngeum Dam electricity now is 393,402,900 kilowatt hours. Thailand for the first 6 months of 1980 received 338,264,000 kilowatt hours. Most of the export of wood, cardamom, and coffee goes to Japan, but there are other recipient countries, too. The wood that has the best sale is pterocarpus macrocarpus. When circumstances allow it, we will let you know the revenue from each.

RICE SALES TO STATE, INDUSTRIAL PRODUCTION REVEALED

Pak Ou Rice Sales

Vientiane SIANG PASASON in Lao 25 Oct 80 pp 1, 3

[Text] In the beginning of October the people of the five cantons which are under Pak Ou District, Luang Prabang Province, namely, Pak Ou, Hat Pang, Houei Kok, Houei Chek, and Phon Kham, volunteered to bring their surplus rice, after calculating their household needs, to sell to the state. This amounted to about 29 tons. Not only did the sale of rice increase household incomes, it represented the performance of the rights and duties of the citizens.

Distillery Production

Vientiane VIENTIANE MAI in Lao 30 Oct 80 p 1

[Text] From January to September 1980 the production of liquor and other alcoholic beverages to meet the requirements of society progressively achieved good results. It is well known that the Lao Viang Distillery is one enterprise of the Vientiane Industry and Trade Service.

In this period production was 90 proof Fan Thong and Bon Yna liquor, 27,140 liters distilled, valued at 1,241,611.45 kip.

At present all the workers of the distillery continue to fulfill the end of the year plan very vigorously to balance the production goal for 1980. They scored achievements to celebrate the fifth anniversary of National Day on 2 December.

Bo O Factory Production Statistics

Vientiane VIENTIANE MAI in Lao 3 Nov 80 p 1

[Text] From January to September 1980 all the workers of the can factory, subordinate to the Vientiane Industry and Handicrafts Company, (factory located at Ban Bo O), determined to produce adequate agricultural tools and household utensils.

In this period they were able to make 13,464 water buckets, size 17, 15, 14, which exceeded planned goals and 197 vegetable watering cans, size 20 and 10, which had a total value of 333,494.46 kip. The factory workers now are continuing to perform their specialized tasks with all vigor.

Brick Production

Vientiane VIENTIANE MAI in Lao 28 Oct 80 pp 1, 4

[Excerpt] From January to September 1980 all the workers of the brick factory, which is subordinate to the Vientiane Industry and Trade Service, raised their sense of responsibility in their specialized tasks to achieve significant production. In this period they were able to make 1,375,283 bricks, valued at 1,110,246 kip.

Luang Prabang Rice Sales

Vientiane KHAOSAN PATHET LAO in Lao 5 Nov 80 p A2

[Text] Vientiane (KPL). From the end of September to 21 October 1980 the members of various agricultural cooperatives in Nan District, Luang Prabang Province, brought their surplus rice, after calculating the needs of their household, to sell to the state. This amounted to more than 21 tons, of which 632 kg was husked rice. The sale not only brought income to the households and the agricultural cooperative units but it also gave the state funds for building the national economic base.

Sayaboury Rice Sales

Vientiane KHAOSAN PATHET LAO in Lao 5 Nov 80 p A3

[Text] At the end of October 1980 the people of Na Khen Canton, Phiang District, Sayaboury Province, brought their surplus rice, after the family needs were met, to sell to the state at a fair price. This was over 12 tons. The sale of the rice to the state is a duty of the citizens, by which every one must give a part of his income to the state, to provide capital for the task of governing, protecting, and building the nation. It also provides increased income for the household to improve their living conditions day by day.

Luang Prabang Bakery Production

Vientiane KHAOSAN PATHET LAO in Lao 4 Nov 80 p A3

[Text] Vientiane (KPL). From the beginning of the year to the present the workers of the bakery, under the Luang Prabang Province Industry and Trade Service, put forth strenuous effort to produce various types of bakery goods enthusiastically, an attitude appropriate for the workers in the new regime. In this period they made more than 10 tons of bakery goods, exceeding last year's plan by 423 kg. At present the workers are joyfully competing in production to achieve much greater production than before, assuring quality, to celebrate the fifth anniversary of National Day on 2 December.

Saravane District Sales

Vientiane KHAOSAN PATHET LAO in Lao 25 Oct 80 p A6

[Excerpt] Vientiane (KPL). From the beginning of the year to the present the trade cadres of Lamam District, Saravane Province, paid attention to bringing goods of various kinds to sell to the cadres, soldiers, and the general public along with buying many agricultural and forest products from the people. The goods sold were more than 7,600 meters of cloth, 4,100 skeins of cotton, 11,900 skirts, 12,300 bars of soap, 9,000 pots, hoes, shovels, and other household utensils. The agricultural produce and forest products purchased from the people were 30 tons of coffee, over 170 tons of unhusked rice, and dozens of tons of animal bones, hides, and other items.

ECONOMIC DEVELOPMENT, POTENTIAL OF SAYABOURY DESCRIBED

Population Figures, Ethnicity

Vientiane SIANG PASASON in Lao 16 Oct 80 p 2

[Excerpt] Sayaboury Province is beautiful and rich.

Sayaboury Province stretches a long portion of the length of the northern region of Laos and lies along the western bank of the Mekong River. It has a total area of 18,400 square kilometers. On the west it borders on Thailand for 520 kilometers and on the east it is bordered by Louang Namtha, Udomsai, Luang Prabang, and Vientiane provinces.

The population of Sayaboury Province totals 207,000 persons including 25,397 Lao Theing and 14,827 Lao Sung.

Administratively, Sayaboury Province is divided into seven districts, namely Xieng How, Hongsa, Sayaboury, Phieng, Paklai, Kenthao and Boten. These are further divided into 58 cantons and 616 villages. Ethnic minorities live in small villages of from 15 to 20 houses that are widely scattered on the mountain tops and small stream valleys. The ethnic Lao Lum people tend to establish large villages of from 100 to 600 houses along the banks of large streams and rivers that are navigable so they can use the streams and rivers for making a living, commerce and association.

Self-Sufficiency in Agriculture

Vientiane SIANG PASASON in Lao 17 Oct 80 p 2

[Excerpt] The Agricultural Field

Plains make up only 40 percent of Sayaboury Province with the remainder being mountainous. As a result there are many difficulties for agriculture. Paddy fields cover an area of only 33,690 hectares but dry fields cover a larger area.

The Hongsa District plain is the broadest plain in Sayaboury Province and covers an area of 3,335 hectares. Besides that there are the Phieng District plain and the Sayaboury District plain that are not quite so large. The majority of people in the districts of Paklai, Kenthao, Boten and all other districts, no matter what ethnic or tribal group they belong to, perform shifting agriculture.

There are two types of soil in Sayaboury Province. In the five central and southern districts the soil is red clay in which crop failure frequently occurs when favorable rainfall does not occur during a growing season and shifting agriculture is successful only on the banks of large streams. In the two northern districts, i.e., Xieng Hon and Hongsa, the soil is rich and a mixture of clay and sandy soil. This type of soil is quite suitable for crop growing so these two provinces have become the rice basket of Sayaboury Province.

There are also many other difficulties that interfere with agriculture in Sayaboury Province. Every year farmers encounter and have to fight against natural pests, especially caterpillars, mice and birds, that cause crop damage while the rice is ripening on the stalk and this is a serious, significant problem.

Despite the difficulties and with the correct policy guidance of the party and state and the close leadership of local revolutionary administrative authorities, the multi-ethnic people of Sayaboury Province, who had brave, firm faith in victory, decided on a high campaign to carry out the plans and policies of the party effectively and efficiently. Based on an awareness of the national interest and a community spirit, the farmers, from scattered pursuit of making a living, all turned to join organizations such as farmers' solidarity units, labor pooling units and agricultural cooperatives. Although the enemy has concentrated on propaganda to confuse in hopes of destroying collective organizations, to date the farmers have maintained their collective spirit and 18.2 percent have voluntarily become members of 125 agricultural cooperatives spread throughout all the districts.

The past 5 years of progress on the path of socialist revolution have improved the living conditions of the people noticeably. As the chairman of the Sayaboury Province administrative committee has said, our province's annual requirements for rice consumption equals 70,000 tons but our actual annual production of rice equals 75,000 tons. In other words, each year we have 5,000 tons of rice to export from the province. The reason for the increase in the quantity of foodstuffs is the widespread improvement and expansion of crop lands. In the past 5 years throughout Saraboury Province they have been able to clear 250 hectares of new paddy fields. The 1,404 hectares of dry-season rice fields is a new element that has originated under the new regime. The growing of dry-season rice, from being considered difficult and unrewarding, has progressed to a normal condition or as it is called "an occupation that could not be cut off."

Coupled with the above the growing of starchy crops began to carry out the plans of the party and state beginning with the day the nation was liberated and it is currently undergoing a strong expansion. Each year they are able to harvest up to 46,926 tons of dried corn to be used as animal feed and to be exported abroad.

Development Potential Noted

Vientiane SIANG PASASON in Lao 18 Oct 80 p 2

[Excerpt] In carrying out the plans and policies of the party and state for the last 5 years the local, revolutionary, administrative authorities of Sayaboury Province have guided the multi-ethnic people to energetic construction of irrigation dams. Besides repairing two medium-size barrier dams, i.e., the Mieng River Dam Number One and the Tan River Dam, to restore them to normal service to agriculture the people of many localities have used their own resources and labor to construct a total of 363 small-size dams. Altogether now in Sayaboury Province there are 9,450 hectares of paddy land that are not dependent upon rainfall because they get sufficient water from irrigation dams. This is 28.5 percent of all paddy land in the province and is a wonderful accomplishment of the people of Sayaboury in the initial phase. The people of Sayaboury Province understand that, "we only need irrigation dams for agriculture in order to realize our desire to progress to large-scale production and to establish agricultural cooperatives or communes."

There are currently 816 domesticated elephants in Sayaboury Province making it the province with the greatest elephant population in Laos. This is an indication of the wealth of Sayaboury Province. It also has large numbers of other animals, such as 63,500 water buffaloes, 15,000 cattle, and 3,200 horses. Yard animals, such as pigs, ducks and chickens, have also expanded due to prevention of diseases and epidemics. There are 56,000 pigs and 538,000 ducks and chickens.

Forestry, Industrial Work

Vientiane SIANG PASASON in Lao 20 Oct 80 p 2

[Excerpts] Forests cover 60 percent of the area of Sayaboury Province. Teak and khamphi-wood are the most valuable trees in this locality. In Sayaboury Province teak trees grow everywhere without any necessity to plant or care for them. Any tree you look at has a massive trunk and is very tall. In some spots the forests are thick with nothing but teak trees. As a result Sayaboury Province is widely known as "the teak province." The greatest concentration of teak trees is in Paklai District where about 20 percent of the trees are teak.

Annually up to 1,500 cubic meters of lumber are cut in Sayaboury Province for sale or for use in making useful items, so replacement trees must be planted every year as well. But there is also a great amount of unfortunate damage caused, for example, by shifting agriculture. Up to 15,000 hectares of forest are destroyed a year in order to clear land for shifting agriculture. The Sayaboury Province party committee has designated this to be an important and urgent problem for solution using the methods of mobilizing the people to give up shifting agriculture in favor of establishing permanent agricultural settlements and of mobilizing the people to plant trees everywhere.

Industry and Handicrafts

Industry in Sayaboury Province is still in a very limited, weak condition. There are only three sawmills, namely the Nam Tian, Thadeua and Paklai sawmills. Besides those there are only 150 rice mills that also come under the heading of industry in Sayaboury Province.

The people of Sayaboury Province are able to produce an estimated annual total of 200,000 meters of cloth, 5,800 butcher knives, 1,000 axes and 2,500 scythes. These are examples and they are able to satisfy 20 percent of the annual demand. They are 42 percent self-sufficient in salt which is distilled from salt mines in four locations in Boten and Phieng districts. The person in charge of handicrafts in the province has said, "we will be completely self-sufficient in salt before very many years." He was referring to plans for improving the capabilities of the existing salt mines and to search for new salt deposits that are currently being carried out.

Communications Poor, Private Sector Active

Vientiane SIANG PASASON in Lao 21 Oct 80 p 2

[Excerpts] Commerce

As stated before the people of Sayaboury Province live in small villages, especially the minority groups, and the villages tend to be spread far apart. There are only 300-plus kilometers of roads. That said, one can easily see that Sayaboury Province has many difficulties for traffic and distribution of goods. For example, in Xieng How, Hongsa, Boten, Kenthao and Paklai districts, and even in Phieng and Sayaboury districts, the latter being the seat of the provincial capital, the transportation of goods must employ elephants, horses and humans for the most part.

The local revolutionary administrative authorities have sought methods to solve the problem rapidly. First, they established eight state stores, at least one in every district. Then they expanded commercial outlets down to the people and expanded cooperative stores widely covering 80 percent of the cantons in the province. Most of the cooperative stores have been set up far from any district or provincial stores. There has also been a policy of splitting a percentage of the profits with over 600 private traders in order to encourage them to take state goods and sell them to people in places that have neither state nor cooperative stores.

Since 1975, annually the province has imported an average of over 4 million kip worth of goods to be sold within the province and has exported an average of over 6 million kip worth of goods from within the province, such as lumber, forest products and agricultural products, to sell outside the province or outside the country. Since export figures exceed those of imports, this is evidence that the economy or the value of all types of goods in the province is firmly assured. Sayaboury Province has trading ties with Thailand with imports and exports totaling not less than 2 million kip yer year.

In the past 5 years the most significant accomplishment of the Sayaboury Province Department of Public Works is the completion of construction of a 150-kilometer road from Phiang District to Paklai District. The completion of construction of a new road such as this is very significant. Besides making travel more convenient, it represents an attack on the backwardness which has existed here for thousands of years. Even though this new road is usuable only in the dry season, it is a foundation and is capable of responding to the demands of a rapidly developing situation.

In order to facilitate commercial traffic and popular travel the Sayaboury Province administrative authorities organized private vehicle owners and private boat owners into a land transport company and a water transport company. The land transport company has 22 vehicles and the water transport company has 26 boats of 10 tons displacement or less. They both operate like state enterprises. In addition the province has set up one state transport company comprising 32 trucks and 4 60-ton boats. All three transport companies have important roles in the work of building the new order. The amount transported annually has increased an average of 2,000 tons by land and 7,000 tons by water.

The progress in communications in Sayaboury Province is a source of satisfaction to the multi-ethnic people. In the 1981-1985 Five-Year Plan Sayaboury Province plans to construct an all-weather road from the north to the south.

PRIVATE SECTOR ACTIVITY, PRICES, POPULATION FIGURES REPORTED

Vientiane SIANG PASASON in Lao 18 Oct 80 p 2

[Article by Sainam Sedon: "New Life of Thakhek District"]

[Text] When we entered Thakhek District late-season rains were sprinkling down without let-up. The rains soaked the broad evergreen forests in the plains area. But this cannot prevent activity by crowds of people. Vehicles and people pass one another on every street in town. Cadres, state functionaries and workers are getting ready to take their implements or equipment to begin their respective jobs. Farmers are carrying their produce to the central market. All the shops have opened their doors to sell an abundance of goods. There are food shops, trading stores, tailor shops and even people's cooperative stores. Each shop is filled with miscellaneous goods, fruits, vegetables and domestic animals that the shop owners have raised or found through their own resources and labor.

I went to the market on the bank of the Mekong. At the market there is still a people's cooperative meat store where each person in a family gets one-half kilogram of meat per day. In addition a state meat store sells meat regularly at from 18 to 24 kip per kilogram (pork and buffalo meat).

The rainy season is the time when the farmers of Thakhek District harvest all kinds of fruit. Every day in late afternoon young men and women are seen carrying mountains of fruit to the shops to be sold the next day. An abundance of large and small fish are also for sale.

Thakhek is a small district situated on the bank of the Mekong in central region of our country and has a population of only 18,000-plus. Some of the houses, shops and roads in the district are old. Most people live in houses or shops made of mosquito netting and boards or with tiles on walls and platform and have occupations in rice or plantation farming. In the district we see fruit and coconut trees and various kinds of fruit trees are planted in an intermingled fashion. In addition all kinds of beautiful flower bushes are scattered all over.

In Thakhek District high-voltage electricity from the Nam Ngum Dam is available and passes through Thailand. It is thus a condition and a facility for use in production such as dams, irrigation systems, sawmills, rice mills, movie theaters, etc., which make living conditions for the people of this district rich and attractive.

MINISTRY OF INDUSTRY, TRADE REQUESTS BIDS FOR FORESTRY PROJECT

Vientiane KPL in English 6 Nov 80 p 7

[Tender notice in English appearing in French language edition of KHAOSAN PATHET LAO]

[Text] The Department of Finance of the Ministry of Industry and Commerce (MIC) invites sealed tenders from member countries of the Asian Development Bank (ADB) for the design, manufacture, supply, testing, finishing, export packing, shipping, delivery, installation, site testing and commissioning of a sliced veneer processing line, a peeling and clipping line and certain other plymill equipment to be financed in various currencies from the special funds resources of ADB under the Lao Forestry Development Project. Such project is to be implemented by MIC through the Wood and Rattan Industry Company, a state-owned company under the jurisdiction of MIC.

Tender documents can be obtained on any working day during office hours from 8:00 a.m. to 5:00 p.m. (Lao time) up to 16 February 1981 on payment of a non-refundable sum of US$50 per set from:

Department of Finance
Ministry of Industry and Commerce
Vientiane
Lao PDR

Fully completed sealed tenders must be submitted to the above address not later than 10:00 a.m. (Lao time) on 16 February 1981. Tenders received later than that time will not be accepted and will be returned to the tenderer unopened. Tenders will be opened in public at the premises of MIC at 10:00 a.m. on 16 February 1981 and the bid prices read aloud and recorded.

MILITARY PERSONNEL PROTEST ILLEGAL DEDUCTIONS, LOW PAY, MARRIAGE BAN

Vientiane SIANG PASASON in Lao 18 Oct 80 pp 2, 3

[Article in "Letters Answered" Column: "Pay Problems"]

[Text] Today SIANG PASASON has selected a letter from Cholachay Phutthala who is assigned to Battalion 702 to reply to questions on several matters as follows:

1. How should a unit treasury be built? If it is done by deducting three-to-five days pay from each soldier's monthly pay, is this correct?

The treasury of a unit, department, or other organization is built up by revenues from the productive or creative labor of its members and by other methods that are consistent with the guidelines and policies of the party. This means that opportunities for making revenue must be in keeping with the guidelines and policies of the party, must guarantee work, and must not be illegal.

Building a treasury by deducting several days pay from members' monthly pay is considered improper because it will have an adverse impact on their living conditions. The only exception is for dues to be paid to an organization that are specified officially.

2. Why do the military receive such small salaries? When food costs are deducted it leaves only a pittance unlike civilians.

If military salaries are compared with civilian salaries there is no difference. The pay received is based on the rank, positions and responsibilities of each individual. But the cash received by military men may be less than that received by civilians because deductions for food there are also deductions for pants, shirts, shoes, hats and bedding. Civilians receive their entire pay in cash but then must use this cash to buy the necessities of daily living.

3. Why do the armed forces not change the ban on marrying someone outside the organization?

Love is a human right which cannot be denied. But love in the capitalist system and in the new order are different. We all know what love is like

in the capitalist system. As for love in the new, socialist order, at all times it must be interrelated with the tasks of the revolution and the tasks of building socialist prosperity. This is the fundamental condition for socialist youth.

In practice the specifics of relationships under the socialist systems are not all alike. Each country has their own laws which are based on their national traditions and customs and on the actual environmental conditions affecting their countries.

In Laos ours are likewise based on the actual situation and the fine traditions of the Lao nation. The proper establishment of mutual love must meet sufficient conditions and must not impact adversely on the work or the future of both parties. At all times organizations are prepared to open a way for young couples to find happiness.

During the period of our new regime many couples have been newly married with the knowledge and approval of their organizations but a number of others have gotten married secretly. We must understand why they have done so. Sometimes mistakes may have been made. Sometimes it may be that a unit sets conditions that are not conducive because the organization takes into consideration advantages, disadvantages and future difficulties. Will the marriage be solid? Because in the new system we have adopted there is no divorce for any reason and only one husband or one wife is authorized. This is so in order to guarantee the work and the future of all our fighters and cadres.

VIENTIANE REPORTS 27 NOVEMBER DEFENSE MINISTRY CEREMONY

BK041320 Vientiane Domestic Service in Lao 2230 GMT 30 Nov 80

[Text] On the afternoon of 27 November, a ceremony was held at the National Defense Ministry's Club to officially confer ranks to middle-level military officers. Attending the ceremony were Comrade Khamtai Siphandon, member of the Political Bureau of the LPRP Central Committee; Comrade Sisavat Keobounphan, member of the Secretariat of the party Central Committee, and chief of the general staff of the LPLA; Comrade Saman Vignaket, alternate member of the party Central Committee, director of the LPLA General Political Department; Comrade Somsak Saisongkham, vice minister of national defense; and high-ranking cadres in the three departments of the National Defense Ministry.

At the ceremony Comrade Sisavat Keobounphan, member of the Secretariat of the LPRP Central Committee and chief of the General Staff of the LPLA, read an announcement opening the ceremony to confer ranks on leading comrade cadres [word indistinct] by the Central Party Military Commission, the National Defense and the LPLA Supreme Command from various local, regional and provincial units.

Subsequently, Comrade Saman Vignaket, alternate member of the party Central Committee and chief of the LPLA General Political Department, read a decree on system to confer to the cadres ranks ranging from the level of second lieutenant up to colonel.

On this occasion, Comrade Khamtai Siphandon, member of the Political Bureau of the party Central Committee, vice premier, national defense minister and commander-in-chief of the LPLA, addressed the officers. First, he extended his warm congratulations to and great joy in meeting a large number of middle-level cadres who have taken part in the national liberation struggle over the past 30 years. He pointed out the heavy duties which must be shouldered by the officers. He said they must fulfill all the noble tasks entrusted to them by the country and people, and, at the same time, strive to gradually build the LPLA into a model modern army, to step up consolidation of national defense and to be prepared to fight and defend the country--an outpost of socialism--and to firmly advance socialist construction.

In response to and to translate into reality the teaching of the LPLA commander-in-chief, a representative of the middle-level officers took the rostrum to acknowledge the address. He then made a firm pledge at the ceremony that they will strive to incessantly enhance the true nature and heroic traditions of our army, to gradually build the army into a model modern army, to be prepared to smash all enemies, to fulfill all tasks entrusted by the party and state, and to further enhance the tradition of combat gallantry of our army.

The ceremony was adjourned amidst the tumultuous shouting of slogans of determination by the officers.

PRIVATE VEHICLES REGISTERED

Vientiane VIENTIANE MAI in Lao 3 Nov 80 pp 1, 2

[Excerpt] After the liberation of the whole country and the establishment of the LPDR on 2 December 1975, all the comrades in the Vientiane Vehicle Control, Traffic, and Public Works Section, determined to press forward to perform the political duty given them by the party and state. They achieved good results in the following tasks: They changed the registration of 50 cc motorcycles from the registration and license plates of the old regime to those of the new regime. In the 5-year period they registered 7,286 motorcycles privately owned by Lao, 964 private motorcycles of aliens, 154 motorcycles belonging to government sections, 27 motorcycles of international organizations, a total of 8,431 vehicles. They changed and raised the registration of all categories of pedicabs from the old regime registration and plates to those of the new regime, 889 covered- and cargo-carrying pedicabs, 80 bicycle pedicabs of aliens for a total of 969. The registration of bicycles of various kinds began in 1979. Up to now they have registered 8,561 bicycles privately owned by Lao, 281 bicyles privately owned by aliens, 195 bicycles of government sections, 29 bicycles of international organizations, a total of 9,166. The changes and the examinations for the pedicab drivers' license from the old to the new regime reached 1,246. Besides they installed a traffic signal system on various streets, such as at the Nong Bon and Ban Fai intersections. They maintained the signal system on various routes so traffic proceeded normally at all times. They made and installed several hundred signs along the streets in the municipal area of Vientiane Capital and the main districts of Vientiane Province, such as Phon Hong, Keo Oudom, Paksane. This provided order and efficient flow along the streets in the Vientiane Capital municipal area. They removed disabled vehicles from the roads, established parking lots (taxi stands) by various markets in four district towns that were functional and attractive. They beautified roadsides in each ceremony to welcome foreign guests and as a way of celebrating national and international holidays, under the leadership of the central echelon and the [Vientiane] City and Province. They made 19,600 license plates for motorcycles, bicycles, and pedicabs (cut and painted the signs). They collected various fees in vehicle control for the budget of the department, that is, for the City and Province budget, doing very well.

MONGOLIAN LEADERS SEND GREETINGS ON NATIONAL DAY

BK121414 Vientiane Domestic Service in Lao 0430 GMT 12 Dec 80

[Text] On the occasion of the fifth anniversary of the 2 December National Day, on 29 November Comrade Yumjaagiyn Tsedenbal, first secretary of the MPRP Central Committee and chairman of the Presidium of the People's Great Hural of the MPR, and Comrade Jambyn Batmonh, chairman of the MPR Council of Ministers, jointly sent a greetings message to Comrade Kaysone Phomvihan, general secretary of the LPRP Central Committee and premier of the LPDR, and Comrade Souphanouvong, president of the LPDR and the Supreme People's Council. The message reads:

On behalf of the MPRP Central Committee, the Presidium of the People's Great Hural of the MPR, the Council of Ministers and the entire Mongolian people and on our own behalf, we would like to convey our warm and intimate congratulations and best wishes for good health to you, the LPRP Central Committee, the Supreme People's Council, the LPDR Government and the fraternal Lao people on the occasion of the fifth anniversary of the establishment of the LPDR.

After their long, protracted revolutionary struggle against the colonialists, the imperialist aggressors and the internal reactionary forces, the courageous Lao revolutionaries and patriots won victories in the national democratic revolution and declared the establishment of the LPDR. This marked a bright future for the LPDR in advancing on the path of socialism.

The Soviet Union, the various socialist countries and the progressive forces in the world, which have always supported the Lao people's national liberation struggle, warmly welcomed the above historic victories.

During the past 5 years, under the leadership of the LPRP, the vanguard of Marxism-Leninism, the Lao people gained great achievements in the cause of revolutionary transformation in the social, economic and cultural spheres and in the cause of national construction on the socialist path. The Mongolian people are pleased with these great achievements.

All progressive forces widely support the reasonable foreign policy of the LPDR, aimed at promoting and developing the firm unity among the socialist community for the safeguarding of peace and stability in Asia and the rest of the world and for the development of friendship and cooperation among nations against aggression by the international reactionary forces and the Beijing big-nation expansionists.

The recent visit to the MPR of Comrade President Souphanouvong opened a new historic era of friendship between the Mongolian and Lao peoples.

We are firmly convinced that the fraternal friendship and close cooperation between the two parties, two countries and our two peoples will be widely developed and continuously strengthened in the spirit of the Mongolia-Lao Friendship and Cooperation Treaty signed in 1979.

On the occasion of this historic day, we sincerely wish you and the Lao people new, still greater successes in the task of safeguarding independence and the fruits of the country's revolution and the construction of the new society.

BRIEFS

KEO OUDOM BANK BRANCH--Vientiane (KPL)—On the afternoon of 23 October 1980 the Board of Directors of the National Bank, Vientiane City and Province, opened a new branch of the bank in Keo Oudom District in the presence of the leaders of the National Bank headquarters, representatives of various services within Vientiane City and Province, together with all the district administrative committees and representatives of the people of different cantons around Keo Oudom District. On this occasion Mr Vongsai, the director of the National Bank in Vientiane City and Province, informed them that in the past 1 year of the expansion of the bank's network to the production bases, the bank's activities made new progress. For example, they created more and more confidence in the people which was demonstrated by the savings deposits, loans to the state enterprises and other collective production units of the people, to be used as capital in building an economic base. Besides this it created conditions suitable for withdrawing payment of salaries for cadres, soldiers, and police more quickly than formerly. Since the beginning of 1980 until the present the National Bank has opened branches in 9 districts of the total number of 15 districts under the jurisdiction of Vientiane City and Province. [Text] [Vientiane KHAOSAN PATHET LAO in Lao 24 Oct 80 p A7] 9615

ROAD REPAIR TO SRV BORDER--Vientiane (KPL)--Since 15 October 1980 the cadres and workers of the Communications, Public Works, and Transportation Service, Attopeu Province, began their dry season work plan with enthusiastic endeavor. They hastened to repair Route 16 at certain places where it had deteriorated, from Samakkhisai District to Pak Thon, on which they have now completed 60 km. At the same time they repaired Route 18 from Saisettha District to Gia Lai-Cong Tum Province (Vietnam). The repair work on these two important roads was carried out with strong determination. They restored old, dilapidated bridges; they cut trees from the road, and fixed the rutted and pot-holed sections. They assured convenient transportation of goods to the production bases in the dry season. [Text] [Vientiane KHAOSAN PATHET LAO in Lao 5 Nov 80 p A5] 9615

DELEGATION RETURNS FROM BULGARIA--Vientiane, 13 Dec (KPL)--A Lao cultural delegation led by Bouakham Chansi, deputy head of the office of the Propaganda, Information, Culture and Tourism Ministry, December 11 arrived here from the People's Republic of Bulgaria. The Lao delegation attended the cultural conference held in Sofia from December 2 to 6. The conference was attended by delegates from 73 countries and other cultural organisations. The participants studied the important role of the cultural works in the construction and development of the society. [BK150517 Vientiane KPL in English 0925 GMT 13 Dec 80 BK]

BRIEFS

OIL PRODUCTS--Pakistan has finalized arrangements with Kuwait for the import of oil products which are not produced by the oil refinery in the country. The commitment to meet the entire need of the finished oil product for the new calendar year, amounting to 1.5 million tons, was made by a high level Kuwaiti delegation. The commitment is part of a 4-year agreement between the two countries under which Kuwait has agreed to supply specific finished oil products to Pakistan and also accord preferential treatment to Pakistan in case of price [as heard] of various petroleum products. A spokesman of the Ministry of Petroleum told a Radio Pakistan representative today that quantities to be imported next year included 1 million tons of high speed diesel and 400,000 tons of kerosene. As against this, Pakistan's imports of finished oil products during the current year amounted to 1.8 million tons. The reduction of 300,000 tons in the import of finished oil products is due mainly to increased domestic oil production and conservation measures adopted by the government for gradually decreasing the use of petroleum products. Pakistan's total imports for 1981 are expected to be worth $1.5 billion, of which finished products will cost $530 million. [Text] [BK261017 Karachi Domestic Service in English 1700 GMT 25 Dec 80]

ISOC: PSYWAR AGAINST CPT IS WORKING

Bangkok SIAM RAT in Thai 7 Nov 80 p 3

[Article: "ISOC Says That Activities Have Achieved Results. The Communist Terrorists Are Being Defeated Concerning Both Theory and Practice"]

[Text] Major General Seni Chamnienwai, the head of the Psychological Operations Section of the Internal Security Operations Command (ISOC), talked with a reporter about the activities of the communist terrorists after important student leaders surrendered to government officials. He said that their activities have declined greatly. This is because the psychological operations of the ISOC have achieved results and this has led to the terrorists suffering defeats in practice and also on the theoretical front.

Concerning the activities of the ISOC that have achieved results, Major General Seni affirmed that, based on documents that have been captured, it has been learned that the communist terrorists have sufferred heavy losses. For example, the Fourth Plenum of the Communist Part in Thailand had to be cancelled. Also, in some places the terrorists have had to move their base camps and they face starvation because of a lack of food.

As for the surrender of the students who were misled [after] the incidents of 6 and 14 October and other terrorists, the ISOC believes that they have common sense and good intentions toward society. When the fight in the jungle continued, they returned and surrendered. This is better than bringing in a foreign country to invade Thailand like neighboring countries.

"The misguided students who fled into the jungle and who have now surrendered say that, even among the terrorists, there are class divisions and a dictatorship and so they could not join them." Major General Seni talked about the statements of the students who have had a change of heart. He stressed that it is pleasing that these students have returned and surrendered to officials with an awareness of things. This has been of great benefit to government officials

because, at the very least, it has been possible to cut the manpower of the terrorists in one direction by more than 400 men.

Major General Seni added that the trend seems to be that other important student leaders and many other misguided students who fled into the jungle will return and surrender to government officials. But the ISOC cannot disclose their names.

Concerning the matter of those who have had a change of heart engaging in activities in those areas, Major General Seni stated that it must be determined whether they are engaging in illegal or constitutionally legal activities. If they are violating the law and if they intend to harm the country, this will not be allowed because we must preserve our beloved institutions.

DEPARTMENT CHIEF CALLS FOR PROPAGANDA TRAINING OF MUSLIMS

Bangkok SIAM RAT in Thai 7 Nov 80 p 3

[Article: "Administrative Policy Stipulates That 'the Southern Border' Is Extremely Important"]

[Text] Mr Phisan Mulasatsathorn, the director-general of the Local Administration Department, stated that government officials believe that solving the southern border problem is a very important goal because the southern border has problems that are very different from those of other regions.

Mr Phisan stated that in other regions, the problems stem from the lack of raw materials and the poor economy. But the south has other conditions such as ethnic and religious differences, language differences and cultural differences, for example. To completely solve the southern problems, things must be carefully discussed in great detail. The Local Administration Department has carried on things using various methods. For example, seminars must be held to provide the government officials who will work in the south with basic information, mobile public relations units and units to promote the education of Thai Muslims must be established, there must be coordination between the local southern leaders and the government officials, seminars must be held for members of the Islamic committees in the southern border provinces and there must be teacher seminars and training sessions for the students who attend public schools that teach Islam.

The director-general of the Local Administration Department further stated that another important method for solving the problems is to select knowledgeable and capable officials to go work in these areas; this will be implemented next year. Also, training seminars will be held for Thai Muslim youths to inspire patriotism in them, to keep them from mistakenly joining the enemy and to keep them from being taken abroad for training and then sent back to cause trouble in the country. These training sessions for youths will be held for for groups of 50 people each. A total of 4,200 people will undergo such training, with each session lasting 5 days.

Mr Phisan added that the Local Administration Department will arrange things for the districts and subdistricts, which are the smallest units in the area, so that the district officer and the deputy district officer are close to the people. This will be done by appointing rotating deputy district officers who will take turns carrying out the duties in the districts and in helping the people or those who contact them.

BREAKDOWN OF FOREIGN LOANS: 24 PERCENT GOES TO BANGKOK

Bangkok SIAM RAT in Thai 10 Nov 80 pp 1, 12

[Article: "Breakdown of Foreign Loans to Thailand Shows That 24.18 Percent Goes to Bangkok Alone"]

[Text] The Office of the National Economic and Social Development Board has proposed that in considering loan programs for future development, thought should be given to programs that are in accord with the goals of the economic and social development plans that have been formulated. Consideration must also be given to what is fair in society.

The Office of the National Economic and Social Development Board has issued a memorandum concerning "The Foreign Loans of Thailand and Economic Development." A summary of the important points stated that from the implementation of the First National Economic and Social Development Plan through the first half of the Fourth Development Plan (1961-1979), thegovernment borrowed a total of 78,044.60 million baht from foreign countries, money that was alloted for development projects. The energy sector received the most, receiving 32.91 percent of the total amount borrowed. Next were the communications sector and the agriculture and irrigation sector, which were alloted 28.68 and 16.27 percent respectively.

As for development expenditures based on region, the north was alloted more of the money than other region, receiving 15.02 percent of the total amount. However, Bangkok alone was alloted the most money for development, receiving approximately 24.18 percent of the total amount.

The summary of the results of borrowing money stated that this has enabled economic growth to proceed at a satisfactory rate and at a rate that is better than that of other developing countries in Asia. In agriculture, the yearly rate of growth averaged 5.3 percent. In industry, the rate of growth was 10.7 percent. The Gross Domestic Product increased 7.7 percent a year, the population increased 3.1 percent a year and the per capita national income increased at a rate of 4.6 percent a year.

"The economic growth of Thailand in the past 20 years is very satisfactory but beneath this growth is concelaed great disparities in development and in the characteristics of the development of sectors and vocations, which have figures that differ greatly," stated the summary.

As for the question of whether or not this debt owed to foreign countries will be a heavy burden for futrue generations, the introduction to the summary stated that, concerning this, it must be admitted that borrowing money from abroad now means that future generations will have to repay the debts. However, the things that the people of today have done to develop the country now will create things of benefit that later generations can use in the future.

The summary of the loans made in accord with the Fourth Development Plan stated that the effect has been to raise the amount borrowed to 7.5 billion dollars. This is because the world economic situation is worse due to [higher] oil prices and because new projects, such as the natural gas project and the project to improve Bangkok airport, have been started. Besides this, the shortage of joint capital for foreign loan projects has made it necessary to borrow large sums of foreign currency and convert it to baht, and money has been borrowed to develop the army too.

In conclusion, the summary recommended that, in borrowing from abroad, thought must be given to social justice. For example, in investing in state enterprise projects using domestic loans, the people who use the services must be the ones to bear the greatest burden in paying for the services. As for loan projects in very poor areas that have little promise of development, much consideration should be given to loans that have grace-period stipulations for use in rural area development projects.

U.S. VISA ISSUANCE PROCEDURES CRITICIZED

Bangkok SIAM RAT in Thai 7 Nov 80 p 7

[Article by Maitri Rakthai: "The Ugly American"]

[Text] By accident I read a story in a September 1980 issue of the newspaper THAI RAT that was entitled "U.S. Consulate Discloses That It Is Not Issuing Visas to Thais and, At the Same Time, Says That Thais Have Clever Schemes."

Later, I had an opportunity to read the newspaper THE DAILY MIRROR. I felt that the story contained only the views of American officials concerned with issuing visas.

It is true that there are several facts that I have to recognize and that I sympathize with them about. But there are also many other facts that that they may not be aware of.

I feel that if I express the Thai point of view, this will be beneficial for both sides, especially for the basic policy that each country has with respect to the other. My aim is to promote good relations and mutual cooperation. If the officials of the U.S. Consulate are allowed to understand things only from their own point of view as expressed in the news reports they have issued, this will cause misunderstandings and lead to mutual dislike.

And this may also lead to Thailand's changing its political policy in the future.

If any harm befalls Thailand, this will also affect all the other Asian countries because, at present, Thailand is the front line. Or it can be said to be the fence of all the other Asean countries. If the fence falls, the other Asean countries will fall too, slowly or quickly depending on the time.

The United States will suffer an even greater loss of credibility and even greater economic and military losses than it did in Vietnam. Everyone who is interested in and who has followed the situation in Asia is well aware of this.

The words "ugly American" can be translated simply as a "despicable American." I do not mean to refer to any person in particularbut I feel that these words are a good warning because they are in widespread use.

I think that it was the Americans themselves who coined these words. They mean that some Americans believe that, since they come from a large country, they are the leaders of the free world. [They think that] since their country is prosperous everybody wants to go visit or work in the United States. Regardless of what they think or do, they think that they are always right. Some people have very poor manners and, even though they are very wealthy, they come from a class that has not received training in proper manners.

In the United States, with luck, it is easy for anybody to become rich.

Another meaning is that some American political figures like to interfere in the internal affairs of other countries. They exceed the limits to the point where they often produce a reaction. It can easily be seen that the people in various countries are constantly holding demonstrations to drive out the Americans and shouting the slogan "Yankee go home."

While the basic policy of the United States is a very good one, that is, [the policy] is to try to help develop countries throughout the world, and even though their annual aid budget is very large, the people of these countries still hate them.

This is because some people of the "ugly American" type give cause [for hatred].

A good example that can be seen clearly is the situation in Iran, where 52 American diplomats are being held hostage. This situation is the result of the great hatred that some "ugly Americans" generated there in the past.

I have many American friends. In fairness, I mustsay that there are many "lovely Americans" who are wonderful people and who are pleasant to associate with. And there are many more "lovely Americans" than "ugly Americans." However, a Thai proverb says that a single rotten fish may spoil all the good fish in the trap.

The Thais who go to the American consulate to apply for visas to the United States are of four types:

The first type is businessmen who go to the United States on business, which is of economic benefit to both countries. Speaking about economics, the United States has a very favorable balance of trade with Thailand, trade [with the United States] being second only to that with Japan. Stated simply, the United States makes a

profit from Thailand every year. These Thai businessmen have commercial companies as security and so they should be encouraged and it should be convenient for them to obtain a visa easily.

The second type is composed of the many Thai students who really go to study. When they finish their studies, they return to work in Thailand. These Thai students should be helped to obtain a visa if they correctly follow the regulations stipulated by the U.S. Consulate.

The third group is composed of tourists or people who go to visit relatives. Things should be made convenient for these people too. This is a time when travelling is popular. This is true not only for Thais but for people from almost all countries. And each year, many Americans visit Thailand. Obtaining a visa should not be a problem.

The fourth type is composed of those who are seeking their fortune. These are the people who intend to go try their luck at finding work in the United States, which is in violation of United States laws. These Thais call themselves "Robin Hoods." The policy of the United States Consulate is to keep these people from entering the country and to not issue visas. According to the consular officials who were interviewed, the Thais in this category have many tricks.

I feel that it is a country's right to allow in or deny entrance to the people of any country it wishes. I am not arguing about this right of theirs.

But the thing I want to say is that of the four types of people who go to apply for a visa, the first three types are friends of the United States. They are not dangerous and they are not tricksters. These three types should be encouraged and aided in obtaining visas in order to create friendly relations between the two countries.

It is only the fourth type that should not be issued visas. But almost all of the American officials and some of the Thai officials at the consulate assume that the Thais who apply for visas are all tricksters.

For example, the newspaper SIAM RAT published an interview in which a high-ranking American consular officials named Mr Richard Milton said that "Thais are clever cheaters."

This is a broad generalization. It sounds like he is referring to Thais in general and it can be taken as an insult. But if we want to respond by saying that Americans are tricksters too, we can say the same thing and there are many examples that can be cited -- Watergate, Lockheed, Billygate, motion pictures such as The Godfather and various crimes, for example. But I do not want to respond by discussing this point too much.

But I do want to say that "nothing good, only bad, can result from high-ranking diplomatic officials talking like this." If both sides have a bad opinion of the other like this, how can there be friendly relations?

All Thais who go to apply for a visa feel that the American consular officials have a condescending attitude. This can be observed from their facial expressions, manners and their impolite speech. Some of these officials work in accord with their mood. Some people who should not be issued a visa are issued one while others who should be issued one are not granted one. Sometimes they act like they are annoyed and they ask for additional documents that are not pertinent. This causes the people applying [for a visa] to have to waste much time going back and forth many times.

One very wealthy Thai businessman, whose name would be recognized throughout Thailand if I mentioned it, applied for a visa in order to go visit his son who was studying in the United States, but he was turned down. A close relative of the wife of a deputy prime minister applied for a visa but was turned down also. A Thai diplomat stationed in the United States applied for visas for his staff but he had trouble obtaining them even though he had letters of guarantee from the Ministry of Foreign Affairs. Some Thai students whose documents have been in order have been denied visas. They were told that their past grades were not good and that they should continue their studies in Thailand.

In actuality, in the United States there are many classes of colleges that students of various levels of intelligence can choose from in accord with their abilities. They should not be denied their rights, which is contrary to the "human rights" policy of the president of the United States. Many Thai students who do poorly in school in Thailand do well in school when they go to study in the United States, and some have returned and become high-ranking government officials. Some students have answered "incorrectly" during their interview with the American vice consul and they have not been allowed to go study.

That is, they have said that the reason that they want to go study in the United States is that they want to learn to speak English well. The reply has been that, if they want to learn to speak English well, they can go study at AUA [the American University Association].

Sometimes, the consulate is not willing to accept the I20 form of the Department of Education of the United States and they make the students appling for a visa go obtain additional documents. When these students again contact the Department of Education, they are told that the I20 form given them comes from the United States government. How can the American consulate not believe its own

government! Some large universities are the same. They issue an I20 and mention only that [the students] must pay the same tuition as an American student. But the American consulate will not issue a visa and has them go obtain additional documents confirming that they are to pay the same tuition as American students. These Thai students must call long distance several times, which costs them several thousand baht, in order to ask the university and this also makes the university angry.

Is something wrong with the American consulate in Thailand? Why doesn't it trust the I20 forms issued by the universities?

It is the consulate's duty to know the laws and regulations of its own country. If it does not know them, it should make inquiries itself rather than shifting the burden and having the foreign students make inquiries and explain things, which is very embarrassing.

Some people say that the consulate is really trying to find an excuse for not issuing visas. Those who apply for a visa are asked the standard questions of the consulate: Are you going to look for work? Are you going to marry an American? Will you go to America and not return? Think about how effective such questions are! All those who intend to go there to work or to get married will answer no.

As for those who really do intend to go study or who go there on business, they will think that these are insulting questions. Why should they have to go marry an American? Are there no longer any fitting marriage partners in Thailand?

These really are insulting and silly questions.

Thais of the first three types are greatly inconvenienced and before they can obtain a visa they have to go and explain things many times. Each time they go they have to wait a long time. Some people become angry and give up trying to go. Some people hurriedly try to contact people at the ambassadorial or ministerial level. And some have met with Mr Milton in order to obtain a visa.

But meeting Mr Milton is even more difficult than meeting a Thai minister.

But those who have been able to meet him have all been helped. Some people say that Mr Milton is a very friendly person. Why, therefore, are all the officials under him so arrogant? The important thing is that all of these people are diplomats and it is well known that diplomats are supposed to be people who have received training and who are well versed in diplomatic etiquette before being sent abroad to work. After they have been assigned to work in a country, they

must try to create a friendly relationship with that country. If there are any problems, they must try to solve these problems. If any major problem arises, they must try to make the problem a minor problem. They must try to make friends out of enemies.

But the diplomats at the American consulate are different from this. They turn minor matters into major problems, make problems out of a good situation and turn friends into enemies. Although there are only a few tricksters, they have assumed that all the people in the country are tricksters. Concerning some Thais who were friends of America, some very wealthy people, some government officials and well-known businessmen and some MPs who applied for visas, it was assumed ahead of time that they were all tricksters.

I am not sure whether these people have come to work in Thailand in order to create good relations or in order to destroy them.

Few people want to be communist but the number of people in the world who hate the United States is growing daily.

I was at one time surprised at why people hated the United States even though they were annually receiving large sums of money to aid development. But when I went and saw the officials at the American consulate, I immediately understood the reason.

I would like to ask: Isn't it time that high-ranking people in American diplomatic circles analyze the facts, teach their diplomatic officials to have the manners of diplomats and change their views about other people so they hold more fitting views?

COLUMNIST COMMENTS ON DISSOLUTION OF 'YOUNG TURK' GROUP

Bangkok SIAM RAT in Thai 6 Nov 80 p 7

[Thoughts From the News column by Prachuap: "The Dissolution of the Young Officers Group"]

[Text] The group of young officers called the "young turks " has sent a notice to all the people concerned in both military and political circles announcing the dissolution of their group and the definite end of any further activities. The officers gave four main reasons for this action:

1. At present, the situation in the country is normal since we have political and military leaders who have widespread support. The political system in Thailand is moving toward a sound democracy in accord with the type aimed for in the present constitution. Thus, the young officers group does not feel that there should be any power groups acting jointly outside the system.

2. In the past, the young officers group came into being at a time when the country was in a crisis, or abnormal situation. Thus, they joined forces to solve the problems both directly and indirectly in order to maintain the security of the country and the monarchy and to respond to the needs of the people. They did not join together for personal gain or power. Thus, they have decided to disband the group before something happens that is damaging to the group.

3. [This is being done] in order to end the criticism and blame, especially the criticism that they are a base of support for some people.

4. If it should become necessary, the group will be formed once again. The group holds the interests of the country above those of individuals and affirms that it will support good people in obstructing bad people in accord with the ideal: "Ww are for the country and king and do not expect to get anything in return."

In actuality,the above announcement by the group of young officers that they are disbanding their group is the affair of officers who are in control of forces or who are commanders at the battalion

level. Not all young officers of every branch are involved. The important goal of these young officers in forming the group was to present their views about how to solve the various political and military problems, views that these officers felt should be presented to the government through their immediate superiors. Their goal was also to oppose some actions that they felt were improper. They did not join together to use the forces under their control to unconstitutionally pressure the government to take some action.

Since the coup d'etat of 20 October 1977, it has seemed that the group of young officers would play a greater role in various political movements and there have frequently been newspaper reports about them. But even though people believed that these young officers, who were called "young turks," had good intentions, or wished to see the country governed in a democratic way, they did not do things openly and their group was not formed openly. That is, they did things just like other power groups that have been formed in Thailand. The only difference is that the people who formed this group held government positions and, what is even more important, they controlled weapons and military forces. Thus, it is natural that some people thought that these young officers had formed a group with at least some intentions and aims other than those cited.

The truth about the Thai system of democracy that must be generally admitted is that most people who serve as prime minister and who are able to carry out their administrative duties smoothly must have the support of the army. They cannot rely solely on their political base in parliament. It can be seen that most Thai prime ministers were military men, or the top military commanders. For this reason, even though the ideas of these young officers stemmed from pure intentions, or good wishes, toward the country, it has not been possible [for them] to avoid having people mistakenly think that they were using their influence to force the government to listen to them or to take certain actions in order to preserve the stability of the government outside parliament.

Concerning this mistaken notion, besides the fact that it damages the reputation of the young officers and the government, which is carrying out its duty of governing the country, I think that it may also affect the people's trust in the system of government since it is the same as saying the the government administers the country by following the demands of this group of young officers, who are in fact only a minority of the soldiers in the country, instead of listening to or paying attention to the voice of the majority of the people, whose wishes have been shown by the results of the election.

Thus, concerning the decision of the young officers to announce that they are disbanding and that they will not engage in any more political movements, I agree that this is a good decision because, regardless of whether they really disband the group or not, at least the young officers have shown, or pledged, that they are prepared to accept the democratic system and will not do anything outside that system.

The interesting point is that after the events of 14 October 1973 and during the period when the transition government administered the country and entrusted the National Legislative Council with the task of formulating a constitution, many power groups were formed. Each group claimed that it represented the people in the various work sectors and each tried to get the government of that time to do the things it wanted. The result was confusion for the government and the people in general since no one knew whether these demands really represented the real desires of the people or not.

The government of that time had to put up with the confusion created by these power groups. When the new constitution was finally promulgated and general elections were scheduled, the system of government began to follow the democratic path by giving the people a chance to elect MPs and choose the government they wanted. But these various power groups that had previously been formed were not willing to disband. They continued to engage in movements and tried to play a political role instead of entrusting such matters to parliament and the government.

In the end, these power groups became obstacles that blocked a democratic form of government [from being implemented], or that destroyed the aims expressed by the students and people on 14 October. But the worst thing is that some of these power groups were "bought" or they because the tools of certain people who did not intend to allow the administration of the country to be carried on in a democratic way and of people who wanted to create disorder so that they could use force to restore order and take control of the country.

Besides this, even though many political changes have taken place since then, these power groups have maintained their position. The only thing is that they are quiet, or they have temporarily stopped engaging in political movements, because later governments have had the support of military forces and they have been prepared to use force to settle matters with those power groups that violate the law. It appears that some of these groups were formed in order to use the name of the power group as a tool to make money by making threats. For example, they threatened to demand the profits of others, claiming that they would hold public gatherings, or Hyde Park gatherings, if they were not given the money demanded. In some

cases, it is thought that they maintained their position for the profits to be made from secretely withdrawing government funds, for example.

When the group of young officers announced that it was disbanding as an example to others, I thought that this might cause other power groups to disband or cease engaging in activities outside the system. This would make it easier for government, as set forth in the present constitution, to become democratic. Because from now on, the people must exercise their voting rights more carefully so that the majority in parliament are in accord, or in harmony, with the real desires of the people. Otherwise, someone will form a power group, claiming that he is representing the people outside parliament. But, in fact, he will be doing this for the benefit of some people or some group. And this will make for an imperfect democracy as in the past.

NEW GAS WELLS FOUND IN GULF

Bangkok SIAM RAT in Thai 6 Nov 80 pp 1, 12

[Article: "Two New Gas Wells Have Been Found In the Gulf of Thailand"]

[Text] Thailand has found a new natural gas well in the Hat Hua Khao Daeng area in Songkhla Province while dredging the chanlel in order to build a new deep-water port. At the same time, Union Oil, which has received exploratory drilling rights, found a large new gas well in the Gulf of Thailand off the coast of Surat Thani. It has approximately 28.6 million cubic feet of gas.

The discovery of the first new natural gas well took place after the contracting construction model and planning company of the deep-water port construction project drilled well No 12, which is located approximately 2 kilometers from Hat Hua Khao Daeng and which is only 14.5 meters deep. They found methane gas, which spurted up and could be clearly seen.

The Ministry of Communications informed the Department of Mineral Resources, Ministry of Industry, about this and the department sent officials to conduct a survey. At present, the company has sealed the opening of the well to keep the gas from escaping.

At the same time, another gas well was found in the Gulf of Thailand at the "Satun-1" well, which is in the concession area of the Union Oil Company. Gas was found at a depth of between 6,962 and 8,360 feet. It is located near the "Erawan" well, where gas has been discovered and where preparations are being made to put gas to use next year.

The amount of gas found at the Satun-1 well has been estimated at around 28.6 million cubic feet. There is also about 708 barrels of liquid gas. The exact amount of gas will be determined for certain after additional wells have been sunk in the area.

EGAT TO BUILD HYDROELECTRIC PLANTS IN LOEI

Bangkok SIAM RAT in Thai 8 Nov 80 p 2

[Article: "EGAT Has Plans to Develop the River Basins In Loei and Channel the Water For Irrigation and to Obtain More Than 100,000 Kilowatts of Electricity"]

[Text] Mr Chaloemchai Rattanarak, an official of the Projects Formulation and Planning Section of the Electricity Generating Authority of Thailand, has disclosed that EGAT has plans to develop the river basins in Loei Province, where three dams can be built in order to generate electricity and [obtain] water for irrigation.

Mr Chaloemchai stated that, in order to build these dams, EGAT has coordinated the work with the National Energy Administration. Initial studies, which have been completed, of the suitability of the river basins in Loei Province [have shown] that dams can be built. One dam will be built in northern Loei in Wang Saphung District. It will channel the water to the Pasak River and generate 18,000 kilowatts of electricity from channeling the water. The second dam is the San River Dam in Phu Rua District. It will channel the water from the San River to the Pasak River, generating 58,000 kilowatts of electricity. The third dam is the Man River Dam in Dan Sai District. It will channel the water from the Man River to the Phung River, generating 26,000 kilowatts of electricity. Building dams in the three river basins will generate a total of 102,000 kilowatts of electricity.

Mr Chaloemchai also pointed out that, concerning this entire project, EGAT is asking for a loan from the Asian Development Bank in order to make final detailed studies and make project models. If things go according to plan, construction will begin around the end of 1983 or the beginning of 1984. The San River and the northern Pasak River dams will be built first with construction taking approximately 5 years.

On the same day, the president of the Gasoline Dealers' Association told the minister of industry that he will propose that the government consider increasing market prices for the dealers so that they make profits of at least 5 percent of the sales price.

Mr Thep Limpaphorn, the new president of the Gasoline Dealers' Association, spoke about this with Major General Chatichai. He talked about the troubles that the oil dealers have encountered because oil prices have constantly increased while market prices received by the dealers have not increased accordingly. This has kept the dealers from making a profit. Calculating things, the profit made by the dealers from selling gasoline is only 2.9 percent of the price of the gasoline before subtracting expenses and taxes.

Those who met with the minister gave the example that, at present, their market profit is only 26-28 satang [1 satang equals 0.01 baht] per liter while that for sola gasoline is only 15-17 baht per liter.

Besides this, they complained about other problems facing the gasoline dealers. For Example, cash must be used to purchase gasoline and so there is the problem of safety. Besides this, it requires an investment of approximately 5 to 6 million baht to build a service station and hiring people to operate the station is expensive.

Major General Chatichai asked the dealers to write down these problems since this matter will have to be considered by the oil policy subcommittee.

BRIEFS

MUSLIM CENTER--At a cabinet meeting yesterday, a resolution was passed giving permission to allocate funds, part of which are support funds, to build the Muslim Center of Thailand. Concerning the details, the Ministry of Education is to reach an agreement with the Office of the Budget. The cabinet gave its permission because of the reasons advanced by the Ministry of Education, which stated that the construction of the Muslim Center of Thailand is aimed at spreading the Islamic religion since all religions provide a basis for living virtuously. Also, the Thai constitution gives the Thai people freedom of religion, with the king serving as patron. [Text] [Bangkok SIAM RAT in Thai 12 Nov 80 pp 1, 12] 11943

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PRIME MINISTER DISCUSSES REGIME'S SUCCESSES

Dacca THE BANGLADESH OBSERVER in English 22 Nov 80 pp 1, 12

[Excerpt] Bogra, Nov. 21:--Prime Minister Shah Azizur Rahman today said that the politics of the Baksalites was politics of violence and frustration, reports BSS.

Addressing a public meeting here at the local Apfatunnessa playground. Shah Aziz said that the politically conscious people of Bangladesh would never accept the medieval concept of one-party regimented system.

Presided over by Advocate Zahirul Islam President Bogra District BNP the meeting was also addressed by Mr. Abdul Alim Minister for Railways, Roads Highways and Road Transport, Mr. K.M. Obaidur Rahman Minister for Civil Aviation and Tourism and Mr Abdul Hasnat Mayor Dacca city.

The Prime Minister said that during the Baksalite government their was no opposition inside or outside Parliament and dissenters were ruthlessly crushed. There was no fundamental rights he added.

Shah Aziz said, the right of unfettered criticism and right of strike and hartal have been given by the government of Ziaur Rahman. But, he said the right of hartal must not be construed as a licence to destroy public property at will.

The Prime Minister said, democracy is fully implemented in the country with the restoration of all fundamental rights, withdrawal of Martial Law and lifting of emergency. He said many political leaders some of whom were convicted on charge of corruption have been released and added, nearly 5,000 prisoners were released from January 77 to April 80.

Shah Aziz said this has been done to create a political atmosphere conducive to functioning of multi-party system.

The Prime Minister said that the Bangladesh Nationalist Party firmly believed in multi-party democratic and peaceful transfer of power through periodical election. President Ziaur Rahman unlike Khondoker Mushtaque was directly elected by the people and is firmly established among them.

Shah Aziz said, President Zia has fulfilled all his pledges and commitments by restoring democracy a sovereign Parliament, holding elections and by establishing buoyant economy. The President has established internal stability and earned prestige internationally.

Continuing he said under the enlightened leadership of President Ziaur Rahman, the people had received a new sense of direction and the countryside was now throbbing with brisk nation-building activities.

The Prime Minister said, the different phases of peaceful revolutionary programme of canal digging mass literacy family planning and establishment of Gram Sarkars had generated much enthusiasm among the people. He said the 200 canals dug last year had already yielded results and the food production has already gone higher than expectation and we would be able to export foodgrains abroad.

Shah Aziz said that in fact the Baksalites were upset by the massive development activities undertaken by the Government and taken once again to politics of violence and subversion on being uprooted from the villages. The Baksalites had now concentrated in the urban areas. He said and added they were now being chased out from the cities as they have no positive politics.

The Prime Minister called upon the people to consolidate national unity and promote politics of peace and production.

JUTE MINISTER REPORTS ON U.S., EUROPE VISIT

Dacca THE BANGLADESH OBSERVER in English 24 Nov 80 p 1

[Text] Mr. Habibullah Khan, Minister for Jute returned to Dacca on Sunday morning after a 16 day tour of the United States and Belgium, reports BSS.

Talking to newsmen at Kurmitola International Airport, the Minister said that Bangladesh jute goods would be exported to European market in increased volumes till 1983. An agreement to this effect was signed on Friday with EEC in Brussels, the Minister said.

Mr. Habibullah Khan and Mr. Wilhelm W. Haferkamp, Vice-President of the EEC signed the agreement on behalf of their respective sides.

Mr. Khan said all jute goods from Bangladesh would find free access into nine countries of the EEC from January 1984.

The Jute Minister during his two-day stay in Belgium called on the Belgian Foreign Trade Minister Mr. Robert Urbainn and discussed with him further expansion of bilateral economic relations between the two countries.

Mr. Khan said that he also held discussions with the members of the European Jute Goods association. He said that Bangladesh carpets had a bright market abroad particularly in the EEC.

About his trip to the United States, the Jute Minister said that Bangladesh was dominating the market there because of its quality and price. He hoped that Bangladesh would be able to export more during the coming years.

Mr. Habibullah Khan said that he had held talks with the officials of International Finance Commission (IFC) in the states for financing the diversifying use of jute. He said that they had shown keen interest, and further talks would be held in the near future.

The Minister also held discussion with the Conference Lines for reducing the rate of freight for carrying carpet backing cloth (CBC) and other materials. He expressed the confidence that the Conference Lines would consider the proposal and reduce the rate.

Mr. Khan described his tour as "successful" and said that our all out efforts now to increase in the mills to cope up with the growing demand of our products abroad.

He said some mills were already working in three shifts while the remaining mills would start their third shift after necessary balancing.

Mr. Manzur Morshed, Chairman Bangladesh Jute Mills Corporation (BJMC) also accompanied the Minister.

JSD PLANS STRUGGLE AGAINST GOVERNMENT

Dacca THE BANGLADESH TIMES in English 23 Nov 80 p 12

[Text] A joint workers meeting of Jatiya Samajtantrik Dal (JSD) Sramik Jote and Krishak League at JSD central office in Dacca on Saturday chalked-out six-point programme for launching a united movement against the Government, reports BSS.

Presided over by JSD President, Major (Retd) M.A. Jalil, the meeting observed that only the issue-based programme cannot bring about a united movement. The speakers of the meeting said that for launching a united and concentrated mass-movement against what they called 'autocratic rule' there has to be a complete programme for the welfare of the commonman.

According to a party Press release, the programmes, which the meeting has chalked out on Saturday are among others, representation of all professionals in the parliament including all representative bodies, organising the workers in the fields and factories for establishing the right of free trade unionism, fixation of the ceiling of lands, introduction of cooperatives in the rural areas formation of people's army for consolidating independence and sovereignty, compulsory military training to all able persons, formation of autonomous bodies both in towns and the villages for democratisation and recognition of the nationhood of the tribal people and to give them autonomy.

AWAMI LEAGUE GROUP ASKS UNITED OPPOSITION

Dacca THE BANGLADESH TIMES in English 27 Nov 80 pp 1, 8

[Text] Awami League (Malek) Parliamentary Party on Wednesday called upon the opposition parties and groups in parliament to launch "united movement" against what it called "terrorist and fascist rule" in the country, reports ENA.

At the end of a two-hour meeting of the ALPP leader of the opposition in parliament Mr Asaduzzaman Khan told newsmen that the ALPP took stock of the prevailing political and economic situation in the country, which it noted, had deteriorated to the detriment of the nation." He said such situation should not be allowed to continue in the greater interest of the nation.

Mr Asaduzzaman Khan said the ALPP in a resolution "condemned the government decision to observe the Independence Day as National Day" and demanded withdrawal of the decision.

He said in another resolution the ALPP condemned the series of incidents inside jails particularly in Khulna and Rangpur jail. He said the government "totally failed to tackle the situation" following which a series of incidents took place inside jails.

The ALPP, Mr. Khan said, took stock of the existing price spiral of essentials. He said the government failed to check upward trend of the prices. "ALPP strongly protest this situation," Mr. Khan added.

Mr. Khan said the ALPP noted with concern that the election of the members of the Gram Sarkar has led to "lot of violence" in the rural areas. This is spoiling the peaceful atmosphere in the villages, he added, "the process of the election to Gram Sarkar is undemocratic" Mr. Khan said.

Mr. Khan alleged that due to ruling party bungling" in the paddy procurement, the growers are deprived of fare prices of their products.

He said the ALPP also demanded tax exemption and waiving of agricultural credit to the people of the flood affected areas.

DACCA ELECTED CHAIRMAN OF ISLAMIC GAMES GROUP

Dacca THE BANGLADESH OBSERVER in English 22 Nov 80 pp 1, 12

[Text] Bangladesh has been elected Chairman of the 11-member ad-hoc committee of "Islamic Solidarity Games" (ISG) to finalise its organisation structure, Sports and Cultural Affairs Secretary Mr. M. Siddiqur Rahman said in Dacca on Friday.

Mr. Rahman said that the election took place at the meeting of the sixth Islamic Commission held in Jeddah from November 16 to 18. Mr. Rahman who represented Bangladesh in the meeting returned to Dacca on Thursday.

Saudi Arabia would be the rapporteur of the committee while Turkey would be the other member.

He told BSS in an interview that eight other members of the committee would be appointed by the Secretary General of the Islamic Conference, Mr. Habib Chatty on the basis of regional representation including one from the Islamic Secretariate.

The Secretary informed that the ad-hoc committee would take all necessary measures for the establishment of the confederation of national sports organisations of Islamic countries and its functional organs and would also prepare the regulations of the confederation and the Islamic Solidarity Games (ISG).

In reply to a question Mr. Rahman said that the National Olympic Committee or other appropriate national sports organisations of the Islamic countries would be affiliated with this confederation which would be known as "Islamic Solidarity Games Confederation."

He said that the functions of this confederation will vest in a General Assembly consisting of representatives of all the Solidarity member countries and an elected executive board. The Islamic Solidarity Games would be held once in four years, he added.

It may be mentioned here that the proposal for organising international games among member countries of Islamic countries was first placed by Bangladesh in the Fifth Session of the Economic, Cultural and Social Affairs Commission of Islamic Conference held in Conakry (Guinea) in January this year. Mr. Rahman said Bangladesh's initiative was highly praised by the member countries.

Besides Mr. Rahman the expert group meeting was also participated by Mr. Shah Jahan Secretary General Bangladesh Olympic Committee, Kazi Anwarul Maswood, Counsellor Bangladesh Embassy in Jeddah, and Syed Moazzem Ali Director, Ministry of Foreign Affairs.

CSO: 4220

AGENDA OF HOUSE WINTER SESSION EXAMINED

Dacca THE BANGLADESH TIMES in English 27 Nov 80 pp 1, 8

[Text] The Jatyia Sangsad winter session tomorrow (Friday) at 10:30 a.m. in the backdrop of a national effort at doubling food production, removing illiteracy and implementation of the Second Five-Year Plan for improving the quality of life of the people.

The Sangsad reconvenes on Friday exactly after 124 days of conclusion of the Budget session, which had lasted 65 days, the longest in the Parliamentary history of Bangladesh.

Most of the winter session of the Sangsad is likely to be devoted to legislative business of the House.

In addition to the 22 outstanding bills, carried over from the last session, three new bills and four ordinances may come before the House for consideration. The 22 bills were sent to the various Standing Committees of the House for examination.

It is gathered that notices have been given for 17 private members bills so far for the consideration of the House. Till Wednesday more than 5,000 questions had been submitted to the Parliament Secretariat. A few notices for moving adjournment motions in the House have also been served.

New Look

Meantime, the Sangsad Bhaban has been given a new look, with its walls white-washed, improved interior lightings and replacement of other old fittings. The corridors have been decorated with brass-plates bearing inscriptions of verses from the Holy Quran, with translations in Bengali.

New Bills

The three new bills to be moved before the House are: (a) Emergency Requisition of property Bill (1980), (b) Red Cross Society (amendment) Bill, 1980 and (c) The Ansars (amendment) Bill, 1980.

Outstanding

The bills carried over from the last session include: Bangladesh Tobacco Bill, 1979, Bangladesh Merchant Ships (registration) Bill 1979 the Police Officers Bill 1979

Animal Slaughtering (registeration) and Meat Control Bill 1980 Bangladesh Umani and Ayarvedic Practitioner Bill, 1980 Bangladesh Homeopathic Practitioners' Bill 1980, the Ferry (amendment) Bill, 1980 Bangladesh Shipping Corporation (amendment) Bill 1980 Bangladesh Rifles (special provisions) Bill 1980 the Employment of Labour (standing orders) Bill 1980 Members of Parliament (rights) Annulment Bill 1980 the Bangladesh Sangbad Sangstha (amendment Bill 1980, Bangladesh Muktijoddha Kalyan Trust (amendment) Bill, 1980, Forests (preservation) Bill 1980 Bangladesh Export Processing Zones Authority Bill 1980 the Supreme Court Judge (leave persion and privileges) Amendment Bill, 1980 and the Islamic University Bill 1980.

Apart from these there are 16 more pending bills moved by Opposition bench members.

ALPP Meets

Meantime, the Awami League (Malek) Parliamentary Party (ALPP) met in the Cabinet room of the Jatyia Sangsad under the chairmanship of Mr Asaduzzaman Khan Leader of the Opposition in the House on Wednesday afternoon.

Talking to newsmen later in the evening Mr Asaduzzaman Khan said that the ALPP had reviewed the socio-political situation in the country with special reference to the law and order situation, rise in the prices of daily necessities, the Awami League--organised hartal of November 3 and its aftermath the constitution of Gram Sarkars, Government's programme of internal procurement of foodgrains jute price and the youth complexes.

The meeting in a resolution condoled the death of Mr Moinirul Islam Monir of Narayanganj, Mir Moshtaque Elahi of Rajshahi University, Dr Monsin of Raipur and Mr Rafiq of the High Court all of whom got killed on November 3, as well as of Treasury Bench MP Syed Habibul Huq of Laksam.

The ALPP in a resolution, condemned the Government for what it termed, unleasing its "private forces of terror in a bid to foil the hartal of November 3". It accused the Government of pursuing a policy of oppression and harassment of the Awami League workers.

The ALPP also denounced the Government for its alleged failure to maintain law and order in the country, control prices of day-to-day essentials raising the price of fertilizers and raising power rates sugar cement, billets, iron rods and writing paper prices.

The ALPP criticised the Government for constitution of "Gram Sarkars in total disregard of democratic norms and laws of the land". It alleged that this was giving rise to groupings and factionalism in rural Bangladesh.

CSO: 4220

NEW PLAN ALLOWS TEXTILE MILLS IN PRIVATE SECTOR

Dacca THE BANGLADESH OBSERVER in English 22 Nov 80 pp 1, 12

[Text] The Government has decided to install 4.25 lakh new spindles in the 26 new textile mills to be set up in the country during the Second Five-Year Plan (SFYP) period, Textile Minister Mr. Mansur Ali said on Friday. The installed capacity of each mill would be 12,500 to 25,000 spindles to attain self-sufficiency in yarn production, he said and added that the new textile mills would produce only yarn.

Mr. Mansur Ali said this while announcing the textile policy at a Press conference at the Secretariat on the day.

The Textile Minister said that the Government has also decided to allow setting up of textile mills in the private sector with installed capacity not exceeding 12,500 spindles each to promote healthy competition in the textile industry. The production of cloth would however, not be allowed in such proposed mills he said.

At present, there are 9,46,000 spindles in the 53 textile mills under the Bangladesh Textile Mills Corporation (BTMC) which are in operation, the Minister said. The decision to add 4,25,000 spindles has been taken to increase the per head annual quota of coarse cloth from eight yards to 12 yards during the Second Five-Year Plan period, Mr. Mansur Ali said.

The previous annual requirements of 64 crore yards of cloth was met through the production of cloth in the BTMC mills and handloom industries, Mr. Mansur Ali said. The annual production of cloth by the BTMC mills was 11 crore yards while that of handloom industries was 44 crore yards, he said.

The Textile Minister said that the new mills would be set up in the less developed areas which would help develop the backward areas on the one hand and solve unemployment on the other. The Handloom Board has undertaken 17 pilot schemes during the current year to help the poor weavers of the country Mr. Mansur Ali said. The weavers under the pilot schemes of the Handloom Board would get 50 per cent of their required quota of yarn through the Handloom Board, he said. The weavers would also be advanced bank loans as financial assistance, he said.

Under the Second Five-Year Plan period, the country's annual requirement of cloth would be 120 crore yards and the production of handloom industries is estimated to be around 103.62 crore yards and that of the BTMC mills 16.38 crore yards, the

Minister said. The annual requirement of yarn will be 30 crore pounds of which 28.40 pounds would be produced locally while the rest would have to be imported, the Minister said.

Dwelling at length on different aspects of losses and profits of the textile mills under the BTMC, the Minister said that 30 mills had made a profit of Taka 25 crore but 10 mills incurred a loss of Taka 11 crore in one particular year. Terming these 10 mills as "sick mills" the Minister said these were being brought under balancing, modernisation and replacement (BMR) at an estimated cost of Taka 47 crore. Mr. Mansur Ali said that of the estimated BMR expenditure of Taka 22 crore has already been spent. The Minister said that BTMC earned a profit of Taka 4.74 crore in two years (1978-'79 and 1979-'80) through reducing the overhead expenditures.

At present BTMC has 108 sales centre in the country. The Head Office of Bangladesh Handloom Board would be shifted to Serajganj soon to better service the weavers, he said.

Mr. Mansur Ali said in reply to a question that the government had no plan to disinvest any of the nationalised textile mills.

Referring to the utilisation of the "surplus" workers employees and officers in the BTMC mills he said they were being employed in the newly constructed mills. The total number of workers in the 46 textile mills which was 48,000 during the pre-liberation period increased to 60,000 according to a new set-up, the Minister said.

ARMED LOOTING OF PADDY FROM FARMERS ALLEGED

Dacca THE BANGLADESH OBSERVER in English 24 Nov 80 pp 1, 12

[Text] The President of Bangladesh Coastal Farmers Association, Maulana Alauddin Al Azhari, on Sunday alleged that certain "armed gangs were looting paddy" from the fields of poor peasants in the coastal belt since the beginning of the current harvesting season, reports BSS.

Addressing a Press conference at the National Press Club in Dacca, he alleged that such "armed gangs of miscreants" were carrying out the mischiefs "with direct or indirect support" of corrupt local administration officials and a "powerful section of the government".

He mentioned Char Osman, Char Clerk, Bashua, Thanar Hat and Char Borhan in particular and all the coastal char areas of Noakhali, Barisal and Patuakhali in general, where such things were going on for a long time.

Maulana Azhari giving details said the "armed gangs" and the miscreants had looted over 1,600 maunds of paddy from the peasants of Char-Osman alone. The miscreants, on many occasions, are getting assistance from the police he alleged.

Referring to the "unprecedented harassments" meted out to the poor peasants of the coastal char areas, the association President placed a seven-point demand calling for the return of the "looted" paddy to the peasants, immediate arrest of the "looters touts, and miscreants", release of all arrested peasants withdrawal of cases against the peasants of Char-Osman and other char areas trial of the office bearers of the so-called agriculture farm in Hatiya and allocation of lands of Hatiya Krishi-Khamar and Multi Purpose Cooperative Society.

GUARDS TO BE PROVIDED FOR BORDER HARVESTING

Dacca THE BANGLADESH TIMES in English 27 Nov 80 pp 1,8

[Text] The farmers of Bangladesh and India will harvest paddy from their lands in adverse possession near the Tamabeel boundary under joint supervision of the border guards of the two countries, reports BSS.

It was decided at a meeting of the BDR Sector Commander of Sylhet and the DIG of Indian BSF of Jayantia Hills held on Tuesday at the Indian border town of Dawky, official sources said in Dacca on Wednesday.

The Indian farmers, according to the boundary meeting decision will not cross into Bangladesh land for harvesting crops anymore.

The meeting was requested by the BDR Sector Commander a few days back following Indian farmers efforts at forcibly harvesting paddy from Bangladesh farmers, land and intermittent firings by the Indian BSF.

For about a week the Indian farmers crossed into Bangladesh territory and tried to harvest paddy with the backing of BSF. When the Bangladesh farmers resisted, the Indian BSF had intermittenly fired on them. The BDR the source said, had to fire in reply.

CSO: 4220

AGRICULTURAL LAND BOUNDARIES TO BE REMOVED

Dacca THE BANGLADESH OBSERVER in English 22 Nov 80 pp 1, 12

[Text] Manikganj, Nov. 21:--The Chairman of Union Parishads of the Dacca Division and the heads of Gram Sarkar of Dacca and Faridpur districts today gave their consent to President Ziaur Rahman to strike out the boundaries of agricultural land holdings to make available more land for cultivation, reports BSS.

They also pledged to the President to give leadership in this direction to encourage others to follow suit.

The pledge came when the President was addressing a conference of the UP Chairmen of the Dacca Division and heads of Gram Sarkar of Dacca and Faridpur districts here today.

President Ziaur Rahman told the conference that if the land boundaries of our country were pieced together they would be equivalent to the size of a district. It had been calculated that the utilisation of such land alone would not only help meet our food deficit but also leave a surplus foodgrains of several lakh tons, he added.

The UP Chairman and the Gram Sarkar chiefs also expressed their solidarity with the declaration of March 26 as the National Day in addition to the Independence Day when the President explained to them that it had been made so because it constituted most glorious day in our national life.

President Ziaur Rahman said that the Union Parishads were not given the responsibility in the past as was due to them. The smooth administration of the government was not possible unless there was proper coordination between the central government and local bodies, he said adding there was no use of fuming over the past lapses and worngs.

Referring to the price-hike of essential commodities, the President pointed out that it was not something unusual at a time which the price of oil which we were to import, had been increasing steadily. In this connection he said that Bangladesh had to import oil worth Taka one thousand crore annually for cars, vehicles, factories and industries and for the operation of agricultural machinery.

We are dependent on oil for all these and the continued rise of its price in the international market is beyond our control, he said.

He further said that the developed countries had also raised the prices of machinery and equipment following the increase in the price of oil. It was our misfortune that we had to give enhanced price not only for oil but also for machinery imported from abroad. We were making exploration for oil, he said and hoped that it would be struck in our country.

President Ziaur Rahman also brought home to the Chairmen and Gram Sarkar chiefs the paramount need for containing the population explosion which is telling heavily on the economy of the country. All our development efforts and their fruits were being neutralised by the population boom, he said and urged the Chairmen and Gram Sarkar chiefs to put in concerted efforts for increasing production and checking population.

He told them that, the demands of all had gone up without corresponding increase in their income because, he said the able-bodied persons of a family were inactive. Moreover, the womenfolk constituting half of the country's population were not engaged in production oriented work. This state of affairs should have to be changed and everybody would have to work. In this connection, he reminded the UP Chairmen and Gram Sarkar chiefs of their responsibility to inspire the people and give leadership to them to work hard. The days of the politics of slogans were over now, he added.

The President maintained that the price of fertilizer was raised only to check its smuggling across the border where its price was higher than that of Bangladesh. Not only fertilizers but also other commodities imported from abroad at the cost of huge foreign exchange were finding their way across the border. Consequently the national economy was suffering collosal damages, he said adding the only way of escape from this situation was the dedicated efforts of all to augment production.

President Zia said that the tolerance was a must for proper growth of democracy that had been established in the country. He said that the development process would be impeded if we were engaged in unnecessary squabbles and quarrel.

We have to launch industrial revolution along with the agricultural revolution for manufacturing necessary equipment and machinery within the country, he said.

President Zia said that the formation of Gram Sarkar had not curbed the responsibility of any other institution rather it would be supplementary for proper execution of the development programmes in the rural areas.

He said that with the proper functioning of Gram Sarkar and other organisation of the villages there would be no more problems.

SOURCE DISCUSSES NEW AGRICULTURAL PLAN

Dacca THE BANGLADESH TIMES in English 25 Nov 80 pp 1, 8

[Article by Shamsul Huq Zahid: "No Budgetary Cuts in Agri Sector During SFYP"]

[Text] There will be no budgetary cuts in the agricultural sector during the implementation of the Second Five-Year Plan of the country, according to an authoritative source.

The Government has taken measures to ensure planned investment of Taka 5,100 crore for the implementation of a medium-term food production programme (1981-85) that, among others, aim at making the country self-sufficient in food.

Under this programme, if implemented properly, about 15.6 million tons of food would be produced by 1983 leaving a surplus of about 30,000 tons, by 1985, the surplus would be around 2.1 million tons.

Government's commitment at th highest level to agriculture led growth is best indicated by the substantially increased allocation of resources to the agriculture sector in the Second Five-Year Plan.

The sources indicated that the priority was given in view of the lapses in the investment in the agriculture sector during the seventies.

This was clearly demonstrated in the low and erratic supply of fertilizer or lack of irrigation. The entire sector suffered from stop and go financing, allowing only inflation to erode cost estimates, fund allocations and profitability.

Inadequate Investment

Inadequate investment in the agricultural sector, lack of institutional reforms and organisation of the rural farming communities and absence of rural and small farmers bias of the development plans demonstrated the fact that the political will was not there in the past to develop the agriculture improve the lot of the small farmers as well, the source maintained.

Dependence on import of vital equipment and spares stunted the growth of potential of irrigated acreage. Besides, uncertainty regarding timely availability of seed, fertilizers, fuel, uncertainty of market price at the time of harvest, absence of

government food grain procurement with support price till the later part of the seventies, lack of storage facilities have been the major factors restraining farmers from investing fully or at all in the seed-based technology.

The problems in the agriculture sector have been compounded by the structural and bureaucratic constraints.

Structural Constraints

The pre-dominance of subsistence level family farming and heavy pressure of population on land have led to a shrinking land-man ratio. The ratio has declined to 0.29 acre in 1979-80 from 0.40 acre in 1960-61.

Land ownership and land tenure patterns have acted as disincentives to the adoption of modern technology. Lack of access to the institutional credit of the small farmers has been another institutional constraint.

The strategy for the implementation of food production programme of the SFYP is to introduce the seed-based technology through expansion of irrigated acreage and through drainage and flood control.

The Government has already issued licences to five local enterpreneurs for manufacturing irrigation equipment beside the public sector enterprise of diesel plant to lesser dependence on foreign supplies and with the objective of local manufacturing of pump engines and accessories. The country is already producing all the pumps it needs.

In line with the same policy and in order to involve the beneficiaries directly the Government has taken up a programme this year for setting up workshops in the private sector for repair and maintenance of irrigation facilities. The programme includes provision for extending credit facilities to the private sector for purchasing equipment and tools and for imparting technical guidance and providing training to the mechanics.

Similarly, input-supply is being progressively handed over to the private sector to the extent possible. The government has already handed over pesticides and retail fertilizer distribution to private sector along with the sale of shallow tubewells. Arrangements are in progress regarding the sale of deep tubewells and low-lift pumps to the cooperative groups or individual farmers.

The Government has also taken up measures to enable the farmers to purchase the supplies and equipment by increasing the availability of credit to the cooperatives, farmers and suppliers opening of more credit channels and liberalizing credit procedures.

Moreover the government to ensure the growers a fair price, have undertaken to construct feeders and access roads to markets and procurement centres as well as to increase the government grain storage capacity including improvement in storage management. Besides, the private grain traders are being encouraged through access to credit for trading and construction of private storages.

INDONESIAN MINISTER ARRIVES--Indonesian Minister for Health Dr. Soewardjono Suryaningrat arrived in Dacca on Friday on a four-day official visit to Bangladesh "to exchange views and experience" of the two countries in health and population planning. He was received on arrival at Kurmitola airport by the Minister for Health and Population Control Dr. M.A. Matin. Talking to BSS, Dr. Suryaningrat said that Bangladesh and Indonesia had been cooperating in the field of family planning. He referred to the prevailing five-year exchange programme on family planning between the two countries and said that his country would send some of its experienced personnel for the success of the population control programme in Bangladesh. The Indonesian Minister who is accompanied by his wife Madame Suryaningrat, said that he was carrying the greetings of President Soeharto for President Ziaur Rahman. [Excerpt] [Dacca THE BANGLADESH OBSERVER in English 22 Nov 80 p 1]

AMBASSADOR TO SPAIN--Madrid, Nov. 21:--King Carlos I o Spain said here yesterday that his government would like to see increased cooperation between Spain and Bangladesh, reports BSS. The King asked the Bangladesh Ambassador to Spain, Mr. Momin, to convey his "warmest greetings" to President Ziaur Rahman, under whose leadership he hoped, Bangladesh will make rapid progress toward prosperity. Mr. Momin was presenting his credentials to the King as Ambassador of Bangladesh to Spain with residence in Paris. Ambassador Momin assured the King that it would be his constant endeavour to strengthen the relations between the two countries in every field. PRAISE FROM PRC, DPRK--Bangladesh foreign policy, has been "very much appreciated" in North Korea and People's Republic of China Mr. Q. G. Ajmeri, President of Bangladesh-North Korea Friendship Association said in Dacca on Monday reports ENA. Mr Ajmeri who recently attended the sixth founding anniversary of Democratic Peoples Republic of Korea (DPRK) and visited China was explaining his experience at an informal meeting with newsmen. He said the peoples of both DPR Korea and China lauded Bangladesh's struggle against hegemonism imperialism and expansionism and expressed their solidarity with the people of Bangladesh in their struggle. [Text] [Dacca THE BANGLADESH TIMES in English 25 Nov 80 p 8]

GREETINGS TO LEBANON--President Ziaur Rahman on Saturday greeted Lebanese President Elias Sarkis on the occasion of Independence Day of Lebanon. In a message to President Sarkis on the occasion, the President expressed confidence that the existing friendly relations between the two peoples will be further strengthened in the years ahead. He also wished for the continued peace, progress and prosperity of the people of Lebanon. [Text] [Dacca THE BANGLADESH OBSERVER in English 23 Nov 80 p 1]

GREEK AMBASSADOR--The Ambassador-designate of Greece, Mr. Dimitry Manoltof, on Saturday presented his credentials to the President Ziaur Rahman at Bangabhaban, reports BSS. He conveyed the greetings of the Greek President, Mr. C. Kramanlis to President Ziaur Rahman he sought for guidance and cooperation from the Bangladesh President for his successful mission in Dacca. President Ziaur Rahman reciprocated the sentiment and assured the Greek envoy of all possible cooperation during his tenure of office in Dacca. [Text] Dacca THE BANGLADESH OBSERVER in English 23 Nov 80 p 1]

COOPERATION WITH JAPAN--Mr. Keisika Arita, President of Japan International Cooperation Agency (JICA) called on Foreign Minister Prof. Muhammad Shamsul Huq Saturday morning at the Foreign Office, reports BSS. They discussed the possibilities of further expanding cooperation between Bangladesh and Japan. Mr. Arita expressed special appreciation from the people and the Government of Japan for the visit of President Ziaur Rahman to Japan on the occasion of the funeral of late Prime Minister Mr. Ohira. Prof. Mohammad Shamsul Huq thanked him and the Government of Japan for their valued cooperation with Bangladesh in various fields of development. The Foreign Minister requested Mr. Arita to convey his warm regards to Foreign Minister Mr. Ito and former Foreign Minister Sonada. [Text] [Dacca THE BANGLADESH OBSERVER in English 23 Nov 80 p 12]

COMMUNIST'S RELEASE DEMANDED--The Central committee of Communist Party of Bangladesh on Wednesday demanded release of Mr Mohammad Farhad, General Secretary of the party, according to a Press release. The demand contained in a resolution, which was adopted at the meeting of the central committee of the party. The meeting began on Tuesday under the presidentship of Mr Moni Singh, chief of the party. [Text] [Dacca THE BANGLADESH TIMES in English 27 Nov 80 p 8]

MINISTER SUPPORTS TRANSFER OF CHIEF JUSTICES

Madras THE HINDU in English 27 Nov 80 p 9

[Text] New Delhi, Nov. 26. The Law Minister, Mr. P. Shiv Shanker, today said the interest of justice itself required that the post of Chief Justice of High Courts should be transferable.

Replying to the debate in the Lok Sabha on High Court and Supreme Court Judges (Conditions of Service) Amendment Bill, the Minister also announced that some of the vacancies in the Supreme Court would be filled shortly.

He said amidst cheers that selection of the first Harijan Judge for appointment to the Supreme Court had already been made. He did not disclose the name, however. The Bill was passed after a brief debate.

The Minister said every possible effort was being made by the Government to expedite filling of the vacancies in the high courts too.

He pointed out that recommendations for appointment of High Court Judges should originate from the Chief Justice of the High Court concerned. The State Government too had a role. The Centre counted for very little in the process.

The present delay in filling the High Court vacancies was due, in some cases, to the delay in proposals coming up; in other cases, the need for consultation on some issues with the Chief Justices.--

Mr. Shiv Shanker said that bodies like the Bar Council, Bar Associations and eminent individuals, including retired judges and famous jurists, have favoured the idea that posts of Chief Justices of High Courts should be transferable.

He said it was a fact of life that complaints kept coming up from time to time that some Chief Justice was favouring one or the other set of advocates in a State. This Chief Justices might also have prejudices peculiar to that social ethos.

The idea of a 'selective transfer" of Chief Justices, that is to say the transfer of only those Chief Justices who showed prejudice or partiality, had serious pitfalls of its own, the Minister observed.

First, if there was a selective transfer, the transfer would mean a stigma. Secondly, if a man was not good enough in one State, how would he be acceptable to another State? Thirdly, the practice would give the executive more, rather than less, opportunity to interfere with the judiciary.

So it was better that transfers of Chief Justices be made transferable as a matter of course, the Minister said.

Quoting figures, he said it was not true that this Government had defaulted in any marked manner in filling vacancies in the High Courts or the Supreme Court. On November 1, 1977, when the sanctioned strength of the judges was 366, the number of vacancies was 88. The corresponding figures for November 1 this year were 406 and 74 respectively.

With regard to Supreme Court vacancies, Mr. Shiv Shanker said these started arising from August 1980. The first judge retired on July 31, 1980 and four more by November.

The Chief Justice of India sent his proposals some time in September, 1980. There was a procedure to be gone through under Article 124.

He criticised some newspapers for putting out slanted versions blaming the Centre for delay. This was possibly due to their "political alignments," he added.

Committed Judges

Replying to the allegation that the Government wanted "committed" judges, Mr. Shiv Shanker said they should be "committed to the Constitution" for the simple reason that they were taking an oath to uphold the Constitution and laws.

Earlier during the resumed debate, Mr. Mool Chand Daga (Cong-I) suggested that the practice of appointing judges on different commissions or giving them jobs after retirement should be discontinued.

He said there should also be "some qualification fixed" for becoming MPs so that laws enacted by them would be better.

Mr. Daga opposed a provision in the Bill which necessitated production of a medical certificate by judges when they went on medical leave for more than 45 days to en-cash their full salary. "It is not fair to ask Supreme Court judges to produce medical certificate" he said and added that the judges were supposed to be very honest.

Mr. N.K. Shejwalkar (BJP) said the amending Bill gave hardly any relief to judges who should be able to live without fear or lure.

Mr. Nawalkishore Sharma (Cong-I) suggested that while appointing judges, their "social outlook" should be taken into consideration.

Prof. P.J. Kurien (Cong-U) wanted permanent benches of the Supreme Court in the south and east. Similarly Benches of the High Courts could be constituted in the districts, he said.

Poorly Paid Judges

Mr. Harish Chandra Singh Rawat (Cong-I) supported the Bill but severely criticised the provision for more facilities to judges of only the Supreme Court and High Courts, "the hunting ground of big landlards, wealthy people and the privileged classes as well as of fabulously paid lawyers".

The majority of the litigants were poor, common people in district towns and cities where local judges continued to be poorly paid and with "shocking" lack of facilities, he added.

Mr. G.M. Banatwalla (Muslim League) refuted the charge repeatedly made by the ruling party that the judges acted as "a stumbling block" on the path to social progress. It was trotted out as a platitude that several judgments had negatived social justice measures.

He said that quite often the judges were helpless in the face of "defective laws" framed for achieving social justice objectives.

Taking an overall view, he said that in the interests of the litigants, accused, witnesses and all, there was "a need for justice to judges."--PTI.

CONTRADICTIONS WITHIN MARXIST PARTY NOTED

Bombay THE TIMES OF INDIA in English 28 Nov 80 p 7

[Text] New Delhi, November 27. The decision of the West Bengal unit of the CPM to organise the bandh in protest against alleged Central neglect is an indication of a sharpening of contradictions within the party.

Whatever substance there may be in Mr. Jyoti Basu's complaints, it is very unlikely that the state government would have opted for military so soon had the ruling group in the state unit been comfortably placed.

Reports from the state indicate that this is no longer so. The militant group, known to be pro-Chinese, has become more active presumably because it finds the situation now congenial for it to assert itself.

The entry into the party of diverse elements who, according to the party leaders, lack in "proper motivation", has created some confusion in the ranks. It is in such confused situations that the militants thrive.

An indication about which group is gaining ascendency in the state party unit, is the type of pronouncements made by its secretary, Mr. Promode Dasgupta. He reflects the views and attitudes of the rank and file. His recent statements have undoubtedly assumed a harsh and strident tone.

The Bengal bandh may well signal the end of a phase in the party. So far, the party's central leadership has been engaged in a delicate exercise of balancing between the pro-Soviet and pro-Chinese groups by making such high-sounding declarations as that the party is committed to bringing about unity in the world communist movement. Actually, it has been an exercise in avoiding the kind of split in the late sixties that gave rise to the Naxalite movement.

The party would perhaps have adopted a more straightforward policy in respect of its attitude to the two communist giants and its relations with the CPI but for the sizable pro-Chinese group in West Bengal. The West Bengal unit being the mainstay of the CPM, it was impossible for the central leadership to ignore the pro-Chinese group.

Dominant Group

A crisis has clearly developed in the West Bengal unit of the party, but how deep it is will be indicated by whether Mr. Promode Dasgupta ultimately goes to Hanoi in response to a Vietnamese invitation along with the party's polit bureau member, Mr. Harkissen Singh Surjeet.

Mr. Dasgupta himself is not committed to any particular line, but it will be difficult for him to ignore the wishes of the dominant group in the state unit. It will also depend on which group is now dominent.

A cleavage in the party's rank and file in West Bengal will not only seriously threaten the continued existence of the state government but will cause a grave set-back to the CPM itself.

MANIPUR DEPUTY CHIEF IS CLP(I) LEADER

Madras THE HINDU in English 27 Nov 80 p 11

[Text] Imphal, Nov. 26. Mr. Rishang Keishing, Deputy Chief Minister of Manipur, has been unanimously elected leader of the Congress (I) Legislature Party.

The election of the leader was conducted last night by the AICC(I) general secretary, Mr. Satyanarayana Rao, who announced the result today.

The delay in the announcement was in deference to the wishes of party members, Mr. Rao told newsmen.

The new coalition Ministry led by Mr. Keishing is expected to be sworn in tomorrow. Mr. Keishing succeeds Mr. R.K. Dorendra Singh, who tendered his resignation following his appointment as India's Ambassador to Norway.

Mr. Rao said Mr. Keishing had been nominated by the Congress(I) president, Mrs. Indira Gandhi and elected by CLP(I) members unanimously.

He expressed the hope that Congress(I) members would work shoulder to shoulder to implement various developmental schemes and to restore peace in Manipur.

Congratulating the new leader, Mr. Dorendra Singh said there was no difference in the party and the policy and programme of his Ministry would be implemented by the new Government.

Referring to the combing operations by the Army against insurgents in the State Mr. Singh said "Innocent persons had been killed" and he had brought this to the notice of the Army authorities.

Mr. Keishing thanked the party members for electing him unanimously and assured them that he would do his best to maintain the unity of the party and work for all-round development of the State.

He said a "direct contact" with the insurgents would be developed to pave the way for an acceptable solution and to restore complete peace and amity in the State.--PTI.

HARDCORE MAOISTS REPORTED FLEEING INDIA

Calcutta THE STATESMAN in English 27 Nov 80 p 9

[Text] Shillong, Nov. 26.--The Maoist hardcore unit of Muivah's National Socialists across the Indo-Burma border is on the run, according to informed sources. They are believed to have taken shelter in a village, Lao, three days' trek from the international border.

Lao is a Konyak village. Some of the Konyaks back Muivah, but not because of his ideology. They are possibly ignorant of Muivah's long-term objectives and acceptance of class struggle. They are loyal as soldiers of the original underground or federal set-up.

Rumours about radical Left activity in Nagaland's backward Tuensang and Mon districts are grossly exaggerated. It could be said that a number of tribes, like the Konyaks of Mon, are seeking greater autonomy and a greater share of the funds. The Khiamungans are one of them. Nagaland's first Khiamungan, Mr Pongom, was sworn in here yesterday as a Minister of State. The young energetic MLA from Thonokyu will look after Information. Publicity and Tourism.

The Khiamungans were major victims of Muivah's extremists but hit back causing the present plight of the group.

A Khiamungan in the federal set-up, Ghing Shingnya of Sanglao village and his command killed 75 of Muivah's men at Langnoa on the Burmese side on October 27. "Lieutenant-Colonel" Shingnyu was promoted "brigadier".

The strength of the trans-border group is being eroded. It is rumoured the largest group is that of the Hemis of Burma led by Khaplang, followed by the Konyaks and a few Semas under Isak who is a Christian. The Tangkhuls are less than 30 but include young men who learnt about Marxism in universities. One of them is JNU. One of the Tangkhuls killed at Pang a few months ago was an M.A. student named Mark.

The Tangkhuls of Ukhrul, a district in Manipur, have perhaps links with the PLA in the contiguous Imphal valley. There are reasons to believe that they obtain arms from the PLA and vice versa. The PLA leader, Bishewar Singh, speaks of mobiling the tribals of the north-east to fight the "Delhi bandits" in the first phase. He dreams of emulating Mao in the counter-offensive.

Revivalism is attributed to various factors. But a little advertised and less understood concerns their claim to the Kabaw valley now in Burma. Quite apart from

theories about Bebensraum--once voiced by the Nagas in their border dispute with Assam--the Kabaw valley could absorb the overflow from the Imphal valley which housed a fairly sizable settlement of Nepalis after world war II.

Whatever the real or amorphous links among Muivah's group, the PLA and other ethnic groups like the Kachin Independence Army or the Eastern Naga Revolutionary Council, the prospects of talks between the federal set-up and the National Socialists are practically ruled out for two good reasons. Ruthless killings by Muivah's men--about 300 to date--cannot be forgotten nor can Christian Nagas overlook Muivah's advocacy of Maoism. Maoist techniques may be acceptable but not as the life style.

Muivah, meanwhile, may be wanting to carry the battle into Nagaland by sending killer squads to eliminate certain leaders. The attempt on Ramyo's life could be owing to Tankhul rivalry. The bid to kill Vamuzo by a fellow Chakhesang is said to be different. The alleged assassin was a frustrated job seeker with perhaps an underground background.

STEPS TO PROTECT HARIJANS, TRIBALS URGED

Bombay THE TIMES OF INDIA in English 27 Nov 80 p 13

[Text] New Delhi, November 26 (PTI): The government has asked the states to take "preventive" action against "powerful" people who hired or employed musclemen or engaged gang leaders in villages to commit atrocities on Harijans and tribal people.

An illustrative list of numerous measures to be taken against the people instigating crimes against the weaker sections was given by the minister of state for home, Mr. Yogendra Makwana, in the Lok Sabha today.

In his reply to a question by Mr. Ram Vilas Paswan, the minister said Mr. Zail Singh, Union home minister, had written to all chief ministers and union territories in September that at least one of the officers in "sensitive districts" should belong to one of these communities.

Administrative heads of districts and superintendents of police should be held personally responsible for ensuring prompt and effective action, not only by themselves but by all officers of their districts, along the lines of the Central directive.

They should be responsible for fully achieving the objectives of effectively preventing atrocities, apprehending criminals and visiting them with condign punishment with deterent rapidity and quick and complete rehabilitation of the victims and their families", the Centre has instructed.

Apart from taking appropriate disciplinary action against irresponsible officials, the state governments have also been asked to treat as "a grave dereliction of duty" any failure to undertake prompt and efficient action or exercise adequate supervision at the preventive, or punitive, or rehabilitation stage.

As one step to bring prestige to the "least prestigious" locality occupied by Harijans in the village, all collectors and police superintendents and their subordinates should be required to spend a substantial part of the time there during their tours of villages, and transact from these localities their work pertaining to the "general advancement and general problems of the village."

But, the Centre has warned, "on no account should the district administration lend the weight of its prestige to that part of the village where the powerful of the village reside" by transacting work pertaining to the general public, or specific occupational groups there.

MINISTER DENIES DISCRIMINATION AGAINST BENGAL

Calcutta THE STATESMAN in English 26 Nov 80 p 1

[Text] New Delhi, Nov. 25.--The Centre is not discriminating against the West Bengal Government, Mr Yogendra Makwana, Minister of State for Home Affairs, told the Rajya Sabha today. "On the contrary, it is creating problems for the Centre though we want to help it", he said during a debate on a call-attention motion.

The motion was tabled by Mr Bhupesh Gupta (CPI) and seven others. The subject of the motion was: "The recent reported observations of the Chief Minister of West Bengal regarding the discriminatory policy being pursued by the Centre against the Government of West Bengal, consequently causing difficulties in the functioning of the State Government, and undue delay in taking action and decisions on certain urgent matters relating to that Government, including assent to the Bills passed by the State Legislative Assembly".

Though the range of the topic was wide, the debate centred round the figures of allotment of foodgrain and its use under the Food-for-Work programme. Mr Makwana said the West Bengal Government "wants to dictate to us. We refuse to be dictated to by it. But we can consider its request in respect of guidelines for the programme".

Besides Mr Gupta, those who pleaded the cause of the West Bengal Government included Mr P. Ramamurthy (CPI-M), Mr Sourendra Bhattacharjea (RSP), Mr Ladli Mohan Nigam (Lok Dal), Mr J.P. Mathur (BJP) whose support was conditional, Mr V.B. Raju (Con-U) and Mr B.P. Maurya (Ind).

Mr D.P. Chattopadhyaya (Con-I) alleged that there had been "political murders" in the State and accused the Left Front Government of being "really partisan". Mr Makwana said Mr Chattopadhyaya had given "a befitting reply to them". He could not do that as "I did not want to bring in politics".

There were altercations between the Treasury Benches and the Opposition and interruptions. Mr Gupta had an angry exchange with Mr Shyamlal Yadav, Deputy Chairman. He charged him with "interference" and said he was taking all the time.

Mr Chattopadhyaya was repeatedly interrupted by Mrs Kanak Mukherjee (CPI-M) and others, Mr Pranab Mukherjee, leader of the House, angrily remarked that the ruling party benches would not permit the Opposition members to speak "if this goes on". The discussion, scheduled for 60 minutes, lasted 150 minutes.

CONTRACT CHANGE ENDANGERS WORLD BANK AID

Calcutta THE STATESMAN in English 26 Nov 80 pp 1, 9

[Article by Warren Unna: "World Bank's Controversy With India"]

[Text] Washington, Nov. 25.--The World Bank, India's main source of foreign aid loans and India, the World Bank's principal and showcase client, are engaged in the first really serious controversy in their long and basically congenial relationship.

It involves what the World Bank suspects is hanky-panky in the reworking of a contract long ago negotiated and agreed upon. The bank thinks that if this reworked contract is allowed to proceed it could compromise both the bank's reputation for integrity and expertise and India's need for the best possible economic development assistance. The contract is to help India build her biggest-ever fertilizer plant, and the first in a projected series which are to make use of the waste natural gas now being burned off in the Bombay High oil extraction.

All this comes just as the World Bank is struggling to maintain India's traditional level of loan money as China, with a considerably larger proportion of the world's needy, has joined the bank to put in its own bid for large-scale loans. It also comes as the World Bank is having more difficulty than ever coaxing already pledged financial support from its largest single donor, the USA, because of the increasingly negative and indifferent attitude of the U.S. Congress.

At issue is a $250-million loan the World Bank agreed to provide India on June 28, 1979. The loan was to enable India to build $812-million natural gas-based ammonia and urea Rashtriya Chemicals and Fertilizers complex at Thal, south of Bombay. By 1983 the complex was to begin producing 2,700 tons of ammonia and 4,500 tons of urea daily and thereby, permit India to save some $200 million a year in foreign exchange for fertilizer imports.

The consultant's fee, variously estimated at between $25 million and $42 million (in the event of a second complex being built in Gujarat), was to go to a U.S. engineering firm, C.S. Braun of Southern California, which had been selected by Rashtriya. Braun was to be responsible for design, engineering and primary construction of the two-unit plant.

But, even though the then Government of India signed the agreement with the World Bank in June 1979, a little more than a half year later the new Indira Gandhi Government ordered a review of all major foreign contracts. And, even though the

two high-level technical committees of business and civil servant experts had by then approved Braun as the most qualified consultant, and the one which offered energy-saving technology, the matter was sent on for further review by a group of Cabinet Ministers.

Apparently, there was a division and the majority went against Braun.

Then, this spring, the full Cabinet decided that the highly-lucrative consultant's fee for the Thal fertilizer complex should go to a group which earlier had been passed over in the original selection, the Danish firm of Haldor Topsoe and its reportedly 50% owner, the Italian firm of Snam Progetti.

When India suddenly informed the World Bank of this change, bank officials were taken aback. They knew Haldor Topsoe was reputable, but not for such large-scale and innovative projects as the one agreed upon for Thal. The World Bank has a policy of not specifying consultants, but instead indicating a panel of approved firms over which it maintains the right to veto. It asked India to justify the unusual change in an agreed-upon contract, and also to justify the change to a business group which by Indian officials' own acknowledgement, would be charging India a "slightly less advantageous fee".

The World Bank set October 31 as a deadline for this justification. India then asked for a two-month extension.

Now unless India is able to justify its change in the original contract, the World Bank threatens to allow the contract to lapse at the end of this year, on December 31. This will mean no $250 million loan issued on the highly-advantageous terms of 20 years with the first five years considered as a no-payment grace period and a very low interest rate of 7.9%. This, presumably, would kill the project and further defer India's need to become more self-sufficient in fertilizer and avoid paying scarce foreign exchange for imports.

Mr David Hopper, the World Bank's Regional Vice-President for South Asia, a Canadian national and the official responsible for certifying the correctness of the transaction, said he "assumed" India would provide a satisfactory technological assessment (i.e., justification) before the December 31 cut-off date for the loan. This, of course, is the diplomatically proper thing to say.

Others don't see how India will be able to document her switch in principals. The explanations submitted by India so far--that the Danish-Italian group will provide India with more transfer in technology, and a more rigorous performance guarantee--are regarded as wishful after-the-fact rationalizations.

Mr David S. King, the U.S. alternate executive director on the World Bank board and a lawyer, put it more bluntly: "Originally, Braun got all of the high marks in both price and quality. Then the Indians demanded that the bids be re-evaluated. But, even after that, Braun still came out ahead. Then, when the Cabinet split, the Prime Minister and the Minister who had been very vocal in countermanding the whole thing said it had to go to Haldor Topsoe a top outfit, but one with no experience in this sort of thing. And, their bid was clearly inferior. In this case, apparently, the thing was so foul and irregular that the bank, which ordinarily might have closed its eyes, figured it could not close its eyes to this. They thought the thing was so smelly it was not even in the ballpark".

SHILLONG MIZO STUDENTS SUPPORT LALDENGA

Calcutta THE STATESMAN in English 26 Nov 80 p 9

[Text] Shillong, Nov. 25.--The Mizo Students Union of Shillong has submitted a memorandum to the Prime Minister with two main demands, described as suggestions. First, that no third party should be associated with the peace negotiations without the approval or concurrence of the MNF leader, Mr Laldenga. Second, that Mr Laldenga should be allowed to visit Shillong and Mizoram before the end of the year to explain "doubts that may arise out of the current negotiations" and clear doubts whether he is really free to go to Mizoram or other places".

This is the first mention of Shillong in any itinerary for the MNF leader.

Reiterating their stand in an earlier memorandum to the Prime Minister in July, the new memorandum stresses that "you two (Mrs Gandhi and Mr Laldenga) alone can ensure a settlement which would make Mizoram feel secure and content".

According to the students, Mr Laldenga's alleged dishonesty was a canard spread by the Janata regime and abetted by "tools" like Mr Biakchhunga, former MNF "commander-in-chief" former top commanders like Zamana and Mr Laldenga's former bodyguard, Mr Lalsangliana Sailo.

The students union is largely symbolic although Mizos are trying for an Assam-style movement. Overt criticism of political parties and their leaders seeps through. The memorandum notes that the Mizoram Congress (I) is "largely accepted by the people because of the professed support for the MNF led by Mr Laldenga", but it adds sceptically: "Of course, whether they genuinely support the MNF or not, you know better than us".

Mizo students in Shillong are pro-Laldenga but were never so active. The ruling Peoples Conference perhaps organized the youth with flattering results since 1978; the MPCC (I) leader, Mr Lal Thanhawla and the breakway faction of the Conference are in the game now. The election of office-bearers to the Mizo Zirlai Pawl, the prestigious apex student body in Mizoram, is a setback for the brigadier.

There are clear indications of a campaign to oust the Chief Minister using students power. But the demand that all MLAs should resign may be counter-productive. Brig. Sailo, now in Delhi, has virtually challenged Mr Laldenga to face him at the polls--inevitable if Mizoram is granted Statehood. Hitherto, Mr Laldenga had

pressed for President's Rule prior to an election, obviously apprehensive of a caretaker Government by the Peoples Conference. Almost to allay such fears, Brig. Sailo has declared that his Ministry would go out of office simultaneously with the grant of Statehood, which could be Mr Yash Pal Kapoor's promised Christmas gift to the Mizos, announced in Aizawl a few weeks ago.

Whatever the prospects, MNF activists and the hardcore have stepped up tax collections, recruitment and training. Official sources are disturbed by reports of MNF bands allying themselves closely with rebel ethnic groups in the Chittagong Hill Tracts and the Arakans. President Ne Win's visits to New Delhi and Dacca are significant in this context.

One school maintains that the MNF units across the border have established links, if not regular communication channels, with the Manipuri Peoples Liberation Army and Muivah's Maoist cadres further north. The other school holds that the MNF's operational links with the Tripuri tribals and other splinter groups in the Chittagong Hill Tracts, east towards the Arakans, may be to carve out a sphere of influence, largely Christian and hence insulated against Maoist winds.

SPACE CENTER DIRECTOR TELLS ROCKET LAUNCHING PLANS

Bombay THE TIMES OF INDIA in English 28 Nov 80 p 5

[Text] Bombay, November 27: India will launch a rocket of the SLV-3 type once in every six months from early next year. During the launches many indigenous substitutes for the imported components will be tested.

This is one of the several major features of the profile for the decade 1980-90 of the Indian Space Research Organisation, approved by the Union cabinet recently, according to Dr. Vasant Gowarikar, director of the Vikram Sarabhai Space Centre, Triyandrum.

Delivering the sixth Vikram Sarabhai memorial lecture under the auspices of the Institution of Engineers (India), Maharashtra state centre and other associations of engineers, here today, Dr. Gowarikar said the ISRO had achieved the goals set by the late Dr. Sarabhai for the decade 1970-80 and in certain respects its accomplishments had exceeded the targets.

India's capacity in solid propellant technology was total and it could make every chemical component required, he said.

The augmented satellite launching vehicle (ASLV), weighing 40 tonnes, is scheduled to be launched by 1983-84 and this will enable Indian scientists to put in orbit a satellite weighing 150 kg.

By 1986-87 ISRO is expected to launch an Indian remote sensing satellite in polar orbit and the satellite will weigh 600 kg. The rocket, polar SLV, will weigh 330 tonnes, according to Dr. Gowarikar.

AIR FORCE MEDICAL CHIEF DISCUSSES PROJECTS

Madras THE HINDU in English 27 Nov 80 p 11

[Excerpt] Bangalore, Nov. 26. The Institute of Aviation Medicine here will shortly launch a research project on the comparative benefits of yoga and physical training on Air Force personnel.

Announcing this at a press conference here on Tuesday, Air Vice-Marshal Mulk Raj, Director of Medical Services (Air), said that a liquid cool suit to be worn by pilots for mitigating the heat stress, particularly while flying high-speed, low-flying military aircraft was in an advanced stage of development.

The Institute had conducted pioneering work in the field of hyperbaric medicine (any agent having a specific gravity greater than that of spinal fluid). With the application of this therapy the lives and limbs which would otherwise have been lost had been saved. He said the Institute had been authorised to treat civilians by means of hyperbaric therapy as the facility was not available elsewhere in Bangalore. A case of gas gangrene was recently saved by the application of this therapy, he said.

A large number of cases involving extensive injuries to blood vessels had also been successfully treated.

Air Commodore Sant, Air Officer Commanding Institute of Aviation Medicine told pressmen that a pilot study on the benefits of yoga had already been completed at the Institute and the Armed Forces Medical Development committee had been approached for finance for research on a comparative study of the benefits of yoga and physical training.

MINISTER SPEAKS AT TEXTILE SYMPOSIUM OPENING

Bombay THE TIMES OF INDIA in English 28 Nov 80 p 5

[Text] Bombay, November 27. The need for transfer of technology from the developed countries to the developing nations and for building a collective self-reliance among the third-world countries themselves was stressed here today by Mr. V.C. Shukla, Union minister for civil supplies, and president, Indian Standards Institution.

Inaugurating the international textile engineering symposium, the minister said the transfer of technology could not just be effected by agreement at the government level, but could be transmitted more effectively through technical conferences. He was sure that in the fields of textiles and textile machinery, the developed countries would become willing partners in transferring their technology to the developing countries in their own long-term interest.

Collective Self-Reliance

At the same time, the developing countries, he said, should build a collective self-reliance, particularly in exchanging their experiences and information relating to the adaptation of the imported technologies to suit their needs. He hoped that the Indian industry would be willing to share its experience and expertise with other developing countries for the growth of their national infrastructure in textiles.

The development of the textile machinery industry in India, Mr. Shukla said, had not reached a stage where, apart from catering to the domestic need, the country had started exporting them. The total value of the textile machinery and accessories produced in the country was only Rs. 80 million in 1958. It increased to about Rs. 1,500 million in 1976-77 and was of the order of over Rs. 2,300 million in 1979-80. Exports of textile machinery for the last five years had amounted to over Rs. 700 million. The country, he pointed out, had also taken a lead in executing turnkey and semi-turnkey textile mills' projects in different countries.

The minister said the theme of this symposium--"Latest development in textile engineering as relevant to the textile industry in the third-world countries"--was particularly significant in the background of the development of textile industry in India at this juncture! He was happy that the symposium was being followed by an international exhibition displaying the latest textile machinery produced all over the world.

Mr. Suresh Mehta, chairman, India--ITME, steering committee, in his welcome address, said that in recent years, the Indian textile machinery manufacturers had made some

original contributions in the development of textile machinery and processing technologies. India today manufactured a complete range of textile machinery and accessories not only for the cotton textile industry but even for synthetic and man-made fibre, and some major items for woollen and jute textile industries.

Mr. Mehta said the third-world countries had great problems for choosing appropriate technology, though there was the need for acquiring such technology which would enable them a faster rate of industrialisation than would be possible otherwise. There had been clear indications in the recent past, he said, that the process of selecting and implementing relevant technologies in most of the third-world countries had been haphazard causing a great deal of concern among the technocrats in such countries.

The management side of sophisticated technologies, Mr. Mehta said, was equally important. Even in India, a few textile units in their eagerness to modernise, adopted wrong priorities and in that process came to grief after making huge investments.

Mr. K. Rajagopal, president, Indian Cotton Mills' Federation, said that on account of the interaction between the textile industry's necessity to acquire a keen competitive edge and the textile machinery manufacturers' anxiety to ensure supplies from domestic production to the maximum extent, it had been possible for both the mill and machinery industries to take the right steps at the right time.

Referring to the integrated textile policy, he hoped that the government would take all possible steps to ensure increased production of the industry. The industry, he said had occasions to impress upon the government the need for initiating a series of steps to facilitate modernisation without tears.

Mr. Atul Bhagwati, chairman, Textile Machinery Manufacturers' Association, proposed a vote of thanks.

INDO-EUROPEAN ENGINEERING COOPERATION STUDIED

Bombay THE TIMES OF INDIA in English 27 Nov 80 p 23

[Article by Ramesh Chandran: "Conference on Tie-ups With W. European Contractors"]

[Text] Paris, November 26: A two-day conference on cooperation between West European contractors and Indian engineering firms interested in subcontract work, organised by the Engineering Export Promotion Council, opened here on Monday.

The largest of its kind to be held here, it has attracted a sizable Indian delegation of 50 members and 173 representatives from West European countries. France leads with 45 delegates, followed by West Germany and Italy, 34 each. The other countries represented are Belgium, the U.K. the Netherlands, Denmark, Austria and Spain.

The purpose of the conference is to enable Indian and European firms to "co-tender" and "co-contract" in projects in the developing countries, especially in West Asia and Africa. Conference officials maintained that such joint working would contribute to more-effective cost competitiveness and efficiency, "displacing mutual rivalry, unhealthy competition and unethical business practices".

The tie-ups between Indian and West European firms have hitherto been on an ad hoc basis. So it is thought necessary to co-ordinate the efforts, even institutionalise them, in a bid to achieve a measure of regulation in areas like markets, specialisation, project location and overall project economy.

Better Equipped

The European delegations are being briefed about the capacity and skills of the Indian engineering and construction firms where quite often they are better equipped to attain economy in the cost of capital goods which is so vital to certain project costs, India is often better placed to cater for the equipment requirements of projects in West Asia and Africa on this basis.

Moreover, Indian contractors have already undertaken projects, including turnkey plants, in West Asia and Africa. Since the European contractors and suppliers are also already participating on a massive scale in the industrial and developmental programmes of the developing countries in West Asia, the scope of co-operation is said to be "limitless".

As one official pointed out, one of the aims of the conference is to draw up an "inventory of mutual capabilities with a view to providing the most economical and optimistic project package by the two sides."

For the uninitiated Western industrialist, lists of material in whose production India has achieved advance skills are readily made available. It was pointed out that the country ranked tenth among the most-industrialised nations and the eighth largest producer of industrial goods. It also had the third largest reservoir of technical and scientific manpower.

Appropriately, the phenomenal strides made in exports by the engineering industry in the past 25 years is being emphasised. The exports have increased from Rs. 5 crores in 1956-57 to Rs. 900 crores in 1980-81. A wide range of primarily iron and steel-based items, consumer durables, capital goods, projects and services are being exported by the country. The European industrialists are told that the Indian industry has planned to step up the present level of exports to Rs. 10,000 crores by 1990-91.

Overseas Contracts

The Indian industiralists have also attempted to analyse the magnitude of the success achieved by India in civil construction in securing contracts from overseas countries to the tune of $3,000 million in the face of stiff competition. These include the construction of hydro-projects, bridges, dams, international airports and townships.

To those overseas industrialists who are hesitant to tangle with India's proverbial bureaucratic red tape, the delegates have been quick to point out the changing composition of national production being reflected in the changing pattern of India's foreign trade. The process of transfer of technologies has already been set in motion. Of the 199 joint venture projects entered into by July 31, 109 have already gone into production and 83 are under implementation. The investment involved in these projects is nearly $100 million.

The Engineering Export Promotion Council, which is heading the Indian delegation, is striving to stress its role as a catalyst in the promotion of export of India's engineering goods through its network of ten foreign and four regional offices within the country.

As one delegate has pointed out, their task is to convince Western industrialists that in a space of two decades Indian engineering industries have matured from being supplies of basic products to the domestic market protected by a thick wall of import restrictions to outward-looking and dynamic traders, seeking and winning big foreign contracts.

Publicity Drive

Among those participating in the conference included Mr. Khurshid Alam Khan, minister of state for commerce, Mr. M. Rasgotra, ambassador to France, Mr. P.K. Dave, ambassador to Belgium and the EEC and special economic envoy in West Europe, and Mr. G.D. Shah, chairman of the council. The French minister of external trade, Mr. Michel Cointat, addressed the conference.

There has been a well-orchestrated publicity campaign for the conference here. Paris's leading daily, Le Monde, carried a six-page supplement on India's industrial potential. It also featured articles on the Tata empire and the prospects for closer

French co-operation with India's industry. Elsewhere, this week's European edition of Time magazine issued a 12-page special advertising section on India which also mentioned the conference.

At the conference, among one of the widely-distributed printed notes was a statement on India's industrial policy by the minister of state for industry, Dr. Charanjit Chanana, in both French and English. In an otherwise cohesive analysis, it contained severely-critical references to the performance of non-Congress governments and flattering reference to the Congress government.

In a paragraph on the "take-off stage", the minister's statement said: "The industrial progress of India during the past three decades can be attributed to the policies pursued by the Congress governments. While the country reached a take-off stage in mid-1970s, both the growth channels--optimum utilisation of installed capacity as well as expansion of industries--were choked off by the 33-month rule of the Janata party and its successor government.

DELHI INVESTIGATES CHANGE IN PRICE INDEX BASE

Calcutta THE STATESMAN in English 26 Nov 80 p 9

[Text] New Delhi, Nov. 25.--Having rejected the Rath Committee's report on correcting the consumer price index, the Government has decided to go through another exercise of investigating the preparation of a new series with 1980-81 as the base.

The exercise will be undertaken by a committee headed by Mr K. C. Seals, Director-General of the Central Statistical Organization. The committee has been asked to submit its report in two months' time.

The consumer price index, on which the dearness allowance formula is based, is supposed to be revised every 10 years. This revision is considered necessary in order to link the series with the prevailing consumption pattern and prices. The changes in the index are expected to take care of the changes in the consumers' tastes, habits, income and the average expenditure on consumption items.

The present series of consumer price index numbers for workers have been compiled by the Labour Bureau, Simla, on base 1960-100 and are based on the family budget enquiries conducted in 1958-59. The Labour Bureau prepared a new series with 1971 as the base year but there was strong opposition to it from trade union organizations. The bureau was told that the old system of compilation was faulty and there was no point in introducing a new series with the same old faults. Thus, the 1971 consumer series remained merely an official exercise.

The Rath Committee, which had been appointed to rectify the consumer price index numbers three years ago, submitted its report to the Government in January, 1978. But, the Government rejected the unanimous recommendations of the tripartite Rath Committee on the plea that their implementation might generate more inflation. The implementation of the committee's report would have meant a minimum seven-point rise in the consumer price index, making another instalment of dearness allowance due for employees in the Centre and State Governments. Quite apart from the additional financial burden on the private sector units, increased dearness allowance for Government employees would have meant an additional monthly expenditure of Rs 2 crores to the Central Government alone.

The Rath Committee had not favoured any fundamental departure in collection of price indices as was demanded by trade union representatives, but only suggested the correction of some faults in the computation of indices in regard to some items.

The rejection of the committee's report has been criticized by trade unions on the ground that this amounted to denial to the workers of neutralization of the cost of living through additional dearness allowance due since the 60s.

JUTE GROWERS REPORTED IN 'DISTRESS SEASON'

Calcutta THE STATESMAN in English 27 Nov 80 p 10

[Text] This has been another season of distress for the jute growers. Prices in the open market have crashed to Rs 50 a quintal below the statutory minimum, probably the lowest ever.

According to informed sources, the main reason for the prevailing low prices is the high production in the past three years. In 1978-79, the production was an all-time record of 8.2 million bales. In 1979-80, it was 7.6 million bales and this year it is estimated to be between 7.5 million and 8 million bales.

In addition to the high production, substantial quantities of raw jute are regularly being smuggled in from Bangladesh, where production has been so high in recent years that the Government there has been forced to do away with the system of having "floor prices" for the crop. It is believed that the jute is smuggled into West Bengal in exchange for items like paddy or salt.

According to the sources, the total availability of raw jute this year is about 11 million bales including a carry-over stock of 3.4 million bales from last year. Since the consumption is estimated to be only about 8 million bales, there are believed to be no chances for the farmers getting a remunerative price as long as there is such a huge glut in the market.

As in the past few years, the performance of the Jute Corporation of India has not been satisfactory. Till now, it has been able to procure only about 600,000 bales. Since only about 50% of this quantity has been bought directly from the growers, it has not been able to make any impact on the price situation.

Since its inception in 1971, the JCI has never been able to procure more than 11% of the total jute crop. Its share this year is not likely to go beyond 5%. The JCI is burdened with a huge unsold stock of about 1.3 million bales. This has led to the blocking of costly space in the godowns.

One way to ease the glut in the market is through the export of raw jute. But in this, the JCI has not met with much success. Till now, it has been able to export only about 100,000 bales.

TENSION REPORTED IN WEST BENGAL HARVEST

Calcutta THE STATESMAN in English 27 Nov 80 p 16

[Text] Burdwan, Nov. 26.--The countryside in West Bengal looks lovely at this time of the year. As you drive out of any mofussil town you see fields of golden paddy ready for the sickle. In some areas harvesting has just begun. Women are seen in fields tying paddy stocks in bundles.

The scene is idyllic. But there is considerable tension during the harvesting season. In Burdwan district, which has witnessed many wild fluctuations in the past years in the political fortunes of the two main rivals--the CPI(M) and the Congress (I)--clashes during harvesting are a regular feature. This year the tension is brewing between the Congress (I) and the CPI(M).

According to official sources, at least 25 clashes have so far taken place in which no less than 55 people, including women, were injured and about 40 people arrested. So far, 18 police camps have been opened. At least, one camp for each thana will be set up soon. A special control room has started operating with five deputy magistrates on round-the-clock duty.

The district authorities fear the situation may deteriorate during the first week of December when harvesting will be in full swing. Clashes reported so far have been mainly over daily wages to farm labourers.

Senior police officials feel that more vehicles and men are needed. The district with an area of 7,007 sq km and a population of 5.5 million, has only about 2,800 policemen. The authorities have asked for more force and vehicles. So far, one company of police has arrived and four vehicles have been available, according to Mr H.A. Safwi, Superintendent of Police. There are more than 300 "traditional trouble spots" in the district.

More than 10 people, said to be CPI(M) supporters, were injured when a jotedar allegedly fired on them when they were harvesting paddy in a plot at Mollasarui in Galshi area on November 20. More than 12 persons including seven alleged Congress(I) men were arrested. Police seized two guns from the jotedars.

Commenting on an incident of alleged forcible harvesting at Maro in the Budbud thana area by the CPI(M-L) followers a spokesman of the party said: "Our party will side by actual bargadars".

The main issue of trouble in the villages at present is the strike by agricultural labourers. A strike has been called over the demand for a minimum daily wage of Rs 8.10. According to official sources, there are about 304-500 agricultural labourers in the district. The landowners say it is "simply impossible" for them to pay such a "high amount". One of them said: "We are ready to pay Rs 3 and a certain amount of rice, apart from conventional mustard oil and bidi. A daily wage of Rs 8.10 will compel us to abandon farming.

The controversy may have a long term effect on relations between the landowners and labourers, nearly 50% of whom come from other districts. The CPI(M) leaders are determined to champion the cause of the labourers. However, Mr Mehboob Zahidi, chairman of the Burdwan Zilla Parishad, said that some sort of a "compromise" was being allowed between the landowners and the sharecroppers. "Our panchayats have been asked to urge those who can afford to pay not to deprive the labourers", he added. An all-Party meeting was held here yesterday on this issue, with Mr Zahidi in the chair.

Congress (I) sources, however, allege that the CPI(M) men are not allowing even "willing workers" to harvest and that they are terrorizing farmers who are harvesting with labourers brought from outside. Small and marginal farmers who did not contribute to the CPI(M) fund are not spared, it is alleged.

Some followers of the Forward Bloc (Marxist) were allegedly assaulted by members of the Krishak Samity, the peasant organization of the CPI(M) when they were working in the fields on November 12 violating the strike call by the Krishak Samity to press their demand for the minimum daily wage.

Another major point of dispute is land tenancy. According to official sources, many peasants who were allotted land during the second United Front regime were evicted by the Congress after its 1972 victory and plots were redistributed mainly among Congress supporters. The present landowners fear their crops would be harvested "forcibly" by others. They do not appear to draw much comfort from official assurance that only those who had sown paddy seeds would be allowed to harvest.

The CPI(M) leaders make no secret of their intention to take over land which was "distributed improperly" during the Congress regime. Mr Zahidi said that his party would help harvest crops on land bargadars had done the sowing. According to him there are about 1.15 million acres of agricultural land in the district. During the past three years about 24,500 thousand bargadars have been recorded. About 75 cases concerning land disputes are yet to be settled.

The police face a tricky situation because in many cases court injunctions and Government directives appear to clash. There are instances of jotedars obtaining injunctions on harvesting where bargadars claimed to have actually done the sowing.

The police in some cases have been asked to seize the disputed crop but the bargadars, it is felt, cannot afford to wait until disputes are resolved. Efforts are being made to sort out such cases through negotiations at the block-level committees comprising block development officers, junior land reforms officers and officers-in-charge of the police stations concerned.

BENGAL FLOUR MILLS HIT BY IRREGULAR WHEAT SUPPLY

Calcutta THE STATESMAN in English 26 Nov 80 p 4

[Text] The irregular supply of wheat has seriously affected production at flour mills in West Bengal. Some time back, the Centre, in order to conserve the wheat component in the Central buffer stock, had reduced the wheat quota of the State's flour mills by half. But during the past two months, the flour mills in the State had not received even this reduced flour quota, it is learnt.

As a result, the capacity utilization of the flour mills has not dropped to 35%. There are 35 flour mills in the State and of these, 21 are in the greater Calcutta area. It is stated that the wheat supply to the mills in Calcutta and Howrah was short by 1,000 tons and 1,800 tons in September and October, respectively.

The situation in the districts was worse. The monthly wheat quota of the mills in the districts was 6,000 tons. Supply to these mills fell short by 50% and 35% in September and October, respectively. The shortfall in supply is said to have been caused by the depletion of stocks at the Food Corporation of India's godowns.

Apart from the shortfall in the supply of wheat, the mills were handicapped by the suspension of wheat supply by lorry transport contractors from November 4. The contractors demanded an increase in the transort charges by 25% to 40%. But the flour mill industry, being a controlled trade in terms of price, production and distribution of the end product, considered the demand excessive.

Several mills were compelled to suspend their production as they had no wheat stock left. The contractors, however, resumed supply from November 13 when talks for a settlement of the dispute started. An agreement is expected to be signed shortly ending the disputes between the mill owners and the contractors, it is stated.

The mills, it is learnt, are not happy with the wheat stock position in the FCI godowns in and around Calcutta. There have been occasions in the past few weeks when no delivery programmes could be given by the FCI because of lack of stocks at the godowns. At times, mills had to lift wheat straight from the rakes to maintain their production.

BRIEFS

MERCURY DEPOSIT DISCOVERED--New Delhi, November 26 (PTI): The Geological Survey of India has located an occurrence of native mercury at the southern tip of the Arnala Island near Bombay. The spot is about 1.5 km away from the sea coast submerged under a column of 1.5 metre deep seawater. It is exposed periodically for an hour or so twice a month when the tide is very low during new moon or no moon days, says an official release. The GSI has initiated action for investigating on a priority basis the collection of basic geological data. The investigation would enable the GSI to draw up further exploration programme. [Text] [Bombay THE TIMES OF INDIA in English 27 Nov 80 p 13]

CONGRESS(U) SESSION CANCELED--Ajmer, November 26: The plenary session of the all-India Congress committee (U), which was scheduled to be held next month in Jodhapur, has been cancelled. It is understood that the pradesh Congress (U) chief, Mr. Nathu Ram Mirdha, has expressed his inability to hold it. [Text] [Bombay THE TIMES OF INDIA in English 27 Nov 80 p 14]

DOWRY CRIMES--New Delhi, November 26 (PTI): The government has ordered compulsory investigation and post mortems in cases of married women dying in unnatural circumstances during the first five years of their marriage. This was stated in the Lok Sabha today by the minister of state for home affairs, Mr. Yogendra Makwana. A circular had been issued to the states and territories with instructions that "serious notice" should be taken by the police of all cases of "attempted suicide" or death in suspicious circumstances of young married women. Officers not below the rank of deputy superintendent of police should personally investigate such cases. A team of doctors should do the post-mortem where required. The government has further directed that disposal of bodies without post mortems should not be permitted except with "no objection" certificates by the police and the police should not give such certificates unless the bodies had been seen by parents, guardians or other close relatives from the woman's side. [Text] [Bombay THE TIMES OF INDIA in English 27 Nov 80 p 14]

TANK PURCHASE PROPOSAL--New Delhi, November 26 (PTI): The Indian government proposes to acquire some more sophisticated battle tanks from abroad as an interim measure, the Lok Sabha was informed today. The country was, however, trying to develop its own main battle tank (MBT), which would incorporate futuristic technological advancements, the minister of state for defence, Mr. Shivraj Patil, said. Mr. Patil told Mr. Chintamani Jena and Mr. Chhitubhai Gamit in a written reply that the Vijayanta tank was not likely to become out-of-date soon. It had a 105-mm gun, which was considered to be the optimum tank gun during the sixties and had been adopted by most advanced countries at that time. [Text] [Bombay THE TIMES OF INDIA in English 27 Nov 80 p 14]

NEW MANIPUR OFFICIALS--Imphal, November 27 (PTI): Mr. Rishang Keishing, newly-elected leader of the legislature Congress(I) party, was sworn in today as chief minister of Manipur. Along with him two cabinet ministers and a minister of state were also sworn in. The governor of the north-eastern states, Mr. L.P. Singh, administered the oath of office and secrecy to the ministers at Raj Bhavan here. The former chief minister, Mr. R.K. Dorendra Singh, and high civil and police officials were present. The ministers sworn in today are: Mr. I. Tompok Singh, leader of the Congress(U) legislature party, and Mr. Ngurdienglen. Mr. Th. Krishna Singh of the Manipur People's Party (G) was also sworn in as a minister of state. Mr. Keishing heads a three-party coalition ministry, comprising the Congress(I), the Congress(U) and the Manipur People's Party (G) with a total strength of 36 in the 60-member legislative assembly. The new ministers, including Mr. Keishing, were members of the previous coalition ministry headed by Mr. Dorendra Singh who had resigned following his appointment as ambassador to Norway. [Text] [Bombay THE TIMES OF INDIA in English 28 Nov 80 p 9]

JAGUAR PURCHASE PLANS--New Delhi, November 27: Sir Frederick Page, chairman of British Aerospace, announced today that the Jaguar deal with India was going ahead as originally planned. The deal falls into three parts--purchase of a certain number of Jaguar planes from Britain, their assembly in India and finally their manufacture in Bangalore. Sir Frederick, who is a member of the British industrialists' delegation to India, told newsmen that all the three phases were intact. Some Jaguar planes had already been bought by the Indian Air Force and the supply of further aircraft was proceeding. Sir Frederick prefaced these remarks by expressing his "happiness" with the statement made by Mrs. Indira Gandhi on January 19 on the Jaguar deal. [Text] [Bombay THE TIMES OF INDIA in English 28 Nov 80 p 9]

SINO-INDIAN INSURANCE TALKS--Beijing, November 27 (PTI): Sino-Indian bilateral cooperation in the field of general insurance moved a step forward following just-concluded talks between the New India Assurance Company, a public-sector undertaking and people's Insurance Company of Chian. The two-member Indian delegation was led by Mr. A.C. Mukherji, chairman-cum-managing director. The Hong Kong based manager of the company, Mr. Samarth, also participated in the talks. During its visit here, the delegation had wide-ranging discussions to define the areas of cooperation between the two insurance organisations. [Text] [Bombay THE TIMES OF INDIA in English 28 Nov 80 p 12]

STATISTICS ON POVERTY--New Delhi, November 27 (UNI): More than 48 per cent of the country's total population is below the poverty line, according to the latest

assessment of the planning commission. Giving this information in the Rajya Sabha today, the planning minister, Mr. N.D. Tewari, said this fresh estimate of percentage of people living below the poverty line had been prepared by analysing consumer expenditure data for 1977-78. The estimates were derived by using the poverty line of Rs. 65 per capita per month in 1977-78 prices corresponding to a minimum daily requirement of 2,400 calories per person in the rural areas and the poverty line of Rs .75 corresponding to requirement of 2,100 calories in the urban areas. According to these estimates, 50.82 per cent of the rural population and 38.19 per cent of the urban population and 48.13 per cent of the country's total population is below the poverty line. [Excerpt] [Bombay THE TIMES OF INDIA in English 28 Nov 80 p 20]

NEW NAGALAND MINISTER--Shillong, November 26: Mr. Pongam was yesterday sworn in as the minister of state in the Nagaland council of ministers, headed by Mr. J.B. Jasokie. With the induction of Mr. Pongam, the strength of the Jasokie ministry has increased to 19. Mr. Pongam fills the vacancy caused by the resignation of the former industries minister, Mr. K. Chishi. [Text] [Bombay THE TIMES OF INDIA in English 27 Nov 80 p 22]

COOPERATION WITH SENEGAL--Ahmedabad, November 26: The Indian Farmers' Fertilizers Cooperatives (IFFCO) will, in a multi-national project, set up a phosphoric acid plant in Senegal, on the west coast of Africa. The Rs. 100-crore project to be set up with Senegal, French and IFFCO collaboration will be assisted by the World Bank. Mr. Brahmkumar Bhatt, chairman of IFFCO, told reporters here yesterday that the entire production of the plant would be imported to the IFFCO's Kandla plant for producing phosphatic fertilisers. This was being done because at present the Kandla plant, with an annual production capacity of 3.75 lakh tonnes, had at times underutilised its capacity for want of adequate supply of phosperic acid. At present the raw material was being imported from five countries. The IFFCO investment in the Senegal project would be Rs. 8 to Rs. 10 crores. REAGAN'S VIEWS ON RELIGIOUS WAR ANALYZED

Karachi THE MUSLIM WORLD in English 13 Dec 80 p 2

[Article by Dr Viqar A. Hamdani]

[Text] The President-elect, Mr. Reagan, in an amazing remark (ridiculing Muslim religious feelings) in an interview to Laurence I. Barrett, Time Senior Correspondent, published in its issue of Nov. 17, 1980, has reportedly said, "and lately we have even seen the possibilities of, literally, a religious war—the Muslims returning to the idea that the way to heaven is to lose your life fighting the Christians and Jews," and consequently drew countrywide indignant protests from numerous American Muslim and religious organizations. Also, some of the representatives of Christian and Jewish NGO's at the United Nations privately expressed in no unmistakable terms their dismay and disapproval of such an irresponsible remark. At the same time, no such protest or even response to my knowledge was expressed by any responsible Muslim government in the Middle East or any of its representatives at the U.N. or in Washington.

One is therefore naturally tempted to ask as to why Mr. Reagan went out of his way to make a belligerent attack on Islam and stranger still, why the Arab and Muslim governments did not utter a single word of protest. In fact, the leading Saudi newspaper, Al-Riyadh, in its issues of Nov. 12 and 16 reproducing the above interview clearly expunged the unpalatable reference to "religious war." It is possible that the Time International or Middle East edition itself did not carry that portion of the statement.

The possibility of inadvertence or ignorance on the part of Mr. Reagan seems remote. In fact, Mr. Barrett of the Time Magazine deliberately prefaced his question with the words : "You have been very explicit in your support for Israel including its West Bank settlements ;" an obvious reference to Mr. Reagan's election campaign statements. So, after winning a landslide victory, Mr. Reagan was no longer a prisoner of his earlier campaign statements on Israel. In fact, it was an opportunity for him to express his views more freely away from the "campaign rhetoric."

In preparation of his important policy statement, Mr. Reagan seems to rely heavily on his expert advisers which include a number of Begin allies holding the President-elect to a tight pro-Israeli policy as well as some others who advocate a more balanced and even-handed approach to the Middle East policies endeavoring to pull the President-elect back from an all-out support for Israel. Thus, this aggressive reference to "religious war" and by inference to the Islamic doctrine of Jehad,

with all its ugly connotations in the Western mind, might well have been inspired by some of his advisers and aimed at Khomeini and Co. ; the company has lately been enlarged by the free and unorthodox use of the term "Jehad" by at least two more leaders.

President Saddam Hussain, the Arab nationalist leader of Iraq, declared on Nov. 9 marking the start of the new Islamic year 1401 that Iraq was engaged in a holy war to defend ideals of the message of Islam. The other Arab leader, Libyan President, Muammar Qadhafi, also called for Jehad or holy war "to liberate the House of God in Mecca."

One should further recall when Prince Fahd of Saudi Arabia enraged at the Israeli rejection of his offer of cooperation toward a full settlement and further tightening of its control of Al-Quds and expansion of settlements, rhetorically asked whether any one might blame the Arab world for turning to an Islamic holy war instead.

Finally, the question of reticence of the Arab world on this provokingly anti-Islamic remark of the President-elect can be explained by its hope that it will be able to bargain a better deal once Reagan is in office as President. This is reinforced by the view expressed by Mr. Habib Al-Chatti Secretary-General of the Organization of Islamic Conference that Reagan will be a better partner of the Islamic world than Mr. Carter.

GOVERNMENT FAMILY PLANNING PROGRAM SUPPORTED

Karachi DAWN in English 18 Dec 80 p 7

[Editorial]

[Text] AFTER a lean period of some years during which population planning was relegated lower down in the list of priorities, the Government has finally come out with approval for a programme to check the rapid population growth in the country. In giving approval to a 'comprehensive' three-year plan the Government hopes to bring down the population growth rate from the steady three per cent of the last many years to two and one half per cent. Details of exactly how the Government proposes to go about this have not been released, but, broadly, one intention is to integrate all Government and non-Government departments, including the Family Planning Association, for providing motivation and services. It is also intended to use large organisations like the railways and others in industry to promote the concept of family planning in the urban areas, while these services will be performed by local bodies in rural areas, in addition to normal departmental methods. This departure from the earlier procedure of almost exclusive dependence on the Government's agencies for providing services and motivation is, of course, a welcome step. Specialised Government agencies will find it difficult, or at least very expensive, to disseminate information properly to the entire population. The involvement of local bodies, and large organisations, in both public and private sectors, will be a great help and the relevant agencies should draw up schemes which can be conveniently adopted.

This three-year programme is part of the overall population welfare plan which does not isolate population planning. Instead, it seeks to integrate it with activities aimed at the general welfare of the people, through uplift of women, among other methods. The plan also aims at mass involvement which, apart from the role of large organisations, will also involve the services of diverse factors like social security institutions, small industries and trade union representatives. If the plan really gets off the ground successfully, then it will be an occurrence of considerable significance. The essential prerequisites for success are, of course, first of all an adequate allocation of funds by the Government, which has been very close-fisted in this matter in the last few years. Apart from this, there is a need for honest and imaginative implementation of the plan, in its direction and execution. Given these factors, there is no reason why a family planning programme cannot be successful in this country. Other developing countries have proved that effective programmes can be mounted: for instance, between 1960 and 1978 the crude birth rate in India dropped almost 19 per cent, and in Indonesia 21 per cent. Even more important and indicative of the people's receptivity to family planning are the results of some surveys which have been carried out in the country. One, in 1976, showed that only 10 per cent of the sample group adopted family planning measures, but 52 per cent were interested in them. It was not revealed why this 52 per cent could not take steps when

they wished to, but the likely reasons are probably lack of information and high cost. The more recent World Fertility Survey also showed that half the married women in Pakistan did not want any more children but less than a sixth of them went in for modern ways of contraception. There can be little doubt, therefore, that if an efficiently run family planning programme is introduced, then it can be successful in reducing the birth rate fairly quickly. The urgent need for this cannot be overstressed, for a high rate of population growth is at the root of many of the country's worries.

INTEREST-FREE BANKING FROM 1 JANUARY

Karachi DAWN in English 19 Dec 80 pp 1, 20

[Text] ISLAMABAD, Dec 18: The Federal Cabinet today gave approval to amendments in several banking laws in order to pave way for the introduction of interest-free banking from Jan 1.

Mr H. U. Beg, Federal Finance Secretary, said procedures had been worked out for establishing Profit and Loss Sharing (PLS) deposit counters from Jan 1 in all branches of the nationalised commercial banks.

The Finance Secretary gave details of the introduction of Islamic reforms in banking in Pakistan at a Press conference and said during the initial phase the interest-based system in banks would continue to exist parallel with the interest-free system. Foreign banks had been given option to introduce interest-free counters and the Finance Secretary claimed that at least one American bank intended to do so while other foreign banks also showed interest in introducing the Islamic reform.

Mr Beg said the amended banking laws would be published in a couple of days.

According to him, Pakistan's experiment in Islamic banking was the first statutory effort in the Muslim World although Saudi Arabia also did not recognise interest in banking. Asked whether the commercial banks in Pakistan commanded enough confidence of the people so as to induce them to respond to PLS system, the Finance Secretary said, it would be apparent when the system opened for public participation. Their response should indicate people's confidence in the Islamic reform, he said.

The Finance Secretary explained that it was necessary to go slow in introducing the interest-free banking in place of the present system so as not to upset the whole system. He, however, expressed his confidence in the new Islamic system as the ultimate banking system for Pakistan and its people. He said the advantages of interest-free banking would be clearly visible in time to come.

Replying to a question, the Finance Secretary said Pakistan would adopt interest-free banking in international transactions as well if and when the foreign banks and agencies also stopped charging interest on their loans and financial transactions.

Mr Beg said funds mobilised through interest-free counters would be investible in interest-free avenues. In the first phase it was intended to invest such funds in the financing of commodity operations of the Federal and provincial Governments and other agencies, export bills purchased or negotiated under letters of credit, NIT units and House Building Finance Corporation.

TEXT OF STATEMENT

Following is the text of the statement made by the Secretary, Ministry of Finance:

"In his broadcast on the 12th Rabi-ul-Awwal, 1399 (Feb 10, 1979), the President had given an assurance to the nation that interest-free banking will be introduced in the country in a phased manner.

At the time of presentation of the last Budget, the Government announced that separate counters in the nationalised commercial banks for accepting interest-free deposits will be opened not later than Jan 1, 1981. The task involved reviewing of the present banking and other relevant laws. The exercise is complete and a package has been evolved.

"Interest-free banking based on the principle of profit and loss sharing will be introduced in a phased manner. The Profit and Loss Sharing (PLS) deposit counters will start functioning in all branches of the nationalised commercial banks with effect from Jan 1, 1981 for which a procedure has been worked out.

"During the initial phase the interest based system will exist parallel with the interest-free system. Foreign banks operating in Pakistan will have the option to open interest-free counters.

"Interest-free accounts can be opened either as saving account or term deposit account of maturities varying from six months to five years and above. The PLS savings account will be opened with a minimum of Rs 100/- and PLS term deposit account with a minimum of Rs 1,000/-.

"These accounts can be opened either by depositing cash or by conversion of an existing interest bearing fixed deposit. In case of conversion the depositor will not suffer any loss. Funds mobilised through interest-free counters will noly be investible in interest-free avenues. The investment thus made will be on the basis of participation in profit and loss, mark-up in price, lease and hire-purchase. The assets in which investment will be made in the first phase have been identified. These are financing of commodity operations of the Federal and provincial governments and other agencies, export bills purchased/negotiated under letters of credit, inland bills purchased/discounted, import bills drawn under letters of credit, investment in NIT units and participation term certificates and provision of finances to House Building Finance Corporation.

"The accounts relating to such funds would be maintained separately from the interest-bearing funds. Based on their earnings the banks shall work out the rates of profit for different types of deposits.

The profits will be distributed to the PLS account holders six-monthly. Details of the new system of "interest-free banking" will be publicised by the Pakistan

Banking Council and the nationalised banks.

"Although interest-free banking is founded on the principle of Profit and Loss Sharing, the banks would endeavour to deploy PLS funds efficiently so as to earn better profits.

"As part of the programme of Islamisation of the banking system an interest-free Qarz-i-Hasna scheme has been devised in which all the five nationalised commercial banks will participate. Under this scheme, financial assistance will be provided to students of outstanding calibre who are unable to pursue their studies due to financial difficulties in selected subjects like oil technology, electronics, engineering, medicine, agriculture etc.

"It also provides for expenses of higher scientific, technical and professional studies abroad as also for travel cost connected therewith.

"No interest will be payable by the recipient of the loan. But he will have to serve the country for a period till the repayment of the loan".

FIRST INSTALMENT OF 99M SDR'S RECEIVED

Karachi DAWN in English 19 Dec 80 p 1

[Text] ISLAMABAD, Dec. 18: Pakistan has received the first instalment of 99 million SDRs, equal to about 133 million dollars, from the International Monetary Fund against the IMF commitment to provide in the next three years 1.7 billion dollars as extended fund facility.

Today's Cabinet decision to enlarge the scope of imports, while maintaining the import range, is stated to be a manifestation of the availability of larger funds from the IMF. Mr. Izharul Haq, Commerce Secretary, said the IMF commitment had facilitated the enlargement of imports.

He contested the assertion that Pakistan was obliged to remove the current ban on certain items of imports under the terms of the IMF facility. But all the same, he said, availability of funds for imports could induce the Government to remove ban on the import of certain items if that was considered desirable from the national point of view.

He said the foreign exchange reserve had also improved and from about 100 million dollars about 14 months ago, these had risen to 480 million dollars. This was in addition to the gold held by Pakistan.

The Commerce Secretary hopefully observed that the stress on balance of payments due to increased imports, as permitted by the Cabinet, would be offset by greater industrial activity in the country. The present facilities, he said, should help increase industrial capacity and generate interest for additional investment, leading to import substitution.

UNICEF-AIDED PLAN FOR DADU, THARPARKAR

Karachi DAWN in English 16 Dec 80 p 9

[Article by Izharul Hasan Burney]

[Text] Water supply and sanitation to over 60 per cent of the total population (2.35 million) of Dadu and Tharparkar districts, training of 3,000 (out of possible 5,000) indigenous mid-wives, and completing the network of immunisation centres in the province are some of the features of the six year UNICEF-aided Action Plan for the development of the child in Sind which goes into operation on Jan 1 next.

Of all Sind regions, drinking water supply problem is most acute in Tharparkar and Dadu districts which are also part of the Indus Basin believed to be world's biggest sweet water reserve underground.

Surveys indicate that in Tharparkar District wells drilled to the depth of 400 to 500 feet reach the source of an enormous and almost inexhaustable supply of sweet water. [as published]

The Action Plan therefore envisages substantial rise in per capita consumption of water by spudding wells in the dry zones, (ii) renovation, improvement and expansion of the existing surface water sources, and (iii) deep bore holes to supplement surface water source in deficient areas, priority going to villages where the water source is more than two miles away. [as published]

In the dry zones of Tharparkar District eight exploratory wells will be spudded by end-1981 and will become functional with suitable additions during the Plan period.

Since increased per capita consumption of water also increases incidence of water-related diseases unless improvements in environmental sanitation and personal hygience are also provided, the scheme provides for hygienic disposal of refuse in the remotest areas of the two districts. [as published] This includes training of elected councillors, teachers and student community, and others who should be the first beneficiary and should set the pace of public education in personal hygiene and environmental sanitation.

Training of Mid-wives

This was started as a pilot project in Mirpur Sakro in 1976. Mobile training teams were formed, spearheaded by the Lady Health Visitor. So far, 45 mid-wives

(daees) have been trained in the use of drugs, anti-septics etc and safe methods of handling pre and post natal cases/problems.

Indigenous mid-wives are an integral part of our society, rural areas in particular, and are destined to play a very important role for a long time to come.

The Action Plan therefore, envisages similar training to 'daees' in other parts of the provinces--to cover 75 per cent of their known strength of 5,000 by 1986.

Under a project director, five mobile teams will be organised at Karachi, Hyderabad, Sukkur, Larkana and Mirpurkhas or Nawabshah. Each team will have two Lady Health Visitors and a social worker besides other staff. They will organise 15-day training programmes for 'daees' who would get a daily allowance and the kit (free) at the end--certificate also.

To protect children from measles, polio, pertussis, TB, whooping caugh, diptheria, tetanus, and tetanus mecnatomum, the Action Plan envisages establishment of 200 main static CPI centres all over the province, consolidation of existing centres, and setting up of sub-centres at the rate of 2-3 per main centre.

The target will be coverage to 50 per cent of the population by 1983-84, extend it to 60 per cent in 1984-85, and to 70 per cent in 1985-86 including all school-going children and 60 per cent of pregnant women.

A large team of vaccinators will be trained to cover the remotest areas, mobility will be ensured for personnel and vaccines, and a surveillance network and evaluation system will be developed to make sure that the EPI centres and sub-centres work efficiently.

Efficacy of the vaccines being of paramount importance, special care will be taken to organise a highly efficient system of procurement, storage and supply at all stages including cold-chain system from the airport to the consumer end.

The scope of this extended project is to cover 150 girls schools (30 each year from 1982 onwards)--30 in Karachi and 120 in Hyderabad division.

Skills will be introduced for girls of Class IV and V in knitting, sewing, embroidery and local craft, to enable girls to earn an average of Rs 30 per month.

During experimental stage in 1979-80 in Karachi, it proved very successful and girls earned extra by selling products in specially organised bazaars.

On the same basis, primary schools will be selected for the introduction of the selected skills.

Popularising ORS

The scheme aims production and consumption of five million oral rehydration salts (ORS) packets annually and their mass distribution by bringing down the activity from the district headquarters level to taluka and village level.

Because of the limited capacity of the National Health Laboratories, Islamabad, some pharmaceutical company will be enlisted for the manufacture of desired

quantity of ORS, while at least 1,000 para-medical personnel will have to be trained for distribution, monitoring and surveillance including reduction in morbidity due to diarrhoea/gastroenteritis.

Mohalla Schools

The objective of this scheme is to fully utilise facilities existing at the mohalla schools by providing extra facilities like a small black-board, jute matting, basic work material like pencils, slates etc and reading materials including books and exercise books.

Slum Improvement

A scheme has been prepared to extend the scope of the Baldia Sanitation Pilot Project to some other 'Kutchi Abadis' like Baluch colony where sewerage system has not been laid as yet and environmental sanitation is a dire necessity.

On an experimental basis, a total of 125 soak pits had been built in Baldia till August last. Sixty more were being built--averaging about Rs 1,800 per unit.

These became so popular that the pending requests exceed the work-pace and better-of residents have built these out of their own resources. [as published]

The objective is that residents of 'kutchi abadis' should built such soak pits themselves or with institutional help to find way for hygenic disposal of refuse and thus bring overall improvement to heal the conditions in the slum areas. [as published]

Repair of Schools

A very important part of the Action Plan is the scheme to repair and overhaul primary school buildings, particularly in the rural areas.

This has been preferred to the alternate plan for in-service training of teachers as it is felt that large drop-outs were also due to the dilapidated state of the school buildings.

The multi-million scheme will be financed to the extent of 95 per cent through UNICEF funds, while Sind Government's contribution of matching funds would be limited to just about five per cent.

Projects for which funds have already been appropriated are worth Rs 144.55 million--UNICEF's contribution Rs 127 million (86.3 per cent) Sind Government's Rs 17.466 million (13.7 per cent).

The following is the complete list and rupee cost of these schemes:

S. No.	Scheme	UNICEF	Sind	Total
1.	Mid-wives training	16,397,000	4,876,800	21,273,800
2.	Health Education	7,140,000	1,000,000	8,140,000
3.	Oral Rehydration Salts	3,618,000	171,900	37,88,900 [sic]
4.	EPI	37,288,000	9,117,700	36,405,700
5.	Income generation (women)	5,700,000	600,000	6,300,000
6.	Girls Income Generation	1,919,000	139,500	2,058,500
7.	Mohalla Schools	2,965,000	60,000	3,025,000
8.	Reading improvements	9,609,000	300,000	9,909,000
9.	Slum improvement	5,730,000	--	5,730,000
10.	Planning Capacity	7,800,000	600,000	8,400,000
11.	Community development	6,500,000	500,000	7,000,000
12.	TB and other drugs	22,420,000	--	22,420,000
	Total:	127,086,000	17,465,900	144,551,900

In addition to the above UNICEF will contribute 95 per cent of the cost of scheme for repair and renovation of primary schools, while its contribution to the scheme for rural water supply and sanitation will be to the extent of 70 per cent.

PARCO COMPLETED AHEAD OF SCHEDULE

Islamabad THE MUSLIM in English 12 Dec 80 p 1

[Article by Sikander Hayat]

[Text] The Karachi-Mahmoodkot oil pipeline project of Pak-Arab Refinery Company (PARCO) has been completed ahead of schedule, saving 15 million dollars it was learnt here today.

The 869-kilometre pipeline is now undergoing debugging operation and it is hoped that it would come on stream by February next year.

The entire project has been done by Pakistani engineers and technicians. Explaining the complex nature of the project, an expert said that welding joints alone were over 70,000.

He said that the mechanical work of the pipeline had proved satisfactory and during the first two weeks of the debugging operation no snag had been detected.

The PARCO Board, which met in Abu Dhabi under the chairmanship of Pakistan's Secretary of Petroleum and Natural Resources Mashiuddin, was reportedly conveyed the appreciation of the United Arab Emirates for the ahead-of-schedule completion of the project.

The work on UAE-Pakistan 195 million dollars joint venture started in October 1978.

The 16-inch pipeline is designed to be used for the movement of high speed diesel, kerosene and light diesel oil from Karachi to market in the north.

It is believed that the pipeline will considerably ease the transportation load of the railways which is now the main source of oil movement from Karachi to the up-country.

OIL AND GAS EXPLORATION

Lahore THE PAKISTAN TIMES in English 14 Dec 80 p 4

[Editorial]

[Text] A Canadian delegation of experts and financiers has arrived in Pakistan to talk about the expansion of the existing co-operation between Pakistan and Canada in the field of oil and gas exploration. In view of the prospect of serious energy shortage in Pakistan this visit is of immense significance. By the end of the present century, Pakistan will require 27,000 MW of installed power capacity but will have achieved only the output of 6,000 MW by the end of the current Five-Year Plans. Even putting all the energy sources together, like oil, coal, gas and hydro-electricity, the total production will not be more than 11,000 MW. There are, therefore, only two courses open to us to reach the extremely tough energy targets. We must use energy sparingly, cutting consumption wherever we can, and must step up our efforts to find more oil and gas in the country to curtail the crippling oil-bill which is expected to spiral further in the coming years. We have been rather complacent about our gas reserves and have allowed large-scale non-productive use of gas as fuel. An early prediction that our gas-deposits would last 50 years perhaps inspired this complacency but a revision of estimates now warns that the gas will be exhausted in 20 years. Unless more gas is discovered in the country, the great gas revolution of Pakistan may come to an abrupt end. There is no limit to the accelerated use of gas and oil in our daily lives. This year the consumption of oil as an energy source, instead of going down following economy measures, has gone up by 17 per cent mostly in the transport sector. Given the state of our transport system the consumption of oil will go further up in the coming years rather than go down.

While the mechanics of conservation and the installation of newly-developed solar and biogas facilities may be complex and unpredictable, the process of exploring additional oil and gas sources is clear-cut and predictable in terms of cost. Recently, foreign experts have once again estimated that there are vast untapped reservoirs of oil and gas in Pakistan. The Indus Basin and the area of Baluchistan together are supposed to contain 53 billion barrels of oil which should be tapped and made available for consumption to remove the burden of foreign debt and to meet the requirements of energy in the growing industrial sector. On the basis of past record, foreign firms should be interested in prospecting in Pakistan. So far 175 wells have been drilled with a strike-rate of 20 per cent. At this rate, the volume of extraction is expected to rise from 10,000 barrels a day to 36,000 barrels a day in 1982. But so far success in the field of oil and gas exploration has eluded us. The prime cause of this delay in achieving autarky in energy is the lack of indigenous technology required for drilling and the unwillingness of foreign prospectors to undertake deep drilling to get at the reservoirs. Most oil reservoirs turn out to be gas

reservoirs upon drilling and are abandoned because of underground pressure of gas which cannot be easily controlled. Deep drilling is, however, the answer and has now become feasible after the steady increase in the international price of oil. The new efforts must be in the direction of deep drilling. At present 75 per cent of the domestic industry is dependant on gas. Oil provides only one-third of our energy needs and we pay one-half of our foreign exchange earnings to purchase it from abroad. The need for oil is increasing at seven per cent annually. The quest for oil and gas must proceed at great speed.

ADB LOAN FOR FISHERIES

Lahore THE PAKISTAN TIMES in English 15 Dec 80 p 6

[Text]

KARACHI, Dec. 14: The Asian Development Bank has granted the $52 million loan to Pakistan for the second Pakistan Marine Fisheries Development Project.

The amount includes 12 million dollars grant from the European Economic Community for the expansion of existing Karachi fish harbour.

The four-member Pakistani delegation which signed the agreement in Manila in this connection said here on arrival that Asian Development Bank will provide $30 million from its special funds resources to complete the project.

The delegation leader explained it that out of the $52 million dollers 12 million are grant while the remaining amount will be in the shape of loan.

The main portion of the loan will be spent on the construction of second fish harbour at Korangi in the first stage on shore facilities will be provided at the site of the new fish harbour which include development work for the tie up of freezing plants and other infra-structure while the second phase will include the construction of jetty and main market.—PPI.

PUNJAB RICE CROP LOSSES MINOR

Karachi DAWN in English 18 Dec 80 p 6

[Text] Islamabad, Dec. 17: Rear Admiral Mohammad Fazil Janjua, Minister of Food and Agriculture, said here yesterday that the losses suffered by rice crop in the Punjab had nothing to do with withdrawal of subsidy on insecticides.

Talking to newsmen on his return here after attending the annual meeting of the Governing Council of the International Fund for Agricultural Development (IFAD), the Minister said that only Irri-6 was slightly damaged in the Punjab and would not make any difference in overall performance of the agriculture sector.

He said Irri-6 variety of rice crop was excellent in Sind while the Punjab had a bumber crop of Basmati rice. [as published] The production of sugarcane also registered an increase. Similarly, cotton production was also satisfactory with a turnout of over 40 lakh bales.

He said the target of rice export would be met by gearing up the procurement and thought that from the next crop procurement prices of Punjab Irri would have to be revised. This is because of its greater demand abroad as it is of better quality.

Describing a newspaper survey of the rice crop as "sensational" the Minister said the subsidized insecticides always benefitted the big landlords while small farmers could not avail of the facility.

He said the IRRI crop suffered in Punjab because of reluctance of farmers to operate tubewells to irrigate the crop at the time of transplantation while in Sind where canal water was available the crop was not damaged. Moreover the Minister said in Punjab farmer preferred to grow Basmati instead of Irri.

He said fertilizers were still being heavy subsidized and was of the view that the new agriculture policy would have a welcome effect and ensured a better performance of the agriculture sector. [as published]

He was confident that the private sector would manage properly the sale of insecticides and also ensure its quality.

He said interest-free loans were being given to farmers through co-operatives and commercial banks to enable them to improve inputs.

About sugar, the Minister said the country would produce more sugar than required by the Government for distribution through ration depots. He said sugar mills would be allowed to sell the surplus sugar in the open market. He said the Government had no intention to increase the prices of sugar and it would continue to be sold at ration depots at the current officially fixed prices.

International Fund

Talking about IFAD, Rear-Adm. Janjua said the Fund would extend financial assistance of 1,500 million dollars to the developing countries during the next three years.

Pakistan was elected chairman of the IFAD Council having representatives of 135 nations. The Fund was created by the United Nations to boost agriculture production of the developing nations.

The Minister was confident that the target of raising 1,500 million dollars would be met and IFAD would continue to play a positive and effective role in eliminating hunger from the world.--APP.

RECENT RICE CROP PROBLEMS REVIEWED

Islamabad THE MUSLIM in English 14 Dec 80 p 4

[Editorial: "Bitter Rice"]

[Text] The survey carried out by this newspaper on the rice crop raises several issues of immediate and long-term concern. With reports coming in of acreage and production fall from several districts, the government needs to think to what extent its own policies have led to the near-debacle on the rice front. Trouble started when the pesticide subsidy was withdrawn this year, causing a great hopper invasion in August. Pleas to the authorities for emergency assistance fell on deaf ears. It is said that the Basmati output may not fall alarmingly but Irri-6 may be anything from 12 to 30 per cent lower than last year. Since Basmati is our main foreign exchange earner, the overall fall in our exports may not be significant. Pakistan earned 421.8 million dollars from the export of rice last year of which Basmati accounted for as much as 225.07 million, while all other varieties sold for 196.80 million dollars. It is said that the international market for Basmati and all other polished grain is contracting gradually and Basmati may soon cease to be the great money-spinner it has been hitherto. Add to this India's recent debut as a rice exporter and the prospects become bleaker for the decade ahead.

The most immediate cause of the rice crisis has of course been the withdrawal of the aerial spray facility by the government. The dreaded hopper caused millions of rupees worth of loss because it could only be contained through sprays. The Basmati is attacked by the borer which requires granular pesticides. Since five commercial concerns have a monopoly in pesticides, they have tended to raise prices at will, greatly reducing consumption. Farmers maintain that at current prices, pesticide purchase means an expenditure ranging between Rs. 200 to Rs. 227 per acre which is simply not an economic proposition. Other vitally needed inputs have also gone up with the result that they require an additional Rs. 500 all told to put just one acre under rice whereas procurement prices have been increased only nominally. This may or may not be true but the fact remains that the agri-sector as a whole deserves a better deal. An interesting fact that may be noted here is that in the Punjab, PASSCO has been asked not to buy Basmati paddy from the growers. This has left the field wide open to the arhtis who are not in business for the love of it. Yet they are buying Basmati paddy at seven to ten rupees higher than the minimum procurement rate of Rs. 75. What does it prove but that the middlemen expect that even Basmati production will be much lower than originally estimated. It is the arhtis who, it is alleged, have put pressure

on policy-makers not to raise the procurement price so that they have the growers constantly on their knees. Which farmer would like to sell his produce to the government when the kind arhti is willing to pay him seven to ten rupees more? The difference between the official procurement price and the rate at which arhtis are willing to lift paddy is, according to knowledgeable circles, the true index of the expected shortfall this year.

So far so bad. What of the future? An expert recently estimated that Pakistan lost an unbelievable 45.8 per cent of its produce to pests, plant diseases, weeds and rodents. This does not include storage and transportation losses. Official circles broadly agree with these findings but maintain that so far as rice is concerned, crop loss on account of the factors enumerated above is 'only' 30 per cent. It is also conceded that five per cent of the grain is lost because of improper storage. The emphasis so far has been on increasing output rather than creating a transportation and storage infrastructure and assuring scientific methods would have made Pakistan self-sufficient in food nearly ten years ago. Thanks to the injection of billions of petro-rupees in the economy, the ordinary investor has learnt to put his money into projects which promise immediate returns. Hence the craze about real estate, legally and illegally imported gadgetry and commerce rather than industry. In a society in which consumerism has gone berserk and in which people want to make a hundred for each hundred invested, long-gestation nation-building activities are always at a discount. Only the other day, the State Bank Governor lamented at the constant fall in national savings at a seminar in Lahore. But with the dramatic decline in the value of the rupee, this should be hardly surprising. In the last three decades, the private sector has learned nothing but to demand tax holidays, exemptions from this social charge or that. After 1970, most private investment has been in commerce rather than industry because commercial returns keep pace with inflation while industrial returns do not. It is imperative therefore that private enterprise be given social direction at least if not social control. There is enough money in private hands. If properly channelled, it could lead to a spectacular increase in agricultural production and make ours a country permanently self-sufficient in food. We have enough shops and more than our share of shopkeepers. It is time we put our men and money to productive work.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Deforestation Rate: None

THAILAND
Total Area: 519,953 sq. km.
Remaining Forest: 132,000 sq. km.
Deforestation Rate: 14,000 sq. km. annually

SOUTH-EAST Asian forests are known to be the most productive in the world. Currently, 70 per cent of the world's tropical wood exports come from Asia and the Pacific.

Among the countries of the Association of South-East Asian Nations (Asean), timber and timber products have been one of their top dollar earners. In fact, the prospects for the region's logging and timber industry never seemed brighter as the world demand for these items increased.

But not for long. Dwindling forest resources and the resulting adverse environmental effects have forced Asean governments to either ban logging totally or strictly regulate log exports.

The state of the region's timber industry may be summed up by a remark of one Malaysian government official: "The current operations of the timber industry are haphazard, ill-conceived and speculative."

World Bank statistics show that tropical wood production grew at an average rate of 5.8 per cent annually from 1961-1976. The forecast for 1976-1990, however, is only 3.5 per cent.

Scientists predict that unless rampant logging and slash-and-burn agriculture — the two major causes of deforestation in the region — are stopped or minimised, Asean forests will be totaly consumed by the year 2000.

Among the five member-states of the Asean, four have extensive forest resources while one, Singapore, has none. Singapore, however, is the leading wood processor in the region.

The rate of exploitation of Asean forests varies from country to country. In Malaysia, nearly one hectare of forest is logged every minute: Thailand's forests only occupy 20 per cent of the total land area and they are declining by 10 per cent annually.

Indonesia has earmarked nearly one-third of its 122 million hectares of remaining forests for logging. In the Philippines, one-third of the land area is still forested but this is being reduced by 7,000 square kilometres annually.

All the five Asean countries depend on exports of logs and wood products as a major source of foreign exchange.

Indonesia's log exports of US$1234 million in 1979, for example are second only to the country's oil earnings.

In Malaysia, the logging industry generates US$1,000 million in dollar earnings. It ranks fourth

after palm oil, rubber and tin.

The logs are exported to Singapore, the European Economic Community, Japan and the US.

While the logging industry generates millions of dollars for Asean countries, it has resulted in unquantifiable environmental damage. Despite massive reforestation programmes and responsible forest management, they have not been able to stem the tide of destruction wrought by deforested areas.

The Philippines provides an excellent example of the rampant logging and the inability of reforestation programmes to repair the damage.

Floods always tend to wipe out the rice crops of the Luzon plains during the rainy season. Minidust storm rage through northern Philippines. And some of the country's once-surging rivers are clogged with silt flowing down from barren mountains.

Scientists do not doubt that these phenomena are indicative of environmental stress brought about by deforestation and excessive logging.

Asean's timber industry is still basically a logging and saw-milling affair, with the exception of Singapore. But even then, spiralling energy costs are cutting into the profits of timber companies.

There have been government attempts to encourage the secondary processing of home-grown timber but the reception has been largely lukewarm.

In Indonesia, the government requires that 45 per cent of its timber production is processed locally. However, only eight per cent of the timber production was processed locally in 1978. Even so, Agriculture Minister Sreadarsono Hadisupoetro says that only 41 out of the 84 wood-processing factories established comply with government regulations.

"Diversification into secondary and tertiary processing," say Malaysian officials, "could turn tons of wood into export dollars."

In Thailand, wastage from its nearly 500 sawmills is being minimised by several Forest Industry Organisation (FIO) export-earning projects.From the wood wastes, the organisation now produces charcoal, hardboard, fiberboard and parquet flooring.

The country earned US$5.35 million out of parquet floors produced from wood wastes in 1979.

Diversification, however, has its drawbacks in the timber trade. Ironically, Malaysia, the Philippines and Thailand face a raw materials shortage when these countries are net exporters of sawn logs.

Added to this problem is the increasing cost of timber, with prices increasing sometimes by as much as 100 per cent. In mid-1978, imported logs cost from US$122 to US$143 per cubic metre. Currently, the asking price is US$173-US$223 per cubic metre.

Thailand, for example, has become Singapore's biggest customer in ungraded sawn timber. Last year, it imported over US$12.6 million worth of timber or roughly 116,330 cubic metres.

Thailand's overall timber imports amounted to US$45 million in 1978 and was expected to reach US$47 million last year. Apart from these legal imports, substantial amounts of Burmese and Kampuchean timber are smuggled in by guerilla groups operating along the rugged frontiers.

The Thai government estimates that it would need 40 million cubic metres of timber by year 2000 unless 14 million hectares of land are reforested soon.

If Singapore remains a paradox in the cut-throat timber industry, it is with good reasons, too. Despite its lack of forests, it ranks as one of the major producers of wood products in the region.

From January-September last year, Singapore exported US$394 million worth of timber and timber products. This represents a 30 per cent increase over the same period in 1978. The bulk of these export earnings comes from sawn timber and plywood.

Singapore's timber industry ranks as the sixth largest export earner and employs five per cent of the country's industrial workforce. Its supply of logs comes from Asean neighbours, with Burma and India supplying the more exotic species.

Its pre-eminence in the industry can partly be traced to Singapore's pioneering lead in the sawmilling business. Its first commercial sawmill was established in 1902.

But even so, the boom days did not arrive until the 1960s when the country's construction industry expanded rapidly and industrialisation of the region grew space.

Despite the generally optimistic outlook for Singapore's timber industry, it cannot be issued a clean bill of health. Like other Asean countries, its timber industry is plagued by labour shortages, rising costs and stricter enforcement of environmental control measures. — Depthnews Asia

JAPAN-MALAYSIA ECONOMIC CONFERENCE IN TOKYO

Positive Influence Despite Alienation

Kuala Lumpur BUSINESS TIMES in English 18 Nov 80 pp 1, 20

[Text]

IT IS not altogether a case of plain sailing for Japanese investors in Malaysia. The sheer size of their investment in this country does not automatically make them model investors.

In fact as revealed by a senior Malaysian official in Tokyo, Japanese investors are far from being exemplary. Not only have they failed to bridge the language gap, they have also been less than willing to transfer their technology to Malaysians.

The observation was made by no other than Datuk Jamil Jan, chairman of the Malaysian Industrial Development Authority (Mida). He said these facts might be unpalatable, but unfortunately they were true.

In respect of technology transfer, Datuk Jamil pointed out that Japanese technicians and production managers had to resort to manuals to convey their instructions to local workers instead of verbal coaching.

Even at the management level, Malaysian managers were alienated by their Japanese employers, who choose to communicate in the Japanese language with headquarters personnel.

Speaking on "Japanese investment in Malaysia — performance and prospects," at the fourth Majeca-Jameca conference, Datuk Jamil pointed out "resentment, suspicion and misunderstanding are certainly not the elements that contribute to the strengthening of economic cooperation between our two countries."

This far-from-satisfactory situation could be remedied by the Japanese offering training opportunities more readily to their Malaysian employees. Even so, this was only a short term solution to bridging the language gap.

Datuk Jamil noted that some headway had been made in this direction. Japanese investors are now offering to train Malaysian workers for varying periods depending on the demands of the particular job.

A long term solution would be for the Japanese to learn more English or Bahasa Malaysia or the Malaysian partner learning Japanese. The latter, he said could be done by the Japanese (both government and private sector) offering more scholarships and incentives for study and training of Malaysians in Japan.

"If Japan would only widen the doors of its training institutions as well as institutions of higher learning to Malaysians, we will be on the right path towards inculcating in our leaders of tomorrow a better understanding and appreciation of the mode of conduct, culture and thinking of the Japanese and Malaysian people, thereby creating a positive climate for future business activities," Datuk Jamil added.

On prospects of Japanese investment in Malaysia, Datuk Jamil said the coming decade would witness the carrying forward of Malaysia's industrial strategies of the 1970s.

While continuing to encourage export-oriented and labour intensive industries, this would, however, take a new direction in that these industries would be dispersed away from the traditional urban centres into high unemployment areas of the east coast of Peninsular Malaysia.

The 1980s will also see Malaysia entering the heavy and engineering industries. Datuk Jamil described this as "an ambitious plan" but added that if Malaysia hoped to make further progress in industrial development it must increase and strengthen the foundation of its industrial sector. "The heavy and engineering industries will contribute to this end," he added.

These had been made desirable and feasible by Malaysia's industrial de-

velopment today combined with its resources. Currently under planning are an iron and steel mill, capital goods manufacturing, aluminium refining and petrochemical plants, and pulp and paper mills.

Reviewing Japanese investments in Malaysia, he pointed out that as at August 1980, a total of 249 projects with Japanese interest had been approved.

There were 165 projects in production as at December 1979 with total investments of $848.8 million. The largest investment was in the textile and textile products industry at $187.7 million followed by transport equipment industry at $164.5 million. The electrical and electronics products industry ranked third with total investments of $61.8 million.

Datuk Jamil pointed out that unlike some other countries which find Japanese dominance objectionable, Malaysia continues to welcome Japanese presence. Malaysia would continue to regard Japanese presence as exerting a "positive influence".

In the past, the sogo shoshas, trading houses, had been instrumental in chanelling trade and investment from Japan. On their own or in partnership, the sogo shoshas had established numerous joint venture projects in Malaysia. A number of these companies' shares are being traded on the Kuala Lumpur Stock Exchange.

Referring to dispersal of industries, Datuk Jamil said that directing industries to certain locations in conformity with the policy was done with due consideration to the availability of infrastructure facilities in these areas.

The dispersal policy, he said, was formulated to achieve balanced growth between the urban and rural areas, between commercial and agricultural areas as well as to reduce the strain on labour and physical infrastructure in the developed areas, by providing the firms an opportunity to enjoy surplus labour and infrastructure facilities in the less developed areas.

Malaysian Export Content Unsatisfactory

Kuala Lumpur BUSINESS TIMES in English 18 Nov 80 p 20

[Text]

MALAYSIA can expect significant changes in the form and pattern of its trade with Japan. This stems from the fact that Malaysia is unhappy over the composition of its exports to Japan and the imbalance in the services account.

Encik Ramli Kusheiri, secretary-general, National Chamber of Commerce and Industry, said for this reason Malaysia intends to step up the exports of processed and manufactured goods to Japan. Japanese trading companies could play their role in meeting Malaysia's aspirations.

Presenting a paper at the Majeca-Jameca conference in Tokyo yesterday, Encik Ramli noted that Japan was Malaysia's largest export market, accounting for about 23.4 per cent of Malaysia's global exports last year, the bulk of exports last year consisted of crude natural rubber, tin, sawn logs and sawn timber, petroleum crude and partly refined and palm oil.

"From Malaysia's point of view, the actual content of its exports to Japan gives no cause for satisfaction. In the decade of the 1980s, Malaysia is expected to intensify local processing of its primary commodities," Encik Ramli added.

In this respect, Malaysia's lack of success in gaining access to the Japanese market for its manufactured and semi-manufactured products was a matter of serious concern. Efforts, however, had to be made — on a bilateral basis — to secure easier access into the Japanese market.

Encik Ramli pointed out that at the present rate of economic development in Malaysia, particularly with the implementation of the Fourth Malaysia Plan, the demand for machinery and equipment and iron and steel products in general (which constitute the bulk of imports from Japan) was expected to grow in the next few years.

With rising inflation in Japan and other developed countries, the price of these goods was expected to rise as well. In view of this, Encik Ramli added, taking the overall trade into account including invisibles, trade surpluses in Malaysia's favour were more likely to be reduced drastically, if not completely eliminated.

"Easier access for Malaysia's manufactured and semi-manufactured products into Japan therefore becomes an important element of Malaysia's trade policies," he said.

Pointing out that Malaysia's exports to Japan consisted of a narrow range of exports, the market prospects of which was also dependent on the well being of the Japanese economy. These products also faced keen competition from Indonesia and Thailand.

Malaysia's market share of tin in the Japanese market had declined from 75 per cent in 1971 to 50 per cent in 1978.

There had also been a decline in Malaysia's market share of natural rubber in the Japanese market from 37.6 per cent in 1973 to 28.2 per cent in 1978. The decline could be attributed to the fact that Japan had emerged as the world's leading producer and exporter of synthetic rubber.

However, Malaysia's exports of palm oil (crude) to Japan had increased from 57,706 tonnes valued at $50.3 million in 1971 to 99,843 tonnes valued at $139.3 million last year.

Encik Ramli, who is also group managing director of Kumpulan Fima Berhad, said that there was a market in Japan for rubber and timber products, furniture, frozen sea food and canned foods provided Japan liberalised its import policy.

DIFFICULTIES IN INDO-BANGLADESH TRADE CITED

Calcutta THE STATESMAN in English 29 Nov 80 p 16

[Text] DESPITE the [illegible] steps for export and industrial collaboration in Bangladesh, the progress made by Indian industrialists in developing trade and commerce with Bangladesh has not been encouraging, according to chambers of commerce sources in Calcutta. Inadequacy of transport and communication between the two countries is said to be the major constraint in the development of trade relations between the two countries.

During a recent discussion on the steps necessary for improving economic ties between India and Bangladesh, organized by the Association of Indian Engineering Industry, Mr M. Dubey, Indian High Commissioner in Bangladesh, felt that poor transport and communication were severely hampering India's export efforts and in many cases had virtually neutralized the advantage of proximity that Indian exporters enjoyed in relation to Bangladesh.

Though some improvement in the field of communication had been made since the liberation of Bangladesh, it had not been up to the desired extent because of lack of incentive to do so. He pointed out that emphasis of trade between the two countries was expected to give the necessary incentement for improvement of the infra-structural facilities in Bangladesh.

He felt that apart from export of goods, Indian industrialists should participate in collaboration projects in Bangladesh to build up additional productive capacity of that country. This was all the more necessary because a healthy and balanced economy could enable Bangladesh to forge an abiding economic and commercial relationship with India. The fear of a section of Indian business men that building of additional productive capacity in Bangladesh would go against the interest of India was not correct, he added.

Other speakers at the meeting said that Bangladesh importers often complained of sub-standard quality of the Indian goods exported to Bangladesh, late delivery and failure of Indian exporters to remit agency commission. It was felt that organizations like the AIEI and Engineering Export Promotion Council could provide advisory service to the entrepreneurs and importers in Bangladesh for purchase of quality goods and for obtaining modern technology from India.

Mr Ashok Bir, chairman of the AIEI, Eastern Region, said that an Indian industrial delegation, which visited Bangladesh in November last year, had identified the fields in which Indian industrialists could collaborate with Bangladesh entrepreneurs for industrial development of that country. Since then Bangladesh had begun its Second Five-Year Plan in July this year. The plan envisaged an industrial investment of Taka 2,600 crores in the private sector.

The industrialization programme under the Second Plan envisages modernization of the old industries in Bangladesh, setting up of some basic industries as a first step towards industrial self-reliance and finally, expansion of industry to help import substitution of some of the essential commodities. No doubt, similarity in the geographical and socio-economic conditions between the two countries and their proximity will give Indian industrialists an immense opportunity to supply equipment and technical know-how for the development of Bangladesh during its Second Plan.

INDIAN PARTICIPATION IN JAKARTA PROJECTS NOTED

Madras THE HINDU in English 1 Dec 80 p 5

[Text]

In its efforts at industrialisation Indonesia finds India a more suitable partner than countries like the U.S. or Japan, according to Prof. Mochtar Kusumaatmadja, the Indonesian Foreign Minister. Our South-East Asia Correspondent, V. T. Sambandan talked to Prof. Mochtar in Jakarta recently.

The interview covered a wide range of issues. The questions and answers on India-Indonesia economic cooperation are of topical interest in view of President Suharto's visit starting today.

QUESTION: What do you think is the significance of the visit now of President Suharto to India? The last visit of this Indonesian President was that of the late Sukarno more than a generation ago.

ANSWER: It is timely and it is mainly a goodwill visit to underline the good relations we have had ever since both countries became independent. We have never forgotten the role India played in our struggle for independence. It was the first country which helped Indonesia gain independence through concrete acts. One of the first Indonesian foreign missions was established in New Delhi. India gave rice to Indonesia breaking the blockade.

We have both fought for the retention of the purity of the non-aligned movement, as we and India see it, fighting off the notion of 'natural allies'.

We also appreciate India's steadfast and able support on the Timor issue. In this sense this visit serves to underscore our relationship.

Technically, of course, it is a return visit. (Mrs. Gandhi visited Indonesia in June 1969 and President Fakhruddin Ali Ahmad in May 1975).

During my visit to India two years ago, I saw the possibilities of increasing trade and economic relations between the two countries. I suggested the Minister of Industry go there. He was impressed.

It is a mistake for a developing country like Indonesia, in its efforts at industrialisation, to always think of countries like the United States, Japan, France and Europe, whereas for certain products countries like India, which are more alike in many respects, are more suitable. That is why I took this up in Pattaya (the ASEAN Foreign Ministers meeting in 1978) for a dialogue with India, instead of the stereotyped dealings with developed countries.

But unfortunately the Indian Foreign Minister did not come (for the ASEAN Ministers' meeting in Kuala Lumpur in June this year). We could have discussed a common stand like that against protectionism and compared notes. It is a pity there has been a setback.

Q: There are 11 Indian joint ventures in Indonesia with more under completion or negotiation. How are they contributing?

A: They are beneficial to Indonesia. For example, there are more and more Bajaj (motorised tri-wheeler) on our streets and helping the small man. You cannot get such vehicles from the U.S. or from France. Italy used to produce them, but no more.

This is a perfect example of cooperation with a country like India that fits with Indonesia's needs. Your engineers do not ask to be put up in expensive hotels. This cuts overhead. They create no resentment with local populations.

Q: Indonesia seems to be now encouraging small-scale industries. Would foreign participation be allowed in them?

A: That would depend on the type of industries open to foreigners, based on the Board of Investment guidelines.

Q: Over the last two years there have been a number of visits at ministerial and other levels between India and Indonesia. Do you think the visit of President Suharto would contribute to expediting projects and further economic cooperation?

A: Sure. Economic cooperation has got to a stage that it has its own momentum. We don't mix up trade and economics with politics. For example, our differences on Kampuchea would not interfere with this.

THRIVING MARKET FOR ILLICIT FOREIGN TRADE

Kuala Lumpur BUSINESS TIMES in English 17 Nov 80 p 19

[Article by Jim Wolf in Rangoon]

[Text] SAPPHIRES, rubies and jade of matchless quality are being smuggled out of Burma to pay for goods from toothpaste to car parts.

But the huge illicit market is grey, not black — a crucial, officially condemned, adjunct to the prime economy in this isolated, socialist nation of 35 million people.

In come everyday items like soap, toothpaste and underwear as well as canned food, bottled drinks and whisky.

Out go rubber, silver, teak and tin in addition to Buddhist art treasures and sacks of the uncut precious and semi-precious stones, their quality unmatched anywhere in the world.

The market — variously termed free, shadow or unofficial — is estimated to handle more volume than its legitimate counterpart, and smugglers are said to "import" and "export" more than the official foreign trade.

It is also believed to be the country's fastest-growing sector.

The commerce thrives because cash-poor Burma, a staunch champion of self-reliance, is unprepared and unwilling to do the importing itself and because state-run cooperatives fail to meet the demand for even basic consumer goods.

While essential foodstuffs like rice and milk, plus limited selections of household goods, are available in the cooperative stores, virtually every Burmese who can afford the mark-up turns to the parallel market for better quality and variety.

Here in the capital and in Mandalay, the second city to the north, streetside stalls in bustling shadow markets feature bright-coloured Thai cottons, German beer, Chinese thermos bottles, Japanese stereos and hundreds of other items.

With Burma's introduction of television earlier this month, pirated video cassettes and players are also finding their way in, leading the strong government of President Ne Win to extend censorship to home movies last month.

Significantly, the clampdown on videotape came after a raid in the Chinatown area of downtown Rangoon netted pornographic tapes including, it is said, the classic "Deep Throat".

The main source of finished products is neighbouring Thailand, with which Burma shares a 1,200-km (1,160-mile) border, parts of which are controlled by drug-running ethnic separatists.

The rebel hill tribes men and the estimated 12,000 guerillas of the banned Burmese Communist Party are deeply involved in the illicit trade, which also reaches across Burma's borders to China, India, Bangladesh and Laos.

In the opium-rich Golden Triangle where Burma, Laos and Thailand meet, much of the commerce centres on the poppies, which are used to produce No. 4 heroin, the most potent variety.

The communists, reportedly getting less aid from Peking than earlier, deal in drugs to fund their operations and buy arms, the only Communist Party known to do so.

Burma has been fighting the rebels, including Shans, Mons and Karens, whose states abut Thailand, since independence from Britain in 1948.

But the long, porous borders, lack of security and huge scale of the smuggling makes it virtually impossible to stop.

Burma is also bounded by the Bay of Bengal and Andaman Sea, plied by Chinese junks that ferry out raw materials to Singapore and Malaysia and smuggle in modern appliances and luxury goods.

The fast-paced illicit trade contrasts sharply with most other aspects of what makes Burma one of the world's most secluded nations, strongly rooted in custom and tradition.

When President Ne Win took power in 1962, he introduced "the Burmese way to socialism," an austere blend of tight military control, neutrality in foreign affairs and socialist economics meant to erase the legacy of the colonial hold on resources.

The country still does not allow private foreign investment and "looks a million times," in the words of one diplomat here, before accepting bilateral aid to ensure no strings are attached.

Recent reports indicate the official economy, spurred by bumper rice harvests and some institutional reforms, has overcome the stagnation of the late 60s and early 70s and is on the path to steady, sustained growth.

With its vast natural resources — Burma is a net exporter of oil and its hardwood forests contain 80 per cent of world teak stocks — the country is potentially one of the richest in Asia.

The shadow market remains a two-edged sword. While it deprives the government of significant revenues from the export of valuable commodities, it provides essential goods that Rangoon is not yet geared to produce.

Over the last few years the gap between official and free market prices has narrowed considerably, reflecting what analysts say is an improvement in the government's production and distribution networks. — AFP.

HAIG NOMINATION SEEN OPENING 'OLD SORES'

BK041441 Bombay THE TIMES OF INDIA in English 23 Dec 80 p 8

[Editorial: "Mr Reagan's Nominees"]

[Text] General Alexander Haig's nomination as secretary of state is more controversial than of other men named by Mr Reagan for cabinet posts earlier. Indeed, the president-elect's initial list surprised those who thought Mr Reagan a hardline, dyed-in-the-wool conservative. Maintaining a tradition of continuity, he has chosen mostly lawyers and business executives belonging to the "East Coast establishment," which has always provided most of the top men in goverment departments. The members of this "set" are generally regarded as moderates whether they be of Republican or Democratic hue. They are more technocrats than ideologues. Though it is far too early to say for sure, Mr Reagan's selections do suggest that there will not be any drastic changes of direction in domestic policy. Of late Mr Carter's Administration was drifting to the right anyway.

General Haig's appointment as secretary of state is, however, something else. For a start, it is bound to rake up old sores. The general was closely associated with Mr Nixon and the Watergate affair; already many Democratic congressmen are decrying the appointment on that account. On the other hand, he enjoys the support of Republican members of the former Senate Watergate committee and his confirmation is not in doubt even though some dust may be raised in the process. Mr Reagan's willingness to take the risk is significant. It shows that he wants a forceful personality to assisthim in the field of foreign affairs. In this sphere, the American President has always had much greater freedom of action than in domestic matters. By choosing Mr Haig, who is an experienced administrator and a respected figure in his own right, Mr Reagan is also downgrading the importance of the post of national security adviser. Mr Kissinger and Mr Brzezinski who previously occupied this post were generally able to get their way and outmanoeuvre whoever happened to be at the helm of the State Department at the time. Friction between the latter and the national security adviser or the coterie round him has been a feature now of as many as three administrations in Washington. Mr Reagan's move will hopefully eliminate it and thus make for greater cohesion in the collective functioning of the U.S. Government. General Haig's views on detente are well-known. He supports the "linkages theory," according to which, U.S. relations with the USSR are strongly contingent on Soviet "good behavior" elsewhere. It is not this that worries some of General Haig's detractors. They feel he is not sufficiently flexible in his thinking to be able to seize the opportunities for accommodation that may arise. Be that as it may, his appointment certainly confirms the view that America is steadily drifting towards greater militarism and a "toughter" approach towards the USSR.

RELIANCE ON SOVIET PROMISE TO SELL CRUDE OIL

Kuala Lumpur BUSINESS TIMES in English 18 Nov 80 p 6

[Article by Prakash Chandra in New Delhi]

[Text] INDIA has been caught in the oil trap due to the Iran-Iraq war.

The situation, experts warn, may become desperate soon. But top officials are taking care to scotch all talk of panic, sudden shortages or even difficulties in procuring oil from an already shrinking world market.

A top Indian official told *Depthnews*: "Why should we worry? The Soviets have agreed to help us. They are producing 600 million tons of oil. And we are raising bumper crops of rice and wheat. Rice alone will amount to 50 million tons during the current season. So, a swap of rice for oil is logical."

Also, both the Iranian and Iraqi governments have assured New Delhi that they would maintain the supply of oil through whatever routes still open to them. Furthermore, the movement of Indian oil carriers will not be impeded in any way.

All this sounds fine until the crunch arrives. Fears are that if the war escalates, it will be almost impossible for New Delhi to procure the six to eight million tons of oil products and some three million of crude still needed for the current year.

Reports suggest that there might be a cut in the use of furnace oil by a government order. There were also rumours that eventually the government may have to resort to petrol rationing.

But it seems that the Cabinet is dead set against oil rationing. What may well happen is a deliberate effort by the government to reduce consumption of petroleum and oil products by public-sector companies which depend on imports for the manufacture of their products such as fertilisers.

India is banking on Russia's assurance to sell at least six million tons of crude to alleviate the crunch. The assurance was given during Indian President Sanjiva Reddy's recent visit to Moscow.

Also, the government has resorted to spot buying on the world market. A spokesman refused to reveal details, but reports suggest that India has already bought some 300,000 tons of crude from the international market.

At the same time, the government has decided to step up oil search to reduce the rising oil bill now estimated at 30,000 million rupees (US$4,000 million).

In a dramatic departure from its earlier policies, the government suddenly called in the "Seven Sisters," the seven oil majors, to bid for collaboration in the digging of wells for oil and offshore exploration for both gas and petroleum.

The government has not revealed so far the exploration terms. But one well-informed source suggests that it may be a 50 per cent buy-back guarantee from the oil companies who may have to spend about 60 million rupees (US$7.5 million) for the drilling of each well.

The Oil and Natural Gas Commission (ONGC), the State-owned body which is already producing 20 million tons of oil from Bombay High and Assam, is planning to go in a big way to increase oil production from its offshore fields.

Already, production is expected to go up to 12 million tons a year.

However, leading scientists of the ONGC and leftwing critics are unhappy over the government's move to invite foreign oil explorers.

"Are we inviting them to loot us?" asked one senior ONGC expert.

According to government experts, India's crude oil requirements may go up to 43 million tons, including refined products, by 1984. If the demand escalates because of mounting industrial production every five years, India may end up by importing 115 million tons of oil and petroleum products by 1990. And the cost is staggering — about 210,000 million rupees (US$27,000 million) annually.

One well-known oil economist says it means India will have to increase its oil production to 55-70 million tons a year from its present production of 12 million tons over a period of 20 years. He feels that it is not "impossible" to achieve this if foreign oil firms are allowed to get in the act.

But an official which has reported on the energy situation recently sounds a rather disappointing note. Its report says: "It is reasonable to assume that the production of 24 million tons would be reached by 1987-88 and this level of production would be retained up to the year 2000."

This is regarded as highly conservative estimate. Even the Russians feel that India can produce more than 30 million tons a year if efforts are made by the government.

Top ONGC experts have prepared a 30,000 million rupee (US$3,700 million) programme for the next five years. This covers 95 exploratory and 200 development wells offshore and 200 exploratory and 300 developments wells onshore.

However, senior Ministers and policy advisers are not satisfied with this forecast of oil resources. Hence, the sudden move to invite foreign oil companies to look for oil.

INFORMATION MINISTER SPEAKS AT ASIAN CONFERENCE

Madras THE HINDU in English 1 Dec 80 p 12

[Text]

BANGALORE Nov. 30.

The Union Minister for Information and Broadcasting, Mr. Vasant Sathe on Sunday gave a call to the developing nations to combat the "invasion" of their countries by the advanced countries through the media.

Mr. Sathe was inaugurating a six-day regional conference on "Media for Development" organised by the Asian Mass Communication Research and Information Centre (AMIC) with the help of the Bangalore University.

The Minister said, "We have to strive collectively to combat the media invasion which, in a very subtle and sustained manner, is trying to undermine our independence and self-reliance. Having substantially overcome political imperialism and colonialism, except in some pockets like South Africa, the developing world is now confronted with economic colonialism and information imperialism."

According to Mr. Sathe in the developing countries of the southern hemisphere, there were imbalances in information flow, not only in the shape of deficiency in volume but also in the content of news as between one country and another.

This realisation prompted the setting up of the Non-aligned News Pool in 1978, to enable each country bring the information media to a level where it could meet the national needs without undue dependence on the media of the advanced countries.

The monopoly of international information media and modern telecommunication technology by the advanced countries on the one hand and the demand for a fair deal for themselves by the developing countries in the area of international communication on the other, was leading to a kind of confrontation. The debate on this issue had given rise to the North-South dialogue, the Minister said.

Mr. Sathe said the mass media in the developing countries, particularly in the Asian region, had to play a vital role in the context of the overall development strategy and programmes of the Government. People should be mobilised towards the goals and public support had to be mustered for the programmes. The media had to strengthen the confidence of the people, promote self-reliance and encourage the forces of unity and national harmony. They had to attempt this with a certain degree of creativity, originality and ingenuity so that the media would remain credible as well as interesting to all sections of the people.

However, he added, the media should not be expected to have an unlimited power. "Its contribution is confined to influencing social norms, focusing attention and demonstrating opportunities."

The Karnataka Chief Minister, Mr. R. Gundu Rao, said the monopoly over the dissemination of news enjoyed by the advanced countries was leading to distortion of news pertaining to the developing countries.

The Chief Minister, whose speech was read in his absence by the Minister for Urban Development, Mr. Dharam Singh, said five news agencies were disseminating 75 per cent of the news. These agencies decided what information about a country the other countries should get.

During the freedom struggle an impression was given that the country was not fit for independence. Now it was being said that the right climate for foreign investment did not exist in the developing countries. Their poverty and ignorance were being highlighted.

The conference is being attended by 35 participants from 14 Asian countries.

Mr. T. R. Jayaraman, Vice-Chancellor, Bangalore University, welcomed the gathering. Dr. P. R. R. Sinha, Director of AMIC, spoke.

Dr. H. K. Ranganath of the Song and Drama Division proposed a vote of thanks.

INDIA, ROMANIA SIGN LONGTERM TRADE AGREEMENT

Bombay THE TIMES OF INDIA in English 3 Dec 80 p 13

[Text]

NEW DELHI, December 2: India and Romania today concluded a new long-term trade and payments agreement stipulating the continuance of bilateral trade in non-convertible Indian rupees.

A long-term trade plan covering major commodities and a trade protocol for 1981 were also concluded.

The agreements were signed by Mr. Pranab Mukherjee, commerce minister, on behalf of India and Mr. Corneliu Burtica, Romanian deputy prime minister and minister of trade, on behalf of Romania. They come into effect from January 1 and will remain valid for five years.

TEN-P.C. INCREASE

The trade protocol for 1981 envisages a trade turnover of Rs. 240 crores both ways, indicating an increase of ten per cent over the 1980 targets.

The trade plan for 1981-85 covers the supply of major commodities essential to the economies of the two countries. The plan includes iron-ore, mica, finished leather and leather products, machine tools, engineering goods, jute manufactures, pepper and electronic equipment for export to Romania and fertilisers, rolled steel products, newsprint, cement, chemicals, cargo vessels, pharmaceuticals and capital goods for import from Romania.

India's trade with Romania has registered a consistent growth over the last few years. Bilateral trade is expected to have reached a record level of Rs. 95 crores this year. Romania is the second biggest buyer of Indian iron-ore after Japan and it is an important source of supply of chemical fertilisers to India.

FINANCE MINISTER CONFIDENT OF BRIGHT ECONOMIC PROSPECTS IN 1981

BK311217 Delhi Domestic Service in English 0830 GMT 31 Dec 80

[Text] Finance Minister Venkataraman is confident that higher foodgrain availability will be the most stabilizing factor for the economy in the new year. Addressing the forum of financial writers in New Delhi today, he said we can step into 1981 with an assurance of no shortage of food. Referring to the farmers agitation, Mr Venkataraman said it has caused great harm to the economy. The optimistic projection for the coming year may be severely affected if such agitations both in agriculture and in the industrial fields are continued.

Expressing dissatisfaction with the poor production of pulses and oil seeds, the finance minister said intensive efforts are being made to improve the situation. While the sixth plan will give a high priority to research in the field of pulses and oil seeds, the government has evolved a support-price policy to pulses to insure an adequate return to farmers.

Mr Venkataraman spoke of the remarkable improvement in infrastructural facilities in the last few months. There has been steady improvement in power generation leading to increased production of coal, cement and steel. However, the fertilizer output showed a decline as compared to the position last year.

Turning to deficit financing, Mr Vankataraman indicated that the deficit in the current year may exceed the budget estimates of 14,000 million rupees. He was, however, hopeful that the deficit limit will be under control in view of increased tax collection and revenue.

About foreign trade, Mr Venkataraman said the gap will be about 43,000 million rupees and the deficit in the balance of payment will be 5,000 million.

GOVERNMENT STUDIES CUBAN TRADE POSSIBILITIES

Madras THE HINDU in English 2 Dec 80 p 22

[Text]

NEW DELHI

An Indian Commercial Delegation, which visited Cuba recently, has identified several areas for increasing India's exports to, and collaboration with, Cuba.

For detailed examination of the Indian potential in meeting the Cuban requirements, specialist delegations from Cuba will visit India, according to the Commerce Ministry. To begin with, a delegation connected with sugar mill machinery, will arrive next month.

The Indian Delegation to Cuba was led by Mr. Suresh Chandra, Executive Director, Projects and Equipment Corporation. Its meetings in Cuba provided an opportunity to observe at first-hand areas of common interest in regard to bilateral trade and exchange of technology and industrial collaboration including joint ventures in third countries. India's capabilities in different spheres of industrial activity and as a supplier of quality goods at various levels of technology on a competitive basis, were also put across.

The supply of sugar mill machinery, parts and accessories was identified as a major area for increasing exports to Cuba. The possibilities of technical collaboration in manufacturing various items of sugar mill machinery in Cuba, and joint collaboration for establishing complete sugar production plants in third countries, were also explored.

The Indian Delegation found possibilities of supply of railway equipment, parts and accessories, particularly passenger coaches and locomotives, to the Cuban National Railways, and for technical collaboration to establish in Cuba manufacturing and assembly facilities for certain types of imported railway equipment like bogies and couplers.

Other areas of export opportunities to Cuba, identified by the Indian Delegation, were handtools, tools and tubes, bicycle and bicycle components, machine tools and other mechanical machinery items, electric power transmission and distribution equipment, sports equipment, industrial fasteners, sanitary equipment and fittings, electronic equipment, tobacco processing plant, bottling and canning plant and mining machinery and equipment.

REVISED REPORT ON VIZAG STEEL PLANT GIVEN

Madras THE HINDU in English 1 Dec 80 p 1

[Text]

VISAKHAPATNAM, Nov. 30.

The revised project report for the Visakhapatnam Steel Plant, finalised by the Soviet experts and Dastur and Company, was presented today to Mr. V. Subramanian, Managing Director, Visakhapatnam Steel Plant at a brief function here by Mr. Supriya Dut Gupta, Director, Metallurgy, Dastur and Co.

The Rs. 2,250-crore coast-based steel plant will have a production capacity of 3.4 million tonnes and is based on the latest proven technologies in coke, sinter, iron and steel-making rolling mills.

Briefing newsmen, Mr. Subramanian said that the use of the universal beams would lead to considerable savings of 30 hundred, avoiding costly and time-consuming site-fabrication.

All major raw materials, required for the steel plant exceptional part of the coking coal, would be met from domestic sources. Iron ore and flux will be supplied by deposits number four and five of Bailadila, the limestone would come from Jaggayyapet and Bodaipur.

While utilising foreign credit of Rs. 700 crores in the initial stage and the like amount in the subsequent period for the import of sophisticated machinery, the Vizag Steel Plant would use locally fabricated machinery to a great extent, he said.

The project is estimated to be completed in six years to produce as finished products for sale, 7.1 lakh tonnes of light merchant products, seven-lakh tonnes of medium merchant products, six lakh tonnes of wire rods, eight lakh tonnes of universal beams and 1.7 lakh tonnes of billets.

DELHI ALLOWS CREDIT FOR UK CAPITAL GOODS

New Delhi PATRIOT in English 28 Nov 80 p 1

[Text] IN a significant policy departure, the Government has approved commercial credit from Britain for capital goods industries. Until now foreign credits have been permitted for technical know-how only.

Two private companies, Simpson (Madras) and TISCO have contracted major credits. British business is taking a long term view of overshadowing Indian private and public sectors as partners in setting up capital goods industries, as also in joint ventures for export to third countries.

This was disclosed at a press conference on Thursday by Lord Limerick, chairman of British Overseas Trade Board, at the end of four days of intensive discussions with the Indian Government and businessmen. The 14-member team of senior British businessmen met the Prime Minister and the Commerce Minister on Thursday.

In Lord Limerick's words, this is the "most powerful team of British industrialists ever to come collectively to India, representing many types of interests."

He said the Indian Government's response to his team was "very favourable." He was told by the Prime Minister, he said, that his team had correctly identified the areas of cooperation with India. They are coal production, transportation, power generation, steel, aircraft, railways, oil and gas exploration, and fertilisers and petrochemicals. Cooperation will include financial packages, technology transfer, and training facilities.

The £20 million credit to Simpson is for import of Ford trucks. It is for five years at 7.25 per cent interest. The £14 million credit to TISCO is for expansion and modernisation and this is largely from the Davy Group and British Oxygen.

Lord Limerick and his team explained to newsmen that now British business could move capital abroad more freely as it had so many companies on account of gas finds in the North Sea. British industry, they said, was in a healthy state, contrary to reports, with monthly exports standing at £1,000 million.

They emphasised that immediately on the cards was the involvement of UK as a major power project in India, and in coal mining. In January, a team will come from Britain to do feasibility studies for new mines.

HOUSE INFORMED OF RAILWAYS 5-YEAR PLAN

New Delhi PATRIOT in English 28 Nov 80 p 5

[Text] THE railways plan to acquire about 1.10 lakh wagons in the sixth Plan, subject to availability of resources, to cater to the increase in traffic and to provide for adequate replacement needs, the Lok Sabha was informed on Thursday, reports PTI.

There was no shortage of wagons in absolute terms, keeping in view the existing targets for movement of traffic, but wagon availability was not, however, satisfactory from 1978-79 onwards due to various reasons, Railway Deputy Minister Malliarjun said.

In written replies to questions on wagon availability, Mr Malliarjun said fresh wagon orders have been placed taking into account price escalations. The outstanding wagon orders as on 11 November were 41,352 wagons in terms of four wheelers.

The Indian Railways, Mr Malliarjun said, were meeting their present requirements of wheel sets, tyres and axles from two plants, Hindustan Steel, Durgapur and TISCO, and about 80 per cent from imports.

In order to prevent a heavy drain on foreign exchange, it had been decided to set up a wheel and axle plant at Yelahanka, Bangalore, at an estimated cost of Rs 38.30 crore. The plant will go into phased production in 1982-83, he added.

He said the percentage of ineffective wagons and coaches was above the prescribed targets w/e trade and the Durgapur steel plant to supply spare components and other accessories and due to poor electric power supply.

The Minister also said that the remaining portion of the West Coast Konkan Railway, from Roha to Mangalore (823 km), with present day estimated cost of Rs 254 crore, is one of the 18 new rail links under consideration for inclusion in the sixth Plan.

Also under construction were six rail links in the Northeast Frontier Railway, which were because of the failure of pri- expected to be opened from the middle of 1982. These rail links covering 208.97 kms were estimated to cost Rs 50.20 crore, the Minister said.

A provision of Rs 50 lakh has been made in the current year's budget for doubling the Phulera-Kishangarh (50.9 km) metre gauge line to broad gauge on the Ahmedabad-Delhi via Jaipur and Ajmer rail link, he said.

The Minister informed Mr A K Ray that the Government was considering the introduction of third and fourth generation computers on the railways.

NATIONAL POLICE COMMISSION REPORT SUMMARIZED

New Delhi PATRIOT in English 27 Nov 80 p 10

[Text]

THE National Police Commission has recommended more powers for district superintendents of police so that they can take initiative to improve the police functioning and operations in their areas.

The police superintendent should not be subordinate to the district magistrate, (an administrative or civil service officer in operational functioning, the Police Commission report's fifth volume says. It, however says that district magistrates should play an overall coordinating role.

The fifth volume of the commission's report was submitted to the Home Minister by commission chairman Dharam Vira on Wednesday. The commission, which was set up in 1977-end, and started functioning from June 1978, submitted the first volume of its report in February 1979. The fourth volume was submitted in June this year.

The commission had been charged with studying the police functioning, its training methods, the personnel and police-public relations in depth and to come up with concrete proposals to vitalise the police forces so that they could meet the challenges of the growing law and order problems and could also reverse the negative public image that had developed in recent years.

In each of its volumes, the commission deals at length with each of these subjects. The fifth volume analyses the relationship between the district magistrate and the superintendent of police, and the parallels between civil and police officers down the line. It also reports on the status and scope of women police, training and recruitment of personnel and the police-public interaction.

According to sources, the commission has pointed out that because of the colonial heritage, the police forces and officers in the basic district units had been made totally subservient to the civil officers. This, the report says, has made the district magistrate (or district collector) the lynchpin of the law and order operations in the state.

The report pleads for giving the district superintendent of police his powers so that he can meet his responsibilities better with the district magistrate having a coordinating function in law and order. "There should be no subordination", says the report.

The commission also recommends expansion of women police units and better training and facilities for them. Sources said the commission has also recommended changes in recruitment policies and the training of police personnel to equip them with the latest in crime fighting. The training changes would inculcate in the force that they are meant for the welfare and protection of the people, and are not an instrument of terror.

The report also discusses at length police-public relations and the police image in the public mind. It says the public should be educated in the powers and limitations of the police force. The public should be specially told as to what the police can do and what they cannot do under the laws of the land.

MISSILE ENGINE WORKSHOP OPENED IN BOMBAY

Bombay THE TIMES OF INDIA in English 3 Dec 80 p 5

[Text]

A NEW missile engine workshop has been added to the existing units at the sprawling complex of the naval dockyard in the city.

It takes about a month to overhaul an engine of a missile boat in this workshop. Whilst some parts of the boat are manufactured locally, a few are still being imported.

INS 'Vikrant', which saw colours during the Goa operations and the Bangladesh war, is now berthed in a corner of the dockyard. The aircraft-carrier is being refitted — a process which started last year —and the job is expected to be completed in a couple of months. Every part of it has been stripped and the ship was unrecognisable with thousands of parts scattered all over.

INDIGENOUS BOILERS

With the indigenous manufacture of shop boilers the dockyard is now able to make an annual saving of Rs. 40 lakhs. Eight to 10 boilers are produced annually in the dockyard. Soon even raw materials will be procured from Durgapur.

The dockyard has an industrial engineering department that has done a lot of work in introducing better work practices and methods.

There is a quality assistance and reliability department and a modern stream test house.

The financial resources allotted to the navy in the early years after independence was limited. The navy was, therefore forced to keep warships which had exceeded their lifespan.

DIVING UNIT

There is a diving unit across the dockyard which is equipped with what is known as a "chariot". This vehicle looks like a cross between a submarine and a jet fighter.

It is mainly used for attacks. The pilot and the co-pilot are enclosed in two small compartments. Its main purpose is to carry out a successful attack below the target by placing an explosive.

A charge of 250 volts is enough to destroy and sink an enemy ship.

A little away from the dockyard, situated in the Bhor Ghats near Lonavla, is INS 'Shivaji' whose intake of foreign cadets has been increasing annually.

The naval college of engineering conducts basic courses, the mechanical training school organises professional courses, and the steam and controls training complex gives practical training.

NEW SYSTEMS INTRODUCED ON NAVY'S NEW FRIGATE

Bombay THE TIMES OF INDIA in English 3 Dec 80 p 5

[Text]

BOMBAY, December 2: Nearly 10 new systems have been introduced in the Indian Navy's fifth Leander class frigate, INS "Taragiri", commissioned some months ago.

According to the ship's captain, S. M. Gadihoke, these systems were "being tried out for the first time in any navy in the world". For instance, he said, the navy had made history by making facilities for a huge 10-tonne helicopter to touch down and take off from a warship of such enormous dimensions. "It can be flown at all times and can be recovered under all conditions", he said.

"Launching and recovery of the large-sized Seaking helicopter from a rolling and pitching deck is a delicate operation. On the 'Taragiri' this is achieved with the help of the RAST (Recovery, Assist, Secure and Traverse) system", he stated.

The helicopter operations are controlled from the landing safety officer's position on the deck. The entire operation is monitored by the command with closed-circuit television system.

Another significant aspect of this vessel is that anti-submarine warfare is controlled by a computer and fitted with the latest sensors. This computer, according to Captain Gadihoke, has been introduced for the first time in the Indian Navy.

The ship now stands in a corner of Bombay dockyard just a few feet away from Tiger Gate.

PLANS FOR EXPANSION OF DEFENSE SCHOOL TOLD

Bombay THE TIMES OF INDIA in English 3 Dec 80 p 5

[Article by Srinivas Laxman]

[Text]

BOMBAY, December 2: The nuclear biological, chemical, defence and damage control school located at INS Shivaji in Lonavla may be expanded with the possible inclusion of army and air force officers as well for its different courses. At present, the training is purely restricted to various categories of naval officers and sailors.

This scheme is stated to be under the consideration of the army, navy and air force headquarters. The institute's authorities have also asked for 51 extra films from the U.K. on various methods of self protection in the event of a possible nuclear war.

Situated in a somewhat obscure corner of INS Shivaji, the unit is one of its kind in India. Apart from a large number of naval personnel, the institute has also been training officers from the ONGC, the Shipping Corporation of India and civil defence organisations.

According to the naval authorities, the role of this school might gain considerable significance in the coming years in view of Pakistan's decision to go in for the controversial "Islamic bomb."

TRAINING FACILITIES

A part of the course is conducted in a specially-equipped chamber where officers and sailors put on protective clothing and get acquainted with different types of instruments such as the anti-gas respirator. At present, they are not exposed to actual radiation fall-out. However, there is a talk of giving them this experience under simulated conditions. Most of their equipment have been procured from the U.K.

The school is equipped with, among others, a smoke chamber, a fire pit and a stability demonstration room. There is also what is known as a "double decker unit" (DDU) which explains to trainees the methods of tackling floods.

There are similar institutes in the U.S., the U.S.S.R. and other countries. The Lonavla school, moreover, has details of different types of chemical gases likely to be used by various countries during a war.

AGRICULTURAL EXPORT SEMINAR RELEASES REPORT

Bombay THE TIMES OF INDIA in English 3 Dec 80 p 6

[Text] New Delhi, December 2.

The nine-day seminar on "agricultural co-operative marketing with special reference to export trade" has recommended the formulation of a regional co-operative trade plan for the southeast Asian countries for the next three to five years.

It has also suggested the setting up of joint ventures by co-operative organisations in different countries in the region. The committee on trade development for south-east Asia of the International Co-operative Alliance (ICA) has been proposed to be the focal point for transnational co-operative trade matters within the region.

The seminar was organised here jointly by the ICA, the National Agricultural Co-operative Marketing Federation of India (NAFED) and the National Co-operative Union of India (NCUI). About 28 experts from 11 countries and the representatives of UN bodies and other international organisations participated in the seminar.

The tentative report of the seminar released yesterday highlighted the need for strengthening commercial and trade links between co-operatives of all countries and recommended that the gap between the co-operative importers and exporters should be bridged. The ICA should provide greater opportunities to representatives of co-operative trading organisations in the region to discuss problems of mutual interest and establish trade contacts.

It urged the financial institutions to provide adequate credit at reasonable terms to co-operatives dealing with marine products, fruits and vegetables, cattle feed raw material, tea and spices. The developed co-operatives should buy their requirements of tea and other agricultural commodities from the co-operatives in developing countries.

The setting up of an international co-operative market information bureau was suggested for providing accurate and up-to-date market information to co-operatives. The proposed bureau could be set up within the framework of the economic bureau of the agricultural committee of the ICA. The governments of the countries in the region should include trade between co-operatives as a regular feature in bilateral trade agreements.

Stressing the need for a well trained management cadre for the fisheries co-operatives at various levels, the seminar suggested that the governments should provide financial incentives to these co-operatives to take up the export of fisheries products. A system of internal taxation should be established to generate resources for financing development projects on fruits and vegetables with an eye on exports.

UNION PUBLIC SERVICE COMMISSIONS HOLD PARLEY

Bombay THE TIMES OF INDIA in English 29 Nov 80 p 9

[Text] NEW DELHI, November 28.

THE Union Public Service Commission received applications only from a very few candidates wanting to take their tests in regional languages, but finds in it a lot of lessons for the future.

First, objective evaluation shows the percentage of qualifying candidates who opt for regional languages is almost the same as for those who opt for English or Hindi.

Secondly, more universities now go for regional languages as medium of instruction, and thirdly, persons and candidates are still wary of tests, particularly in optional subjects in regional languages.

The language break-up shows that the majority of candidates prefer English. Of about 7,000 candidates for the civil service examination, 6,000 opt for English, 900 for Hindi and the rest for regional languages. But none of these languages has more than 25 takers. Urdu had one, Malayalam four, Tamil seven, Telugu 23 and so on.

A conference of chairmen of the Union and states public service commissions concluded a two-day session here today after discussing several issues related to recruitment.

To facilitate the selection process, most of the commissions have initiated measures like objective and semi-objective questions and computerisation. It is stated that through electronic data processing at the UPSC the answer papers of as many as 30,000 candidates are evaluated in just ten hours.

There was considerable discussion on recruitment philosophy. The tone had been set by the Prime Minister who stressed the special responsibility of the service commissions to devise methods which would ensure that any educational, economic and social disparities do not tilt the balance in favour of the privileged, and the Harijans, tribals, minorities and the rural poor get their share in government jobs.

The conference agreed that it was necessary to ensure that candidates from rural and backward areas do not suffer from any handicap in selection and all candidates are judged on the basis of their intrinsic merit and potentiality and not merely on the basis of articulation and urban or metropolitan attainments.

They also recommended to the government that action should be initiated to construct hostels where candidates could be accommodated at subsidised rates.

The issue of keeping posts out of the purview of the public service commissions particularly through *ad hoc* appointments on political considerations was another issue that came up for discussion. In some states, the trend had been growing while in others like Kerala, *ad hoc* appointments would have to be regularised within three months by the public service commission.

TRIBUNALS PLANNED

The subject had come before the conference on previous occasions. The conference held in 1976 recommended that the convention followed at the Centre about the UPSC being consulted and their advice duly taken into account before a post is excluded from the purview of the commission should be adopted by all states.

The Central government commended the suggestion to the state governments for acceptance. The government of India did not, however, accept the recommendation of the conference that uniform guidelines should be evolved on the basis of which a post should be excluded from the purview of the commission.

The conference held the following year (1977) felt that it was anomalous that while additional functions can be assigned to the commission only by legislation, exclusion of matters from the purview of the commission can be done by means of regulations issued by the government.

In his address to the closing session of the present conference, the home minister, Mr. Zail Singh, said the government was actively considering to establish administrative tribunals to settle disputes relating to promotions and the like so as to avoid litigation.

He stated that in "translating policies into action and implementing them on the ground, it would require a team of dedicated and dynamic officers who can identify themselves totally and unequivocally with the politics of the government."

According to him, the public service commissions instilled a sense of security and confidence in government service as the interests of the employees are safeguarded by an independent agency with a constitutional status.

DELHI PHYSICIST CLAIMS UFO'S IN INDIAN HISTORY

Bombay THE TIMES OF INDIA in English 29 Nov 80 p 9

[Text]

AHMEDABAD, November 28.

MOST of the natural disasters in the recent past in the country were caused by the Unidentified Flying Objects (UFO), according to a Delhi university physicist, Prof. Swadeshkumar Trika.

Prof. Trikha, who was addressing a meeting of scientists at Gujarat university here, made some startling revelations today.

Referring to the Morvi tragedy, which was caused due to the bursting of Machchu Dam-II, he said the presence of a higher level of radio-activity in the flooded areas in Morvi indicated the presence of an UFO propelled by a small nuclear reactor.

He was convinced that the Morvi disaster was not a natural disaster.

Prof. Trikha also claimed that the Brahmastra used in the Mahabharat was a neutron bomb. He came to the conclusion after making intensive survey of the areas mentioned in the Mahabharata.

Prof. Trikha said that soon after the Morvi tragedy, he had been to the site of the tragedy carrying the necessary equipment to record the radio-activity in the area.

CALL TO SCIENTISTS

He found an enormous increase in the radio-activity in the areas inundated by the flood waters.

Similarly, on June 16, 1979, the Wankaner township, about forty km. from Rajkot, was hit by a 'tornado and hailstorm' for five minutes. Prof. Trikha visited the area on October 4 last year and recorded 75 per cent increase in the level of radio-activity in the area hit by the tornado.

According to Prof. Trikha, a nuclear reactor installed in the UFO might have caused the radiation.

Referring to the possible use of a neutron bomb in the Mahabharata war, he said in the Kurukshetra area (Haryana), he found an increased level of radio-activity. In addition, he found deep underground shelters in the area indicating that they might have been used as shelters against "Brahmastra", the ultimate weapon.

Prof. Trikha urged scientists to make a deeper study of his findings, which might throw new light on Indian history.

EXECUTIVE MEMBER, OTHERS RESIGN FROM LOK DAL

Bombay THE TIMES OF INDIA in English 30 Nov 80 p 1

[Text] New Delhi, November 29: Chaudhari Brahm Parkash, a member of the national executive of the Lok Dal, has resigned from the party along with eight local Lok Dal leaders.

Mr. Brahm Parkash told reporters today that the president of the Lok Dal, Mr. Charan Singh, had been behaving in an authoritarian manner. He neither consulted nor discussed any issue with members of the national executive. Even on such an important issue as the selection of candidates for the assembly elections, he said, Mr. Charan would not consult other party workers.

In his long letter of resignation to Mr. Charan Singh, Mr. Brahm Parkash has said: "Your unilateral decision to boycott the national integration council and later the all-party meeting on Assam called by the Prime Minister has came as a shock. [as published] Whatever our differences with Indira Gandhi no responsible party in a democracy can legitimately keep away from the effort to deal with issues of such crucial importance for the nation. A dialogue is necessary in a democracy, however, wide the range of differences."

He told reporters the Lok Dal had neither a policy framework nor any kind of organisational set-up. The party, he said, had been limited to a few castes in some specific areas. It needed to be widened and have contact with labour, youth, minorities and women.

MINISTER SPEAKS TO CONSTITUTIONAL LAW SEMINAR

Bombay THE TIMES OF INDIA in English 30 Nov 80 p 7

[Text] The Union law minister, Mr. P. Shiv Shankar, today spoke on the varying importance given to the fundamental rights and directive principles of our constitution by the supreme court.

Inaugurating a national seminar on constitutional law to mark the silver jubilee celebrations of the People's Education Society's Siddharth college of law here today, Mr. Shiv Shanker said if the principles of the preamble had been kept in the forefront, to a large extent, the controversy over the supremacy of the fundamental rights or the directive principles could have been avoided.

He quoted Dr. Ambedkar and stated that the directive principles did not merely contain the "direction" but also had the content of the future socio-legal order.

The role and eminence of our supreme court was unmatched by the judiciary in any other part of the world and there was a great burden on those who moved the court to serve the lofty goals set by the founding fathers in the constitution. It was appropriate that the seminar would discuss the approaches shown by individual judges of the court as also its role as a whole, the minister observed.

He also suggested studies of the judicial approaches of the individual judges to analyse how the "judicial behaviourism" had affected the constitutional concepts.

Minerva Mills Case

Citing the Minerva Mills case decision, Mr. Shiv Shanker pointed out the view that "it was wholly unnecessary for the court to go into the question of constitutionality of article 31-C as it stood after the constitution (42nd amendment) act." The preliminary objection raised by the attorney-general on this ground was overruled by a majority of the judges.

"There are also grounds for urging that the orders passed by the judges in the Minerva Mills case do not constitute a decision by the supreme court but only opinions by individual judges who heard the case. On this ground, it is felt that the orders passed are devoid of legal effect," according to the Union law minister. The Union government has prayed for listing the Minerva Mills batch of cases for hearing before a larger bench of not less than seven judges.

Referring to the directive principle on legal aid, inserted by the 42nd amendment, Mr. Shiv Shanker said: "Here, at least, we are not bothered by the supposed conflict between fundamental rights and directive principles."

Legal aid clinics could be set up under the aegis of the law colleges and the law colleges could organise and co-ordinate legal literary schemes for the common man," he said.

Mr. D. N. Sandanshiv, principal of the Siddharth law college, welcomed the guests and Justice R. R. Bhole, MP and chairman of the People's Education Society, delivered the presidential address. Justice P. N. Bhagwati of the supreme court, was among those present.

REVIEWER DESCRIBES BOOK ON INDIAN INTELLIGENCE

Bombay THE TIMES OF INDIA in English 30 Nov 80 p 8

[Text]

"This book should never be written," said R. N. Kao, the first director of the Research and Analysis Wing (RAW), the mysterious super-secret foreign intelligence agency which reported directly to the Prime Minister. The eye-opening extracts from "Inside RAW" by ASOKA RAINA detail a story of political interference, bureaucratic machinations and bungled operations which have stifled India's intelligence-gathering activities.

THE declaration of the emergency on June 26, 1975, the lifting of the emergency, the formation of the Janata Party on March 22, 1977, the Janata Party victory in the elections by an overwhelming majority and formation of the Janata government were the forerunners that would herald an unprecedented change in the foreign intelligence bureau, for an appreciable part of the Janata government's wrath was aimed at RAW.

They appeared to have firm faith that RAW had played a major role during the emergency, the firm belief that RAW was "IG's storm troopers" and were also instrumental in transferring hordes of money abroad for Mrs. Gandhi. The Janata government let loose all the vengeance it could muster against RAW. With it, the decay in RAW set in.

SN: RAW is not an organisation to be ashamed of.

MD: I hope so. I believe your department has appointed a large number of retired people.

SN: Yes Sir, but these people have been re-employed according to the rules and are experts in their own fields.

MD: All of them should be turned out. I believe RAW was involved in the internal affairs of the country.

SN: No Sir, that is not correct; all were external operations.

MD: But your activities were highly immoral, highly irregular. . . .

SN: These are RAW's external operations, Sir . . . .

MD: This does not reduce the immorality. Stop all operations you are handling at present.

SN: If we do that Sir, some of them might mean a loss of faith in our promises and in the credibility of the government.

MD: I do not care. Stop all operations and also reduce the RAW strength by fifty per cent. We do not need such a large outfit . . . Let me have the details as soon as you can.

The above conversation is reported to have taken place between the then Prime Minister Morarji Desai and K. Sankaran Nair, shortly after the Janata government came to power and Nair was made secretary and chief of RAW. (After Nair had resigned as chief of RAW he confirmed, in the course of an informal conversation with the author, that the conversation between Desai and him and taken place.).

The organisation built over the years with tremendous effort and devotion was shattered in a few moments. Twenty-five per cent of the investment on highly developed human resources was written off. The remaining 75 per cent were mauled, perhaps beyond repair.

The raw deal was finally taking shape. It started with the unceremonious sacking of the first RAW chief, R. N. Kao, soon after the Janata came to power. Nair, who was then joint secretary, was asked to take over on April 4.

Nair had been very unhappy with these developments. "Anybody," he had then remarked, "can see the need for an effective foreign intelligence agency. It is as clear as the nose on one's face that India would be the object of increased superpower attention."

Soon after his encounter with the executive head of the country, it is said that Nair in close company remarked in utter disgust, "Prime Minister Morarji Desai is the greatest enemy of India's national security."

Mukerjee, the cabinet secretary, seemed adamant in playing a double game. Not wanting to offend Nair and at the same time to please Desai, he called for Nair. Mukerjee went to great lengths to explain what "the PM desires" and how he had tried to fight it out. He went on to explain that this might be for the good, because inspite of the downgrading of the post, Nair's salary would remain the same and at the same time, he (Mukerjee) could act as a buffer.

He went on to assure Nair that, unofficially, Nair would have the powers to do what he liked and all he had to do was to keep him informed.

Nair by now had seen through Mukerjee's game and it was obvious what Mukerjee was striving at. He had informed Mukerjee that if the orders did come through, he would resign. Mukerjee for quite some time believed that Nair was playing a game of brinkmanship. But he was wrong. Nair was a man of strong beliefs and rarely opened his mouth. When he did, one normally listened to him carefully, so the saying went among the men he worked with.

To put matters to a close, Nair sought his second appointment with Desai. That resulted in a shouting match, it is said. Nair had wanted clarifications on the rantings of Mukerjee and, to his mind, it was just right to meet the chief. In his case, it was the Prime Minister.

The Confrontation

Confronted once again, Desai lost his temper and instead of talking, shouted as he spoke. But after a while, sensing Nair was not a man to be bullied, he formally accepted Nair's resignation from RAW and allowed him to proceed on long leave. The two shook hands and parted.

V. Shankar, who had been sitting all along during the Desai-Nair confrontation, possibly came across for the first time in his life someone who stood up to Desai.

Nair's sudden exit left RAW in a state of limbo. Taken aback by the developments they had not foreseen, the cabinet secretariat desperately looked for a successor. In the meanwhile, two contenders had already begun sending out feelers. They were Narain Rao, inspector general of police, Andhra Pradesh, and S. N. Santook, chairman of the joint intelligence committee.

Mukerjee at the same time wanted to bring in an Indian Police Service officer (because of his old association with the police), but more so because the new chief would accept his tutelege, since Rao had worked under him in the Intelligence Bureau, when Mukerjee was home secretary.

Nair had recommended Santook, before he had proceeded on long leave, for under the circumstances Santook fitted the bill. Having been brought into RAW by Kao six years ago from the North East Frontier Agency, Santook was attuned to the philosophy of RAW. Like Kao, Nair did not want the organisation to suffer, inspite of what had happened to them personally.

Santook came. Left with an organisation cut in half, with half his powers taken away, he was only a "head of the department". Being a man of different caliber than the two chiefs he succeeded, Santook, it is said, "was afraid of his own shadow".

Morale in the foreign intelligence bureau was sinking slowly. From outside, the difference was hardly noticeable. To quote a man who was holding the reigns of the system, "Our mood was one of gnawing anxiety in 1977."

The system had started to break up. As the Chinese would have put it, "a loss of face", for the ones that had trusted RAW found themselves betrayed and could not understand why.

By now, many of the special operations RAW had been handling had been ordered to be shut down—the follow-up of the Desai-Nair dialogue by the Janata government, irrespective of the price involved.

The government, it seems, had been very moralistic in its views. Kao, before quitting, is reported to have told Desai, "There are no legal means of collecting intelligence abroad," to which Desai is believed to have retorted, "Then I do not want an organisation that conducts such business."

How many of the special operations had been closed will be impossible to say. But those that can be told spell out a gruesome story, not because of the operations in themselves, but because of the obsession against RAW and all that it did.

The end result of the Janata government's RAW sanctions had one factor in common — those involved felt betrayed and wondered why.

THE prelude: December 16, 1971, at 1100 hours, somewhere in East Pakistan, a self-styled general, Abdel Kader (Tiger) Siddiqi, a young revolutionary, flamboyant and fearless leader of an effective band of insurgents, the Mukti Bahini, climbed into a Pakistani staff car flying the 2nd Indian Mountain Division flag on its bonnet.

The bizzare scene was enacted a few hours before the instrument of surrender was signed at 1631 hours in Dacca, by Lt-Gen. Abdullah Khan Niazi for Pakistan.

The Mukti Bahini had dominated the Tangail area and certain areas of Mymensingh district and Dacca. The Bahini had played a crucial role in the Indian Army's plans along with RAW for the liberation of Dacca and the installation of Sheikh Mujibur's government in January 1972. A dramatic turn of events took place subsequently with the formation of the Bangladesh Krishak Sramik Awami League with Mujib as its Chairman in 1975, followed by his assassination the same year on the night of August 14, with the coup installing Khandokar Mushtaq Ahmed as President.

Once again, history seemed to repeat itself in Bangladesh when Ahmed, too, was overthrown by General Zia ul Rehman. That was followed by a referendum a month later, confirming Rehman in the presidency by an incredible 98.87 per cent vote of confidence.

Tiger Siddiqi, who had fought for the liberation of his country, was determined to keep alive the memory of "Bang Bandhu" Mujibur Rehman. He, along with the now dwindled Mukti Bahini of 1971 (from 16,000 to 2,000) crossed over the India-Bangladesh border in West Bengal.

Tiger Siddiqi, who had contacts with members of the RAW during the Bangladesh operations, is reported to have made contact with them again, asking for support, for in Bangladesh he and his followers were wanted men. According to sources, the hastily reassembled Mukti Fouj was aimed at renewing "Mujibism". Siddiqi, along with three others, made their way to New Delhi. Their demands were simple, as they put it—unofficial support as in the past and funds to regroup themselves.

The Indian government acceded to their demands. However, there was a clause—the Mukti Fouj was to operate from within Bangladesh and for the time being for the limited purpose of reviving the aspirations of Mujib. They would also only use Indian

sanctuary when they found themselves in a desperate situation. This suited the Mukti Fauj, for the Bangladesh Rifles rarely troubled them, as they were inactive most of the time.

Besides holding a great affection for Sheikh Mujib, as far as the Indian government point of view was concerned, the possible reason for supporting this group was the information that the Bangladesh government was harbouring Mizo rebels and allowing China to train them in Bangladesh. The Siddiqi group was expected to prevent such activities and so the Indian government support continued via RAW.

The coming to power of the Desai government changed the picture rapidly. Mukti Fauj sources claim that the Desai government not only withdrew its support but also (three months after coming to power), handed over a large group of 200 Mukti Fauj members who had come across the border when chased by the Bangladesh Rifles.

On government instructions, the group of 200 were handed over (then under RAW protection) to the Border Security Force (BSF). The BSF in turn later handed them over to the Bangladesh Rifles on specific instructions from the Prime Minister. The carnage that the Muslim Bengalis had seen during the liberation struggle was once again enacted.

Massacre Of Bengalis

These men are reported to have been persuaded to go back on the Indian assurance of amnesty. But that was not to be. Almost all were annihilated. A few survived to tell the story. Among them was Tiger Siddiqi.

Tiger Siddiqi's survival was largely due to the instance of his RAW contact, Major Menon. For Siddiqi was not among those handed over. He was lucky. Living somewhere in Siliguri, he is reported to be still unable to understand why they had been betrayed. To him it was nothing but a breach of trust.

THE Prelude: April 10,1973.

The National Assembly of West Pakistan adopted a new constitution. The four provinces of Sind, Punjab, Baluchistan and the Frontier Province combined to form a new Pakistan. However, the general elections of March '77 saw the accusations being hurled at Z. A. Bhutto for having rigged the elections. It was said that but for the large scale rigging, Bhutto would never have returned to power. Bhutto, adamant in staying on, used his heavy hand. Riots broke out everywhere.

On July 5, 1977, General Zia ul Haq, the army chief, took over. Martial law was once again enforced. Zia, like all martial law dictators, promised free and fair elections and a civil government thereafter.

"We have come to the close of 1980 with the old game continuing," said a Pakistani refugee in Afghanistan. The statement coming from a Pakistani in Afghanistan does seem a bit odd. But the circumstances that brought it about started soon after the adoption of the new constitution. The exodus, however small, from the North West Frontier began. With it fled Wali Khan and a group of political refugees seeking asylum in Afghanistan.

Aid Denied

General Mohammed Daoud, who only a short while ago had assumed power after abolishing the monarchy, had declared Afghanistan a republic and had installed himself as president on July 18, 1973.

Not wanting to burden himself and his country with the cost of maintaining the refugees from Pakistan, he gave permission for them to stay, provided they found funds to support themselves. It did not take Wali Khan long to find a solution.

RAW operatives had already established contact with Wali Khan in Kabul and his request for financial assistance did not come as a surprise. Another factor that prompted Wali Khan to ask for assistance was his close association with Badsha Khan, the "Frontier Gandhi", and his personal association with Indian leaders during the Indian independence movement. The negotiations did not take long to finalise. The situation suited both Afghanistan and India.

Once again, fate did not seem to favour Wali Khan. The Desai government found it horrifying that India had been supporting a political group in a third country. Morarji Desai is reported to have himself ordered Nair to cut down this support drastically. Thus ended yet another RAW operation (It is believed that the KGB took over where RAW had left off).

If there is any truth in the matter, it will be a long time before Wali Khan and people like him trust India again.

MORE CONTENTS OF BOOK ON INTELLIGENCE GIVEN

Calcutta THE STATESMAN in English 1 Dec 80 p 9

[Text] New Delhi, Nov. 30.—The massacre of Mujibur Rahman and his family on August 14, 1975 might have been averted had the Bangladesh President heeded a personal warning from the senior Indian intelligence officer, according to a new book on the Research and Analysis Wing, says PTI.

Asok Raina, New Delhi journalist, in his book writes also of a plan to abduct and save Mujib, but the conspirators struck an hour before the plan was to go into action.

Mr R. N. Kao then Chief of RAW, Raina claims that Mr Rao gave Mijib the name of the conspirators—Major Rashid, Major Farooq, Lt-Col Usmani and Zia-ur-Rahman—but the President insisted that "these are by children and they can do me no harm" [as published]

A plan of Mujib's two nephews, Sheikh Moni and Sheikh Islam, to "physically abduct" the President came just an hour too late, says the author who interviewed RAW's present and past officials to check his facts.

Raina traces Indian intelligence involvement in the affairs of erstwhile East Pakistan back to 1962-63 when a meeting took place in Agartala between the pro-Mujib faction and intelligence bureau operatives.

Mr K. Sankaran Nair, who was later second to Mr Kao in RAW, is named as the main liaison man with the pro-Mujib group. Pakistanis got on to it when the pro-Mujib faction jumped the gun and made an unsuccessful raid on the [word illegible] Bengal rifles armoury in Dacca. They could not however make the charges against Mujib and other stick in the "Agartala conspiracy case" because of incomplete information secured by Pakistani authorites. [as published]

Later, when Pakistan launched its oppressive policies in the eastern wing and resistance groups were formed, the newly-created RAW set up cells all along the India-East Pakistan border, Raina says.

Mr Sankaran Nair met Colonel M. A. G. Osmani, later commander-in-chief of the Mukti Bahani, Major Khaled Musharraf, Major Saifullah and Abdul Kaer Siddiqi. RAW operatives trained the freedom fighters recruited by the resistance groups.

When Yahya Khan agreed to the December 1970 elections to the Pakistan National Assembly, RAW bigwigs were unable to believe that the military junta could concede a step that would see Mujib in power at Islamabad. When the Awami League won the elections as foreseen by RAW, Yahya indefinitely postponed the opening of the National Assembly precipitating the Bangladesh war of liberation.

Raina says RAW was tipped off about Tikka Khan's March 3, 1971 crackdown in Dacca and tried to persuade Mujib to leave Dacca, but the Bangangandhu declined to do so.

Mujib, however, agreed to Tajuddin Ahmed and a few others travelling to Mujibnagar near Jessore and establish the Bangladesh Government in exile. With Tajuddin were Nasrul Islam, Mushtaq Ahmed, Sylhet Azad and four student leaders.

The Government-in-exile subsequently functioned from "a nondescript house in the heart of Calcutta."

"RAW sanctuaries all along the India-east Pakistan border provided adequate cover and the vast border made it difficult for Pakistani security forces to ferret out out the Mukti Fauj" according to the author. [as published]

The Fauj, renamed Mukti Bahini, ganied in strength as Pakistani repression caused thousands of students, teachers farmers, soldiers and para-military personnel to revolt. [as published] RAW helped Mukti Bahini become an effective fighting force by setting up guerrilla training camps all along the border. By early December 1971, the Bahini was over 100,000 strong--and growing.

The War Council

Some observers thought the Mukti Bahini was capable of driving out all Pakistani forces from Bangladesh but only after a very prolonged guerrilla war and a lot of bloodshed. Indian Army involvement was therefore considered but General Manekshaw Chief of Army Staff wanted political involvement of the Government, Raina says. So, for the first time, a political representative was inducted into the War Council, in the person of D. P. Dhar designated as chairman of the Planning Committee of the Ministry of External Affairs. RAW was involved through a joint intelligence committee.

By opting for an all-out war, Yahya Khan made the military solution possible, the author says. RAW agents in Peshawar provided the tip-off on the December 3 attack on India by Pakistan in the west. During the march of the Indian Army to Dacca, the Mukti Bahini fought side by side.

Raina says that a message intercepted by intelligence possibly enabled India to give the final blow, leading to the surrender of the Pakistani troops.

As the Indian Army was poised on December 12 for a decisive victory on the battle-field, Pakistan proposed in the U.N. a cease-fire without a political settlement. The message intercepted on that day spoke of a igh-elevl meeting at the Government House in Dacca, and the Indian Air Force Hunters bombed it at the scheduled noon hour of the meeting. [as published]

Dr A M Malik, then Governor of East Pakistan, rushed down into the cellar. When the raid was over, he announced his resignation. His cabinet colleagues dissociated

themselves from the Yahya Government. Left to carry on the fight alone, General Niazi surrendered two days later and Bangladesh was born.

Raina repeats the charge denied by the Desai Government that during the Janata regime, India handed back to Bangaldesh 200 Mukti Fauz men who has crossed the border, chased by Bangladesh Rifles. [as published] He says all of them were killed, except a few including Tiger Siddiqi, who was not sent back at the instance of Sankaran Nair.

GANDHI SPEAKS AT RAE BARELI, AMETHI MEETINGS

Calcutta THE STATESMAN in English 1 Dec 80 p 1

[Text] /Rae Bareli, Nov. 30.--Mrs Gandhi today warned of a further rise in the prices of petrol and petroleum products because of the Iran-Iraq war, report UNI and PTI. If the conflict did not end petroleum prices would go beyond the Government's control, the Prime Minister told her party workers at a meeting here./ [in boldface]

She said her Government had taken various measures to check rise in prices as a result of which the increase in recent months had been only 13%. During the Janata regime the rise has been 23%.

The Prime Minister, during a quick tour of the Rae Bareli and Amethi, addressed the district development conference and warned Opposition parties that their agitations would not cow her down. On the other hand they would drain away the little resources meant for development.

In Amethi, the Prime Minister was confronted by demands from her party men to induct Mr Rajiv Gandhi into politics and to put him up as the Congress (I) candidate for the by-election to the Lok Sabha from Amethi.

Mrs Gandhi said that the decision in the matter would be entirely her son's. However, she told her party men that she would convey their wishes to Mr Rajiv Gandhi.

The Prime Minister burst into tears while referring to Sanjay Gandhi at a development seminar held in the Lok Sabha constituency which had elected him in the last general elections.

The Prime Minister said the seminar had been planned by Sanjay Gandhi and had he been alive, he would have been present today.

"One tree after every child" was the new slogan given by the Prime Minister at the development conference. She said trees were most useful for the country and their plantation should be taken up on a big scale.

To cope with the current energy crisis, the Prime Minister stressed the need for exploration of solar energy which alone could help India in meeting this crisis in view of the scarcity of petrol.

The Prime Minister admitted that there were many backward areas, but all of them could not be improved overnight because of various factors.

She said progress had been seriously impeded during the three years her party was not in power. In fact, in the name of the Rolling Plan, the Government at that time not only rolled down the entire Plan but also the country.

At the district development conference, Mrs. Gandhi made it clear that she was not going to concede any demand under threat or pressure.

Referring to the Opposition parties' threat to launch an agitation from December 7 for higher sugarcane and paddy prices, she said the Government had already offered higher prices. If the Opposition parties tried to get everything done through agitations, the development work would obviously suffer.

Mrs Gandhi said the Government would be forced to spend money on dealing with the agitations if they were not given up or suspended. The money, thus saved, could be diverted to development projects.

Commenting of yesterday's incident in Allahabad, Mrs Gandhi said violence by students was unfortunate. She was all the more sorry because responsible people, belonging to Opposition parties were trying to instigate them. It was most unfortunate that students had set some buses and other property on fire.

She said that the Government would examine the cases filed against her party workers and some others in various courts by the Janata Party Government.

She also promised her party workers to consider the question of releasing pension to all genuine freedom fighters whose pension was stopped by the Janata Party.

COMMUNISTS SAID TO ADVISE DANGE NOT TO RESIGN

Calcutta THE STATESMAN in English 1 Dec 80 p 7

[Text]

MR Dange has been advised by the All India Communist Party not to resign from the CPI till he has held a discussion on the inner-party crisis with the Soviet team, led by Mr Brezhnev, when it arrives in Delhi this month. The AICP feels that since Mr Dange is a Communist leader of international stature, it is only proper that he should consult the teams before taking any decision.

An AICP source said in Calcutta on Sunday that Mr Dange had wanted to resign after his experience at the recent conference of the All India Trade Union Congress, where his close supporters, including his daughter, Mrs Roza Deshpande, and Mr K. G. Srivastava were removed from the posts of treasurer and general secretary and replaced by members of the anti-Dange group.

Mr Dange was said to have been so unhappy at the way Mr Rajeshwara Rao, Mr Biswanath Mukherjee and other anti-Dange leaders made their moves at the AITUC session that he wrote a letter to the party weekly, New Age but it was not published. The AICP leaders allege that the CPI leaders had tried their best to split the AITUC by provoking the AICP delegates, but their ploy did not work.

A similar move to disrupt the Bengal Provincial Trade Union Congress, the State unit of the AITUC, might be made, but the AICP leaders say that they are determined to prevent it. Mr Jagadish Dasgupta, AICP leader, said in Calcutta on Sunday that a party might break up, but a split in an organization of the working class adversely affected the workers' movements.

The last session of the BPTUC was held in 1973. Normally, it is held immediately after an AITUC conference, but no session could be held after the 1976 AITUC conference, because at that time, the differences in the party between the supporters and opponents of Mrs Gandhi and the Emergency had surfaced.

According to a BPTUC source, it became evident during the 1976 AITUC session that the workers had become restive under the Emergency (which was then in force), mainly because the management was having a "field day". It was felt at the time that since the majority of the BPTUC leaders were against the Emergency and Mrs Gandhi, a conference would only bring into the open the division in the CPI.

Now that the party has actually split, the BPTUC leaders would face the same problem at the forthcoming session. A CPI leader said, however, that since the parent body, the AITUC had not split, it was not likely that the BPTUC would break up. However, since the AICP has about 10 members in the 60-odd member working committee, the preparation of resolutions, especially on the attitude towards the Left Front Government, would not be easy. Besides the AICP members, there are several CPI members in the working committee who are supporters of Mr Dange. They include the BPTUC general secretary, Mr Bhowani Roy Chaudhury.

ALTERNATIVE TO CONGRESS(I) REPORTEDLY SOUGHT

Calcutta THE STATESMAN in English 1 Dec 80 p 9

[Text]

CHANDIGARH, Nov. 30.—Mr H. N. Bahuguna is trying to form a viable national alternative to the ruling party which can bring about basic reforms in electoral and administrative system in the country. But such an alternative cannot come so quickly, as, in his view, any national alternative to the Congress (I) would have to do "apprenticeship" for at least two to three years in the service of the nation.

Mr Bahuguna who is on his "Bharat Darshan" tour—today being the 64th day of the tour which would continue till January 3 next year—was talking about his scheme to reporters here yesterday. He said that he was meeting likeminded people who agreed with him on his assessment of national problems, was educating himself about the conditions in the country and talking about his views to the people. If he had not undertaken the tour, he would not have known what the genesis of the problem in Chhotanagpur Santhal Parganas region was or why the farmers' agitation in Nasik was necessary or why the paddy growers of Pilibhit were the losers.

He said that, after his trip was over, a national convention would be called on January 23 to 25 in Bombay—the venue had been chosen to be of convenience to the people from the south because of Bombay's moderate climate—where various proposals would be placed for discussion. The meeting, dubbed All-India Democratic Socialist Convention, would find ways and and means to help create a viable national alternative. It would seek to fight the management organization system rather than the Government. And this would be within the framework of the parliamentary democracy and secularism.

He was hopeful that many political activists and people who had nothing to do with politics would attend it. The activists could be from different parties, some from Congress(U) and Congress(I) and many from the Janata Party. Suggestions from various people would be received for discussion by December 15

The future programme of people like him would be decided at this convention, but efforts would be made for two to three years to achieve the ultimate objective. These efforts were necessary to create a credibility which had been lost by political leaders. But a beginning would be made next year. What he had in mind were things like eliminating money power from elections, wider powers for the Election Commission, administrative reforms and an improved political party system.

He said that there was no question of his joining the Congress(I) as it was only a one-person party. But he was not an enemy of Mrs Gandhi at a personal level. He would support whatever she did right and would oppose any wrong done by her. He said that the Sixth Plan approach paper circulated by the Union Planning Minister did not show any direction and had not tried to tackle the most important problems before the country. He also took note of the talk of condemning the Opposition without concrete charges by the ruling party and creation of an illusion in the people's mind. There was a danger behind this trend for such talk preceded the emergency. This might be the basis for use of draconian measures by the Government, he said. It was in this context that non-issues were being raised these days.

PAPER REPORTS BAUXITE RESERVES 'ADEQUATE'

Calcutta THE STATESMAN in English 1 Dec 80 p 15

[Article by C. S. Raja Rao]

[Text] Aluminium is the most abundant metal in the crust of the earth. Most minerals, which make up the rocks, contain this metal. But all these rock-forming minerals cannot be used in the manufacture of the metal. Bauxite is the most commonly used ore. It contains hydrated oxides of aluminium like gibbsite, boehmite and diaspore, with other impurities like iron oxides, clay, silica and titanium. Gibbsite, the trihydrate of alumina, is the most favoured mineral constituent as it is easy to digest in soda during extraction of the metal.

Bauxite is a product of weathering of rocks having a high proportion of aluminium-bearing minerals. The organic acids released by decaying plant material seep through porous, weathered rocks and leach out the other constituents, leaving hydrated alumina as a crust. This process is known as bauxitization and it takes place extensively in tropical regions. Bauxite-bearing areas are common over broad, gently sloping plateaus with a cover of forest.

In India bauxite has been derived from such varied rocks as Deccan Trap, granite, khondolites, schists and sandstones. Bauxite deposits are closely associated with laterites or the reddish crusts, which are commonly seen in the plateau terrain. Gibbsite is the major mineral in Indian bauxite, and boehmite and diaspore, the monohydrates, are present in traces.

Bauxite with over 40 per cent alumina and less than 50 per cent silica is considered as ore. Bauxites containing over 50 per cent alumina are considered to be high-grade ores. Prospecting for bauxite is time consuming as the ore bodies have varied shapes and show much variation in grade. Pitting, trenching, drilling and shaft-sinking are undertaken in order to collect representative samples and to note the limits of the ore bodies. The work of prospecting is rendered difficult as the areas where bauxite occurs are on tops of plateaus and are difficult to reach.

In India, much exploration has been done and a good idea of the reserves of bauxite is available. The reserves estimated of the various grades are as follows: Maharashtra-66 million tonnes, Madhya Pradesh-53 million tonnes, Bihar-31 million tonnes, Gujarat-22 million tonnes, Karnataka-16 million tonnes, Orissa-15 million tonnes, Tamil Nadu-8 million tonnes, Goa-7 million tonnes, Kerala-3

million tonnes, Jammu and Kashmir-2.5 million tonnes and Uttar Pradesh-2 million tonnes.

Recently, large deposits have been discovered along the east coast. The deposits are on large plateaus extending from Orissa to Andhra Pradesh. The reserves estimated in these deposits are of the order of 2,000 million tonnes. Thus the total reserves now known are about 2,226 million tonnes. The country is fortunate in having such large reserves. This will be evident when the known reserves in other parts of the world are compared with what is available in India. The reserves of bauxite in other parts of the world are as follows: Africa--6260 million tonnes, Oceania-3065 million tonnes, Asia (other than India)-1,600 million tonnes, the USA-3,075 million tonnes and Europe-1,250 million tonnes.

India produced 390,000 tonnes of ore in 1960. This increased to 1.68 million tonnes in 1972. But production dropped to 1.11 million tonnes in 1974 due to curtailment of aluminium production as a result of power shortage, transport difficulties, and a decline in exports. India's contribution to world production of 79 million tonnes in 1974 was quite meagre, indeed. Nearly 80 percent of world production of bauxite is consumed by the metal industry and the remaining by refractory, abrasive, chemical, steel and cement producers and also by petroleum refineries.

In 1980, Bayer discovered the industrial process for extracting alumina from bauxite. This involves leaching of bauxite at high temperatures and pressure by caustic soda. The sodium aluminate solution produced is separated and the hydrated aluminium oxide is precipitated by seed crystallization. The latter is roasted to yield alumina. This method is still in use. Aluminium metal is finally extracted by the electrolytic process. For this, the alumina is dissolved in molten cryolite, which acts as an electrolyte. The anode is carbon, while the cathode is molten aluminium. The aluminium produced at the cathode is tapped off from time to time, at around 900°C. This process needs nearly 20,000 KWH of electricity and five to six tons of bauxite to produce a ton of the metal.

In order to reduce the dependence on electricity, several new processes have been evolved. One such process uses chlorination of ore and treatment by manganese to isolate the metal. This is considered to be a much cheaper process and is being developed in the USA.

Aluminium was first produced in India in 1943. By 1948 the production had reached 3,360 tons. The production then rose to 192,000 tons by 1979-80. The present demand for the metal in the country is placed at 325,000 tons.

The first aluminium plant was built at Alwaye in Kerala. Now there are aluminium palnts at Hirakud (Orissa), Belgaum (Karnataka), Ranikoot (Uttar Pradesh) and Korba (Madhya Pradesh). [as published] Another plant at Jakaynagar (West Bengal) has not been working for the past few years. The plant at Ranikoot is the largest and that at Korba is in the public sector. The built-in capacity of the different plants is put at 331,000 tons of metal.

In INdia, unserviceable aluminium vessels containers and scrap are systematically collected and used for making the fresh metal. [as published] It is estimated that 24 per cent of production from aluminium plants is produced from the scrap.

This recycling reduces to a considerable extent the pressure on import. Aluminium is used in the manufacture of utensils, construction materials, railway carriages, aircraft, automobiles, electric transmission cables, machine parts, paints, explosives, chemicals, cement and in powder metallurgy. The demand for aluminium is therefore growing year by year.

The Task Force for Non-Ferrous Metals (Aluminium and Magnesium), Government of India, in its report of January, 1973, indicated the requirement of the metal at 1.01 million tons at the end of Seventh Five-Year Plan and two million tons by 2000 A.D. For production of this much metal, six million tons of bauxite are to be produced by 1969 and 12 million tons by the turn of the century. Other materials needed for production of aluminium are caustic soda, fuel oil, cryolite, calcined petroleum coke, pitch and carbon blocks. Most of the caustic soda and pitch are produced in the country. Part of the requirements of cryolite and petroleum coke are met by imports. Carbon cathode blocks are mostly imported.

In order to produce the metal at a reasonably low cost, raw materials and electricity have to be fairly cheap. The cost of raw materials other than bauxite art reported to be two to four times higher in India than elsewhere. [as published] The cost of producing electricity is going up day by day, hydel projects do not meet the needs of the industry throughout the year as production of electricity goes down during the summer months.

Today, the country has adequate bauxite resources to support an increased production of aluminium. The extensive deposits along the east coast are favourably located for extensive mining, as individual plateaus hold 20 to 50 million tons or even more of reserves. One deposit has as much as 317 million tons. The Government has already taken steps to utilize this large resource. Indian bauxites are known to contain titanium, vanadium, gallium, phosphorus and a few other rare elements. Processes should be evolved to recover and utilize these useful constituents.

FUTURE STUDIES PARLEY WITHDRAWN FROM INDIA

Bombay THE TIMES OF INDIA in English 26 Nov 80 p 13

[Text] NEW DELHI, November 25.

AN international conference scheduled to be currently on in New Delhi could not be held as the Indian council of social sciences research (ICSSR) developed certain reservations about the agenda and came out with last-minute modifications in the programme and a suggestion to drop "politically controversial" subjects from the agenda.

The organisers regretted the last-minute changes suggested by ICSSR, rejected the proposal for postponing the conference and withdrew the conference from India. Thus, the 1980 world congress of the world future studies federation (WFSF) is not being held in India.

According to Mr. Ramesh Thapar, vice-president of WFSF, it virtually amounted to banning an international conference. It had raised the issue whether a government should be permitted to inhibit the autonomy of intellectuals to meet and discuss issues of vital concern to the future, said Mr. Thapar.

The decision to hold the 1980 world congress in New Delhi was taken at the 1978 session held in Cairo. It was accepted by the then chairman of the ICSSR, Prof. Rajni Kothari. The theme chosen for the congress was "Future societies: power, lifestyle and world order." The hosts were to be the ICSSR and the centre for the study of developing societies. The ICSSR had formally agreed to this collaboration.

The theme of the congress was developed by a 25-member steering committee, which included Prof. M. G. K. Menon, Mr. Ashok Parthasarathy, Dr. O. P. Pant, Mr. Mrinal Dutta Chaudhuri, Mr. Ramesh Thapar, Mr. G. D. Deshingkar and Mr. Mr. Ashish Nandy. The detailed programme formulated by the committee was approved by the executive council of WFSF.

The ICSSR was to spend Rs. 30,000 for the congress and main support was to come from a UNESCO grant of $ 15,000. The centre for the study of developing societies decided to put in another Rs. 50,000 in the form of staff salaries and organisational infrastructure.

CLEARANCE DELAYED

The government was approached by the ICSSR in early 1980 for clearance to hold the conference. This clearance was delayed for months. In August, the new chairman of the ICSSR, Mr. G. Parthasarathi, voiced some reservation about the programme during his conversation with Prof. Kothari, the outgoing chairman of the ICSSR.

According to Mr. Thapar, it is only in September—barely two months before the conference — that the first indications were available that the clearance was conditional on changes being made in the contents of the conference programme.

Mr. Parthasarthy, sent a communication to Prof. Eleonora Masini, secretary-general of WFSF, saying that, first, the conference should be postponed to the spring of 1981 and, second, instead of "politically controversial" subjects, science and technology should find a prominent place in the conference. It also said that the department of science and technology would be a co-sponsor of the conference.

According to Mr. Thapar, accepting Mr. Parthasarthy's suggestions would have led to leaving out five invited theme papers from the conference.

The implications of the altered programme and of the attempts to make the government of India supervise the holding of the congress through a national steering committee and through its department of science and technology were obvious to everyone.

In October, the WFSF executive council decided by a majority to spurn the offer of the Indian government and to withdraw the conference from India.

FINANCE MINISTER SPEAKS IN DEBATE ON INFLATION

Bombay THE TIMES OF INDIA in English 26 Nov 80 p 15

[Text] New Delhi, November 25.

The finance minister, Mr. R. Venkataraman, today tried to dispel the impression about "gallopping price rise" by pointing out that the average rate of price increase in the last three months had been only one per cent. [as published]

"I claim this to be a great achievement for any developing country," he told the Lok Sabha while intervening in a debate in a motion by the Janata party leader, Mr. Madhu Dandavate, expressing concern at the inflationary trend and rising prices.

The finance minister asserted that the situation did not justify the alarmist note struck by the opposition members. Though the government was concerned at the present situation, there was no reason to believe that things were going out of hand.

He said that, no the contrary, he could confidently say that inflation had been contained and that the country could now look forward to a "bright future." [as published] Production was picking up and, if labour relations improved helping productivity, the country could except a rise in the GNP by five per cent. [as published]

Initiating a six-hour debate on his motion, Mr. Dandavate said it seemed to him that the country was entering the inflationary situation of the preemergency days. "I think the situation is extremely dangerous both economically and politically," he added.

While conceding that the oil import bill might have been a contributory factor in the inflationary trend, he felt that the main reason was deficit financing. He pointed out that the sixth plan frame envisaged a Rs. 300 crore loss in the public sector and the losses of the state plans added up to Rs. 800 crores. All these contributed to pushing up prices.

Among others who participated in the debate, Mr. Y. B. Chavan (Cong.-U), former finance minister, sought to correct the impression that prices had started to come down during the emergency. He said the downward trend started in October 1974 and this was the result of a package of unpopular decisions taken by him as finance

minister. The present government seemed to treat the situation with complacency. There was no sense of direction, he added.

The Congress (I) members sought to put the blame for the price rise on the failures of the previous Janata government and urged the present government to take stern steps against "anti-social elements--hoarders, blackmarketeers and smugglers, who were responsible for creating an artificial scarcity and pushing up prices."

The finance minister said that though the government had succeeded in controlling inflation, it needed to be controlled further. He appealed to the members not to create a psychology of scarcity because that would lead to hoarding and frustrate the measures to bring down prices.

He said the price rise was due to factors some of which were beyond the government's control. The chief among them was the oil price hike and this was bound to have an impact of the price situation. He disagreed with Mr. Dandavate's estimate that the rise was only two per cent and said, according to the government's estimate, it was 21 per cent of the total increase.

But he claimed that the price situation in the country was much better than in many other countries. This was acknowledged the world over. While, in a three-month period the rate of inflation was seven per cent in the U.S. and 11 per cent in the U.K., it was three per cent in India. The rise in the cost of living index in the three countries was seven percent, nine per cent and 4.4 per cent respectively.

Mr. Venkataraman said that an incorrect sugar policy followed by the Janata government was responsible for the present sugar crisis. When it came to power, it inherited a sizeable stock of sugar from the previous government, but frittered it away by indiscriminate releases instead of building up a buffer stock.

/By the indiscriminate releases, the Janata government was able to bring down the price of sugar to Rs. 2.85--lower than the cost of production--but it laid the foundation for the present shortage. The present government was handed over a stock of 3.5 million tonnes with which it had to manage. Two-thirds of that quantity was distributed at levy price rate./ [in boldface]

The finance minister said that in a situation of shortage, it was quite in order to sell a commodity at a low price to the poor and charge a higher price from those who could afford to pay more. When the opposition members were complaining about the high price of open-market sugar, they were actually speaking for the affluent classes, he added.

The finance minister claimed that the economy was gradually picking up. Power generation was expected to go up by ten per cent and so also the food production. The production of foodgrains was expected to touch the all-time high of 132 million tonnes this year. Industrial production might not rise by six to eight per cent as envisaged earlier, but it would not be less than four per cent.

He said the main constraint on industrial production was labour trouble. The government was trying to see that matters improved. It was trying to persuade both industry and labour to link revision of wages and productivity. If this could be achieved, the production situation would improve considerably.

PLANNING COMMISSIONER ADDRESSES RUBBER MEETING

Madras THE HINDU in English 26 Nov 80 p 9

[Text] Kottayam, Nov. 25.

Dr. M. S. Swaminathan, Member, Planning Commission (Agriculture), called on the rubber scientists and technologists to come out with technologies using the vast human resources available in the country.

Addressing the delegates of the International Rubber Conference at the Rubber Research Institute near here on Monday, Dr. Swaninathan said researchers should orient their efforts in bridging the gap between actual and potential yields of rubber, at the current technological level by effectively transferring them to small planters.

The Planning Commission had revised the production target for natural rubber from 1.92 lakh tonnes, projected by the Rubber Board, to two lakh tonnes by the end of the Sixth Plan period, Dr. Swaminathan said.

This would lead to an additional production of about 45,000 tonnes of natural rubber in the country. The annual growth rate of rubber which was only three per cent, should be increased to seven, he said.

Dr. Swaminathan earlier released a hand book of 'Natural Rubber Production in India' brought out by the Rubber Board commemorating its silver jubilee.

Mr. S. G. Sundaram, Chairman, Rubber Board, highlighted the role of rubber in the industrialised world.

Three technical sessions followed Dr. Swaminathan's key-note address.

TAMIL NADU PIG IRON BLACK MARKET THRIVING

Madras THE HINDU in English 26 Nov 80 p 11

[Text]

COIMBATORE, Nov. 25.

The small scale industries and foundries in Tamil Nadu are faced with a piquant situation due to the inadequacy of supplies of essential raw materials, pig iron and coke, through the official channels and the prevalence of blackmarketing in private trade.

The scarcity conditions have led to over-dependence on the official trade channels, and the uncertainty in supplies caused by bottlenecks in wagon movement for transporting these raw materials has seriously affected production of castings in Coimbatore, the leading and predominant foundry centre in Tamil Nadu.

The small industries have formed a new association styled the "Coimbatore Small Foundrymen's Association which contends that the foundries in Tamil Nadu will have to close down in the near future throwing out of employment about 10,000 workers, if steps are not taken immediately to ensure supply of pig iron and foundry grade coke in adequate quantities to actual users.

Increase in Demand

The demand for iron castings has increased considerably in recent years with the rapid growth of industries here and elsewhere. The small foundries manned and run by skilled artisans have been catering to the needs of both the small and large scale industries and they are preferred both for their quality workmanship and price competitiveness. They thus form an important link in the country's industrial production.

There is good lot of money in this occupation for one who knows the job and many a skilled worker has made his fortune in recent years. The constraint are the availability of finance and regular supply of raw materials.

There has been a phenomenal growth of foundries in the country during the last 10 years. The development is described as 'fantastic' in Bihar, Punjab, Haryana and other centres in the north. In Tamil Nadu itself, the number has been almost doubled. Coimbatore and its suburbs with their 400 units, both medium and small, claiming the lion's share of this development. There are also some unregistered units started by individual artisans with limited resources and thriving on a day-to-day production and sale basis.

The Coimbatore District Small Scale Industries Association, the leading small scale sector association in the State, has come out with the allegation that the southern States, especially Tamil Nadu, have suffered due to a steep reduction in the allocation of pig iron during the last five years.

Progressive Reduction

In a statistical review of the position, the CODDSIA contends that the share of Tamil Nadu in 1973-74 which was 49.332 (11 per cent) tonnes out of the total national availability of 4,48,968 tonnes has been progressively reduced over the years, in terms of percentage last year it being only 63.293 tonnes against the national availability of 11,47,308 tonnes representing 5.51 per cent.

Though the arrivals indicate a small increase quantum-wise, the allocation of pig iron to this State has been disproportionate to the growth registered here, with the result that the foundries are faced with the problem of inadequacy of supplies.

The CODDSIA, as also the newly formed Coimbatore Small Foundrymen's Association, are aggrieved by the fact that while the share of Tamil Nadu has been reduced in stages, the allocations made to centres like Bihar, Orissa,

> Punjab, Haryana and Uttar Pradesh have been increased by 774 per cent, 649 per cent, 627 per cent, 450 per cent and 416 per cent respectively during this period at the cost of Tamil Nadu.

Stocks Through Private Trade

Though semi-starved due to the general shortage in the quantum of availability of pig iron, the foundries have been managing with the stocks made available, by the private trade channels and the scrap materials offered by traders which has now become a lucrative trade.

Resourceful traders manage to get these scarce raw materials, both pig iron and coke, from the producing centres using their ingenuity and influence and their efforts at mobilisation of such resources are sometimes aided by some foundries parting with their allotments for a good consideration.

While the exact number of such foundries which part with their raw material is not known, what prompts them to dispose of their allocations is the big difference in the open market price of the raw materials and the finished products. In view of the huge profit margin got by the sale of raw

> materials, the surplus available in the neighbouring States freely flow into

the stockyards of the Coimbatore private traders.

Paradoxical

> Mr. S. Lakshmanan, Secretary, Coimbatore Small Foundrymen's Association,

says that it is paradoxical that while the Steel Authority of India pleads non-availability of adequate stocks of pig iron to meet the local demand, the private traders have piled up huge stocks of different varieties and sold them at exorbitant prices. He says that as against the SAIL price of Rs. 1,100 per tonne the traders sold pig iron at Rs. 2,600 per tonne in the open market.

Mr. Lakshmanan alleges that a flourishing black-market has seriously affected the working of small foundries as most

of them, already suffering from severe finacial strain, do not have the wherewithal to meet the inflated cost of raw materials and compete with others in marketing their castings.

When the going was good some years ago, the small foundries secured their requirements from the private traders in preference to SAIL as the former gave credit facilities and other accommodation. This has now worked to their disadvantage, with the raw materials becoming scarce and the allotment being fixed by SAIL on the basis of the foundries' previous off-take.

Industries Look up to SAIL

Their concern now is that if the SAIL does not meet their requirements in full, which they put at 10,000 tonnes a month (against about 4,500 tonnes made available now), it would seriously cut at their competitiveness in the market besides leading to their ultimate closure.

The foundrymen allege that the coke supplied by SIDCO is not also of the foundry grade quality with the result that they are not able to lift their allotments.

As a corrective, the Coimbatore Foundrymen's Association has demanded that pig iron must be classified as an essential commodity and brought under the purview of the Essential Commodities Act and its distribution regulated through the SAIL to actual users. The association has urged that the sale of such scarce raw materials like pig iron and coke by the private trade must be banned by legislation.

In the light of past experience, the association has further demanded that the system of allocation of pig iron on the basis of the previous offtake be scrapped and that the allocations be made on the basis of the fresh assessment made of the requirements of the foundries.

CONGRESS(I) MPS ELECTED TO AICC(I)

Bombay THE TIMES OF INDIA in English 26 Nov 80 p 9

[Text] New Delhi, November 27 (UNI): Mr. Kartik Oraon, Union minister of state for communications, and Mr. Prakash Mehrotra, secretary of Congress (I) party in Parliament, were among the 15 members unanimously elected to the AICC (I) from CPP (I) today.

Although 62 members had filed their nominations to fill the 15 seats, all but the 15 candidates withdrew today, the last day for withdrawals.

According to CPP (I) sources, all the 62 contestants had offered to withdraw their nominations to enable the Union minister for parliamentary affairs, Mr. Bhishma Narain Singh, and the Union commerce minister, Mr. Pranab Mukherjee, to work out a consensus.

In fact, the deadline for withdrawal was extended by a couple of hours to enable the leaders to arrive at an agreed list of 15 members, who were later declared unanimously elected.

The following members of the Congress (I) party in Parliament were unanimously elected to the AICC (I):

Lok Sabha: Mr. Kartik Oraon--Bihar, Mr. Harish Rawat--UP, Mr. Ajitsinh Dabhi--Gujarat, Mrs. Mohsina Kidwai--UP, Mr. Rajmallu--Andhra Pradesh, Mr. Chiranji Lal Sharma--Haryana, Mr. R. Y. Ghorpade--Karnataka, Mr. Mahabir Prasad--UP, Mr. Santosh Mohad Deo--Assam, Mr. Xavier Arakal--Kerala and Mr. Arjun Sethi--Orissa.

Rajya Sabha: Mr. Srikant Verma--Madhya Pradesh, Mr. M. S. Ramachandran--Tamil Nadu, Mr. Ramanand Yadav--Bihar and Mr. Prakash Mehrotra--UP.

CONGRESS(I) GAINS IN HARYANA BYELECTIONS

Bombay THE TIMES OF INDIA in English 26 Nov 80 p 9

[Text] Chandigarh, November 25: The ruling Congress (I) in Haryana yesterday consolidated its position by winning the Ateli and Bhattu Kalan assembly seats but yielded the Beri seat to the Lok Dal.

With yesterday's election results the strength of the Congress (I) in the 90-member state assembly rose from 50 to 52. The Lok Dal's strength increased from 21 to 22. The position of the other parties is BJP 11, Janata 4 and Janata (S) 10.

The most impressive victory of the Congress (I) was from Ateli where its candidate, Mr. Bansi Singh, won by a margin of 27,668 votes. The remaining four candidates, including the Lok Dal candidate, lost their deposits.

The by-election was caused by the Union agriculture minister, Mr. Rao Birendra Singh, vacating the seat following his election to the Lok Sabha.

The by-election to the Bhattu Kalan constituency was caused by the former state chief miniser, Mr. Devi Lal, vacating the seat on his election to the Lok Sabha in January.

Mr. Ran Singh wrested the seat from the Lok Dal by a margin of about 10,000 votes, defeating his nearest Lok Dal rival, Mr. Sampat Singh, in a seven-cornered contest.

The Lok Dal retained the Beri seat from where its nominee, Mr. Ajit Singh, was declared elected by a margin of 2,257 votes. The by-election was caused by the resignation of the Lok Dal legislator, Brig. Ran Singh, who later joined the Congress (I).

KERALA MARXISTS ASKED TO PROMOTE LAW AND ORDER

Bombay THE TIMES OF INDIA in English 30 Nov 80 p 10

[Text] Trivandrum, November 29:

The KPCC (U) president, Mr. A. K. Antony, asked his Marxist allies today to correct the distortions in the administration of law and order "immediately and effectively."

He added that the KPCC thought a section of the people was feeling insecure. The farm and industrial sectors were disturbed. The CPM and the RSS were at each other's throat.

Implied in this call to the CPM was a clear warning that the Congress-U would take up the cause of law and order as its watchdog and would not tolerate any deviation from the democratic functioning of the coalition as it (Congress-U) envisaged.

Addressing a news conference on conclusion of the two-day conclave of the party's leadership, Mr. Antony cautioned the CPM that it would not tolerate in Kerala the style of functioning of the West Bengal left front or the CPM-led united front of 1967 in Kerala.

Anti-Cong. Drive

This was in effect an indictment of the Marxist-style of functioning in Kerala.

The Congress-U leader accused the lower-level Marxist workers of continuing anti-Congress campaign even after the formation of the coalition. The estrangement between the Marxists and the Congressmen was widening.

At the same time, Mr. Antony welcomed the CPM politburo resolution on the need to strengthen the working of the Kerala coalition. But its "baseless" charge against the Congress that it was blindly retaining an anti-Marxist policy was "unfortunate."

He reminded the politburo that it was the CPM that first inflicted an injury to the concept of left and democratic unity when it insisted on impossible conditions for unity. One such condition was that the parties, including the Congress-U which supported the land gift bill, should withdraw its support to the bill. This was before the last election.

Subsequently, after much discussion, the CPM returned to the fold of left democratic unity. But even now a section of the Marxists failed to understand the significance and peculiarities of the Kerala experiment, he said.

The Kerala experiment reflected the broadest possible unity among different strata of society--the poor, the weak, the middle and the working class, the teachers, the students and the youth.

LITTLE INCREASE IN TELUGU USAGE IN ANDHRA

Bombay THE TIMES OF INDIA in English 29 Nov 80 p 8

[Article by K. K. Sastry]

[Text] HYDERABAD: The Telugu-speaking people were the first to agitate for and get a separate state for themselves, carved out of composite Madras in 1953, sparking the move for the reorganisation of states on a linguistic basis. But 27 years after its creation, little progress has been made towards making Telugu the official language even at the taluka level.

One often hears criticism of the officials for their lack of enthusiasm in introducing it as the language of administration but the leadership's tardiness is evident. It took two years for the new state to adopt a resolution making Telugu the official language. The official language act was passed in 1966, ten years after Andhra Pradesh was created under states reorganisation.

Eight more years elapsed before an official language commission was set up and four years more before it became really effective. Nearly two years after that, the state lags far behind not only the northern states, but even some southern states.

ONLY ONE ACT

Even at the level of the Centre which has the responsibility for translating the Union legislation into regional languages, Telugu has only one act to its credit, compared with 16 in Gujarati, 44 in Punjabi, 23 in Kannada, nine in Malayalam and four in Tamil. The Telugu version of the constitution was released only in June this year, long after the translation into Hindi, Punjabi, Marathi, Urdu and Bengali were issued.

Last year was declared as the official language year but it saw no appreciable acceleration in the adoption of Telugu even in moffusil government offices. Mr. Vandemataram Ramachandra Rao, chairman of the official language commission, whose term has been indefinitely extended, laments about the officials' lackadaisical attitude and the dust and rust gathering on Telugu typewriters. He continues to set up ever-receding deadlines for the introduction of the language at various levels of the administration. No special drive has been announced so far for speeding up the process in this "silver jubilee year" of the state.

Telugu, which was the language of the administration and of the courts before the territory passed under alien rule, presents many paradoxes. Its first classical grammar was written in Sanskrit. Its first grammar and dictionary on modern lines were composed by a British administrator, Mr. Charles Philip Brown, in mid-nineteenth century.

While the drive is on for greater use of Telugu, the association of unemployed Telugu pundits has complained that "a large number of qualified Telugu pundits remain jobless while a large number of vacancies remain unfilled." The gist of a passage set for translation in the tenth standard examination last year was that Telugu, with its great dependence on Sanskrit, would "collapse" if the Sanskrit words were withdrawn but it was not the case with Tamil and that every pundit should learn Tamil. Though it caused a furore, Telugu dependence on Sanskrit is undeniable. For instance, there are no genuine Telugu equivalents for word, sentence, north, south and many more terms.

There are also mechanical handicaps to faster adoption of Telugu. According to Mr. Vandermataram, there are only 750 Telugu typewriters available against a requirement of at least 10,000. The old keyboard facilitates a speed of only 18

words per minute but prototypes with a new keyboard capable of thrice that have been developed. The commission has ordered 2,000 new machines, to be delivered at the rate of 100 a month. Eight Telugu lino machines will soon be set up in the government press.

The most controversial aspect of the language problem is the use of Telugu as the court language. In a few districts, it is being used for depositions and arguments, though the judgments are still written in English.

Another difficulty arises from the great chasm between "bookish" Telugu and "spoken" Telugu. A movement was started 70 years ago by Gidugu Rama Murthy Pantulu to release Telugu from the rigidity of traditional grammar (the coils of a boa constrictor, as a poet put it) and frame new and relaxed rules to "refine" colloquial Telugu.

COMMAND CHIEF EXPLAINS ARMY ROLE IN ASSAM

New Delhi PATRIOT in English 2 Dec 80 p 4

[Text]

CALCUTTA, Dec 1

LT-GEN E A VAS, GOC-in-C, Eastern Command said here today that "Assam is the most important challenge that has arisen in the country after 1974." The challenge should be met quickly, intelligently and wisely.

The general was sure that unless the problem was immediately solved, "some of the foreign countries will certainly try to take advantage of the situation."

Regarding the Army's position in Assam, General Vas said that "it is only the Army presence in Assam. So far the Army "has not fired a single shot in Assam," he added.

Regarding, the Manipur situation the Army commander felt that he would be able to say something definite about the containment of the situation there by the end of December. But so far the Army's achievements in Manipur were considerable, taking into account the various difficulties including that of "authentic intelligence." Only recently the Army "has been able to nab the second man in the PLA—their vice president Raili Singh."

Nagaland and Mizoram were remaining peaceful now, the general said.

INSURGENCY

Regarding the seven North Eastern States and territories—the so-called seven sisters—General Vas said that they "have a border length of 3,700 kms with foreign countries, while the internal borders between them and other parts of India are only 70 kms."

But everywhere the situation was not that of insurgency. Insurgency, he said, "denotes some specific aspects such as proximity to foreign borders, certainty of sanctuary in foreign territory, foreign aid, armed rebellion and total violence." All these factors "are not present in all the seven sisters," he said and added, "certainly these are present in some areas, for instance Manipur."

Replying to a question he said that insurgents from some of these seven states go abroad, particularly China, via Kathmandu.

The general also explained in some detail the tasks set to the Army on the oil front in Assam and the achievements made by the Army in that respect.

ARMY ROLE

The Army was called upon to collect oil from the wells and store that in the storage tank, and also to condition the oil. The second important task was to reduce viscosity by flushing the stagnant oil from the pipes. The Army engineers, two regiments of them completed the tasks in 23 days, ahead of schedule.

Before taking up the job the Army engineers underwent training for one and half months in Gujarat, Bihar and West Bengal. The task of flushing the oil and refilling the tanks was achieved with complete success. At present the Army is also engaged in collecting oil, but from the ONGC wells only. The Army engineers have left the Oil India installations.

General Vas said that the Army in Assam has been performing the duty of security checks even today. In the limited scope of the tasks the Army had never given any reason to anyone to suspect that the engineers were there to defeat any trade union or any such thing.

He said that the Oil India workers and employees have taken over the jobs from the Army two days ago. But as of now the pipe lines are again idle. General Vas expected that the Oil India workers and employees would soon start their work, because he found them with very good intentions. But the fact was that many of these workers were being threatened by some agitators.

In 23 days the Army engineers were able to pump 94,000 kilolitres of oil.

ECONOMIC DAMAGE OF ASSAM AGITATION ASSESSED

BK021111 Delhi Domestic Service in English 0830 GMT 2 Jan 81

[Text] The loss to the country because of the Assam agitation has reached a staggering figure of over 10 billion rupees in foreign exchange alone. This was stated by Union Finance Minister R. Vankataraman in an interview with PTI in New Delhi.

Replying to questions on the direct loss to the economy on account of the agitation, Venkataraman said that since the beginning of the agitation in December 1979, the production at the three refineries at Digboi, Gauhati and Bongaigaon as well as the Barauni refinery in Bihar, has been reduced drastically. While the Barauni and Bongaigaon refineries remained closed totally, the Gauhati and Digboi refineries have been functioning intermittantly. As a result the country has lost 3.9 million tons of crude output valued in the international market at about 9 billion rupees. The government has been forced to import large quantities of petroleum products during the last year to avoid shortages and to cater to the basic consumption needs of the different sectors of the economy.

Venkataraman said besides the loss in foreign exchange, the economic flow to the state has already been considerable because of the disruption of the normal development process. The other sector of the national economy mostly affected is fertilizers, which is a crucial imput for increasing the production of foodgrains.

Vankataraman said that the agitation has disrupted the flow of basic feed stocks to the fertilizer plants. Production losses in those fertilizer plants are estimated to be about 1 million tons of fertilizers valued at 2.26 billion rupees at international prices.

The finance minister said the government has been forced to resort to import to make adequate stocks of fertilizers available both for the kharif and ravi crops in different states.

Venkataraman said that it is most unfortunate that the economy has to sustain an additional burden of over 10 billion rupees in foreign exchange at a time when the balance of payments position is severely strained.

CPI GENERAL SECRETARY NOTES FAMINE IN ANDHRA

New Delhi PATRIOT in English 2 Dec 80 p 4

[Text]

HYDERABAD, Dec. 1.

FAMINE conditions in 13 districts of Andhra Pradesh, particularly in Rayalaseema and Telengana districts are so serious that already a score of starvation deaths have been reported in these districts, CPI general secretary C. Rajeswara Rao told newsmen here today.

Mr Rao, who toured these districts intensively for nine days charged both the State and Central Governments with grossly underestimating the seriousness of famine conditions in the State. He said that both Central and State Governments "fight shy of calling it famine, because they have some serious obligations under the famine code if they accept that it is famine".

Hence they call it a drought and announced a paltry sum of seven and half crores rupees which is a drop in ocean, the CPI leader said. He said that about 18 lakhs people were affected by famine in any one of these districts, while Union Minister K V Swaminathan had announced in Lok Sabha that people affected in Andhra Pradesh were 14.19 lakhs as if he had counted heads and arrived at that figure.

Narrating sorrowful situation and the pathetic conditions of people in these districts, Mr Rajeswar Rao said that Government should immediately declare these 13 districts as famine-affected areas and provisions of the famine code be implemented. He demanded that the Central Government should grant Rs 200 crore and 20 lakhs tonnes of foodgrains to meet the immediate challenge posed by the famine unheard of in these areas.

He said the State Government should immediately come forward with a bang and procure the entire paddy available with farmers by paying support price and that paddy be sold at cheaper price through fair price shops at every village.

JOB SCHEMES

He said that all agriculture workers and other needy people be provided with work mainly in productive schemes like desilting of tanks, deepening of wells, digging of canals and construction of roads. He said these schemes should be implemented through representatives of village committees and not through contractors who swallow money with the cooperation of corrupt officials. Loan, tax and electricity arrears of farmers must also be waived in these districts and fresh loans be given. Drinking water must be provided to these villages through deep bore wells, deepening of existing wells and tankers whenever it was not possible to provide water locally.

State CPI leaders V K Adinarayan Reddy and S Sudhakar Reddy accompanied Mr Rajeswar Rao throughout his nine-day tour of the famine-affected districts in Rayalaseema and Telangana regions.

Mr Rao warned that if no effective steps were taken by both the State and Central Governments immediately to meet the famine and help people, several lakhs of people would fall dead like dried leaves and the remaining cattle would also be lost.

PAPER REPORTS, DEPLORES BIHAR BLINDINGS

Bhagalpur Report Cited

Bombay THE TIMES OF INDIA in English 26 Nov 80 pp 1, 13

[Text] Patna, November 25:

In a report to the state government, the Bhagalpur jail authorities have confirmed that about 40 undertrials in their custody had been rendered blind allegedly by the police in the course of investigation of cases against them.

The report was submitted to the inspector-general of prisons recently though officials refuse to acknowledge this fact. On the contrary, the government is making desperate attempts to hush up the case or at least absolve the police of blame.

The chief minister, Dr. Jagannath Mishra, while maintaining that he could not say anything until he received the report of the inquiry he had ordered, said it was quite possible that the undertrials were blinded by villagers in the course of an encounter before their arrest. Villagers might have done so in collusion with the police.

The chief minister said it was highly unlikely that the Bhagalpur police, which was headed by a Harijan superintendent of police, would resort to such inhuman methods.

"In fact, the entire district administration is headed by a good chap. I do not think there is any basis for the allegation." In any case, if the allegation had some truth, the government had no means of discovering it. No opposition leader had raised the issue.

Inquiries reveal that the Bhagalpur jail authorities were first concerned not so much with what had been allegedly done to the undertrials by the police as the problems they were causing in the prison due to the loss of sight.

First, the jail administration had made a case for posting additional warders in the prison for escorting the blinded undertrials from their cells to places of convenience and other places in the prison.

The most shocking case of the alleged police torture in Bihar came to light as a result of a petition filed in the supreme court by Mr. Hingorani in New Delhi.

The supreme court directed the Bihar jail department to report if there were some sightless undertrials and the possible reasons for their loss of sight. The Bihar inspector-general (prisons) had called for the report from Bhagalpur after this petition.

The undertrials had been allegedly rendered sightless in the course of the first ten months. According to an unconfirmed report, the first case took place in February when the police sought to bring down the rising crime graph in the district by allegedly rendering a jail bird blind with the use of acid. Encouraged by the results, they allegedly applied the sovereign remedy to a number of other suspects for dealing with crime.

The irony of the situation is that the officer now asked by the Bihar government to investigate the allegation was earlier divisional commissioner of Bhagalpur and most of the cases of blinding of criminals occurred when he was in charge of the administration there.

It is quite possible that the junior level police functionaries in order to win laurels from their seniors, might have resorted to barbaric methods in dealing with suspects without his knowledge.

The home commissioner, who is conducting the inquiry, said in an interview shortly before leaving for Bhagalpur: "The allegation might be true." Asked to confirm the Bhagalpur jail superintendent's report, he said: "I cannot say anything about it. After all, we receive several hundred reports from different places all over Bihar every day. If it was sent, it might have been lying buried in files somewhere."

It is stated that the jail authorities had summoned the district eye specialist for treatment of the blinded undertrials. He had reportedly stated that most of them appeared to have been deprived of their sight by the application of some method.

Relatives of the suspects and a lawyer engaged for their defence made the story of the alleged police torture known to a voluntary organisation concerned with the welfare of convicts.

Bail Refused

In what must be regarded as a remarkable feat, a local photographer chasing the story along with a reporter of a Delhi newspaper, managed to smuggle himself inside the Bhagalpur jail to take photographs of blinded undertrials who have reportedly refused to get themselves released on bail as a protest against the treatment meted out to them by the police.

While the Bhagalpur police methods in dealing with suspects have come to light, even worse atrocities are allegedly committed by the guardians of law and order in different parts of Bihar.

For instance, a common method employed in liquidating criminals is to give out the story of encounters after they had been done to death. Unfortunately, the victims of such cases do not survive to tell the tales of their woes. The Bhagalpur

undertrial story has become known only because the police allegedly contented themselves by robbing them of their sight.

Referring to reports of torture on Adivasis in Adhoura in Rohtas district, which appeared recently, the chief minister said a wireless operator who had allegedly raped a tribal woman had been suspended. The divisional commissioner, Patna, had been asked to investigate the allegations and report to the government for further action.

'Shocking Brutality' Claimed

Bombay THE TIMES OF INDIA in English 27 Nov 80 p 8

[Editorial]

[Text]

Blinding of several dozen under-trial prisoners by the Bhagalpur police, apparently with cynical deliberation one after the other, is one more grim reminder that Bihar is the worst administered state in the country. Ironically, the atrocities might have never come to light but for the request of the jail authorities for more staff to escort the sightless men around inside the prison. Even now, an attempt is evidently being made at the highest level in Patna to hush up what is probably the most brutal instance since independence of "goring human rights to death", as the Supreme Court put it not too long ago in another case of torture perpetrated by the Haryana police on a helpless prisoner. For the last ten months, policemen in five different police stations in Bhagalpur have been systematically selecting their victims, forcibly puncturing the retinas of their eyes, and pouring strong acid to disfigure the face and close the eyelids permanently. Some reports suggest that senior police officials were commended this so-called *gangajal* treatment to deter some suspected criminals from breaking law and order for good and to deter the others. But, at least according to one version, corruption is the root cause: known "bad characters", who grease the palms of the local policemen suitably, are spared. Be that as it may, the state home secretary's callous disregard of the Bhagalpur jail superintendent's report, confirming the police excesses, is truly reprehensible. Shortly before leaving for Bhagalpur to investigate the allegations, he is said to have told newsmen: "If the report was sent, it might have been lying buried in files somewhere.... After all, we receive thousands of reports from all over Bihar every day". Equally astonishing is the chief minister's *sang froid* in the face of what is, to say the least, a heinous scandal. He has tried to make out that the men were blinded by villagers in "encounters before their arrest"!

It is true that third-degree methods are routinely used by the police everywhere to extort confession from alleged criminals and that conditions in jails all over the country are deplorable. But nowhere else are the poor singled out on such a scale for beating, torture or worse by the police as in Bihar. Only last year the Supreme Court had ordered the release of scores of the under-trial detenus in the state because they had been longer in prison than would have been the case if they had been tried promptly and awarded the maximum punishment provided in the law for the offences with which they were charged. The only reason why they were not released on bail was that they were too

poor to furnish the requisite surety. Apparently, the Supreme Court's strictures on that occasion have failed to mend matters. While the ruling party and the state administration are squarely to blame for their shocking apathy to the police brutality in Bhagalpur jail, the opposition, too, cannot shrug off its responsibility. At the very least, it abysmally failed to exercise the requisite vigilance.

PARLIAMENT DISCUSSES BIHAR BLINDINGS

Mishra Resignation Demanded

Madras THE HINDU in English 2 Dec 80 p 11

[Text] New Delhi, Dec. 1.

The Minister of State for Home, Mr. Yogendra Makwana, announced in the Rajya Sabha today that the Bihar Government had ordered the arrest and prosecution of officers allegedly involved in the blinding of undertrials in Bhagalpur jail.

Mr. Makawana's announcement came while replying to the points raised by the Opposition leader, Mr. I. K. Advani (BJP), who initiated a calling attention motion on the "brutal act of blinding of undertrial prisoners by the police in Bhagalpur jail in Bihar".

The Government was "shocked" to learn about the atrocities committee on undertrials and the Chief Minister had already suspended the officials. The State Government had also ordered the arrest and prosecution of officers allegedly involved in the crime, Mr. Makwana said.

Raising the motion, Mr. Advani said the world and the country were watching about the firm steps the Government proposed to take to deal with persons involved in the crime.

He demanded the resignation of the Chief Minister, Dr. Jagannath Mishra, saying there appeared to be "total collapse of rule of law in the State".

'A Minister Aware of Incidents'

Mr. Advani said the matter was raised before a Sessions Judge and the Supreme Court and the newspapers had mentioned that one Minister the Cabinet and senior officers knew about the happenings in the Bhagalpur jail and nobody had done anything to stop this campaign of blinding of undertrials.

Mr. Makwana said he came to know only today from newspapers that one Minister of the Mishra Government knew about the incidents and he had asked for information.

Mr. Bhupesh Gupta (CPI) said the least Chief Minister, Mr. Mishra could do was to resign in the name of democracy.

Amidst interruptions from women members of the Congress(I) that the Opposition should not politicise the issue, Mr. Advani said the incidents were symptomatic of "deadening of conscience and deadening of sensitivity" in the Government.

It was all the more astounding that such an "outrageous" incident should have taken place in Bihar "which is the land of the Buddha, an embodiment of compassion."

The least that should have been done by the Centre, Mr. Advani said, was to ask the Bihar Chief Minister to resign.

In a democracy, responsibility for all failures, whether it amounted to acts of omission or commission, lay at the political level.

"You cannot make scapegoats of petty police officials." It was not a question of one man becoming a beast but of the whole system becoming beastly.

The women members from the ruling party, particularly Miss Saroj Khaparde, Mrs. Pratibha Singh and Mrs. Monika Das, asked Mr. Advani whether the Janata Government had the same sense of shock and shame when Harijans were burnt alive.

Belchi and Bhagalpur

Amidst interruptions and shouting, Mr. Advani said the Janata condemned the Belchi incidents. "Belchi was bad but Bhagalpur is outrageous. I am surprised that they are comparing the two."

What happened in Bhagalpur "is unprecedented in the annals of Indian history".

Mr. Advani also recalled Mr. Jaiaprakash Narayan's call to the police not to obey illegal orders and said "I am sure many of these constables would have acted against their conscience when they poured acid "(into the eyes of the prisoners)."

Mr. Advani wanted to know whether press reports that the Home Minister of the State was aware of the incidents taking place were correct and whether the IG of Police had written a letter of appreciation to the Superintendent of Police.

He also enquired whether a meeting of officials was held to devise ways

of controlling law and order and whether secret instructions were issued to district magistrates to ensure that no news items were sent without their approval.

Mr. Makwana pointed out that that the incidents had been taking place since October 1979 and Mr. Mishra came to power only in June this year. He, however, wanted notice to reply to the queries raised by Mr. Advani.

Amidst interruptions from the Opposition, Mr. Makwana said in the Belchi incident that took place when the Janata was in power, even children were thrown into the fire.

Parliamentary Probe Urged

Mr. Ramanand Yadav (Cong-I) wanted the Government to take stern action against those who had perpetrated such barbarity on prisoners.

He wanted a committee to be constituted with two members from each House to enquire into the Bihar incidents.

The Minister assured Mr. P. Ramamurthi (CPI-M) that he would write to the Patna High Court for action, if necessary against the district judge, Bhagalpur, for not taking adequate action on receiving representations from the blinded undertrials.

Mr. Ramamurti demanded the arrest of all those guilty under Section 326 IPC (voluntarily causing hurt resulting in loss of limb), an offence punishable with transportation for life.

Mr. Makwana agreed with the member that the undertrials had been unauthorisedly taken to police stations after they were remanded to judicial custody.

Mr. V. Gopalasamy (DMK), said there was no necessity for a judicial enquiry into the incident but the guilty should be prosecuted. Investigation, however, should not be left to the Bihar police but to the CBI.

Mr. Bhupesh Gupta (CPI) wanted to know whether there was any truth in reports that the Bihar Chief Minister asked officers at a meeting to use all methods to stop crimes.

He said police used brutal methods only against the poor. In this connection, he said, the General Manager of Bokaro steel plant, who was arrested regarding with the pilferage of stores, was released on bail at the intervention of a State Minister.

Mr. Gupta said that even though the Minister in charge of jails was not directly responsible for the incidents, he should resign on moral grounds.

Action should also be taken against the Inspector General of Police as he was responsible for the police force.

The Home Minister, assured the member that all those found guilty would be punished. He had never approved use of third degree methods by the police.

He had been told by the Chief Minister that action was being taken against the jail official.

The question of assisting families of those blinded would be decided after cases pending against them were disposed of. "Many of them had indulged in heinous crimes".

Several members, including Mr. Ramamurti, Mr. Ladli Mohan Nigam and Mr. Gupta, demanded that the police must stop using third degree methods on undertrials.—PTI.

Zail, Others Comment

Madras THE HINDU in English 2 Dec 80 p 11

[Text]

NEW DELHI, Dec. 1.

The Home Minister, Mr. Zail Singh, today assured the Lok Sabha that no stone would be left unturned to enquire into the alleged blinding of undertrial prisoners by the Bihar police and punish the guilty, howesoever high.

Replying to a calling attention motion, he said it was strange that though the first blinding took place in October 1979, neither the State nor the Central Government nor Parliament came to know of them.

"There have been three elections since then—to the Lok Sabha, State Assembly and the Zilla Parishad. There must have been some conspiracy behind it and neither the previous Government nor the present one can escape responsibility. As for myself I am ready to own it".

While describing the incident as "unfortunate, unhuman and barbarous", Mr. Zail Singh did not agree with the Opposition demand for a judicial enquiry and said he was afraid that it would delay action.

He agreed with Mr. A. B. Vajpayee that the incident tarnished the country's image abroad and steps must be taken to see that such thugs did not recur.

On the demand for the resignation of the Bihar Chief Minister, Dr. Jagannath Mishra, the Home Minister pointed to the Opposition and said "You are also responsible for the incident, specially Mr. Dhanik Lal Mandal, who was then Minister of State for Home Affairs (in 1979)".

The motion stood in the name of Mr. Ram Avtar Shastri, Mr. Dhanik Lal Mandal, Mr. R. K. Mahalgi, Mr. Vajpayee and Mr. Mool Chand Daga.

Mr. Shastri (CPI) and Mr. Daga (Cong.-I) were not present in the House when called.

Mr. Vajpayee congratulated the Indian Express for exposing the "terrible crime" which, made every one hang his head in shame. He doubted whether even freedom of the press was safe in Bihar.

Amid interruption by some Congress (I) members, he said in August last, the Bihar Government had issued a secret circular prohibiting officials from giving information to the newspapers.

The crime was sought to be justified by saying the crime rate had come down in Bihar. "They do not do it even in Russia where criminals are sent to Siberia", he said.

Mr. Vajpayee wanted to know the difficulty in having a judicial enquiry into the matter as CID was part of the same establishment which was callous and heartless".

Asking what had happened to the so-called doctor who pierced the eyes with the 'takwa' (big needle) and put acid in them, Mr. Vajpayee wanted the medical reports to be placed on the table.

He reminded the Government that India was a signatory to the Charter on Human Rights. What answer it would give at the United Nations, he asked.

Mr. Mandal blamed feudal elements and high officials who were in league with the police for various crimes against the weaker sections in the State. During the Emergency, they had killed 148 Harijans in the name of naxalites, he alleged.

In Bodh Gaya, an agitation was going on against a Mahant who owned 18,000 acres of land. But no action was being taken against the Mahant whose crops were being 'harvested with the help of the Government'.

In Moradabad the police had mutilated the fingers of brassware workers.

Mr. Mandal wanted to know the action being taken to discipline the police and remove the officials involved in the blinding incident, which, was a 'conspiracy hatched at a high level'.

Action taken by Bihar Govt.

Mr. P. Venkatasubbiah, Minister of State for Home in his reply said criminals were criminals and caste combinations and permutations as given by Mr Mandal did not hold good. In fact, the Superintendent of police of Bhagalpur was a harijan.

The Bihar Government, had taken immediate action and had constituted a committee of legislators, including Mr. Karpuri Thakur, to go into it. Mr. Thakur, had been the Chief Minister of the State and in his time caste conflicts took place.

Amidst cries of shame from the ruling benches, he said there was no Congress (I) Government in Bihar in 1979 when the first blinding incident occurred.

Mr. Venkatasubbiah told Mr. R. K. Mahalgi that it would not be possible to constitute a parliamentary committee as the State Government had already set up a committee of legislators to go into the matter.

He said he did not know whether any Minister or the Minister for Jails had visited the Bhagalpur Jail during the last six months.—PTI.

CORRESPONDENT REPORTS BIHAR BLINDING COVERUP

Bombay THE TIMES OF INDIA in English 3 Dec 80 pp 1, 9

[Text] PATNA, December 2.

THE Bihar government was fully aware of the happenings in Bhagalpur in September but chose to sleep over the matter, virtually allowing the gouging out of the eyes of habitual offenders as part of the anti-crime operations up to the second week of November, according to well-informed sources.

It is reliably learnt that the inspector-general of prisons in a report to the home commissioner in September had mentioned allegations that the police were blinding undertrials and urged the government to look into the matter, especially in view of the fact that the number of eyeless undertrials in the custody of the Bhagalpur and Banka jails had been increasing.

That this important communication contained in a top-secret file marked urgent remained unnoticed by the home commissioner until the barbaric methods employed by the Bhagalpur police were reported in newspapers in the third week of November is difficult to understand.

Soon after the first report had appeared in a Delhi newspaper, this correspondent contacted the home commissioner who denied any knowledge about it and added he was making inquiries with the Bhagalpur police.

BID TO SUPPRESS CASE

Had the Bihar government woken up in September and shown even a little concern for the plight of the undertrials, the eyes of at least ten persons who were taken to Rajoun on October 6 or 7 for blinding operations could have been saved.

One of these victims allegedly died during the barbaric operations. These blinded undertrials were lodged in the Bhagalpur jail. One more eyeless undertrial was brought to the jail on November 10. Apparently, the eyes of the last such inmate of the jail were gouged out early in November.

Unfortunately, the government tried its best to suppress the case which rocked Parliament yesterday and shocked the whole country. Even after a report mentioning that there had been 40 cases of blinding of undertrials had appeared in this newspaper on November 26, the chief minister, Dr. Jagannath Mishra, did not reveal the full facts. He maintained that there were only 13 eyeless undertrials in the jail. After the issue had figured in Parliament, he conceded that their number was 31.

A state minister, who is said to be quite close to the chief minister, became fully aware of the methods being adopted by the Bhagalpur police several months ago because of his friendship with an outlaw, two of whose lieutenants were blinded, the first in February and the second later. It is stated that this minister had first sought to put pressure on the Bhagalpur police to stop the practice. That he did not mention this fact to the chief minister is incredible.

According to unconfirmed reports, the number of habitual offenders who had been given the barbaric treatment is larger. It is stated that people in Naughachia near Bhagalpur had been blinded. It is difficult to check the veracity of these reports, especially now that the whole government machinery is engaged in suppressing the facts.

'DERELICTION OF DUTY'

Though the Union home minister has assured Parliament that all those involved in this case, which had impaired the nation's image, would be dealt with severly, there is so far little evidence of any concerete measures being taken in this rgard. There is a feeling in political circles here that whatever is being done by the state government is an "evewash."

There appears to be some truth in this view. For instance, all 15 suspended police officials have been charged with only dereliction of duty. After departmental inquiries, they will manage to get away with mere adverse entries in their confidential reports.

Officials, who were allegedly responsible for the adoption of barbaric methods in dealing with the criminals and their execution may not be hauled up in court and given punishment commensurate with the nature of their crime.

In all cases of blinding of undertrials by the police, there were no public witnesses. That any one of the policemen who were around will come forward to give evidence is unlikely. Ironically, three FIRs lodged with different police stations do not mention that the police were responsible for the operations. Only persistent questioning by impartial judges and prosecutors' can bring out the truth. But no such process has been set in motion.

According to some reports, the opposition leaders included in the legislators' committee are not at all happy with its composition and may boycott it. Reports have already appeared in local newspapers that Mr. Thakur will not associate himself with the committee because the government has set it up only as a "sop" to the critics.

A comparatively junior Congress (I) MLA has been made convener of the body. That the status of the opposition leader in the vidhan sabha is not is not more than that of an ordinary member in the committee is galling to the critics.

There is a feeling in political circles that the Bihar government, shamed by the Bhagalpur incidents, has already embarked on a witch-hunt.

Several opposition leaders feel that the suspension of the Bhagalpur jail superintendent, who had forwarded the petitions of the sightless undertrials to the supreme court and allowed a couple of newsmen to meet them inside the prison, is highly unjustified. The charge levelled against him that he had not recorded the injuries of undertrials does not wash.

The district superintendent of police, who had apparently played a key role in the whole operation, has only been shifted to Patna. It is stated that any inquiry committee will find it difficult to arrive at the truth so long as the top officials are not transferred from the district.

It is alleged that if an impartial inquiry is held into the happenings a very important official, who was transferred from Bhagalpur recently, would have a lot to explain. It is doubtful that the legislators' committee appoint-

ed to uncover the facts can succeed in its purpose. In view of the serious nature of the crime, only an inquiry by a senior and seasoned judge can help in uncovering the truth.

PTI adds: The Bihar government is making arrangements for shifting six blinded prisoners from the Bhagalpur jail to the Patna Medical College Hospital, it was officially learnt.

A team of eye specialists of the hospital deputed by the state government to examine the eyes of the blinded prisoners in the jail had suggested the immediate shifting of the six prisoners as there was a possibility of their sight being restored.

Altogether, 18 blinded prisoners were examined.

The sources said the team in its 18-page report said corrosive substances were inserted in the eyes while some were blinded with blunt weapons.

BRIEFS

TWO FRENCHMEN ARRESTED--New Delhi, 6 Jan (AFP)--Two Frenchmen have been taken into custody in Kerala on the charge of trespassing into the protected area around the Space Research Centre at Tumba, near Trivandrum, capital of the southernmost state. Reports reaching here today said the arrested had been identified as Beyard Daniel and Assale Jean Jacques. They had arrived by a dinghy from Maldives and were arrested by police as they came ashore--Jacques on Saturday and his accomplice on Monday. Mr Jacques has been remanded in judicial custody till tomorrow while the other was being interrogated by police, the reports said. [Text] [BK061617 Hong Kong AFP in English 1454 GMT 6 Jan 81]

CREDIT TO SRI LANKA--India and Sri Lanka have signed an agreement providing for a credit of 100 million rupees to Sri Lanka for buying machinery and equipment from India. The agreement was signed by Union Finance Minister R. Venkataraman and Sri Lank's Finance Minister Ronald de Mel in Colombo today. The Indian side has indicated that it will consider as a special case any further financing of any project after utilizing the credit now agreed upon. Addressing a news conference after signing the agreement, the finance minister said that the India-Sri Lankan relations are at their best and no problem of any kind exists between the two countries. He declared that there is close cooperation between them in all fields. Mr Venkataraman told a questioner that there is no misunderstanding between the two countries over Mrs Gandhi's comments on the expulsion of Mrs Bandaranaike from Sri Lanka's Government. He said the statement by Mrs Gandhi is nothing more than a comment by an international statesman. [Text] [BK061243 Delhi Domestic Service in English 1230 GMT 6 Jan 81]

ROK ENVOY CREDENTIALS PRESENTATION--New Delhi, 5 Jan (AFP)--President Neelam Sanjiva Reddy today spoke of the need for the peaceful reunification of Korea. He expressed the hope that it would be realised through bilateral negotiations. Mr Reddy was welcoming South Korea's new Ambassador Kim Tae-chung who presented his credentials to him this morning. [Excerpt] [BK051527 Hong Kong AFP in English 0827 GMT 5 Jan 81]

TUNGSTEN ORE--New Delhi, 5 Jan (AFP)--Huge depoists of tungsten ore have been detected at Sirohi in the western border state of Rajastan, the PRESS TRUST OF INIDA (PTI) reported today. The agency said that the new discovery would make India one of the leading producers of this strategic material. It quoted Dr V. S. Krishnaswamy, director-general of the Geological Survey of India, which made the discovery, as saying at Varanasi (Banaras), northern India, that the area was being developed intensively under a four-year programme. However, no approximate estimate was available of the deposits. At present tungsten is produced only from Degane area, also in Rajastan and the country's needs are mostly met by imports. [Text] [BK051527 Hong Kong AFP in English 1121 GMT 5 Jan 81]

REPRESENTATIVE AT UNITED NATIONS--New Delhi, 3 Jan (AFP)--Natarajan Krishnan, additional secretary in the Foreign Office, has been appointed India's new permanent representative at the United Nations, it was officially announced here today. He succeeds Brijesh Mishra. [Text] [BK041045 Hong Kong AFP in English 1425 GMT 3 Jan 81]

INDO-SOVIET PLANNING GROUP--The fifth meeting of the Indo-Soviet planning group would discuss monitoring of plan implementation and project construction, formulation and selection of projects and mathematical models of planning. The date and place of the meeting of the group were not yet fixed, but the meeting might be held here early next year. This was stated by Union Planning and Labour Minister Narayan Datt Tiwari in a written reply to Mr Balasaheb Vikhe Patil, reports PTI. Mr Tiwari said the planning group at its fourth meeting held in New Delhi in April 1978, set up a working group which discussed the subject "energy planning" and presented a report to the group. [Text] [New Delhi PATRIOT in English 27 Nov 80 p 5]

NEW TRAVEL REGULATIONS--New Delhi, November 28: The reserve bank will introduce from January 1 a new travel scheme under which Indians visiting Sri Lanka, Pakistan, Bangladesh, Burma, Malaysia, the Maldive Islands, Male, Mauritius and Seychelles can get $250 in exchange per person once in two years. The existing Mauritius travel scheme and the special exchange facilities available for travel to Sri Lanka and Bangladesh will be withdrawn from that date. The foreign travel scheme under which persons visiting any country other than Nepal, Bhutan and South and South-West Africa (including the countries covered by the new scheme) can avail of foreign exchange of $500 once in two years will, however, continue to be operative. [Text] [Bombay THE TIMES OF INDIA in English 29 Nov 80 p 9]

MINORITIES PANEL MEMBERS--New Delhi, November 28: Dr. Rafiq Zakaria, M.P. has been appointed member-secretary of the high-power panel on minorities, scheduled castes, scheduled tribes and other weaker sections with immediate effect in place of Mr. Khurshid Alam Khan, M.P., who has been inducted into the Union council of ministers as minister of state for commerce. Dr. Gopal Singh continues to be the chairman of the panel. Mr. Hokishe Sema, former chief minister of Nagaland, Mr. Arvind Netam, M.P. and former Union deputy minister, Mr. L. Bullayya, former vice-chancellor, Andhra University, Mr. N. C. Parasher, M.P., Mr. I. D. Jawahar Raj, advocate from Tamil Nadu, Mr. L. R. Naik, former M.P., Dr. J. Leon D'Souza, M.P., and Mrs. Aloo Chibber, MLC, Maharashtra, are other members of the panel. [Text] [Bombay THE TIMES OF INDIA in English 29 Nov 80 p 13]

NIGHT BORDER MOVEMENT BAN--New Delhi, 6 Jan (AFP)--A night ban on movement of people has been imposed within a three km belt along the border with Bangladesh in disturbed Assam's Goalpara District from last Monday, it was reported today. The ban will be in force from 2200 hours to 0400 hours Indian Standard Time till February 26 next. PRESS TRUST OF INDIA (PTI) News Agency in a dispatch from Gauhati, capital of the eastern frontier state, said that the order promulgated by the district magistrate gave no reason for the decision. Assam is rocked by an over 15-month-old mass agitation against "illegal" immigrants from Bangladesh and Nepal. Strict press censorship has been imposed recently. In the state as the agitationists rejected a recent fresh offer by the government of Prime Minister Mrs Indira Gandhi to resume talks with them and stepped up their campaign by organising state-wide general strike and mass demonstrations. [sentence as received] A representative of the agitationists, however, announced here last evening that they were now willing to resume the dialog. [Text] [BK061615 Hong Kong AFP in English 1443 GMT 6 Jan 81]

MAHARASHTRA BIENNIAL ELECTIONS--Bombay, Dec 1. The Congress(I) bagged five seats and the Congress(U) one in the biennial elections to the Maharashtra Legislative Council from six Local Authorities Council which went to the poll yesterday. The successful Congress(I) candidates are: Mr. P. S. Deshmukh (Thane), Mr. Abdul Shaffi (Chandrapur-Bajura), Mr Keyalchand Jain (Bhandara) Mr. J. R. Dhange (Yavatmal-Wardha) and Mr. Dajiba Patil (Jalgaon). [as published] The Kulaba seat was won by Congress(U) candidate Mr. P. N. Dharkar, who was supported by the six-party Left and Democratic Front. Mr. Dharkar defeated Mr. Bhai Dandekar (Cong-I). The result of the elections from two graduates' and three teachers' constituencies, which also went to the poll yesterday, will be announced on Wednesday.--UNI. [Text] [Madras THE HINDU in English 2 Dec 80 p 9]

EUROPEAN ELECTRONICS DELEGATION--A delegation sponsored by the Electronic Component Industries Association to Europe has come back with very good impressions of Indo-European ties in the field of electronics. According to the delegation, there was enthusiastic response from all over Europe for setting up joint ventures with Indian parties and to act as agents for distribution of electronic components from India. It was able to allay fears about the lengthy government procedures for setting up new projects. The success of ELCINA delegation's visit is evident from the fact that a number of countries have offered to send similar electronics delegations to India to conclude the negotiations started by the Indian team. The first to arrive will be a British team sponsored by the Electronic Components Industry Federation of the U.K. which will be in India in March next. [Text] [Bombay THE TIMES OF INDIA in English 26 Nov 80 p 10]

TRADE WITH FINLAND--New Delhi, November 25 (UNI): India has secured considerable liberalisation in its textile trade pact with Finland. This was achieved when an Indian delegation led by Mr. B. K. Zutshi, joint secretary in the ministry of commerce, visited Helsinki recently and reviewed the operation of the memorandum of understanding on textiles and colthing between the two countries concluded in May 1978. [as published] Despite its limited product coverage the agreement continued several restrictive provisions. These restrictions related to non-exempt status to handlooms and cottage industry folklore products, absence of inter-product transfers (swing) and small growth rates. These new arrangements will take effect from the beginning of 1981. [Text] [Bombay THE TIMES OF INDIA in English 26 Nov 80 p 10]

COASTAL SHIPPING PANEL--A committee for formulating a plan for the development of coastal shipping through 1980s had its first meeting here yesterday. It discussed the problems of the ailing coastal shipping with shipowners and the customs and heard some suggestions for its improvement. The committee, headed by the director-general of shipping, Mr. R. D. Pradhan, and consisting of representatives of the Indian National Shipowners' Association, the shipping development fund committee, the customs and port trusts, was trying to ascertain the present cargo movement, potential for development of coastal shipping and constraints in its operation. One suggestion was that the customs and port formalities should be done away with as they were elaborate and unnecessary. It was pointed out by shipowners' representatives that no such formalities existed for rail and road transport. The customs formalities tended to discourage the diversion of vessels operating in the adjacent trades to coastal trade. The coastal fleet today consists of 38 vessels, 12 of them engaged in carrying only coal and salt. In 1979, the coastal cargo

movement amounted to 900,000 tonnes. [Text] [Bombay THE TIMES OF INDIA in English 26 Nov 80 p 7]

INTERNATIONAL WOMEN'S CONFERENCE--The sixth international conference of women engineers and scientists will be held in Bombay between September 7 and 12, 1981. Subjects such as technology transfer, nutrition and health disease and population problems will come up for discussion. The deadline for "abstracts" and registration is March 31, 1981. Interested parties may contact, Dr. (Mrs.) Sumati V. Bhide, Cancer Research Institute, Tata Memorial Centre, Parel, Bombay 12. [Text] [Bombay THE TIMES OF INDIA in English 26 Nov 80 p 5]

HARIJAN JUDGE NAMED--New Delhi, November 29 (UNI): The government today named its first Harijan judge in the supreme court ever since independence by appointing Mr. Appajee Varadarajan, a judge of the Madras high court, to the highest judicial forum of the country. Another judge appointed was Mr. Baharul Islam, a retired chief justice of the Gauhati high court. The government is expected to announce the appointment of a few more judges shortly to fill the vacancies that have arisen. There are six vacancies and one more judge is retiring by January next year. [Text] [Bombay THE TIMES OF INDIA in English 30 Nov 80 p 1]

NEW SIKKIM GOVERNOR--New Delhi, November 29 (PTI): Mr. Homi J. H. Taleyarkhan has been appointed governor of Sikkim in place of Mr. B. B. Lal. The appointment will take effect from the date Mr. Taleyarkhan assumes charge of his office, a Rashtrapati Bhavan communique said today. Mr. Taleyarkhan was formerly a minister in Maharashtra and later ambassador to Libya. [Text] [Bombay THE TIMES OF INDIA in English 30 Nov 80 p 1]

INDO-SOVIET TEXTILE DEAL--A Rs. 70-crore contract to supply 107 million metres of textile fabrics has been signed here today between the Indian suppliers and Exportljon, a Soviet organisation. Last year, the USSR had bought textile fabrics worth Rs. 56 crores. Mr. G. P. Bykov, director, Exportljon, said the agreement was the manifestation of close relations between the two countries. He was proud that it was signed a few days before Mr. Leonid Brezhnev's visit to India, he added. [Text] [Bombay THE TIMES OF INDIA in English 3 Dec 80 p 10]

VICE ADMIRAL'S REMARKS--Visakhapatnam, December 2: The Indian Navy's role has been considerably enlarged by the declaration of the 200-mile exclusive economic zone, Vice-Admiral M. K. Roy, Flag-officer commanding-in-chief Eastern Naval Command, said here yesterday. He told a press conference that besides maintaing our sinews of war, the new talks entailed guarding against poaching by foreign vessels, protection of offshore installations and the wealth of our oceans. [as published] Vice-Admiral Roy said the financial stringency necessitated the marine force to tailor its needs within these constraints. [Text] [Bombay THE TIMES OF INDIA in English 3 Dec 80 p 7]

OFFICIALS COMMENT ON U.S. ELECTIONS

Jakarta SINAR HARAPAN in Indonesian 6 Nov 80 pp 1, 3, 12

[Article: "Foreign Minister Mochtar on the Election of Reagan; New U.S. President Must Pay Attention to the Developing Countries"]

[Excerpts] Minister of Foreign Affairs Mochtar Kusumaatmadja believes that with the election of Ronald Reagan it is certain that the policies which Reagan will adopt will show some differences from the policies of Carter up to now. However, Minister of Foreign Affairs Mochtar said that Indonesia hopes that President Reagan will continue to pay attention and show understanding regarding the interests of the developing countries. "We also hope that the U.S. will continue to pay attention to and to support the efforts of ASEAN to reach a peaceful solution for the question of Kampuchea, in the interests of the peace and stability of Southeast Asia."

Lt Gen (wartime) Dr T.B. Simatupang assumes that there will not be much difference in U.S. policy toward Indonesia and ASEAN under the new U.S. president. According to T.B. Simatupang, during the presidential election campaign in the U.S., the policy of the U.S. toward Indonesia as well as ASEAN did not become an issue. T.B. Simatupang has the impression that during the campaign the differences which appeared between Carter and Reagan did not concern very fundamental matters.

For the president of Parliament, Daryatmo, although there has been a change of leadership from the Democrats to the Republicans, it is hoped that relations between Indonesia and this super power will not deteriorate. "God willing, they may be improved." According to Daryatmo, if Indonesia becomes a strong country, the U.S. will also obtain benefits from that. However this may be, Indonesia cannot be separated from being a strong link in a chain in facing the chain of the opponents of the U.S. in the world.

Regarding Reagan, the chairman of Parliament said that he is not yet able to express an opinion on what the effect of his leadership role will be in the future. "It would be better for us to wait and see," he said, adding, "although Reagan made many promises during the campaign, a campaign is a campaign." He said that the question is how will the policy presented by Reagan be applied.

Regarding the defeat of Carter, Daryatmo agrees with other politicians like Sugiharto and Usep Ranawidjaja that the weakness of Carter in resolving the question of the 52 hostages in Iran and the economic situation within the country had led to his defeat.

Dr Juwono Sudarsono, an instructor in politics at the Faculty of Political Science of the University of Indonesia, considers that we have no need to fear that the "hard line" which Reagan will use will be absorbed into his position as president of the U.S. Commenting on the Reagan victory to SINAR HARAPAN, Juwono saw that "hard line" as merely a matter of campaign rhetoric and that it will not be applied in Reagan's new position. "Usually, if a candidate is elected, his conduct in office is not so extreme," he said. From his private review during the campaign of the former governor of California and during the past 2 weeks, Juwono concludes that Reagan's statements are beginning to shift away from a "hawkish line" and toward a rather "dovish" line.

Commenting on the rather major defeat of Carter, Juwono thinks that this was a matter of "Jimmy Carter defeating Jimmy Carter." According to Juwono, Carter gave the impression of a person who lacked presence and often changed his views, both on domestic as well as on foreign policy. "Consistency is not the special mark of a politician," he went on to say, "but Carter showed more of a lack of consistency."

The doctor of political science continued, saying that 4 years ago Carter emerged with all simplicity, and it was considered that he could remove the "trauma" that Americans suffered from as a result of the Vietnam war and the Watergate affair. "Now he is encountering a backlash in his country," Juwono said, adding that, "it seems that many Americans are more comfortable having a president who, if necessary, will play dirty, rather than an honest man who appears to be weak." What will perhaps influence the attitude of the Third World toward the Reagan administation will be a lessening of attention to human rights questions such as Carter previously displayed. "For some countries which take a hard line toward human rights, the Reagan victory will be rather advantageous."

The coordinator of the Indonesian Democracy Party [Partai Demokrasi Indonesia], Prof Usep Ranawidjaja, at this point is not fully in agreement with Sugiharto from the Functional Development [Karya Pembangunan] group that the election of Reagan will weaken all of the commitments made by Jimmy Carter in the world political game. Usep inclines to the view that the main line of policy of the U.S. under Reagan will still be the same.

When it is recalled that Ronald Reagan once promised to resolve the matter of U.S. diplomatic relations with Taiwan, Usep states, perhaps Reagan will only seek to ensure that Taiwan will not become an enemy easily "incited" by the Soviet Union.

Resolving diplomatic relations with Taiwan and then destroying existing relations with the PRC is the same thing as "abandoning a friend." In this connection, at present the foreign policy of the U.S. seeks to find friends, including the PRC, and on the other hand the PRC indeed seems to value its relations with the U.S. What is interesting in the different concepts of Reagan and Carter is in regard to Middle East policy. His analysis concludes, "Therefore, if there is a change, it will only be in the Middle East, but not in the Pacific."

A member of the Unity for Development [Persatuan Pembangunan] group, H. Amin Iskandar, agrees with Vice President Adam Malik that, whoever becomes president of the U.S., everything will be just fine, and there will be no problem. He also agrees with Sugiharto that Reagan, if he attempts to follow the line of his past campaign, will have to make large scale changes in view of the world situation. He notes that, in the first place, the U.S. faces some tension with the PRC and,

secondly, with Israel, if Reagan holds to his campaign line. Regarding Israel, if the U.S. provides more support to it, this could lead to more aggressive action by Israel in the Middle East in confronting the Arab countries. "The expansion of Zionism will be more aggressive," says the ambassador of one country in the Middle East. The U.S. will be more determined in facing up to Iran. The U.S. will not display a soft attitude toward the Soviet Union. Thus, wherever one looks, the U.S. will be on the attack, in Vietnam, in South Yemen, Ethiopia, Angola, and Afghanistan, and Reagan will face the situation with a "hard line."

A member of Parliament of the Indonesian Democracy Party [PDI], Dr Soeryadi, thinks that whoever won, as between Jimmy Carter and Ronald Reagan in the presidential elections in the United States, will have no direct influence in Indonesia.

In answer to a question Dr Soeryadi said that American attention is no longer directed to Southeast Asia since America's defeat in Indochina. In his view American attention is largely directed to the Middle East, Western Europe, East Asia, and America itself. For example, America has asked Japan to increase its role in the international world. Soeryadi says that America will not consider human rights in helping another country. "Assistance to other countries will certainly be regarded from the point of view of national interests," stated Dr Soeryadi, the chairman of Committee 10 of Parliament.

The chairman of the Functional Development group in Parliament, Sugiharto, considers that the president elect, if he follows what he previously said, will provoke a major change in the map of world politics. And if this happens, it will mean that we too in Indonesia must begin again from the very start.

Like Sugiharto, Sarwono Kusumaatmadja, who, throughout the election campaign, followed the campaigns of the two candidates, points to statements by Reagan on foreign policy toward the China question, which could lead to the re-establishment of diplomatic relations with Taiwan. If this happens, it will certainly change the attitude of the PRC toward its commitments and other matters which have been resolved in the Southeast Asian region up to now. Sarwono added that with the Reagan victory it is possible that the American human rights policy will be abandoned and that relations between governments will be given greater importance.

JAPAN PROVIDES $500 MILLION CREDIT FOR OIL REFINING

Jakarta KOMPAS in Indonesian 5 Nov 80 pp 1, 12

[Article: "Japanese Minister for International Trade and Industry Received by President; Japan Provides $500 Million Credit for Oil Refining in Indonesia"]

[Text] The Japanese government is prepared to provide credit assistance to Indonesia amounting to $500 million for the construction of an oil refinery in Cilacap and expansion of an oil refinery in Balikpapan. The credit will be provided by the Export Import Bank of Japan, with ordinary conditions attached. This was stated by Japanese Minister for International Trade and Industry Rokusuke Tanaka on Tuesday [4 November] after his conversation with President Soeharto at the Bina Graha offices. The minister arrived in Jakarta Monday evening [3 November] and will be in Indonesia until 6 November.

The expansion of the oil refinery in Balikpapan will require expenditure of about $800 million. For the construction of the project the Bechtel Co of the U.S. has won the tender.

In his conversation of almost 1 hour with the president Minister Tanaka delivered to him a private letter from Prime Minister Zenko Suzuki. He himself made clear to the president the views which he holds on the questions of energy, medium and small industrial development, increasing the production of the ASEAN countries for export, and expansion of the opportunities for work.

At the meeting President Soeharto described the Indonesian effort to increase oil production by using new technology. In addition he discussed the efforts to develop generation of electricity using hydropower and geothermal resources, as replacements for oil.

He also described to Tanaka Indonesian policy on petroleum exports, paying particular attention to the ASEAN member states which have no oil resources. "I quite understand this Indonesian policy," Tanaka stated through an interpreter.

Taking note of the president's statement, Rokusuke Tanaka made it clear that his government was ready to help Indonesia in the field of technology, in order to increase its production of petroleum. Japan also attaches great importance to Indonesia, because 15 percent of Japanese oil requirements come from Indonesia, Tanaka added.

In response to a question Rokusuke Tanaka stated that the technological assistance referred to above can be provided by the Japanese Petroleum Board. The Japanese government always supports the efforts of the Board to develop petroleum resources.

According to Rokusuke Tanaka, President Soeharto also stated that Indonesia has extensive deposits of uranium. If Indonesia and Japan could cooperate in the exploration activity, it is possible that Indonesia could export uranium to Japan. Asked whether it was true that Japan would send a joint survey team to Indonesia from the Japan Energy Development administration to explore the uranium reserves in Indonesia, Tanaka said, "Discussions have not yet reached the stage of an agreement but are only at the stage of asking about the uranium deposits and the possibility that Indonesia would export it."

Regarding production of LNG (Liquified Natural Gas), according to Tanaka Indonesia is ready to go ahead in a cooperative way, provided that Japan is also ready to help in its development. Beside that the president hopes that Japan will be ready to raise the level of its relations with Indonesia, on the basis of mutual respect for each other's sovereignty.

"I myself have said that Japan is aware of how important it is that relations between the two countries be continued. Relations between Japan and Indonesia meet each other's needs. Therefore the effort to develop relations is very important," Tanaka said.

In answer to a question Tanaka stated that Japan continues to be ready to assist in the development of the ASEAN area fertilizer project in Aceh, if it is clear that the project will go forward. However, up to now there has been nothing certain about the planned project, according to Rokusuke Tanaka.

PERTAMINA PERSONNEL INVOLVED IN OIL SWINDLE

Kuala Lumpur NEW SUNDAY TIMES in English 16 Nov 80 p 3

[Text]

JAKARTA, Sat — Indonesian authorities have uncovered the theft of US$17 million ($28 million) worth of oil from Pertamina, the State-owned oil company, a spokesman said today.

The spokesman said a Singapore-based network operating with the complicity of 16 Pertamina officials and employees has succeeded in stealing some 35,500 tons of oil refined products worth US$13 million over the past several months.

Administrative sanctions have been taken against the Pertamina officials involved and they also may face legal suits, the spokesman said.

Mr Judo Sumbono, Pertamina's director for domestic oil supplies, said the oil was stolen from company stocks refined in Singapore and shipped back to Indonesia.

Indonesia, although an oil producing country, has limited refining facilities. Large amounts of its crude are refined in Singapore and shipped back to Jakarta for domestic consumption.

Tankers operated by the network to return the refined products to Jakarta unloaded only part of their cargo in Indonesia. The spokesman said the Pertamina officials involved then issued false certificates stating the total cargo had been unloaded.

The tankers then returned to Singapore to pick-up new shipments and set up rendezvous at sea with other tankers which collected the stolen oil, the spokesman said.

The network then sold the stolen cargo in Singapore.

Pertamina began its investigation when figures showed that oil amounts allegedly lost during transhipment in Jakarta were far above the maximum 0.5 per cent loss percentage. — UPI

FINANCIAL DETAILS OF OIL AGREEMENTS REPORTED

Kuala Lumpur NEW STRAITS TIMES in English 19 Nov 80 p 4

[Text]

JAKARTA, Tues. — The Indonesian Government has signed exploration and production sharing agreements worth up to US$583.5 million (about M$1,300 million) with five foreign oil companies covering nearly 70,000 square kilometres of the Java Sea. The signing is the second largest in Indonesian oil history.

The contracts were signed with Union Oil, Conoco and Atlantic Richfield, all of the US, with Agip of Italy and Ina Naftaplibn of Yugoslavia.

The companies must spend a total of not less than US$223 million on exploration in the first six years.

Pertamina, the state oil company, is to receive from the companies US$35 million in signature bonuses and, if eventual output from the companies' blocks reaches specified levels, it will receive a further US$270.5 million in production bonuses.

Under the production sharing side of the agreements, Pertamina will receive 85 per cent of oil production and 70 per cent of gas production, after deductions for cost. The foreign companies will meet all exploration costs.

The new agreements, signed at the weekend by Pertamina Director Piet Haryono and Minister for Mines and Energy Mr Subroto, reflect the major revival of interest in the Indonesian archipelago among foreign oil companies over the last 18 months.

Bonuses

In the last six months, Pertamina has signed eight production sharing contracts and signature bonuses received this year so far have reached US$36 million.

The latest contracts bring the number of exploration blocks awarded this year to 11, the same as for the whole of 1979. Foreign companies this year have committed themselves to spend not less than US$423 million during the next six years.

Pertamina expects that more than US$600 million will be spent on oil and gas exploration this year. This is nearly 60 per cent more than in 1979. And the high level of expenditure should be maintained over the next few years, following the signing of the latest contracts.

OIL EXPLORATION ACTIVITY INCREASES

Jakarta HARIAN UMUM AB in Indonesian 15 Nov 80 p 3

[Article: "Budget for Oil Exploration Continues to Rise"]

[Excerpts] Minister of Mining and Energy Soebroto states that exploration activity to find new sources of oil is increasing from year to year.

The budgetary expenditures by foreign contractors and Pertamina itself totaled $189.6 million in 1978, $290 million in 1979, and $591 million in 1980. Pertamina itself, in its budget for this activity, spent $29 million in 1979 and $118 million in 1980.

In 1978 the total number of wells drilled was 126, in 1979 the total number was 130, and in 1980 it is estimated that the total number will exceed 200 wells drilled.

This was stated by Soebroto in his speech on the occasion of the signature of a production sharing contract between Pertamina and 6 foreign oil contractors, including Union Oil Java Sea Ltd, Conoco Java Sea Inc, Atlantic Richfield Bali North Inc, AGIP (Overseas) Ltd, Union Texas Oil, and Ina Naptalin. On the program for the meeting, which was held yesterday [14 November] at the Ministry of Mining and Energy, the minister stated that the signature was the eleventh of its kind to be held in 1980.

In 1977 only 2 production sharing contracts were signed. In 1978 there were 4 such agreements signed, and in 1979 there were 11 production sharing contracts signed between Pertamina and foreign contractors. With the signature of the 11th production sharing contract in 1980, this means that up to now 39 production sharing contracts have been signed, 10 joint operation contracts have been signed, 3 contracts of work have been signed, as well as 2 technical assistance contracts.

CONTRACT SIGNED FOR GENERAL MINING IN IRIAN JAYA

Jakarta HARIAN UMUM AB in Indonesian 15 Nov 80 p 3

[Article: "Contract of Work Signed by PT Anggi Chemalloy and Indonesian Government"]

[Excerpt] The Indonesian government, represented by Minister of Mining and Energy Soebroto, yesterday [14 November] signed a contract of work agreement with PT Anggi Chemalloy (a joint venture between PT Danau Anggi Indah and PT Puncak Maoka with International Chemalloy Limited of Canada and Howe Pty Ltd of Hong Kong) for the development of a general mining enterprise (not including oil and gas) in an area 95,000 ha in extent in the "Bird's Head" [Kepala Burung] region of Irian Jaya.

In his speech Soebroto stated that the signature of the contract of work covering the general mining area was the first to be entered into in 1980. He admitted that interest in carrying out general mining activity was rather slight, compared with mining of oil.

A contract of work in the general mining field was signed for the first time in 1967. The signature of a first generation type of contract of work was followed by development of a second generation type of contract. In all there have been 17 contracts of work in this field. However, of that total 9 contracts have been withdrawn, 3 contracts of work are still in the exploration stage, and 5 others are at the production stage, with exports of nickel, copper, tin, and granite taking place.

In the recently signed contract of work PT Anggi Chemalloy has assumed the obligation to use Indonesian labor to the maximum possible extent within the limits of the practical and efficient and to provide training for them. The period of validity of the contract is 30 years, beginning with the date of entry into production.

The opportunity for Indonesian participation in the capital of the company extends to 51 percent. At the time of the signature of the contract 20 percent of the capital was Indonesian and 80 percent was of foreign origin. After 5 years of production the balance will become 51 percent Indonesian capital and 49 percent foreign capital.

SINGAPORE CAPITAL INVESTMENT OF BATAM ISLAND

Jakarta KOMPAS in Indonesian 5 Nov 80 p 12

[Article: "20 Singapore Firms Request Business Licenses on Pulau Batam"]

[Text] The Indonesian Embassy in Singapore has approved requests from 20 firms in various fields of activity in that country to invest capital on Pulau Batam. Only one firm has been given a license and begun operating. This is a 200 room hotel whose capital investment will total $200 million.

Indonesian Ambassador to Singapore Subjatmiko made this statement after being received by President Soeharto at the Bina Graha offices on Tuesday [4 November]. He reported to President Soeharto that a cooperation agreement has been signed between Indonesia and Singapore to accelerate the development of the industrial area of Pulau Batam. The agreement was signed last Friday [31 October] by Ambassador Sudjatmiko in the name of the Indonesian government and Minister of Trade and Industry Goh Chok Tong in the name of the Singapore government. With the signature of the agreement only technical accords remain to be resolved, such as questions regarding immigration, transfer of funds, and so forth.

Discussions on cooperation in this area were begun in June, 1978, when Singapore Prime Minister Lee Kuan Yew visited Pulau Batam. The conversations were later carried on at the government level, when President Soeharto visited Singapore in September, 1979, and when Prime Minister Lee visited Yogyakarta in July, 1980.

The ambassador estimates that the total number of Singapore workers who are now employed on Pulau Batam is between 350 and 500. This total changes every day, depending on the work available.

Asked about the effort to agree on an extradition treaty between Indonesia and Singapore, Sudjatmiko said that efforts continue to be made in that direction. In the field of cooperation within ASEAN agreement can be reached in the economic and other areas, so that in the judicial field also it is desirable to cooperate. Singapore up to now has declined to recognize the existence of the crime of smuggling as a matter for extradition.

The ambassador is of the opinion that smuggling between Indonesia and Singapore has begun to decline, since Singapore industry, which previously processed raw materials, now has turned toward "capital intensive" industry and high technology industry. On the other hand smuggling from Singapore to Indonesia has also declined because the cost of goods in Indonesia is not far different from the price in Singapore, according to Indonesian Ambassador to Singapore Sudjatmiko.

IRIAN JAYA DISSIDENT SURRENDERS

Jakarta HARIAN UMUM AB in Indonesian 3 Nov 80 pp 1, 3

[Article: "Chief of Staff of OPM Bandit Group in Irian Jaya Surrenders to Indonesian Armed Forces"]

[Text] Jayapura, 2 November. Paulus Kuntuy Pesakor (37 years old), who described himself as the chief of staff of the bandit group "Free Papua Organization" [OPM], on Friday, 31 October 1980, surrendered, together with his wife and 7 followers, to the Indonesian Armed Forces [ABRI] post near the village of Wembi in the Jayapura area, after having wandered in the jungle for about 12 years.

The chief of the special branch information department in Irian Jaya, Lt Col Yulius Harun, Communications Corps, in a special statement to Antara on Saturday [1 November], declared that this step was taken by the person concerned on his own, after reflecting that there was no use in continuing to wander in the jungle and in view of his desire to return to living like other Indonesians.

He and his wife, Beatrix Boroktian (30 years old), had previously worked, respectively, as a teacher in the Catholic Mission in Wamena and as a teaching assistant in Kampung Amgoto, sub district of Ubrub, in the Jayapura area. Later, influenced by OPM agitation, he joined the bandits in 1968. In 1978 he was appointed by Martin Tabu and Yacob Pray as deputy chief of staff of the National Liberation Troops [Pasukan Pembebasan Nasional--PAPENAL], and in 1979 he was confirmed as chief of staff of that organization.

The bandit leader was subsequently flown to Jayapura by helicopter, together with his wife and followers. In view of their weak physical condition and the illnesses they were suffering from it was necessary to give them medical attention, according to the special branch information department.

The continuous decline in numbers of the leaders and followers of the OPM this year, according to an Irian Jaya community leader, is evidence of the success of the "Smiling Policy" which was undertaken by the commander of Military Region XVII/Irian Jaya, Brig Gen C.I. Santoso, as well as by the special branch in Irian Jaya.

RELATIVELY HIGH GROWTH RATE ANTICIPATED IN COMING DECADE

Kuala Lumpur BUSINESS TIMES in English 18 Nov 80 p 6

[Text]

INDONESIA can expect a growth rate of 6.5 to seven, and possibly eight per cent per year, in the 1980's, according to Minister of State for Development Control and Environment, Dr Emil Salim.

At the recent seminar on *Trends in Indonesia* organised by the Institute of South-East Asian Studies, Dr Salim said that after the relatively high growth rate of 7.8 per cent during the years 1970-73, Indonesia was well placed for further growth.

But though Indonesia's resources base had widened because of the income from oil exports, there were political and institutional limitations to its growth.

However, the country lacked indigenous managerial skill and the ability to mobilise massive domestic savings.

Both managerial skills and savings can be "borrowed" from abroad, but with the increase of per capita income and rising expectations, "it is reasonable to expect that there is strong pressure to prefer indigenous skill above others," he added.

The major sector whose contribution has a decisive impact on the overall rate of growth was agriculture. The growth rate in this sector had actually declined to 3.4 per cent during the last five years from the four per cent growth achieved in the early seventies.

With an increasing population, which was expected to reach 160 million in the mid-80s, despite population control measures, it was important to emphasise the increase of food production. Not only was the population rising, but rice consumption also had increased from 106 kg per capita in 1970 to 126 kg in 1977.

Prospects for further increases in industry and other non-agricultural sector were potentially "very good".

The level of Indonesian industry was at the infant state and there was a strong inclination to keep the domestic market protected until the industry has been consolidated.

Such an inclination would hamper the rapid development of a common market among the Association of South-East Asian Nations (Asean) and Dr Salim said: "It is realistic to assume that the pace towards faster economic cooperation in Asean is closely related to the pace of the Indonesian domestic industries towards becoming strong enough to meet external competition."

Dr Salim expected huge investments to be made in the cement and fertiliser industries to boost food production, and oil products. The supporting economic infrastructure such as roads, harbours, airports and electricity will also call for huge investment resources.

But a "heated" economy would lead to a revival of inflation which reached a frightening 33 per cent in 1974 but brought down to seven per cent in 1978.

However, in 1978, inflation rate had jumped to 22 per cent, at least partly as a result of the devaluation of the rupiah.

An inflation rate of more than 10 per cent can be expected in the 80s, and a maximum of 20 per cent would be tolerable.

Monetary measures would still be necessary in controlling the inflation rate. The growth in exports should be matched by deflationary and compensating policy measures in the budget and credit expansion.

A balanced budget, tight credit and a firm control on the factors affecting the balance of payments, which were successfully tried out in the 70s, would still be valid in the next decade.

"This is not an easy task as the availability of foreign reserves leads to the temptation to embark the economy upon constructing large projects," Dr Salim said.

The rapid economic growth of the 70s had led to a widening of the gap between the traditional (indigenous Indonesian) and the modern sector represented by non-indigenous (Indonesian Chinese) and foreign sectors.

This phenomenon was noticeable not only in industry, but also in the agriculture, trade and the services sectors.

Various measures have been instituted by the Suharto government to assist the indigenous entrepreneurs including direct funding of special projects, reservation of certain contracts for the economically weak and various credit schemes. However, the inability of the bureaucracy to implement these measures was a major constraint in doing more for the poor.

Indonesia, Dr Salim said, would not allow timber-based industries to be set up in Batam, an island off Singapore which Indonesia is planning to develop in cooperation with Singapore.

The government was gradually shifting the emphasis from log production to processed timber production "recognising the fact that Indonesia possesses an increasingly scarce forest resource in Asia."

In the eighties, the emphasis will not be on quantity, but more total value of processed logs. "The days of simple logs exports will be over and a gradual shift toward increased value added in processed logging will be the case," he added.

Timber-based industries would be sited in future in places where the resources exist, such as Kalimantan and Sumatra.

Along with timber, emphasis on non-oil exports in the eighties will also apply to the plantation sector, such as rubber, which is Indonesia's second largest foreign exchange earner outside oil, palm oil, copra, tobacco, coffee and tea. — AFP

INDICATIONS OF MAJOR OFFSHORE TIN DEPOSITS

Kuala Lumpur BUSINESS TIMES in English 18 Nov 80 p 20

[Text]

BANGKOK, Nov. 17

THERE are some indications that major undersea tin deposits have been found in Indonesia, an expert in offshore prospecting said here today.

Following the conclusion of a two-week meeting of the committee for coordination of joint prospecting for mineral resources in Asian offshore areas (CCOP), the coordinator, Mr A. Johannes, said that a geological survey between May and August 1979 showed that strata over a wide area were consistent with nearby tin-producing areas.

The area surveyed occurs in the so-called tin belt, which stretches from southern Thailand into Malaysia and Indonesia, including offshore areas.

The tin belt already accounts for 60 per cent of the world's production.

Mr Johannes said that more than 7,800 line-kilometres were surveyed in an area between the Sinkep, Bintan and Karimu islands, but that final confirmation of tin deposits awaited the drilling of test bores.

The meeting of the CCOP also heard reports that significant discoveries of oil and natural gas continue to be made in the offshore areas of China, Indonesia, Malaysia, the Philippines and Thailand.

It said prospecting for offshore natural gas and oil in Indonesian waters between January 1979 and June 1980 yielded 42 successful wells out of 82 drilled. — AP

EFFORT TO IMPROVE DISCIPLINE OF CIVIL SERVANTS

Kuala Lumpur BUSINESS TIMES in English 25 Nov 80 p 6

[Article by Warief Djajanto in Jakarta]

[Text] THE government has ordered a crackdown on erring and corrupt officials and employees in its two-million-plus bureaucracy.

The "get-tough" stance was adopted following rampant public charges and complaints of bureaucratic red tape and inertia. These include: employees trimming work hours, senior officials playing golf on work days, slowness in getting work done and corruption.

Working with the State Employees Administrative Agency (BAKN), Minister of State for Administrative Reforms J.B. Sumarlin drew up rules and regulations on employee discipline. The regulations took effect on Aug. 30 when it was approved by President Suharto.

In essence, the regulations spell out in black and white the do's and don'ts for officials and employees. They also provide a three-level penalty mechanism for any violation.

There are 26 obligations and 18 prohibitions civil servants must observe.

The do's include reporting to superiors when in knowledge of matters that endanger or harm the state or government, especially in the areas of security, finance and property; observing regular work hours; providing as best a service as possible to the public; finalising as best as possible every report on breach of discipline.

On the other hand, the don'ts cover working in league with superiors, colleagues, subordinates or others within or outside the job area in activities for self-gain or for groups or other parties which either directly or indirectly harm the state; receiving gifts in whatever form from anyone for which it is known or suspected that such gifts affect the function or work of the civil servant in question; engaging in business activities either officially or "on the side," by becoming a director, manager or board supervisor *(komisaris)* of a private company; acting as middleman for a business concern or group seeking work or orders from a government agency.

Violators are liable to face one of three levels of disciplinary action. In level one, the lightest penalty is a verbal reprimand, followed by a written reprimand, and then a written statement of dissatisfaction.

Disciplinary action at the intermediate level is postponement of periodic pay raises, decrease in salary, postponement of promotion.

The heaviest penalty covers demotion, suspension from duty, and dishonourable discharge from the service.

Any disciplinary action in any of the three levels does not rule out the possibility of criminal action according to the regulations.

Civil servants, in most instances, cannot appeal their case once their superiors pass the disciplinary verdict against them. In cases involving senior government officials, it is the President who passes judgment. And his decision will be final.

In his first move to assert the weight of the new government legislations, Minister Sumarlin reminded civil servants of two presidential orders in 1964 and 1972 regulating government work hours.

In Jakarta, government employees must work between 8am and 3pm. On Fridays, the Muslim holy day, work ends at 11.30am. On Saturdays, work stops at 2pm.

In the provinces, government employees start earlier at 7 am and leave at 2pm.

At the same time, Minister Sumarlin has called on senior officials to set an example to their staff on government work hours.

Sports during work hours are not allowed, he added, referring to government golfers playing the courses on work days. Underscoring this point, senior officials playing golf with staff members when work should be done are "wrong," he said.

But perhaps, the most effective way of ensuring work-hour discipline is for the boss to set an example. The Governor of Jakarta, for instance, promptly arrives for work at 7am. Any staffer who is not behind his or her desk at 8am when the Governor frequently phones his aides would need a convincing story to explain why his call was not answered. — Depthnews Asia

BIOGRAPHIC INFORMATION ON INDONESIAN PERSONALITIES

[Unless otherwise noted, the following information on Indonesian personalities has been extracted from Indonesian language sources published in Jakarta.]

AIR VICE MARSHAL SRI MULJONO--After treatment at Gatot Subroto Hospital in Jakarta for an illness which he was suffering from, Air Vice Marshal Dr Sri Muljono, private assistant to the chief of staff of the Air Force for social and functional affairs, died on Wednesday [12 November] at 5:00 AM. That same afternoon at 2:00 PM the deceased was buried in Kalibata cemetery, in the presence of Air Marshal A Alamsjah, deputy chief of staff of the Air Force, The late Air Vice Marshal Sri Muljono was born in Klaten in 1930. He began his career in the Air Force in 1959, after completing his studies at the Faculty of Civil Engineering [Fakultas Tehnik Sipil] of the University of Gadjah Mada. Among other assignments he held was that of military secretary to the president, planning director of the Halim Perdanakusuma airport project, chief of the technical implementation bureau for the Cengkareng airport project, and his final post as private assistant to the chief of staff of the Air Force for social and functional affairs. Service medals which he held included the Guerrilla Star [Bintang Gerilja]; Order of Merit of the Independence War [Satya Lancana Perang Kemerdekaan], first and second class; Order of Merit of Operation Merdeka [Satya Lancana GOM], sixth class; Veteran of the Indonesian Independence War [Veteran PKRI], group B; Good Conduct Medal [Satya Lancana Penegak]; Air Force 10 Year Service Medal; Order of Dwija Sistha [Satya Lancana Dwija Sistha]; and Order of Functional Service [Wira Karya]. [Text] [Jakarta HARIAN UMUM AB in Indonesian 14 Nov 80 p 2] 5170

POLICE BRIG GEN R SOETRASNO--The governor of the police section of the Indonesian Armed Forces Academy, Police Brig Gen R. Soetrasno, died on Friday [7 November] at 12:30 AM at Dr Karyadi Hospital in Semarang after falling ill and being treated for four days. The deceased leaves a wife, 3 sons, and 3 daughters. He began his service at the Indonesian Armed Forces Academy in 1974, serving as deputy governor of the police section until 1979. On 2 April 1979 he was appointed governor of the police section. The deceased was born in Banjarnegara (Central Java) on 1 August 1926. He was married to R Idrijati in Madiun in July, 1956. Police training courses he attended included: Police Inspector Course at Mertoyudan, 1948; Company Commander Course at Porong, 1954; Scout Ranger Class in the Philippines, 1955; further training in the United States, 1957; Staff and Command School, 1967, and the National Defense Institute, 1972/1973. The deceased began his career as a police officer in 1945 as commander of the Police Office of the Regency of Kebumen. Later, from 1950 to 1952

he was chief of police in Madiun, from 1960 to 1963 he was commander of Mobile Brigade Region IV (East Java), and from 1964 to 1971 he was an officer on the staff of the Assistant for Operations at Police Headquarters. The deceased held 10 service medals, including the Order of Merit of the Independence War, first and second class; the Order of Satya Dharma, the Bhayangkara Nararya Star, and the Order of Dwija Sistha. [Text] [Jakarta KOMPAS in Indonesian 8 Nov 80 p 12] 5170

BRIG GEN EDDY SABARA--The inspector general of the Ministry of Internal Affairs, Brig Gen H Eddy Sabara, has been appointed Acting Governor of the province of Central Sulawesi, replacing Col Eddy Djadjang Djajaatmadja, who held the position for 13 months. This matter was made public in Presidential Decision No 150/M/80, dated 6 November, but the appointment will take effect at the time of the transfer of office on 25 November at the Ministry of Internal Affairs. This was stated by the spokesman of the Ministry of Internal Affairs, Dr Feisal Tamin, on Tuesday [11 November] to the press. With this appointment Eddy Sabara will hold both the position of inspector general of the Ministry of Internal Affairs and acting governor of Central Sulawesi. Feisal Tamin did not answer clearly whether the replacement of the acting governor was a consequence of the long drawn-out process of the election of a governor of Central Sulawesi. In this connection one of the major tasks of the acting governor of Central Sulawesi is to carry out the election of a permanent governor. The current acting governor of Central Sulawesi was installed in office by Minister of Internal Affairs Amir Machmud on 22 October 1979, based on Presidential Decision No 177/M/79, dated 17 October 1979. [Text] [Jakarta KOMPAS in Indonesian 12 Nov 80 p 12] 5170

IZAAC HINDOM--Based on Presidential Decision No 146/M/80, dated 27 October, a member of the Second Committee of Parliament, Izaac Hindom of the Functional Development group, was appointed deputy governor of Irian Jaya, replacing Ellias Paprindey. According to present plans the transfer of office ceremony will be held in Jayapura on 22 November. Ellias Paprindey was appointed deputy governor of Irian Jaya on 11 March 1977 by Minister of Internal Affairs Amir Machmud. Prior to that he was chairman of the Provincial Council of Irian Jaya. Izaac Hindom, who will replace him, was born in Adora (Regency of Fak-Fak) on 23 December 1934. He has been a member of Parliament, representing the electoral region of Irian Jaya for the Functional Development group since 1971. He is a member of the Second Committee, which is concerned with the Ministry of Internal Affairs, oversight of the state appartus, the office of the state secretary, the State Administrative Institute, the Body for Administration of State Employees, and the National Archives. [Text] [Jakarta KOMPAS in Indonesian 12 Nov 80 p 12] 5170

FIVE NEW AMBASSADORS--President Soeharto has urged all countries in the world to halt all wars, including limited wars as well as a new world war. President Soeharto made this statement when he installed in office 5 new Indonesian ambassadors, respectively, M S Mintaredja, ambassador to Turkey, replacing Nurmanli Aman; Barli Halim, ambassador to France, replacing Mohammed Noer; Janwar Marah Djani, ambassador to Poland, replacing Tamtomo; Husni Thamrin Pane, ambassador to Mexico, replacing Ben Mang Reng Say; and Teuku Mohammad Mochtar Mohammad Thajeb, ambassador to Tunisia, replacing Ilen Surianegara. The installation of the 5 ambassadors in office was

carried out at the State Palace, witnessed by Vice President Adam Malik and ministers from the Cabinet. The chief of state stated that it was the moral duty of all countries of the world to halt, not to spread, and even to prevent the possibility of war erupting, including both limited war and even more a new world war. "To that end all countries, both large and small, must limit themselves," said President Soeharto. Recent experience, said the president, shows that following the course of war and confrontation clearly cannot resolve conflicts. [Text] [Jakarta MERDEKA in Indonesian 10 Nov 80 p 1] 5170

DR H SUTAMI--The former minister of public works and electricity, Prof Dr H Sutami, on Thursday [13 November] at 11:15 PM died at Cipto Mangunkusumo Hospital in Jakarta, following a long illness. President and Mrs Soeharto on Friday [14 November] visited the home of the deceased at Jalan Imam Bonjol 24, preceded by the coordinating minister for politics and security, M Panggabean, who will act as presiding officer when the remains are moved to Tanah Kusir cemetery. The expression of condolences by President and Mrs Soeharto was received by the Sutami family with tears. Vice President and Mrs Adam Malik came to pay their respects, followed by a number of members of Parliament. Dr Sutami was born on 19 October 1928 in Surakarta. He graduated as an engineer from the Technical High School in Bandung in 1956. Later, he was an instructor at the Faculty of Technology [Fakultas Tehnik] at the University of Indonesia in Bandung. On 25 May 1965, he was appointed minister of state for construction review affairs in the Dwikora Cabinet. Subsequently, he held the post of minister of public works in the reshuffled Dwikora Cabinet, in the Ampera Cabinet, and in the Development Cabinet, up to 1978. He obtained an honorary doctorate from Gadjah Mada University for his work in the field of construction technique on 3 May 1976. Later, on 20 May 1976, he was appointed full professor at the University of Indonesia. Throughout his life Sutami was in the forefront in the use of reinforced concrete, in the theory of ultimate strength design, in technical calculation by use of computers, and in modern management technique in public works in Indonesia. The deceased also wrote 17 scientific studies in the field of construction technique. The service medals which he held included the Mahaputera Adipradana, the Order of Development [Satya Lencana Pembangunan], the Piagam Anugerah Award of the Ministry of Education and Culture for his work as a practitioner and supporter in the field of science and technology, the Star of the Ancient Order of Sikatune, the Maginoo Medal from the government of the Philippines, and the Grand Cross of Leopold II from the Government of Belgium. Sutami leaves a wife and 5 children. [Excerpts] [Jakarta SINAR HARAPAN in Indonesian 14 Nov 80 pp 1, 12] 5170

CORRESPONDENT VIEWS PRK DEVELOPMENT

Hanoi VIETNAM COURIER in English Sep 80 pp 26-30

[Article by Thanh Tin]

[Text]

AFTER completing a tour of Kampuchea during which I met with many people, I am now convinced that the country is no longer what it was last year.

Services and trade

Each day begins early for the 100,000 inhabitants of Phnom Penh and hundreds of thousands of other people on the outskirts.

Children go to school on foot or by bicycle. Schools have been opened in all parts of the city. Workers head for the power station, the textile mill, the printers', the waterworks, the rice mill, the mechanical engineering factory, the soft drink plant, or the tobacco factory. The main streets are lined with State or private stores, restaurants, barbers', hairdressers' and tailors' and shops repairing bicycles, motorbikes, watches and electrical appliances.

Cinemas ran three or four shows for children on June 1, the International Children's Day. Shoppers go to the old market north of the Royal Palace, or to new ones near the former Chinese Embassy and at Monivong Bridge, where are sold dry goods, vegetables, fish, palm sugar, salt, bread and sweets. There is a great number of shops specializing in the famous "Phnom Penh noodles", but they are outnumbered by roadside refreshment counters set up under tamarind or flame trees, which sell iced fruit juices.

The new *riel* issued in April has become a familiar feature. A kilogram of rice is sold at one *riel*; a kilogram of fish costs 2.5 *riels*. A *riel* also buys five bundles of green vegetables or two glasses of sweetened seaweed jelly.

The new currency has been readily accepted at western border areas, at markets in Battambang, in shops along Highway 5, in the countryside.

Customers can find a wide range of goods in Phnom Penh or in provincial townships — cloth, ready-made clothes, toys, China, detergent, towels, mirrors, leather goods, vacuum flasks, stationery, and so on.

At the Phnom Penh University of Medicine and Pharmacology

People are eager to study, and classes are held at all government offices. More and more functionaries of the old regime have enrolled for the Political School run by the National United Front, and there is enthusiastic participation in discussions on current events, on State policies, or on the role of intellectuals in the new society. There are courses on foreign service, trade, financing and statistics. On June 12, a course on foreign trade was opened. The Education Ministry is busy compiling textbooks for the schools.

At the Public Health Ministry we were told about the good results of the first year of the University of Medicine and Pharmacology. The 726 students, who still had five more years to go, had begun their studies before April 1975. Now they were revising what they had already learnt while continuing with the syllabus. They are expected to be fully qualified in both theory and practice by any world standard

Late in June eight doctors graduated after the required examinations. Professor Mi Samadi, the director, headed the jury which included professors of cardiology, pediatrics, external diseases, radiology, ear-nose-throat diseases, epidemiology and pharmacology. We congratulated Ich Sunnara on the excellent marks he had obtained for his entry exams to the sixth year. We first met Sunnara when he was returning with his father, Ich Kim Seng, M.D., from Takeo where, for three years, they had slaved, tending cattle. They were but two living skeletons then, and the black pyjamas they wore were in rags. Dr. Ich Kim Seng, now nursed back to health, was working at the Health Ministry. Sunnara had put on ten kilograms to his wasting body and was working hard for his graduation next year, reading specialized journals from foreign countries.

At the university library housed in the biggest hall on the second floor, we were received by Mrs Kim Phuon and Miss Sara. Mrs Kim Phuon worked there from 1963 to 1975 before she was deported to the mountains in Kompong Thom province. Her husband, a teacher, was beaten to death at the camp. Miss Sara, a former law student, was helping Mrs Kim Phuon acquire books for the library which, in five months, had over 3,200 titles in addition to more than 200 specialized books and journals received from Hanoi, Moscow, Berlin, Paris, London and Bern.

The library was well frequented by the students who mostly were boarders, living on a monthly State allowance of 45 *riels*, a sum sufficient for their meals, clothes and other necessities.

A research project completed

I was received by Vandy Kaonn at his office at the Social Science Committee under the Front's Central Commission of Propaganda and Training. Frangipanis filled the air with their fragrance in the first-floor room in which we talked for a whole morning.

"It's wonderful," our host exclaimed. "The way things have taken place is so unexpected. It surpasses one's imagination. Only a year and a half have gone by, and our country has changed so much."

During our first meeting last year Vandy Kaonn had won our hearts with his warm personality and openness. He had obtained a degree in Social Sciences from the Sorbonne and is a leading intellectual in his country.

"It's true that my hands are full," he admitted with pride. "I give lectures, talk to intellectuals, help the Constitution Drafting Committee, and recruit for the Social Sciences Committee. Recently I stopped over in Vietnam and the Soviet Union on my way to an international conference in Budapest. The trip was very instructive, but it was too short because I was in a hurry to get back to my work here."

"What's your main job for the moment?" I asked.

"We have three projects on hand," Vandy Kaonn replied. "I'm seconded by four other intellectuals, in addition to more than 30 others on our staff. The number is too small, and I intend to have some 200 experts on philosophy, history, literature, political economics and statistics."

"The first and most important project," he continued, "concerns genocide, its nature, its political, ideological and philosophical basis, its effects and origin, its international supporters. Its political and legal aspects were already dealt with during the Phnom Penh Trial last year. Now we must take upon ourselves the task of explaining this historic phenomenon to the civilized world. This is a scientific project, an in-depth study with serious and objective analysis. For this we work 12, even 14 hours a day. I read a lot, take notes, talk with people, discuss and especially do a lot of thinking. My four young assistants are a great help, and we strictly observe our schedule. We expect to complete our work in another two months and the result will be some two hundred typewritten pages."

Then Vandy Kaonn talked about the characteristics of genocide, about the nature and destructiveness of Maoism, about Khieu Samphan's sickly philosophy of man, about Pol Pot's megalomania, and about Ieng Sary's craftiness.

Expanding greenness

A welcome sight in Kampuchea that summer was the expanding greenness of the paddy fields. Officials at the Ministry of Agriculture said the sown area would have reached almost one million hectares by the end of July and would further increase, since planting would continue into late August.

Fields around Tonle Sap Lake had been sown with rice seedlings of the floating variety supplied by the Vietnamese provinces of An Giang and Cuu Long, and special attention was being paid by the Government and the Ministry of Agriculture to Prey Veng and Battambang, the fertile eastern and western regions. We had a very instructive conversation with Koong Yat, an agricultural technician and head of the agricultural office of Sang Ke, the largest district in Battambang. He received us in his office next door to the district's seed depot where 290 tons of seed were stored with good ventilation. From where we were we could see long lines of ox-drawn carts coming from other areas to collect the seed. Koong Yat said the main rice crop the previous year had been a complete failure because of drought, the most serious in 20 years, which lasted a whole month. The loss covered as much as 4,000 hectares. This year, he said, the district was striving for 43,700 hectares, and what was encouraging was that by the end of June peasants had already tilled almost 30,000 hectares including 3,000 hectares for floating rice. Rain had come a little late, but then it had poured for weeks. So there was enough water for transplanting, and the crop was expected to be a good one. The district, however, still needed 50,000 kilograms of seed, which would be supplied in good time by the province.

Koong Yat showed us the seed supplied by Vietnam, the FAO and UNICEF. The Vietnamese variety IR26, we were told, suited Battambang. The Thai-grown varieties ED1 and ED9 were supplied by the FAO and UNICEF.

Another improvement in the general situation was that law and order had been strengthened. Disbanded Pol Pot troops were being tracked down relentlessly by the army and militia, and so the peasants, even those in the mountains, could work their fields in safety.

Koong Yat also told us that industrial crops would become another of Battambang's assets. Thousands of hectares, he said, used to be grown with cotton, coffee, orange trees and beans, and there used to be vast mulberry fields on either side of the Sang Ke River devoted to silkworm-breeding. Mat-making used to be another source of income, Koong Yat added.

Tonle Sap Lake—inexhaustible fishing grounds

Having planned our visit to Tonle Sap Lake to coincide with the fishing season, we made a detour to Boribo, a district in the province of Kompong Chhnang. Boribo means "plentiful" in the Khmer language. The area, indeed, is a rich and beautiful one. Kampuchea is a country of sugar palms, and Kompong Chhnang leads all other provinces in this kind of crop. Sugar palm juice is sold on stalls strung along Highway 5. Fresh, it has a sweet flavour. Fermented for a few days it becomes slightly intoxicating. Foreigners used to call it "Pochentong beer" instead of the local name "toithenet". A kind of brown sugar is derived from the juice and is sold in cakes wrapped in palm leaves. A reporter of the paper "Revolutionary Army" told us that there were as many as three millions sugar palm trees in the whole country. In Kompong Chhnang a tree can give up to 20 kilograms of sugar a year. The previous year, we were told, had been very good for sugar. Palm sugar and fish from Tonle Sap Lake have done a great deal in nursing back to health a nation exhausted by Pol Pot's genocide.

Snok Tru, or "Fish Village", pop. 1,300, consists of hundreds of floating houses. It is one of the largest fishing community on Tonle Sap Lake. Some houses are quite big, with plank floors and corrugated iron roofs, separate compartments for living quarters, fish storage, and tool sheds. It is impossible to get an idea of the vast resources of this lake without seeing it for oneself. We were told that a good fisherman could catch from 150 to 200 kilograms of fresh fish a day, and that some fish could weigh up to 15 or 20 kilograms. One, caught in 1979, weighed almost 200 kilograms.

The fish is left to dry on the shore for four or five days. It is then packed into bags, loaded onto ox-drawn carts and transported to Pon Lay, where it will be sent on trucks to Phnom Penh. There are fish markets all along Highway 5, from Kompong

Chhnang to Pursat. Fresh fish and shrimps are kept in big oil drums. Some shrimp species, like the white and pink ones, can be very big. Only five or seven such shrimps can add up to a kilogram.

We learned that fishing on Tonle Sap Lake was being restored. More boats, nets, electric generators, and outboard motors had been supplied, and boat-building was being developed. Fish, shrimps and crabs were being exchanged for rice, textile goods, salt, tobacco, bread, ice, soft drinks, and medicines from the State or private traders.

Public security had been guaranteed. The year before, Pol Pot troops would roam the lake at night and rob the population of whatever they could. Then they had been put to flight, cornered and wiped out. Snok Tru was now guarded by a militia force of more than 30 well-trained members armed by the regular army.

In a western border area

We arrived at the western border in the midst of great tension caused by Thailand.

Bangkok was saying that it was neutral, that it had nothing to do with the Pol Pot clique, and that it respected Kampuchea's sovereignty. But what it was doing belied its claims.

Pol Pot troops captured by the revolutionary army in Battambang and Siem Reap all said that their sanctuaries were on the other side of the border. They said there were a dozen Pol Pot camps in Thailand, that they had received assistance from the Thai administration at both provincial and district levels. They said Thailand was their "close friend", that food, medicines and weapons were being sent them by China via Thailand. Hospitals, training camps and munition depots had been built along the Thai-Kampuchean border for use by the Pol Pot army.

In Phnom Penh in early June, we attended the trial of 16 leading Sreika men arrested by the security forces with the help of the population. They had formed a "cabinet" complete with a "prime-minister", a "deputy prime-minister", many "ministers", and a flag — a triple-dome temple in gold on a white and green background. The "prime-minister", Hem Krisna, was a sergeant in the Lon Nol military police and later worked as an army reporter. He told the court that he had had direct or indirect contacts with the Bangkok authorities through his liaison officers — Phiep, Muon and Pa; that his group had been recognized as the internal section of the Sreika by the external section headed by Son Sann and Dien Del and based in Thailand; and that Bangkok had promised immediate "recognition" as soon as they were officially set up.

The "deputy prime-minister" Ma U Bon Phon, a bullnecked man with shifty eyes, had been a professional footballer before becoming a police sergeant. He said that among the ASEAN nations, Thailand was the "friendliest". He said China, the United States and Japan had promised them uniforms, weapons and money, but Thailand had allowed them to use its territory as basecamp, springboard and contact point, and had helped them recruit troops among Kampuchean refugees.

We had a meeting with Koi Bien, commander of the revolutionary forces in Battambang. He showed us a map on which were marked a series of Thai-based Khmer Rouge camps. "Whatever they may say," Koi Bien told us, "the Bangkok authorities are encouraging crimes. They are partly responsible for the murders and robberies committed by Pol Pot men on either side of the Kampuchean-Thai border." He said that Pol Pot troops were in better shape now because they had been fed, trained and equipped in Thailand, but morally they were on the decline. Those forced to return to Kampuchea for sabotage would avoid contacts with the revolutionary forces. The only thing they did was to ambush traders, even Thai citizens, and rob them of their goods, money and gold. Koi Bien also said that a great many bandits had been captured by the revolutionary forces.

•

Road communication has vastly improved. Most of the bridges have been repaired to accommodate trucks and lorries. It takes only two hours and forty

minutes to go by car from Phnom Penh to the port of Kompong Som on the 235-km long Highway 4, on which between several dozen and one hundred vehicles run a day, singly or in convoys. On Highways 5 and 6 there is a constant flow of ox-drawn carts, bicycles, motorbikes, trucks and small cars. On either side one can see peasants busily planting and ploughing, young volunteers rebuilding irrigation canals, and militia training in the shade of luxuriant orchards.

Traffic on the Tonle Sap River has trebled. A train is run to Battambang every other day, instead of the weekly trip previously run. Soon the train service will become daily.

Kampuchea is reviving despite a genocide of a kind which no other country has ever experienced.

CSO: 4220

BRIEFS

WAPI LITERACY WORK--The committee in charge of literacy training in the district of Wapi, Saravan Province, conducted a ceremony for the purpose of officially declaring that illiteracy has been eliminated from among the district's 6,121 polyethnic inhabitants, including 4,449 women. [Text] [Vientiane BULLETIN QUOTIDIEN in French 27 Oct 80 p 4] 11,464

HOUA PHAN TEXTILE WORK--(KPL)--Workers at the 12 October weaving plant, under the Houa Phan Province Department of Industry and Commerce, have concentrated their efforts on production since 1975. Over the past 5 years, they have turned out 556,800 meters of fabric for skirts, 279,840 meters of material for mosquito netting and made over 2,300 blankets and 364,100 bath towels. [Text] [Vientiane BULLETIN QUOTIDIEN in French 29 Oct 80 p 4] 11,464

SAYABOURY DISTRICT LITERACY WORK--(KPL)--On 30 October, the committee for the eradication of illiteracy in the district of Xieng Hon, Sayaboury Province, officially announced that illiteracy had been eliminated from among its 11,740 inhabitants, including 2,762 women and 934 Lao Soung, in 12 communes and 112 villages. To date, illiteracy has been stamped out in six districts of the province. [Text] [Vientiane BULLETIN QUOTIDIEN in French 31 Oct 80 p 4] 11,464

LUANG PRABANG RICE SALES--In the course of this quarter, members of agricultural cooperatives in the district of Nan, Luang Prabang Province, have sold the government stores over 21 tons of their surplus paddy rice. [Excerpt] [Vientiane BULLETIN QUOTIDIEN in French 6 Nov 80 p 4] 11,464

LUANG PRABANG ROAD REPAIR--To commemorate the national holiday of 2 December, cadres and blue- and white-collar workers in the Department of Communications, Public Works and Transport in Luang Prabang Province devoted their efforts to repairing the road from Luang Prabang to Pak Mong (district of Oudomsai). They completed over 60 kilometers of repairs and built a ferry on the Nam [stream] Suang. [Text] [Vientiane BULLETIN QUOTIDIEN in French 6 Nov 80 p 4] 11,464

CHAMPASSAK RICE EXCHANGE FOR GOODS--Since the beginning of September, inhabitants of the Khong commune in the district by the same name, located in Champassak Province, have traded 36 tons of paddy rice for manufactured products from government stores. In the lead are the residents of the village of Done San, with 20 tons of paddy. [Text] [Vientiane BULLETIN QUOTIDIEN in French 10 Nov 80 p 3] 11,464

PHON HONG HARVEST--Farmers in the district of Phon Hong, Vientiane Province, began their seasonal harvest in October and to date, have completed work on 50 percent of their more than 4,500 hectares of rice paddies. Some areas are already beginning the new cycle of irrigated rice growing. [Text] [Vientiane BULLETIN QUOTIDIEN in French 11 Nov 80 p 3] 11,464

ROUTE 13 ROAD REPAIR--(KPL)--The Road 1 Construction Company, under the Ministry of Communications, Public Works and Transport, has already completed repairs on a portion of National Road 13, a 40-kilometer stretch linking Pak Kading and Nam Thone, before its deadline of 29 days was up. This success is due to the spirit of emulation in honor of the fifth anniversary of 2 December. Company workers are actively continuing their work in order to complete the second phase of repair work on the road successfully. [Excerpt] [Vientiane BULLETIN QUOTIDIEN in French 11 Nov 80 p 4] 11,464

PHONG SALY TRADE--The personnel of the state store in the Khoua District, Phong Saly Province, sold to the multiethnic population between June and August 1980 more than 22 tons of salt, over 2 tons of sugar, 600 cans of foodstuffs, 3,300 cans of condensed milk, 613 outfits of clothes, 488 blankets, 297 meters of fabrics for skirts, 135 pairs of slippers, 340 kg of spools of cotton thread, 2,222 basins and cooking pots, 1,454 bars of soap, 726 kg of detergent, and 2,275 liters of kerosene. During the same period the state store bought from the multiethnic inhabitants 2.7 tons of forestry products. [Article by KPL] [Text] [Vientiane BULLETIN QUOTIDIEN in French 10 Oct 80 p 3] 2662

NORTHERN REGION ROAD WORK--Since the end of August 1980 the functionaries and workers of the provincial unit of the Luang Prabang public works department have managed to repair National Highway 13 along that section which falls under their jurisdiction, that is, 160 km of roadway and 19 bridges. During the same period the inhabitants of the 3 communes of Houa Muong District (Houa Phanh), those from the 10 communes of Khoua District (Phong Saly), and the members of the cooperative of Na Hoi Village, Pek District (Xieng Khouang), also set out to recondition dozens of kilometers of roads linking the villages to the communes and the district. [Article by KPL] [Text] [Vientiane BULLETIN QUOTIDIEN in French 11 Oct 80 p 4] 2662

SARAVANE TRADE--The personnel of the state stores of Saravane Province sold to the multiethnic population during the third quarter of 1980 more than 4 tons of sugar, 4,300 cans of condensed milk, 8,200 meters of fabrics, more than 2,000 skirts, 500 blankets, 1,080 outfits of clothes, 890 mosquito nets, 12,180 bars of soap, 2,050 tubes of toothpaste, more than 2,700 boxes of matches, 1,950 pots, 2,400 bowls, 280 plowshares, 200 spades, and a large amount of school supplies and kitchen utensils. At the same time, said personnel bought from the multiethnic inhabitants more than 33 tons of agricultural and forestry products, namely, paddy, peanuts, and wildlife bones and skins. [Article by KPL] [Text] [Vientiane BULLETIN QUOTIDIEN in French 14 Oct 80 pp 2,3] 2662

ATTOPEU ROAD WORK--This year the blue- and white-collar personnel of the provincial unit of Attopeu's public works department have managed to repair National Highway 13 and National Highway 18 among other major roads along a total length of 386 km, have built 9 large and small bridges, and repaired a garage and 4 small craft. Said personnel say they are always fired to work hard in commemoration of the second of December anniversary. [Article by KPL] [Text] [Vientiane BULLETIN QUOTIDIEN in French 16 Oct 80 p 4] 2662

THOROUGH SCREENING FOR ALL MUSLIM MISSIONARIES

Kuala Lumpur NEW STRAITS TIMES in English 24 Nov 80 p 8

[Text]

KUALA LUMPUR, Sun. — Those wishing to give lectures on Islam will now be subject to "thorough screening" by the religious authorities before they are allowed to do so.

Deputy Information Minister Datuk Haji Embong Yahya said today the new move, being adopted by all State Religious Affairs Departments, was to ensure that only "bona fide" candidates were allowed to preach the religion.

In the past, there was some form of screening, but the exercise was not thorough, he added when opening a day-long civics course

for leaders and members of the Sungei Besi Umno division here.

Candidates will be quizzed on Islam and their religious orientation. Their background, like their education and connections with political parties and other affiliations, would be looked into before approval is granted.

Datuk Haji Embong assured that the move was not intended to curb genuine missionary activity but aimed at weeding out those wanting to capitalise on religion for selfish ends.

The Deputy Minister stressed that the Government was eager to see missionary activity flourish among the Muslims but would not tolerate any deviant teaching or opportunists operating under the cloak of religion to whip up anti-Government sentiments.

Target

The Government, he added, had long recognised the dangers that might be brought about by deviant teachings but had not taken measures to restrict them for fear of being branded "anti-Islam."

However, the Batu Pahat incident showed that such measures were now necessary.

Datuk Haji Embong said investigations showed that Muslim youths had been used as a target group by the religious opportunists to spread anti-Government propaganda.

The Government, while encouraging missionary activities in the country, would not tolerate religious forums being used to propogate anti-Government feelings.

Datuk Haji Embong, who is also Umno Chief Publicity Officer, urged party leaders and members to be always on guard against religious opportunists operating in their areas.

He said they should realise that opposition parties were going all out to spark off misunderstanding and disunity through religion.

DEVIANT MUSLIM GROUPS BEING INVESTIGATED

Kuala Lumpur NEW STRAITS TIMES in English 26 Nov 80 pp 1, 32

[Text] **KUALA LUMPUR, Tues. — The Government has received intelligence reports that a deviant religious group is planning to assassinate Cabinet Ministers and political leaders.**

Minister without Portfolio in the Prime Minister's Department Datuk Haji Mohamad Nasir, who said this here today, said action would be taken against these people.

"From the documents and records that we have, there is evidence that the group will resort to such actions," he said.

He, however, did not say who or which deviant group was involved.

"The Government will take stern action on this matter as it can jeopardise the nation's security," he said.

"The people responsible could be charged under the Internal Security Act because the lives of the rakyat will be at stake."

Strategy

He was speaking on deviant Islamic teachings at the University of Malaya.

He also touched on the background and ambitions of Ismail Nasir, the self-proclaimed "Messiah" and "Imam Mahadi" and leader of the group which attacked the Batu Pahat police station last month.

Datuk Mohamad said latest police investigations revealed that the group had planned a strategy to seize power in Johore after which they would attack Kuala Lumpur.

"After they had conquered Malaysia, the group planned to attack Thailand, Kampuchea and the Soviet Union — all these to have been completed in 73 days," he added.

He described the group as "lunatics".

On false Islamic teachings, Datuk Mohamad said so far the Government had been able to trace more than 30 such religious groups out to influence other Muslims.

Every State Islamic Affairs Department was investigating and collecting information on the activities of deviant groups, he said.

The feedback obtained by the Government on these false teachings would be discussed at the next meeting of the National Islamic Council to be chaired by Datuk Hussein Onn.

"It is time for the Government to take appropriate action on such teachings," he said.

"We have to resort to legal means if efforts to stop the deviant groups from carrying out their activities proved futile."

Datuk Mohamad also spoke on the activities of subversive elements out to create disunity among Muslims here and to mar the good name of the country.

"A magazine published in Egypt recently reported that the Government had persecuted and executed Muslim missionaries in Johore, which is something that is not true and baseless," he said.

Book

He added that he had directed the Malaysian embassy in Egypt to investigate the false report and wrongful accusation and to give the right picture of . . what the Government had done for Islam here.

The Government had also seized a book published here which accused and branded Muslim political leaders here as "murtads" (those who had swayed from Islam). The book also accused them of encouraging vices and not implementing the syariah laws in the country.

To counter all the false teachings and other deviationist activities, which could endanger Muslim unity and Islam, Datuk Mohamad said the Government planned to set up a research unit under the Prime Minister's Department to carry out studies on Islam for the benefit of young Muslims.

The unit would be ready by 1983 with backing from the Kuwaiti Government. Muslim scholars are expected to help in the research.

MANUFACTURERS' TRADE MISSION TO CHINA TERMED SUCCESS

Kuala Lumpur BUSINESS TIMES in English 18 Nov 80 p 20

[Text]

THE first Malaysian manufacturers' trade mission to China which returned yesterday, netted on the spot sales of about $8 million and identified the prospect of selling another $10.5 million worth of goods in the next year.

Two manufacturers sold refined palm oil worth $8 million while another two manufacturers hoped to conclude a deal amounting to $10 million next year. Yet another manufacturer of raw rubber processing machinery and equipment anticipated a potential sale of about $500,000.

The mission, organised jointly by the Ministry of Trade and Industry and the Federation of Malaysian Manufacturers (FMM) was led by Tan Sri Nazrudin bin Mohamed, secretary-general of the Ministry of Trade and Industry, with Tunku Tan Sri Mohamed, president of the FMM as the deputy leader.

The mission, comprising four senior government officials and 16 manufacturers, including FMM executives, was the first overseas sales mission undertaken by the FMM.

According to the FMM, keen interest was shown by Chinese trading corporations in refined, bleached and deodorised palm oil and related products, raw rubber processing machinery and equipment, cigarette tipping materials, heavy duty tyres, plywood and blockboard and asphalt plant.

The two-week mission visited Peking, Shanghai and Canton. While in Canton, the mission visited the Canton Autumn Trade Fair.

The mission also took the opportunity to explore the possibility of obtaining coal from China for use as fuel by Malaysian manufacturers, especially those in energy intensive industries.

With this objective, the mission made contact with the China National Metals and Minerals Import and Export Corporation. Follow-up action will be taken by the relevant Malaysian manufacturers with the corporation.

Mr Wang Runsheng, Vice-Minister of Foreign Trade, and Mr Wang Yaoting, chairman of the China Council for the Promotion of International Trade (CCPIT), at separate meetings with the mission, stressed the importance of sending more trade missions to China to promote the export of made-in-Malaysia products.

En route to China, the mission stopped over in Hong Kong and held useful discussions with the China Resources Company, which is the general agency in Hong Kong for various import and export corporations in China.

Kuala Lumpur NEW STRAITS TIMES in English 25 Nov 80 p 19

[Text]

KUALA LUMPUR, Mon. — Belgium has chosen Malaysia as the "priority" country for investment and trade in the Asean region for the next three years, a member of a visiting Belgian economic mission said here today.

The deputy counsellor of the Belgian Foreign Trade Office, Mr Georges Van Dyck, said Belgium had decided to concentrate on Malaysia instead of the other Asean countries because of her sound and rapidly growing economy.

Belgian investment in Malaysia was still quite small, he added, amounting to only $2 million at present.

He said Belgium would also like to export more to Malaysia to improve the current trade balance between the two countries, which was in Malaysia's favour.

The leader of the 27-member mission, Mr Edward Wauters, said he was convinced there were ample opportunities for trade and investment in Malaysia.

Members of the mission, organised by a leading Belgian bank, Kredietbank N.V., would be interested in investing in agro-based industries, wood industries, feedmills, steel wire factories and other industries.

Mr Wauters, who is also the managing director of Kredietbank, added that mission members would be holding discussions with local industrialists and businessmen on the possibility of setting up joint-ventures on these industries.

He said the mission, which included representatives of 20 leading Belgian companies from a cross-section of industries, was also keen to sell products to Malaysia as well as to buy some local produce, such as cocoa.

"In many ways we are complementary — Malaysia has the natural resources while we have the technology and modern management," he said.

He said Malaysia should send promotional materials such as films and samples of products to Belgium to promote business opportunities.

"Malaysia is not really well known in Belgium and Europe and these promotional materials will help," he added.

The mission, which arrived yesterday for a week-long visit, was given a briefing today at Mida.

Mission members would also be meeting officials of the Malaysian Industrial Development Finance as well as local bankers.

TALKS WITH SEOUL ON PETROCHEMICAL PLANT

Kuala Lumpur BUSINESS TIMES in English 18 Nov 80 p 1

[Text]

THE proposal for the setting up of a petrochemical complex on a joint venture basis between Malaysia and South Korea moves a step closer to realisation today as technical experts from the two countries begin discussions on the project in Kuala Lumpur.

The visiting South Korean Trade and Industry Minister, Mr Suh Joon Suk told reporters yesterday the final decision on the proposed venture will depend on the outcome of the current discussions.

Mr Suh was speaking at a brief interview following his visit to the offices of the national petroleum corporation, Petronas, where he and members of his delegation were briefed on Petronas' plans and activities by its chairman, Tan Sri Abdullah Salleh and senior Petronas officials.

(A Petronas official later said a special Press conference will be held next Monday to announce the outcome of the talks on the petrochemical project as well as other aspects of the South Koreans visit).

According to Mr Suh, the availability of abundant gas supplies in Malaysia was a crucial factor in its favour for the setting up of a petrochemical plant.

He explained that the basic need of a petrochemical venture is the availability of raw feedstock at reasonable prices to ensure viability.

From this viewpoint, there appears to be a good possibility that users of petrochemical inputs or "intermediates" in South Korea can get their supplies from Malaysia.

"Whether it is possible to identify a specific project (to exploit the available opportunities in Malaysia) will depend on the discussions of the technical experts from tomorrow," Mr Suh said.

He said that, from South Korea's viewpoint, a petrochemical project set up in Malaysia must, of necessity, be "narrow-based" in scope because of the nature of its gas supplies.

He explained that South Korea's existing petrochemical industry is essentially based on the use of naphtha as its basic input. (Naphtha is "the vital, oil-based petrochemical raw material", as distinct from gases like methane and ethane which are said to be more efficient as petrochemical feedstocks).

Mr Suh said that whereas Korea's naphtha-based plants can cater for the making of a variety of end-products, the proposed plant in Malaysia (with natural gas as its raw input) will only be able to produce intermediates catering for the fairly limited needs of the plastics industry.

Mr Suh added that apart from the possibility of a petrochemical joint venture between Malaysia and South Korea, other fields of cooperation were discussed although not at great length.

These included South Korean aid and participation in Malaysia's shipping and automotive industries.

Earlier, after the South Koreans visited his office, the Deputy Prime Minister, Dafuk Seri Dr Mahathir Mohamad told a Press conference that the main topic discussed was the petrochemical plant.

He explained that South Korea's interest in such a venture was disclosed to him during his visit to the country early last month.

Dr Mahathir said he had then suggested that since Malaysia has abundant natural gas supplies and since it is nearer to Korea than countries like Saudi Arabia, the South Koreans should come to Malaysia to see the country for themselves and hold talks with Petronas on the possibility of a joint venture to produce the needed intermediates.

He added that, apart from the abundant supply of natural gas, Malaysia would also offer such advantages as lower costs and a low inflation rate.

Dr Mahathir made it clear that Malaysia's present thinking was that such a petrochemical project would best be based in Trengganu, partly because Sabah and Sarawak already have a number of major projects (petroleum related and otherwise) under consideration or implementation but mainly because Trengganu has rich reserves of unassociated gas.

In this connection, he said that in producing polyvinyl chloride (PVC) or intermediates for the plastic industry, it is necessary to set up a reasonably big plant whose output must therefore be sold internationally as the domestic market is too small.

In this light, he added, a joint venture with South Korea has the added advantage of ensuring the Malaysian plant of a captive market.

The two leaders also discussed the participation of South Korean contractors and specialists in the construction industry and the South Korean assistance in the promotion of Malaysia's shipbuilding and repairing industry.

CONSTRUCTION OF HYDROPOWER FACILITIES IN SARAWAK

Time, Money Problems

Kuala Belait BORNEO BULLETIN in English 22 Nov 80 p 10

[Text] KUCHING. — Unlike the situation in many other parts of the world, there is no energy crisis in Sarawak.

Instead the state faces a twin crisis of time and capital — time to get energy projects off the ground ... and the money to pay for it all.

At least this is how the general manager of the Sarawak Electricity Supply Corporation (SESCO), Mr William Lai, sees the situation.

It's a view few experts would argue with.

For, as Mr Lai was at pains to point out during a recent energy seminar in Kuchung organised by Jaycees Malaysia, Sarawak has one big energy card up its sleeve — water power.

The two biggest sources of such energy in the state are the Rajang River, in particular the Pelagus Rapids area, and Batang Ai.

But while the energy potential is there, there is a lot of difference between the force of a fast-flowing river and the availability of usable power.

So the state's crisis of time and money; dams and generating facilities are not built overnight and they certainly don't come cheaply.

Despite this, Sarawak should have its first substantial supply of hydro-electric power on stream by mid-1985, courtesy of the Batang Ai.

A sizeable river in the Second Division running close and parallel to the Kalimantan border, the electricity it will supply should meet the needs of the First and Second Divisions.

Certainly both Kuching and Bandar Sri Aman will be geared to switch from oil fired to water-powered ciectricity generating stations.

According to Mr Lai, this hydro scheme will be able to generate an average of 580 billion watt hours of energy annually.

Since the total electricity consumption in the state last year was 275 billion watt hours, it is clear the Batang Ai project is a big step forward in energy availability.

However, anyone who thinks it is the total answer to Sarawak's electrical energy needs would be well-advised to think again.

For when account is taken of the major energy-hungry resource projects planned for the 80s, the overall picture is less rosy.

As explained by Mr Lai, the electricity needed for these schemes will push the state's electricity consumption to 1,243 billion watt hours in 1990.

This represents a five-fold increase in just one decade and is more than double the amount of electricity which will be available from Batang Ai.

The projects which will require all this extra electricity are the urea-ammonia plant, the Tanjung Kidurong deepsea port and the University Pertanian campus, all of which are in Bintulu, together with new Sarawak Shell installations in Miri and a cement clinker plant in Kuching.

According to Mr Lai, SESCO regards these electricity demands as "committed loads" which his corporation will definitely have to supply.

If three yet-to-be confirmed projects are given the go-ahead the total demand will jump even higher.

The projects in question, which are all in Bintulu, are the proposed aluminium smelter, the iron ore direct reduction plant and an electric arc steel factory.

If all three eventuate, the total electricity demand by 1990 will reach the quite staggering figure of 4,502 billion watt hours.

As noted, consumption last year was a mere 275 billion watt hours.

The energy, if it is to be available can really only come from one source — the Pelagus Rapids.

According to Mr Lai the Rajang River basin has the potential to generate more than 10 times the amount of electricity needed by 1990, even if all the proposed projects are operating by then.

And while there are other rivers in the state which might eventually provide hydro power, the total electricity which could be produced by all of them together would still fall short of the Rajang's potential.

But once again the twin problem of time and money raises its unwelcome head.

This time it is probably money which is the bigger stumbling block.

The Batang Ai hydro scheme was originally estimated to cost $600 million. With inflation and interest charges hitting the project the final outlay could touch the billion dollar mark.

And although very important, Batang Ai is a tiny undertaking compared to what might be built on the Upper Rajang.

With so much money involved, it is hardly surprising the whole project is being subject to exhaustive examination regarding its economic viability.

Yet given the cost and supply uncertainties surrounding oil-generated electricity the government probably has little choice but to opt for hydro-power if it wants Sarawak's economic development to maintain its momentum.

According to Mr Lai, the fuel oil crisis of 1973 and the continuing difficulties with oil supplies brought this fact home to many in the administration.

And although Malaysia has oil now, at the present rate of production it will last only another 15 to 18 years unless there are some substantial new discoveries or there is a technological breakthrough in the oil industry.

At present, Sarawak, which depends entirely on fuel oil for generating electricity, is in a particularly vunerable position.

If the present hydro-electric plans are carried into effect all this will change by the end of the decade.

Twelve Major Projects

Kuala Lumpur NEW STRAITS TIMES in English 24 Nov 80 p 8

[Text]

KUCHING, Sun. — The Sarawak Electricity Supply Corporation expects to spend $867.1 million on various projects under the Fourth Malaysia Plan (FMP).

Under the plan, the rural electrification programme would be expanded to benefit about 106,000 people in the interior, a spokesman said today.

Besides the construction of several minor power stations, 10 mini-hydro schemes would be developed to extend supply to remote kampungs in the State, the spokesman said.

Under the TMP only 71,000 people benefitted from the rural electrification programme compared with 5,600 under the SMP.

Of the 42 rural power stations targetted under the TMP, 25 had been completed at a cost of $200,000 each while the other 17 were expected to be operational next year.

The spokesman said the second and final phase of detailed engineering and design works were in progress on the Batang Ai hydro project in the Second Division.

Assistance

Work on the project would be intensified during the FMP period with assistance from the Snowy Mountain Engineering Corporation of Australia.

The project with a 92-megawatt capacity was expected to be commissioned in 1985 and would meet the power needs of Kuching and the surrounding areas.

The Batang Ai project, expected to cost about $700 million, had the least capacity of the 12 major hydro schemes that had been identified for feasibility studies in the State.

The Pelagus hydro electricity project with a capacity of 1,700 megawatts in the Seventh Division was another of the 12 major schemes identified in the master plan study carried out by international consultant groups.

Feasibility studies on the project to be continued under the FMP would involve the determination of the project's economic viability and a study on the high voltage direct current (HVDC) transmission from Sarawak to Peninsular Malaysia.

If all went well the project would be launched by the end of the FMP period (1985), the spokesman said.

Schemes

The other 10 major hydro schemes were at Balui (2,830MW), Baram (1,070MW), Murum (970MW), Baleh (880MW), Tutoh (470MW), Linau (380MW), Belaga (320MW), Limbang (230MW), Katibas (190MW), and Belepeh (160MW).

All the schemes, except the one at Limbang, are in the upper reaches of the Rajang river.

Under the FMP, a $40 million 60 megawatt power station would be constructed in Bintulu in the Fourth Division.

The station would complement the present supply to the town proper from two stations.

The major industrial projects sited in the area such as the liquefied natural gas (LNG) project, the deepwater Tanjung Kidurong port and the urea plant would have their own power stations. — Bernama.

STRUGGLE FOR LEADERSHIP IN SARAWAK NATIONAL PARTY

Kuala Belait BORNEO BULLETIN in English 22 Nov 80 p 4

[Text] KUCHING. — The political dust is finally settling in the Sarawak National Party. And from it has emerged the figure of political veteran Datuk James Wong Kim Ming as the party's chief.

Apart from being party president, he now also holds the reins as chairman of its central executive committee.

Meanwhile, retaining the two positions of SNAP's secretary-general and secretary of the central executive is Datuk Leo Moggie, the federal Minister of Telecommunications, Energy and Posts.

It was the tussle between these two for the top position that provided four stormy months within the party.

It was stirred with the resignation of former president-executive chairman Datuk Amar Duncan Endawie when he was appointed Malaysian High Commissioner to New Zealand in July.

As the question of who should become party chief dragged on for several weeks, Datuk Moggie won a vote (narrowly by 7-6) at a central executive meeting that appointed him acting party leader.

But Datuk Wong and a group supporting him as leader (he had been the long-serving deputy president of SNAP) questioned the validity of this position for Datuk Moggie.

It was pointed out the party constitution did not provide for an acting party chief (there was even mention that some of the SNAP hierarchy were considering taking the issue to court for a ruling).

In a move to resolve the matter, Datuk Wong and six other central executive members wrote to Datuk Moggie asking him to convene a meeting of the executive with a view to the fixing an early date next year for a general delegates' conference of the party.

Instead, Datuk Moggie called a meeting of another party sector, its 36-member central committee, which is SNAP's policy-making body.

This was held on November 6, lasted more than five hours, with 32 members present and Datuk Wong in the chair.

Datuk Wong's appointment as president was, like Datuk Moggie's earlier acting appointment, a closely fought affair. In fact, at the end of the voting the result was deadlocked 16-all for both candidates.

As meeting chairman, Datuk Wong had the casting vote and he gave the vital vote to himself.

Another important appointment to emerge from the meeting was Encik Daniel Tajum SNAP's senior vice-president as deputy chairman of the central executive.

Encik Tajum recently became the successor to Datuk Amar Endawie as the party's Deputy Chief Minister and Minister of Communications and Works.

◆ The meeting also decided, in a review of SNAP positions in both the state and federal cabinet, Datuk Wong should be appointed to a full Sarawak ministership and Encik Grumong Juna (a new member of the central executive) as an assistant minister.

This, however, could present problems.

There are only two vacancies for full ministers. One portfolio is that of Minister of Housing, which is being held in a temporary capacity by Datuk Haji Nor Tahir (he was named for the position last month at the same time as he was appointed Forestry Minister).

The other is Minister of Welfare — a position another party of the National Front, the Parti Pesaka Bumiputera Bersatu Sarawak, wants Puan Hafsah Harun, the present minister, appointed to.

It is also understood the third Front party, also wants a full ministership for its secretary-general, Datuk Stephen Yong and an assistant ministership.

Chief Minister Datuk Patinggi Tun Sri Haji Abdul Rahman Ya'kub will make a decision when he resumes duty, probably in early January.

In the present state Cabinet, SNAP has two full ministers and two assistants, while at the federal level there is one full minister, a deputy and a Parliamentary secretary.

It wants the latter. Encik Luhat Wan, the Beram member, elevated to full ministerial rank.

OIL, MINERAL PRODUCTION IN FIRST HALF OF 1980

Kuala Lumpur BUSINESS TIMES in English 19 Nov 80 p 20

[Text] MALAYSIA produced 58.9 million (US) barrels of oil during the first half of this year, against the estimate of 100.4 million barrels for the whole of the year and 103.3 million barrels during 1979.

According to the latest quarterly data from the Mines Department, the output for the second quarter (at 28.9 million barrels) reflected a decline from 27.0 million barrels during the first quarter.

The mining returns showed that oil production rose from 8.6 million barrels in April to 8.9 million barrels in May but fell back to 8.5 million barrels in June.

The bulk of the output during April came from Trengganu (with 3.6 million barrels), followed by the only other oil-producing states of Sarawak (2.7 million barrels) and Sabah (2.2 million barrels), giving a total of 8.5 million barrels for the month.

The cumulative total for the first four months came to 35.4 million barrels.

The tin-in-concentrates production for the first half of the year totalled 30,522 tonnes, compared with an estimated 62,000 tonnes for the entire current year and 55,000 tonnes for 1979.

A total of 14,936 tonnes was produced during the second quarter, down from 15,586 tonnes in the previous quarter.

The number of dredging units in active operation during June was 53 (down from 55 in April), while non-dredging units totalled 842, up from 835 in April.

Mine stocks at the end of June stood at 15,094 piculs of tin concentrates, up from 12,324 piculs in April.

The average true assay of domestic tin concentrates exported during the April to June period was 75.44 per cent.

Iron-ore production declined markedly from 100,522 tonnes in the first quarter to 65,120 tonnes in the second quarter (giving a total of 165,642 tonnes for the whole period, compared with 350,498 tonnes for 1979.)

The decline took place despite an impressive outturn of 29,963 tonnes during June, up from 15,614 tonnes in the previous month and 19,543 tonnes in April.

The detailed figures for April showed that more than 50 per cent of the month's output came from Kedah (10,800 tonnes) followed by Perak (6,101 tonnes) and the only other iron-ore producing state of Johore (2,642 tonnes).

Significantly, Kedah's output came from a single active unit, compared with five in Perak and two in Johore.

Bauxite production for the first six months of the year showed a spectacular rise to 436,435 tonnes, compared with 398,530 and 615,060 tonnes respectively for the whole of 1979 and 1978.

The second quarter's contribution totalled 259,836 tonnes, a marked rise from 176,599 tonnes during the first quarter.

The production of china clay (kaolin) also increased during the second quarter, totalling 12,600 tonnes compared with 9,343 tonnes during the first quarter.

The total for the first six months (21,943 tonnes) compares with 32,934 tonnes for the whole of 1979.

SWEDEN SEES TREMENDOUS TRADE POTENTIAL IN MALAYSIA

Kuala Lumpur BUSINESS TIMES in English 25 Nov 80 p 6

[Text] MALAYSIAN and Swedish trade policies are heading towards greater economic complementation and increased bilateral relations in the 1980s.

According to Swedish trade officials in Stockholm, Sweden's trade policy is shifting away from the import of traditional raw materials to imports of semi-finished and finished goods from the developing countries.

At the same time, Malaysia's policy is moving away from the export of only raw materials and commodities to the industrialised countries.

According to Malaysian trade officials, Malaysia is keen to add value to her raw materials so that they can be exported in semi-finished and finished forms to the industrialised countries.

Swedish trade officials are optimistic that the complementation of trade policies will bring about mutual benefit to the commercial and industrial sectors of both countries.

According to Mr Curt Wijk, Deputy Under-Secretary, Swedish Foreign Trade Department, the decade of the 1980s will see a greater flow of Swedish investment into Malaysia.

At the same time, Malaysia will be exporting a larger volume and variety of goods and services to Sweden.

Among the Asean countries, Malaysia has caught the attention of Swedish public and private sector interests as a country with tremendous potential for trade and other economic joint ventures.

Proof of Swedish confidence in Malaysia is embodied in the investment guarantee agreement signed between the two countries in July last year.

The agreement provides for mutual protection of Swedish and Malaysia investors in either host country.

Malaysia is the only Asean country which has such an agreement with Sweden.

Referring to the Fourth Malaysia Plan, Mr Wijk says it stands out as a document and programme which will provide the Swedes many opportunities to enhance their economic and other involvement in Malaysia.

Swedish industrialists are especially interested in the Malaysian forestry and wood industry with regard to investment and transfer of technology.

With their vast technological experience in the forestry and wood industry, the Swedes are keen to assist Malaysia in setting up pulp and paper mills and timber processing into value-added export forms.

A Swedish wood products industry delegation was in Malaysia recently to study business possibilities.

The Swedes also see tremendous potential in the production and transmission of hydro-electric power from Sarawak to Peninsular Malaysia and have indicated their interest in participating in such a project.

Mr Wijk assures that the Indochina conflict has not in any way dampened Swedish investment interests in Malaysia.

"Malaysia's strong political and economic base is well known to Swedish investors and businessmen.

"In fact, a group of Swedish industrialists has requested the Swedish Department of Foreign Trade to organise another trade mission to Malaysia next year," he adds.

Over the last five years, trade between Sweden and Malaysia has shown progressive growth.

In 1975, Sweden's exports to Malaysia totalled $104 million against $99 million for imports from Malaysia.

In 1978, Swedish exports to Malaysia rose to $178 million against $96 million for Malaysian imports.

Last year, the volume of trade peaked at $202 million worth of Swedish exports to Malaysia against $128 million worth of imports from Malaysia.

Major Swedish exports to Malaysia include vehicles, various types of pumps, paper, iron, steel and certain metals.

On the other hand, Malaysian products include palm oil and vegetable oil, textiles, rubber and foodstuff.

Although the trade balance has hitherto been in Sweden's favour, Mr Wijk is confident that the 1980s will see the imbalance being gradually reduced. — Bernama

PETRONAS SEEN AS PEERLESS IN MALAYSIAN CORPORATE WORLD

Kuala Lumpur BUSINESS TIMES in English 17 Nov 80 p 20

[Article by A. Kadir Jasin]

[Text]

THERE is no ready or fair comparison in judging the stature of Petronas at home. With a turnover of $3,963.9 million (for the year ended March 31), it leaves its closest big league sister Sime Darby Berhad quite a distance behind (with turnover of $2,322.5 million for the year ended June 30).

This is not a good comparison because the two companies are engaged in two very different lines of business. Nevertheless it serves to indicate what sheer size the state-owned oil corporation has acquired since the signing of production sharing contracts with the oil companies at the end of 1976.

The very nature of the industry has made it possible for Petronas to record this kind of turnover and turn virtually almost every cent of revenue into profit, as its pre-tax figure of $3,860.7 million illustrates.

A moderate rise in production coupled with an unprecedented rise in prices has enabled the oil corporation to improve its profit position by two and a half times from the previous year.

Petronas earned an average daily income of $10.9 million, of which $10.52 million is profit before the tax-man's cut. At this level of turnover Petronas ranks among the 500 largest corporations outside the USA. On the basis of *Fortune* magazine's rankings for 1979, its position would be about 210.

Should Petronas be listed in the *Fortune* survey, it would be one of the 35 largest petroleum companies outside the US, falling in the class of Exxo of Netherlands and Texaco of Canada. Its turnover is also comparable to that of Alfa Romeo of Italy, CSR of Australia and Sharp of Japan.

While Petronas and the nation can boast of the fact that correct decisions and policy measures have been taken resulting in the country gaining absolute control over its oil and gas resources, these changes have brought along with them significantly heavier responsibilities.

The bottom line to the rapid development of the oil industry in general and Petronas in particular is the undisputed fact that the bigger they become the heavier would the impact be on the country should anything adverse happen to them.

It therefore comes as a great relief to learn that Petronas is humming along in sound health. For its promptness in preparing its annual accounts for submission to the Registrar of Companies, the management deserves a bouquet.

This praise is even more deserved when it is realised that not many public enterprises have been able to prepare their annual statements and accounts promptly. As recently revealed by Public Enterprises Minister, Datin Paduka Rafidah Aziz, some are in arrears of up to five years in presenting their statements.

Although Petronas, for one reason or the other, has not made a general disclosure of its accounts apart from the obligatory submission to the Registrar of Companies, it is to be hoped that it will keep up this good record.

Even in its healthiest state, Petronas' decisions significantly affect the economy. With huge cash reserves at its disposal, Petronas has been a significant determinant of the banking environment. On many occasions, the tightness or looseness of the money market has been attributed directly to the ebb and flow of Petronas' funds.

A simple statistic shows the weight of its influence. At the end of the last financial year, Petronas had $4.7 billion in deposits, more than double that of the previous year.

Although a beginning has been made to rationalise and conserve oil re-

sources through the National Depletion Policy adopted in the middle of the year, Petronas would continue to reap handsome revenue due to higher oil prices and exercise this role.

However, the time is fast approaching when Petronas will start to increasingly utilise its profits to meet its commitments in the development of the various oil and gas related projects currently being undertaken either by itself or in partnership.

As its latest accounts indicate, Petronas had approved and contracted $1,434 million worth of equipment and services for the group and $29.2 million for the company. A further $2,398 million for the group and $1,900 million for the company had been approved in principle.

This means that Petronas will not be as bountiful a source of funds. However, its moves in development work will have as stimulative an impact on the economy as it releases funds into the system.

With its revenue and investment burgeoning, the pressure on its managerial capability will increase too. After having succeeded in getting the best possible deals from oil and gas for the country, Petronas is now responsible for ensuring that the part of oil revenue accruing to it (after paying taxes) is well spent: for in reality the money it earns is not "profit" but should be considered capital to ensure the nation's future well being when oil and gas have become depleted.

In this respect, Petronas has to be doubly sure its projects are viable for it will take full blame if at a later stage something adverse happens to its undertakings.

Although it is in a totally different field, the national oil company could learn from the experiences of its sister organisations like Pernas and the Malaysian Rubber Development Corporation.

The one fact that none of these agencies can dispute is that expansion which is not properly planned and conceived could spell trouble. Both Pernas and Mardec expanded too rapidly and both have found themselves in trouble. Mardec is completing a major consolidation phase, expected to end this year, while Pernas is still in the midst of one.

Manpower is perhaps the most critical factor in the expansion of the national oil company and its subsidiaries. With little indigenous expertise, they are depending heavily on the good faith of partners and contractors. Unfortunately, good faith is highly subjective in business.

True, as top Petronas officials repeatedly contend, the national oil company could buy the services of foreign consultants and advisors but this, at its best, can only be considered temporary arrangement and short term. In the long run it has to develop its own core of experts.

Another interesting aspect is the fact that oil is rapidly turning into a major political issue. This is unavoidable because while no one politician can successfully make use of oil as his political base (as opposed to say rubber or padi) the impact of the industry is too widespread to be ignored.

Petronas has already felt the heat of political pressure as seen in the somewhat "cold" relationship at one time between it and the leadership in Sarawak and Trengganu. At the national level, Petronas and oil are highly politicised subjects as indicated by the number of questions raised on them in Parliament.

It is, of course, too much to expect a totally trouble free relationship between a huge agency like Petronas and the politicians. Nevertheless, even if Petronas is subject to the political system, the national oil company should be looked upon as an authority on oil and that its advice be heeded.

It has to be acknowledged that a good business decision does not always fit into the shape of things a politician envisages. The mixture of business and politics is like drinking and driving. A bad mix could end in a crash. — *By A. KADIR JASIN*

COUNTRY SAID TO LACK CLEARCUT FOREIGN TRADE POLICY

Kuala Lumpur BUSINESS TIMES in English 28 Nov 80 p 6

[Article by Aditya Man Shrestha in Kathmandu]

[Text] NEPAL'S efforts at import substitution and export diversification have been unsuccessful.

Simply put, "the gap between words and deeds is too distant," said Dr Bruno Knall, professor of development economics at Heidelberg University, West Germany.

Dr Knall, who is also the director of the university's South Asia Institute, examined Nepal's performance at reducing import of finished goods and expanding the export items.

He found the performance disappointing because of the low "talk-action ratio," particularly among government officials.

Dr Knall said: "A clear-cut foreign trade policy has not been formulated so far; nor is there any hint as to how the overall efforts for economic diversification of the country should be meshed with foreign trade activities."

He is pessimistic that Nepal now has the capacity to produce local goods to reduce imports.

"The fact that Nepal is in an early phase of industrial development is revealed by the composition of its imports," Dr Knall said.

Statistics show that manufactured goods have a dominant place in Nepal's imports (about 30 to 40 per cent), followed by food and live animals (between 15 and 20 per cent), machinery and transport equipment (between 10 and 20 per cent) and mineral, fuel and lubricants (around 10 per cent).

However, if the whole range of industrial goods, including drugs and chemicals is taken into account it will occupy two-thirds of Nepal's import.

In the two decades reviewed, Nepal developed a number of enterprises which are now producing consumer goods like textiles, ready-made garments, household equipment, plastic goods, shoes, soap, biscuits, sugar, liquor, drugs, cigarettes and matches as well as fertiliser, cement and agricultural tools.

But Dr Knall pointed out that these enterprises preferred capital-intensive technology to labour-intensive technology. As a result, imports did not go down even when "industrial development of sorts" occurred.

Capital-intensive technology was encouraged even by the government's dual exchange rate policy. When it reduced the second exchange rate from 16 to 14 rupees (US$1.20-US$1.15) per US dollar on Feb. 21 this year, it facilitated and encouraged more imports.

For industrial development, Dr Knall said public sector enterprises are inadequate. He urged private entrepreneurs to invest in industries. But it isn't enough for the government to modify the existing fiscal policies and complicated customs regulations to encourage private businessmen.

It is also necessary for government, he said, to reduce if not completely remove the cumbersome and harassing bureaucratic procedures involved.

Dr Knall also opposed short-term-high-profit-making activities which are relatively productive in terms of national interest. He cited the example of the production of stainless steel utensils and synthetic fabrics in the mid-'70s.

Although very profitable for private entrepreneurs, he said the government missed a chance to skim off some of the profits through excise taxes. Using these revenues, the government could have implemented development projects beneficial to the entire population.

On the export side, Dr Knall found the problem more acute. Imports far outweigh exports by a high ratio of 2:1 in the recent years. The imbalance has been offset by Nepal's hard currency earnings in foreign aid as well as revenues from tourism and private remittances.

But nevertheless, the foreign trade deficit has been increasing over the past few years, reaching a new peak of more than 1.6 billion rupees (US$122 million) in 1978-79. "The huge trade deficit which is expected to increase in the future is certainly a good reason to take the outward-looking strategy of export promotion more seriously than has been the case in the past," said Dr. Knall.

The bulk of Nepalese exports consists of food and live animals, crude raw materials and animal and vegetable oils and fats, which account for about 30 to 35 per cent of the total. Manufactured goods and articles range between 10 and 16 per cent, and their share in exports is increasing.

Nepal now exports 45 different items to more than 40 countries. The major exportable goods are raw jute and jute goods, rice, handicraft products, woolen carpets, goatskin, spices, herbs, Nepali papers, ready-made garments, shoes, leather goods, wooden and bamboo goods and brittles.

But there's an urgent need for the government to standardise export production. An Institute of Standard has already been established although its activity is "hampered by the prevailing ignorance of what 'standard' means."

Nepalese exporters were also encouraged by the change in the second exchange rate. The government pays 14 rupees instead of 16 rupees per dollar earned by the exporters.

Dr Knall said the government should have introduced other incentives like export credit facilities, cash subsidies for new exports, tax rebates and tax holidays, duty rebates and exemptions which it has obviously failed to do. — Depthnews

FIELD PARTY MAKING GEOLOGICAL MAPS IN ANTARCTIC

Wellington THE EVENING POST in English 6 Dec 80 p 2

/Text/ Christchurch, Dec 5 (PA)--A four-man field party has left Scott Base on what will be the longest toboggan journey by New Zealanders during the 1980-81 summer season in the Antarctic.

On their 10-week trip to Ferrar Glacier, 70 kilometres west of Scott Base, they will make geological maps in the area. The work is part of a continuing programme to provide detailed mapping from the Koettlitz-Blue Glacier region northward to the Dry Valleys.

Led by Dr R H Findlay, a Christchurch geologist with the Antarctic division of the Department of Scientific and Industrial Research, the expedition is being made on two motor toboggans.

Three sledges will haul about a tonne of equipment across the sea ice, including dehydrated food designed to last for 18 weeks.

MARCOS TO ENCOURAGE MORE FOREIGN INVESTMENT

Manila DAILY EXPRESS in English 11 Dec 80 p 6

[Text]

PRESIDENT MARCOS said yesterday that the government will encourage more foreign investments "to help sustain the momentum of the country's economic growth."

In a talk with newsmen, the President said, "I am looking forward to encouraging more equity or outright investments instead of loans because the atmosphere seems to be just right."

Already, the President said, several international banking institutions, including some in the United States and Japan, have openly pledged support to the country's 11 major industrial projects.

He also mentioned bankers from West Germany, Sweden and Britain as among those interested in investing in the country, particularly in mining.

* * *

THIS COMING year will see the opening of more gold, copper and nickel mines with the participation of foreign investors, the President said.

He said that the country's economic growth this year is between 6 and 7 percent and that this momentum is expected to be sustained with more foreign investments.

The President attributed the ideal investment climate in the country to what he said is its ability to cope with the present economic crisis arising out of the energy problem.

He cited the International Monetary Fund and the World Bank which said recently that the Philippines is one of the few countries which have sustained momentum in reducing inflation and unemployment rates.

The President said the pushing through of the 11 industrial projects despite recession will help reduce unemployment and inflation.

* * *

THE PROJECTS to be undertaken include a copper smelter, phosphate fertilizer plant, Tongonan geothermal project and the production of heavy equipment.

NEW FOREIGN INVESTMENT INFLOW REACHES $182 MILLION

Manila DAILY EXPRESS in English 9 Dec 80 p 16

[Article by George T. Nervez]

[Text] Direct foreign investments amounting to $181.74 million flowed into local enterprises during the first ten months of the year, the Central Bank said in a recent report.

The amount was $54.75 million more than direct foreign investments in the same period last year which reached only $26.99 million, the CB said.

For the month of October alone, direct investments in local enterprises amounted to $19.64 million, an increase of $7.90 million compared to the same month in 1979.

The 10-month investment inflow far exceeded the foreign exchange which flowed out of the country during the same period last year due to withdrawal of foreign investments and capital for direct investment abroad, the CB said.

During the period, a total of $47.23 million flowed out of the country as capital for direct investment abroad. In addition, $98.02-million worth of foreign investment was withdrawn, the CB added.

The CB also noted that during the period, personal income remitted inwardly by seamen and contract workers amounted to $282.45 million, slightly down from the previous year's $303.34 million.

Tourism earned for the country a total of $215.03 million, an increase of $73.88 million over the 10-month dollar earnings from tourism in 1979.

The CB data showed that a big portion of dollar earnings from non-merchandise trade (also called invisible receipts) during the period was interest income which amounted to $233.98 million. From January-October 1979, interest income amounted to only $145.02 million.

On the other hand, the big expense items in invisible trade were interest payments which amounted to $617.72 million, freight and insurance--$113.88 million, other transportation--$162.95 million, and profits, earnings and dividends--$130.37 million.

Only $90.88-million worth of foreign exchange was spent for travel purposes from January to October 1980, the CB said. Last year, it amounted to $63.8 million.

The biggest expense-interest payments--represents interest on both government and private sector loans which fell due during the period.

INCENTIVES TO BE GRANTED TO 20 INVESTMENT AREAS

Manila DAILY EXPRESS in English 6 Dec 80 p 9

[Article by R.A. Liquicia]

[Text] President Marcos has authorized the Board of Investments (BOI) and the Ministry of Finance to grant incentives to 20 investment areas under the country's various priorities plans for 1981.

The new areas eligible for government incentives were included in five ongoing priorities plans.

The incentives are mostly in the form of tax holidays and financing support from government institutions.

There are seven new additions to the 13th investment priorities plan (IPP), 10 to the 11th export priorities plan (EPP), and one each to the third agricultural investment priorities plan (AIPP), sixth public utilities priorities plan (PUPP), and in the 1980 energy priorities program.

The inclusions to the 13th IPP are the manufacture of leguminous and other vegetable-based protein, pure refined lead, automotive-grade iron castings, caustic soda, xanthates, titanium dioxide, electronic telephone switching equipment and telephone sets.

The new investment areas included in the 11th EPP which are now eligible for incentives are the production of processed sheepskin, wooden clog components, copper metal, food-grade phosphoric zcid, sizing agent compound (modified starch), reclaimed rubber and rubber sheets, laminil board, high pressure and hydraulic rubber hose, candles, artists' and writing brushes.

Mushroom culture is now entitled to incentives under the AIPP; the manufacture of district cooling systems in the PUPP; and the manufacture of aircon water heaters in the 1980 energy priorities plan.

These new inclusions were approved last December 2. However, the BOI will start to accept applications under the amended listings on December 8.

These inclusions are actually amendments to the 1980 priorities plans. Every year, the Board of Investments comes out with updated priorities plans where some areas are either added or scrapped.

Investment activities that are scrapped from the list of preferred areas are those whose measured capacity has now been filled, or where in private firms have not shown any interest.

The 20 new inclusions in the 1980 priorities plans will form part of the 1981 priorities plans.

AGREEMENT TO EXPAND TRADE WITH SOUTH KOREA

Kuala Lumpur BUSINESS TIMES in English 24 Nov 80 p 20

[Text]

MANILA, Nov. 23

THE Philippines and South Korea have agreed to further expand their bilateral trade and economic relations, a government report said yesterday.

A joint communique signed on Friday said there are "promising opportunities for expansion and trade in view of the complementary nature of the two economies" of the Philippines and South Korea.

The communique was signed by Trade Minister Luis Villafuerte and South Korean Minister of Commerce and Industry Suk Joon Suh in Manila after a two-day meeting between the technical panels of both countries.

The Korean delegation requested the Philippines to increase its imports from their country in view of the existing trade imbalance in favour of the Philippines.

Total volume of trade between the two countries reached more than US$231 million in 1979.

The Philippines wanted the Koreans to diversify their imports from raw materials like sugar and coconut oil to items like canned pineapple, coffee beans, abaca cordage and pulp, electronic components and other manufactured products. — UPI

SMALL FARMERS COMPLAIN OF COCONUT MONOPOLY

Kuala Lumpur BUSINESS TIMES in English 25 Nov 80 p 6

[Article by Adlai J. Amor in Manila]

[Text] SEVENTY-YEAR-OLD Nathan Fagel came to Manila late last month from the southern Philippine city of Davao. He is a coconut farmer, one of the few who have refused to join the government-organised Philippine Coconut Producers' Federation (Cocofed).

Mr Fagel, who is president of the 30-member Bunawan Coconut Planters and Copra Producers Association in Davao City, came to Manila bringing dire predictions for the troubled coconut industry.

"The small coconut farmers down south are hopping mad. If the government does not listen to our appeal now, we might be driven to violence," the wiry, white-haired farmer said.

Since the middle of this year, he and his colleagues have been bombarding government officials, legislators and other coconut farmers with appeals pressing for the abolition of the "monopolistic control" of the industry by the Cocofed and its milling arm, the United Coconut Oil Mills Inc (Unicom).

Officials of the two organisations were not available for comment.

However, an official of the Philippine Coconut Authority (PCA) — which helped to establish the Cocofed and the Unicom — said that the so-called monopoly is a "gross misconception."

"They were established using funds collected from the farmers themselves. The Cocofed and the Unicom belong to them," said PCA administrator Lt Col Felix V. Duenas, Jr. "And the government does not own any of it."

The Cocofed is the largest and only recognised coconut farmers association in the country, accounting for over 90 per cent of the 800,000 registered farmers with the PCA. The Unicom, organised by the United Coconut Planters Bank which, in turn, is owned by the Cocofed, now controls 98 per cent of the country's coconut crushing capacity.

Underlying the discontent of coconut farmers is the fact that current prices for coconuts are low. For the more than 70 per cent coconut farmers with less than five hectares of land, their earnings have been slashed by as much as 80 per cent compared to last year.

For the last four years, the coconut industry has been the Philippines' premier dollar-earner despite violent price fluctuations. It posted US$1,019 billion last year or nearly 30 per cent of the total export earnings.

Almost one-third of the population rely on coconuts for their livelihood — either as farmers, tenants, traders or millers. They produce from 1.8 million tons to 2.6 million tons of copra annually; about 80 per cent of this is exported.

This makes the Philippines the world's largest coconut producer, accounting for 60 per cent of the total output. It is also the market leader in the world coconut trade, commanding 80 per cent of the world market.

Contrary to earlier reports, however, the Philippines is not trying to create a coconut cartel. "We cannot dictate the world price for coconut since it is such a small market," Col. Duenas said. Coconut oil comprises only eight per cent of the total world market for fats and oil. It can also be easily substituted for any other vegetable oil, like soybeans for example.

Because of this, coconuts are subject to violent price fluctuations. The PCA administrator says that current prices are low because of a glut in the world fats and oils market, the US embargo on the Soviet Union for its Afghan invasion and world-wide inflation.

Mr Fagel says that the current prices for copra are "starvation prices." The international price of copra fell from a high of 423 pesos (US$28) per 100 kilos in 1979 to 282.86 pesos (US$23.60) last April. It has continued to decline since then.

Col. Duenas says that the world prices of coconut oil are currently 27 US cents a pound. The prices four years ago, however, were much lower: 14 US cents per lb.

But the prices actually paid to coconut farmers are even lower

after the middlemen have taken their cut. On the average, copra passes through five middlemen before it reaches the oil mill.

In some parts of the country, the prices of copra have dipped to as low as 100 pesos (US$12.50) per kilo. And in the central Philippine island of Samar, the prices have gone to as low as 80 pesos (US$8) per 100 kilos. Other farmers have simply refused to harvest their coconuts since they invariably lose money.

Added to the low prices paid to the coconut farmers is a 60-peso levy the government collects per 100 kilos of copra. Since this levy was first collected in 1973, it has been increased eight times from the original 15 pesos (US$2).

In May 1980, however, the burden of collection was shifted from the small coconut farmers to the exporters. This levy — which is now called an "assessment" — was increased to 80 pesos (US$11) per 100 kilos for export, with 60 pesos for domestic use. About 80 per cent of the coconut production in the Philippines is exported.

Despite the complaints of many farmers that the levy had been too onerous for them, the funds were instrumental in improving the coconut industry. These improvements have benefited even those coconut farmers who have not joined the Cocofed.

Since 1973, over six billion pesos (US$800 million) were collected and it is estimated to grow by 1.5 billion pesos (US$200 million) annually.

With these funds, the government helped the farmers to organise the Cocofed, helped them to acquire their own bank — the United Coconut Planters Bank — provided scholarships, provided insurance for the farmers, purchased the oil mills, funded the PCA and financed coconut trading.

No plans, however, have been made for the allocation of the recent 20-peso (US$2.75) increase in the export levy.

The funds are also being used for the government's coconut planting programme.

The programme, which started this year, seeks to replace the more than 40 per cent coconut trees in the country which are considered old. When finished 40 years from now, it is expected to result in a five-fold increase in coconut production.

But despite efforts to stabilise the Philippines' coconut production and cushion the farmers from violent price fluctuations nobody really knows how far the world prices will fall. — Depthnews Asia

SINGAPORE BECOMING INTERNATIONAL OIL TRADING CENTER

Kuala Lumpur BUSINESS TIMES in English 20 Nov 80 p 6

[Article by Peter Knight-Barnard in Singapore]

[Text] SINGAPORE's role as an international oil trading centre has expanded over the last two months as a direct result of the Iran-Iraq war, according to oil traders based here.

Countries which have traditionally relied on oil supplies from the two Gulf neighbours are now venturing into the Singapore spot market in order to replace Mid-East oil with Asian crude and oil products, they said.

Fears that members of the Organisation of Petroleum Exporting Countries (Opec) may raise their official oil prices soon, possibly even before next month's scheduled Opec meeting in Bali, has also panicked some countries into hastily trying to arrange long-term contracts with Malaysia and Indonesia.

"Suddenly, a lot of people are looking to this part of the world," one oil trader said.

He noted this was despite the fact that the quality of the Asian crude may not exactly match customer requirements or be on a par with the benchmark Saudi Arabian light oil.

A number of foreign oil trading firms which moved to Singapore during the last 18 months principally with the intention of doing regional business have been swiftly propelled into the international arena by recent events.

Traders are starting to ship cargoes of fuel into Europe and the United States from this region where higher prices can be obtained than in the local spot market.

"You can pick up naptha here for US$27 a barrel, sell at US$42.20 in Europe, and after allowing for around US$4 a barrel freight charge, depending on quantity, the net-back price in Singapore is still US$32.20," a trader said.

"Until recently, crude and oil product prices had tended to be higher in Singapore than in Rotterdam, for example, but now Europe is taking the brunt of the upward pressure on prices," he explained.

Refined oil products are also being moved into North America and recently, oil traders reported three 25,000-tonne cargoes of naptha, produced by Singapore refineries, shipped to the US.

Apart from its newly-discovered role as a major spot oil market, Singapore is also the third largest refining centre in the world after Houston and Rotterdam with a refining capacity of more than one million barrels per day.

Naptha, which is used in petrochemicals and processed in reformers to produce petrol, has been a particularly active market in Singapore.

A suspected downturn in Soviet naptha production which some traders said could delay deliveries to Europe and elsewhere is also contributing to the shortfall.

Petrochemical companies are particularly concerned about whether they have sufficient stocks of the product for the end of this year and 1981 and this has been putting pressure on prices.

Although Indonesia is a major supplier of naptha, it may soon be overtaken by China.

One firm is already planning to ship 18,000 to 20,000 tonnes of the product from China to Europe, industry sources said.

India has been tendering here for 25,000 tonnes of naptha and although Japanese firms have not been buying naptha, they are in the market for kerosene if the price falls below the US$47 a barrel cost, insurance, freight Japan, currently being offered in the spot market, Japanese traders said.

However, not all product prices in Singapore have been moving upwards. High sulphur fuel oil has slipped back to around the US$225 to US$230-a-tonne level after fetching more than US$230 about two weeks ago.

India paid US$250 a tonne for a recent 50,000-tonne cargo but the fact that local refiners appear to have already covered their requirements has now depressed the price slightly.

Gas oil has dropped to around US$35 to US$39 a barrel fob Singapore from US$40 10 days ago, and some parties offering the product at US$42 have found no takers.

Although Singapore is essentially a market for refined products, crude oil has also been changing hands here.

The absence of Japanese firms from the market in response to pressure by the Japanese government which is trying to curb soaring spot oil prices has had little apparent effect, traders said.

A top quality Indonesian attaka crude recently fetched US$41 a barrel for delivery in Bombay.

It is likely that Singapore will continue to play an expanding role in international oil trade in the foreseeable future, one foreign trader said.

"So long as we have this crazy imbalance in world oil stocks and the farther away we see Iraqi crude from the market, the oil business in this region will continue to grow," he said.

"Demand for petroleum in some of the newly industrialising and developing countries of Asia is projected to grow at 20 to 30 per cent a year compared with a negative growth in oil demand some areas," he noted.

"Yet at the same time," he lamented, "refining capacity is not keeping pace with demand."

But aside from the supply and demand factors, the oil trading business, which has attracted a large number of Japanese and other foreign firms to Singapore, can be lucrative. One oil trader said his firm made after-tax profits of around US$300 million in 1979 and expects to top that figure this year.

BRIEFS

MINISTER ON OIL BILL--Minister of Finance and Planning Ronny de Mel has said that our oil bill this year will exceed 11.5 billion rupees. Addressing a meeting of secretaries of the ministries in Colombo, the minister said that this sum represented more than 42.5 percent of the national budget and 58 percent of the country's export earning. De Mel said that with a 10 percent price hike for oil already announced by OPEC and further increases anticipated in the future, the oil bill will exert a tremendous pressure on the country's economy. The minister pointed out that the oil bill alone this year will be much more than the entire annual budget in the time of the Sri Lanka Freedom Party government. The government had been able to carry forward the economic development programs and to maintain imports, including oil, without a break only because of nearly 10 billion rupees foreign aid on the most concessional terms. [Text] [BK041131 Colombo International Service in English 1045 GMT 4 Jan 81]

ADB GRANT--The Manila-based Asian Development Bank has approved a technical assistance grant for graphite mining project in Sri Lanka. The ADB technical assitance is designed to formulate a project which will help Sri Lanka produce an additional 17,000 tons of graphite ore annually for export. The technical assistance study is expected to begin in March 1981. [BK031055 Colombo SUN in English 25 Dec 80 p 1]

COLUMNIST SAYS VIETNAMESE REFUGEES SEIZE THAI BOATS

Bangkok TAWAN SIAM in Thai 8 Nov 80 pp 6, 2

[Commentary by Dr Preecha Hongkrailert: "Political Happenings of Interest"; passages enclosed in slantlines printed in boldface]

[Text] /The Vietnamese refugee problem/ is again becoming a political issue for this Thai Government, because the Vietnamese refugees have /"plotted"/ to enter Thailand by a new method: bringing their boats into the Gulf of Thailand and lying in wait to seize Thai fishing boats and foreign vessels of every kind, thus finding ways to wangle themselves into Thailand under the guise of the /"humanitarianism"/ of Thailand and of foreigners.

Recently two Thai commercial ships apparently picked up and brought in some Vietnamese refugees. One of these ships, the "Sri Siam II," brought in a total of 78 refugees. The ship's captain claimed he was "forced." And these Vietnamese refugees had destroyed their own boats in the Gulf of Thailand to prevent the Thais from pushing them back out to sea in the gulf as had been done in the past.

At the same time a separate incident occurred involving the British ship "Logos," registered in Singapore. The "Logos" called at Klong Toey Port, bringing its international book exhibition to Thailand as part of its tour. It picked up and brought in 93 Vietnamese refugees. As has been trumpeted in the news, /the British government has tried to persuade the Thai or Singaporean government to accept the refugees from the ship./ The "logos" is now anchored at Klong Toey Port.

/In this matter the Thai government ought to adhere to a "push-back policy" of forcibly turning Vietnamese boat people away from Thai territorial waters. It ought to announce to all Thai and foreign ships/ intending to enter Thai waters that Thailand will not accept Indochinese refugees, no matter what the situation may be. The government policy should possibly include a stipulation forbidding ships which are in violation of the policy to anchor at Thai ports.

/It is clear that/ the Vietnamese refugees' new method of wangling entry into Thailand is /"the world's clearest case of barging in,"/ replacing the old methods which failed the refugees in the past. At the same time the Vietnamese refugees have cried out against Thai fishing boats, accusing fishermen of piracy and rape. /These accusations have tarnished Thailand's image in the eyes of the world./

The accusations are simply the Vietnamese refugees' tactics to force Thailand to accept the boat people who enter Thai waters.

/Furthermore,/ in the case of the refugees aboard the ship "Sri Siam II," this writer disagrees with initiating court procedures against them for their violation of the law in forcing the ship captain to pick up 78 refugees. If we were to follow the /"court trial"/ route, these Vietnamese refugees would be very satisfied since they would not be pushed away. They would have less to risk and much to gain. At the least they might be jailed inside Thailand or fined, but would still have the opportunity to stay in Thailand. /In the end we would have Vietnamese refugees regularly entering Thailand through this means./

CHAIYAPHUM MP SAYS CPT STILL THREAT

Bangkok BAN MUANG in Thai 8 Nov 80 p 6

[Article: "MP Requests Troops to Suppress Communists. Threat Forces the Hoisting of White Flags"]

[Text] Mr Sihanat Rucha, a member of parliament from Chaiyaphum Province, said that Prime Minister Prem Tinsulanon had responded to Sihanat's request for assistance by ordering the troops of Army Region Two to suppress the communists in Nongbuadaeng District, Chaiyaphum Province. He said he had asked the Prime Minister to help solve the problem of a communist threat to that district's inhabitants because communists had infiltrated the area and had fatally shot some and had wounded others of the subdistrict chiefs and village chiefs who lived along the right bank of the Chi River. Some of the remaining headmen and village chiefs had therefore fled their areas. No one dared to run in elections. Teachers were scared to teach. Communists had taken away almost all the guns belonging to the Thai Volunteers for National Defense. Some villages had even hoisted white cloths as flags in front of their villages, signaling their surrender.

MP Sihanat recommended that when the troops of Army Region Two have finished their suppression operation, the soldiers should remain in the area permanently to help develop the villages and to prevent the communist terrorists from returning. He also suggested that the village chiefs who had fled should be helped to return to their duties and that urgently needed elections for subdistrict headmen and village chiefs should be held quickly to replace those who were gunned down. A bridge across the Chi River should be built, and the roads leading to the villages should be made passable in all seasons. Teachers should be provided help and security so that they can go back to teach their students in their respective schools.

MPS DENOUNCED FOR SUPPORT OF RIGHTIST PARTY

Bangkok TAWAN SIAM in Thai 3 Nov 80 pp 5, 14

['Half a Leaf is Half a Leaf' Column by Pet Banlaem; passages enclosed in single slantlines printed in boldface; passages enclosed in double slantlines printed in italics]

[Text] /Mr Anuwat Watanapongsiri, who is both the Minister of Science, Technology, and Energy and also the Deputy Secretary General of the Chart Thai [Thai Nation] Party, gives his opinion regarding the case of some Chart Thai Party members who joined the newly organized Naew Mahachon [Mass Line] Party, which is headed by Major General Sutsai Hatsadin./

Mr Anuwat's thinking in this matter must be considered rather strange, and it reflects the nature of Thai politicians.

/The crux of the matter is that the Thai pattern of thinking about political parties has not been adequately developed. It can also be said that this inadequacy is the main cause for the failure--evidenced as stagnation--of the political party system and the democratic system in Thailand./

More evidence is that members of the Thai parliament are still firmly linked to political interests and positions.

Mr Anuwat told reporters that the Chart Thai members who joined the new political party still come to his party's meetings as usual. They will follow whoever entices them with money.

At the same time Mr Anuwat revealed that some members of his party even said that being members of the Chart Thai Party is like being legally married to the party. Therefore members can sleep with prostitutes anywhere they want, as long as they do not bring diseases home. In other words, the Chart Thai Party registration gives the party the position of major wife.

The Chart Thai Party regards such action and frank speaking by its members as sportsmanlike conduct and, furthermore, as their personal affair. In the past, MPs have acted the same way, accepting money from other parties and then pooling and sharing it. They have enjoyed such conduct openly.

Scrutiny of Mr Anuwat's point of view reveals two important facts.

/First, it is obvious that the newly founded Mass Line Party employs the method of using money to buy members from other political parties./

//And second, the acceptance of money or benefits by some members is a normal practice and is considered the private business of each individual. The party does not consider their actions a serious matter because some past members of parliament also practiced such activities.//

After listening to the tale of this incident I was awfully saddened, because if any Thai political party considers it a normal or personal affair, and not a serious matter requiring corrective action when members of parliament elected under the party banner sell themselves to or join other political parties for personal gain, then /I must say frankly that this kind of political party should not be called a political party; but the best it can be called is a mob of political gangsters./

This kind of political party is founded only so that its chief or key party leaders can use it as a bargaining tool in seeking benefits and positions with those who hold political power.

Such a party is not founded to serve the people or to protect the benefits, rights, and freedoms of the people, which is the purpose of political parties in other democratic countries.

I consider any members who resign from their own parties and join others for money or benefit, without thought of their obligations to the people who elected them, /as not only traitors to their party but also as traitors to the people, double crossing them./

Any political party that considers such practices to be normal and acceptable, rather than improper, should not be supported by the people.

/Furthermore, if the new allegiance of such a party member is temporary, like that of a man who has a wife but goes with prostitutes once in a while,/--in other words, if the member is not serious about the new party he joins—I consider this conduct even more vile, because the member who conducts such activities is no different at all from a criminal who dupes his victim.

For these reasons and for the promotion of the democratic form of government in a system of political parties, I consider it the duty of the political party whose members left or sold themselves to another party to severly punish in some way its members who practice such actions.

/One should not sit and put up a smokescreen of eloquence or witty rhetoric to protect such members, because this might discourage other members who uphold the party's high ideals and policies./

//But the most important thing is that if wrong practices continue, the people will lose their faith in the political party system, and that will open the door for the easy entry of government by dictatorship.//

COMBAT NEWS FROM MYITKYINA AREA, SOUTHERN SHAN STATE

Myitkyina Area

BK071228 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 7 Jan 81

[Text] Combat news from Sadon and Lauhkaung areas, located east and northeast of Myitkyina:

On 30 October, an attack by a small unit of the People's Army below (Kyungaw) killed two and wounded one enemy from the military government's mercenary 2nd Chin Rifles regiment.

Between 23 and 28 November, mine attacks by small units of the People's Army killed two enemy troops including a mercenary corporal.

On 3 and 5 December, guerrilla and mine attacks conducted by small units of the People's Army killed two mercenaries from the military government's mercenary 29th infantry regiment.

On 7 December, a small unit of the People's Army attacked a military convoy on the Myitkyina-Chipwe Highway, destroying two vehicles and wounding and killing some enemy troops.

Myitkyina, Southern Shan State

BK021444 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 2 Jan 81

[Text] Combat news from Sadon and Lauhkaung areas located east and northeast of Myitkyina: On 27 November, the People's Army and militias jointly attacked a mercenary platoon of the military government stationed at (Pha La) village located between Sawlaw and Chipwe; the mercenaries had been harassing the people living in nearby areas. The enemy retreated along with the wounded. Some ammunition and military equipment were seized from the enemy and the enemy's camp was burned down.

On 19 December, an enemy soldier was killed as he stepped on a mine planted along the (Nyanchangmaw) Stream by the People's Army. In the same evening, a small unit of the People's Army staged a surprise attack on the (Haw Gaw) enemy camp, wounding and killing some enemy soldiers.

On 22 December, a small unit of the People's Army attacked mercenaries of the 3d company of the military government's mercenary 2nd Chin Rifles regiment who came to destroy Ngamaw village. The attack killed two enemy soldiers and wounded five including a mercenary corporal. On the next day, on 23 December, the People's Army pursued and attacked the mercenaries from the 1st and 2nd companies of the military government's mercenary 2nd Chin Rifles regiment while they were retreating after burning and looting Ngamaw village again. The enemy fled in disarray with five wounded.

Combat news from the southern Shan State: On 21 December, a small unit of the People's Army attacked the enemy from the military government's 6th infantry regiment near Keng Tawng, killing one and wounding four.

'VOPB' REPORTS PEOPLE'S ARMY ACTIVITIES IN DECEMBER

BK091254 (Clandestine) Voice of the People of Burma in Burmese to Burma 1200 GMT 9 Jan 81

[Text] Combat news from Central Shan State:

On 3 December, a small unit of the people's army made an attack on the enemy at (Kwehkalang). The enemy fled. On 16 December, mines planted by the people's army killed two enemy soldiers at (Kyarudi Gway). On 26 December, an attack by a small unit of the people's army at (Wan Pang) River, (Hai Hkawng) region, killed two enemy soldiers and wounded three others.

Combat news from Eastern Keng Tung District:

On 15 December, mines planted by the people's army near (Hpang Mawng-Yong) and Loi Mwe killed one enemy soldier. On 20 December, a clash broke out between a people's army unit and enemy transportation troops at Wan Pa-hok. The people's army captured 9 rice bags and over 200 tins of canned food.

On 21 December, the people's army clashed with the enemy near (Ya Hpang) Village. Two enemy soldiers were wounded and the enemy fled leaving a body behind. Three G-2's were seized by the people's army. The people's army captured over 3,000 rounds of ammunition and over 100 explosives and bombs in a clash which took place at the foot of the eastern mountain in Mong Yawng field on the following day, 22 December.

On 26 December, a small unit of the people's army attacked and overran the enemy camp at (Nanthalin) in Mong Lin field. The camp was burned and destroyed. On 17, 19, 20 and 21 December, the communications links used by the mercenary army to oppress the people--the (Loi Hpaw) bridge between Mong Yawng and Mng Hpayak; the bridge between Mong Hpayak and Mong Lin; the road between Mong Hpayak and Mong Lin; the (Long Hsan) bridge on Mng Tong-Mong Hpayak road; and the bridge between Keng Tung and Loi Mwe--were dynamited and destroyed by small units of the people's army.

Combat news from Maw Hpa region, Southern Wa District:

On 30 December, an attack by people's armed forces around (? Yawng-U) killed seven enemy soldiers and wounded four others. On 31 December, five enemy soldiers were killed and five others wounded in a clash which was between (? Yawng-U) and (Tapaw).

CSO: 4511

BRIEFS

COMBAT NEWS--On 8, 9, 10 and 13 November, small units of the people's army conducted mine and guerrilla attacks around (Hsuppa), Mong Yang and Mong Lwe areas in Mong Ngen District, killing or wounding almost 20 enemy soldiers. On 20 November, a small unit of the people's army staged a guerrilla attack on the first column of the military government's mercenary 80th infantry regiment between (Loi Tung) and (Loi Ta) in Mong Mit region, wounding three mercenaries. On 8 December, mines planted by a small unit of the people's army near Htawgaw Camp, northeast of Myitkyina, killed one enemy soldier. On the same day, an attack by the people's army in Yawng Aw region, southern Wa District, killed 12 enemy soldiers and wounded 6 others. On 10 December, a guerrilla attack by a small unit of the people's army at Mong Yang-Wan Ke wounded two enemy soldiers. Several guerrilla attacks by small units of the people's army in Maw Hpa, Yawng Aw, (Pang Hong) and (Na-Kong) in southern Wa District on 8, 10, 11 and 12 December resulted in more than 20 enemy soldiers killed and almost 30 wounded. PRESS REPORTS DETAILS OF CONGRESS(I) SESSION

First Day's Proceedings

Calcutta THE SUNDAY STATESMAN in English 7 Dec 80 p 1

[Text] New Delhi, Dec. 6.--While several members withdrew amendments to the political resolution of the all-India Congress (I) Committee today, suggesting a switch-over to the presidential form of Government, others made a strong plea for reimposition of the Emergency, if necessary, to curb the activities of anti-social elements.

Later, Mr Kamalapati Tripathi, who officiated for Mrs Gandhi for almost the whole day's session, suggested that the switch-over to the presidential form be debated.

The AICC (I) session was the first to be held since the party's return to power in January this year.

Mr Tripathi had moved the resolution on the political situation which the AICC (I) meeting adopted unanimously after a 10-hour debate.

Winding up the discussion, he said he had received a number of amendments to have the AICC (I) incorporate in the resolution the move for a changeover to the presidential form of Government.

However, he did not find it possible to accept the amendments which were withdrawn.

Mr Bhagwat Jha Azad, Minister of State for Supplies, who made the last speech supporting the resolution, thought that "if necessary, we should discuss a change in the Constitution".

He pointed out that these days almost any law passed by Parliament was being taken to courts and challenged. Although the Indian Parliament was based on the Westminster model, people in Britain did not take the laws passed in Parliament and challenge them in courts. He therefore felt it had become necessary to consider "what constitutional changes are needed" and posed the question: "Are France and the USA (which have presidential forms of Government) dictatorships"?

Several members, including Mrs Vidyavati Chaturvedi (Madhya Pradesh), Mr Lakshmi Narayan Acharya (U.P.), Mr M. M. Jacob, general secretary, Kerala PCC (I) and

Mrs. Kamla Ajmera (Maharashtra) went to the extent of suggesting that Government should not hesitate to reimpose the emergency for curbing the activities of anti-social elements.

Some members also suggested the revival of the Maintenance of Internal Security Act. The main thrust of the debate on the "political situation" resolution was an attack on the Opposition parties--and many of the 40 members who spoke singled out the CPI(M)--for attempts to subvert democracy and foment trouble, and instead of gracefully accepting the popular verdict.

/The resolution itself contained a bitter attack on the Opposition parties, the AICC (I) alerting party Governments, both at the Centre and in the States, to be vigilant against the "machinations" of anti-social forces and devote themselves to solving the problems of the people./ [in boldface]

The resolution deplored the "open involvement of the Marxist-led Kerala and West Bengal Governments in agitations and bandhs causing untold hardships to the people".

The other parties--Mr Charan Singh's Lok Dal and the Bharatiya Janata Party--came in for comments too, but the criticism against them was muted and the Bharatiya Janata Party was not mentioned by name, except that the speakers suspected the RSS hand behind communal riots. They charged thatthese constituents of the former Janata Party were attempting to create chaos and conditions of instability only to hide the "Janata's incompetence and bankruptcy".

The main brunt of the criticism was against the CPI(M) which the speakers said was ruling in Kerala, West Bengal and Tripura. The CPI(M)-led Governments, they said, were openly involved in agitations and bandhs threatening law and order.

Mr C. M. Stephen, Union Minister for Communications, was most vocal in criticizing the Left Front Governments in the three States for "fomenting trouble rather than safeguarding the life and property of the people". He said the two Governments of West Bengal and Kerala were "instigating violence and murder against the constitutional responsibility bestowed on them". They were also throwing challenges at the Centre, he said in a hard-hitting speech.

/Mr Stephen virtually served notice on the Marxist Governments by declaring: "If there is a breakdown in law and order anywhere in the country, the Centre is duty-bound to set things right"./ [in boldface]

Mr A. P. Sharma, another senior Minister, also strongly criticized the Left Front Governments and asserted they were creating trouble for themselves.

Gandhi's Opening Address

Calcutta THE SUNDAY STATESMAN in English 7 Dec 80 pp 1, 7

[Text] New Delhi, Dec. 6.--Mrs Gandhi said today that India had not changed its policy of total disapproval when a foreign country intervened in another country and this applied to Afghanistan. At the same time, she said, the perspective must not be lost and those who complained of "intervention" should not forget the power confrontation that had developed in the Indian Ocean.

In her opening speech to the AICC (I) session--the first since her party was returned to power after a break of three years--Mrs Gandhi also said that those who talked of intervention in Afghanistan should remember how some countries are turned by others into military bases and pads for atomic weapons. These efforts at arms race and expansionism must be met.

She referred to the visit of the Soviet President, Mr Brezhnev, beginning Monday and said he was an honoured guest. When such great leaders come, people who do not like their policies feel unhappy. They could, she said, express their views, or write to the Government. But it was improper for them to resort to anything like agitations, which would only sully India's name. She thought that some Opposition parties should reconsider their attitude.

Mrs Gandhi said a new administration would come to power in the USA. "We do not know what its attitude towards India will be, but our policy towards the USA has always been one of friendship, and we hope they too will maintain this policy of friendship towards us". She was sure the new Administration would forget the past and strengthen friendship with India, keeping in view the position India held in this part of the world and how helpful India could be in maintaining world peace".

Regretting that Iran and Iraq, both friends of India, were wasting their energies in war, Mrs Gandhi said their emissaries had come here and ours had gone to the two countries. India's efforts were to see that the war ended soon.

It was strange, she said, that in such situations, only big Powers benefiter and the smaller and under-developed countries suffered. [as published]

In her other references to foreign relations, Mrs Gandhi said her Government's policy had always been one of friendship with all. It was she who had initiated steps to improve relations with China and Pakistan.

Without mentioning anyone by name, she said some people alleged that India wanted to attack Pakistan. This was wrong and without any foundation.

India had never committed aggression on any country, though it had been invaded several times. "We will never commit aggression on anyone, and we will not attack anyone, but if other countries attack us, it is clear that we shall have to be prepared". Mrs Gandhi thought the best way India could be ready to meet such an eventuality "is to strengthen our friendship with others and this is what we are trying to do".

The highlight of Mrs Gandhi's 40-minute speech was, of course her comments on international affairs, on which a party resolution is to be debated tomorrow, but Mrs Gandhi also dwelt on the recent spurt in communal incidents, casteism, the economy, Assam and the Opposition.

She said that a sinister propaganda was on--that the Congress (I) had not fulfilled its election promises. This was being repeated time and again so that people would start believing it. "But there is no truth in this propaganda".

In 1966, when she took over, Mrs Gandhi said, the situation was not bad, though there was slackness. The Janata Government had deliberately demolished whatever the predecessor Congress Governments had done.

She held that the Janata Government could function in the beginning because of the sound base left by the Congress. She regretted that the Opposition parties had taken to an agitational approach--and some of these agitations had turned violent--from the very day the Congress (I) Govenrment came back to power. [as published]

She deplored attempts being made perpetually to weaken the Government. In a democratic set-up, the Opposition should remember that an elected Government should be given time to work. How could the Government implement its programmes if agitations were started from the very day it took over?

Mrs Gandhi also regretted that whenever there was an agitation, the Opposition parties encouraged it.

She asked her partymen not to get elated over success, nor disappointed over set-backs. Her partymen, she was sory to say, became dejected fast when they met with reverses. [as published]

Amid cheers, the Congress (I) president reminded her partymen that the massive victory in the elections had added to their responsibilities and they could not afford to relax. They must fan out to the villages and do some work. It was time to work with greater vigour and zeal.

Assam Agitation

Mrs Gandhi said some of the complaints of Assam agitators were correct. It was true that development work had been very slow in the north-eastern region. Her Government had initiated action in that direction soon after it came back to power.

But the foreigners issue was a complex one, involving humanitarian and international considerations. From the very beginning, she had been saying that the work of detection should start, but the agitators insisted in 1951 as the base year--"either 1951 or nothing".

The agitation in Assam, she said, was sectional. The tribals did not support it. This point had to be considered. She was in favour of settling the issue through negotiations and talks, because she did not want people to suffer.

Mrs Gandhi blamed the previous Janata and Lok Dal Governments for giving a new lease of life to communalism, casteism and regionalism.

Expressing her sympathy with those who had lost their lives and property in the recent violence in Moradabad and elsewhere, she said the Government was doing everything possible to stop such disturbances, but the Opposition parties were out to exploit the situation and fan trouble. Sometimes Congressmen also got involved in them.

Sometimes there was confrontation with the police. This was not proper. Bad elements, however, should be weeded out of the police. If the police personnel got the feeling that the people did not have confidence in them, how could they discharge their duty, she asked. In Aligarh, this was the complaint of the police.

Mrs Gandhi said that the economy had shown a distinct improvement. The effect of certain steps taken by the Government would be visible after some time.

Concluding Day's Session

Calcutta THE STATESMAN in English 8 Dec 80 pp 1, 9

[Text] New Delhi, Dec. 7.--The All-India Congress Committee (I) concluded its two-day session here today after adopting two resolutions on the economic and international situations, report UNI and PTI. The six-page resolution on economic affairs directed the Centre and the States to take "strong and effective" action against economic offenders, such as hoarders and profiteers and to curb the circulation of black money.

Members expressed concern over the scarcity of essential commodities. The resolution also emphasized the role of the public distribution system and called upon Congressmen to help in building a strong consumer movement to hold the price-line.

In its five-page resolution on the international situation, the AICC (I) supported the Centre's stand on the Afghanistan crisis, thus reaffirming its opposition to foreign intervention in the affairs of sovereign States.

The resolution recalled the talks India had had with non-aligned and other countries. It said the talks showed "a wider acceptance of inadmissibility of such interferences". It was said that India wanted to share the desire for friendship between the two countries with the people of Pakistan and the resolution asked the party to continue its efforts in this direction.

Before concluding the two-day session, the AICC(I) adopted a resolution on the economic situation predicting a five per cent rate of growth of the economy in 1980-81 and said that a trend towards price stability had been achieved. The resolution claimed that the ruling party's tax, industrial and export policies were imparting buoyancy to investment.

The main thrust of the attack by more than 30 speakers who participated in the debate was against the Janata regime for "bungling" the foreign affairs and the economic front, and destroying whatever the previous Congress regimes had built up.

A new feature during the debate on the economic situation was to blame the bureaucracy and the administrative machinery for standing in the way of carrying out development programmes and work for the amelioration of the conditions of the poor.

A large number of speakers, including Mr Nawal Kishore Sharma (Rajasthan), Mr Manoranjan Bhakta (Andaman and Nicobar Islands) and Mr Vithal Gadgil (Maharashtra)

said rules and regulations should be changed if they were obstructing the development programmes.

Moving the resolution on international situation, Mr Shankar Dayal Sharma, a former Congress president, said India would like to befriend a "strong Pakistan".

He, however, observed that if Pakistani leaders sought to raise any bogey to ward off trouble from "rebellious elements" in their country, India would not be caught napping.

Mr Sharma denounced the former Prime Minister, Mr Morarji Desai's statement (regarding the USSR instigating India, during his regime as Prime Minister, to attack Pakistan and dismember it) and asked the AICC (I) members not to take Mr Desai seriously for he had been occasionally "talking irresponsibly and against national interest".

He held that the Janata Party Government had damaged India's respect and honour in the comity of nations, especially in the non-aligned and developing countries.

Mrs Sheila Kaul, Union Minister of State for Education, said India did not believe in confrontation, but that should not be mistaken as its weakness. Mr Zainul Basher (U.P.) said he foresaw a confrontation with China in the next 10 years.

Moving the resolution on the economic situation the Maharashtra Chief Minister, Mr A. R. Antulay asked for drastic constitutional changes to ensure steady economic growth.

Two Chief Ministers, Mr Darbara Singh (Punjab) and Mr Jagannath Pahadia (Rajasthan) held that the Janata Government had immeasurably harmed the country's economic set-up. They joined several other delegates in attacking the Opposition parties for creating impediments in the way of Congress (I)'s socio economic programmes aimed at removing the suffering of the downtrodden poeple. Mr Darbara Singh also attacked the communal forces for demanding a separate State. Without naming the Akali Dal, Mr Darbara Singh said these forces wanted to disintegrate the country.

The Union Planning Minister, Mr N. D. Tiwari, said he proposed to give the highest priority to petroleum exploration and production.

Mr Pranab Mukherjee, Union Commerce Minister, said that there could not be any anomaly on abolition of sales tax. A committee of Chief Ministers had been constituted to go into the question and its recommendations were awaited. "We have to take hard decisions, strong decisions, if necessary" he said.

Mr Mukherjee refuted the charge of the Opposition parties that Mrs Gandhi's Government was a "non-performing" Government. The situation he said, had to be viewed in the background of the "mess" created by the Janata Government. It would take some time to correct the distortions.

Gandhi's Concluding Remarks

Bombay THE TIMES OF INDIA in English 8 Dec 80 p 1

[Text] New Delhi, December 7. The Prime Minister indicated today that she would keep her options in her talks with the President Leonid Brezhnev, during his visit here beginning tomorrow.

In her concluding remarks at the AICC(I) session this evening, Mrs. Gandhi said India welcomed the visit of the Soviet President and reminded the audience that the Soviet Union had always stood by this country at times of difficulties.

"But that does not mean that we will say yes to everything he says," she added. "We will have to decide."

She said that tension and conflicts were growing in the region with the increase in the big-power presence. Some attempts were being made to destabilise governments which were working for complete independence.

Economic factors, she added, were at the root of these conflicts and India was pursuing a path of self-reliance to strengthen its independence.

Mrs. Gandhi said that because of this reason India was being accused of being "isolationist." This was not true, but there was nothing wrong in being isolationist. "We have to decide for ourselves which policy suits our interests. If it serves us to stay in isolation for some time, what is wrong in it? We must see that we are going in the right direction."

India, she added, did not want to give leadership to anyone in the international sphere but wanted to work in partnership with countries willing to co-operate with it.

Charge Refuted

Turning to domestic affairs, Mrs Gandhi refuted the charge that her government was non-performing and the ministers were inexperienced. "We have a number of chief ministers who have a good record in office. Some new persons have of course been taken, but no government can go ahead without new persons."

She claimed that in its ten months in office, her government had been able to arrest the drift. There was no drift now and also there was no complacency. The government was aware of the anxiety among the people over the rising prices.

Mrs. Gandhi said that a lot of propaganda was being made that the government was not sympathetic towards the farmers. This was not correct because farmers had been meeting her and they had told her that they were satisfied.

This was because the government was pursuing a correct policy. Conditions were being created in which the farmers could produce more. The Indian farmer was not conservative. He could accept new things.

She said that it had to be recognised that there were limitations to giving more to the farmers. If some restraint was not observed, the whole economy would collapse. Everything was interconnected--the prices of farm products and industrial goods. They could not be separated.

She said that there was an epidemic of agitations to disrupt the life of the nation. "How can we help you in these condition?"

Mrs. Gandhi pleaded with the opposition parties to take a "national perspective". They should try to look at the problems from a wider perspective.

Referring to the communcal situation, Mrs. Gandhi said that every effort should be made to remove suspicion from the minds of the minorities. It was only then that harmony would be restored.

Saying that there was need to adopt a modern outlook, Mrs. Gandhi said: "Since I have been going to some temples, some people have been saying I am an obscurantist. I am not an obscurantist. We have always to see that something goes forward. We must not be bogged down in tradition, but we must also take care that we are not cut off from our roots."

She said the country's survival depended on attaining self-reliance and for achieving this there should not be hesitation to bring in modern technology from outside. There was a wrong idea that modern technology would lead to unemployment. It was only high technology which could lay the foundation for future employment. "There can only be a temporary dislocation, but we have to take a long-term view."

She referred to the experience of China which had tried to develop herself on her own for about two decades. Ultimately, it had to go to the West for technology. "I don't blame China. Every system has its difficulties." There were now two systems in the world--the capitalist and the socialist systems, but none of them was working well.

India, she thought, had to chart out its own path, as either of the two systems might not be suitable to it.

Draft of Political Resolution

New Delhi PATRIOT in English 7 Dec 80 p 5

[Text]

Following is the text of the draft resolution on the political situation finalised by the Congress-I Working Committee.

Early this year the people of India, by a massive mandate in the Lok Sabha mid-term poll, called the Congress Party, under the dedicated leadership of Mrs Indira Gandhi, back to office in order to pull the country out of the morass into which the Janata and Lok Dal Governments had let it slide. They reaffirmed their support to the Congress-I and to the leadership of Mrs Indira Gandhi in the elections to the Legislative Assemblies in many States in June 1980 and in the Assembly byelections in several areas last month. With this consistent endorsement, the people have demonstrated their determination to stand solidly behind the Congress-I, its policies and programmes and have given a fitting reply to the charges levelled against the party and the Prime Minister by diverse Opposition groups. The AICC expresses its deep gratitude to our people and reiterates its pledge to prove worthy of this confidence.

Every aspect of the national situation, inherited from the previous Governments, was in such a frightening state of drift and deterioration that a concerted and determined effort was necessary to put the nation back on the rails. The people, by their electoral verdict, had assigned to the Congress the task of leading the nation in this mammoth effort. The Prime Minister, on her part, began with an impassioned plea for cooperation from all. It is, however, unfortunate that instead of bowing to the unmistakable verdict of the people and taking their own defeat with the grace befitting the democratic spirit, some political parties have chosen once again to follow the path of confrontation and chaos. On several crucial issues which were in fact a consequence of the failure of the previous two regimes, these parties seem to be bend upon fanning unrest and instigating violence and extra-constitutional courses of action.

Attempts at destabilisation began almost immediately after the Congress Government took over at the Centre. They rose in intensity and tempo when Congress Governments assumed office in eight out of the nine States which went to polls in June 1980. While the Congress Governments grappled with the myriad intractable problems created by the incompetence and bungling of the previous three years,

violent, obstructionist and premeditated agitations were fomented. Particularly deplorable is the encouragement given to communal or caste tensions and parochial agitations. The situation has reached an absurd and highly dangerous state when the pattern of opposition has been characterised by the open involvement of two State Governments in agitations and bandhs, causing untold hardship to the people of those States. Another characteristic of the pattern of agitation has been that the very segments of the population, viz. women, minorities and weaker sections, who have always lent solid support to the Congress, have been systematically involved, the obvious intention being to allenate them from the Congress. However, the AICC notes with satisfaction and profound gratitude that one by one, these attempts have failed and the vast base of the Congress among the people of the country remains intact. Indeed, the people have seen through the game of destablisation and have rallied round the banner of the Congress with determination.

The norms of democratic functioning demand that the electoral verdict be fully respected, while the right of dissent and criticism shall be available to the Opposition. But repeated acts of violence, sabotage and destruction have no place whatsoever in democracy and those who indulge in these methods are seeking to subvert democracy itself. The AICC unequivocally condemns such reprehensible trends and all acts of violence and vandalism witnessed at various places, and pays homage to those who have lost their lives and offers condolences to those who have suffered in other ways. It urges Congress Governments as well as Congressmen to do all that is possible for their relief and rehabilitation. The AICC is gratified to note that that energetic steps have been, and are being, taken by the Governments to restore conditions of peace and harmony and to create a new atmosphere of national integration by reviving the National Integration Council and similar useful measures.

The AICC compliments the Government on the utmost forbearance and tact with which it has been handling the complicated problem of foreign nationals in Assam. In view of the far-reaching implications of the agitation and the enormous losses it has already caused to the people of the State as well as to the nation's economy, the AICC, while welcoming the cooperative role of many other political parties, appeals to the leaders of the agitation to call it off without further delay. The establishment of a popular Government in the State will, it is hoped, pave the way for a satisfactory solution of the question. The AICC, while expressing its distress at the hardships caused to the people of the State during the agitation, appeals to them to cooperate in terminating the agitation and restore conditions of normalcy, amity and goodwill in the State so as to set it once again on the path of orderly progress and development.

Our nation has been built up by the suffering and sacrifice of the people of India during almost a century. The Indian National Congress, which led this long and arduous struggle to a successful conclusion, has during its long history, upheld freedom and democracy at home and abroad. It will continue to dedicate itself to strengthen the democratic vision and to concretise it so that it permeates the lives of the people. The Congress has integrated the nation on sound and strong foundations and will do all that is in its power to isolate, expose and combat the forces of disintegration and discord. The AICC appeals to the people to be forewarned to the dangers ahead and to stand by the forces of integration spearheaded by the Congress. The sinister attempts to divert the nation's attention and to deflect the Government's concentration from single-minded attack on poverty and its concomitanty, shall be defeated at all costs. The AICC calls on the Governments at the Centre and the States to ensure that their employees are vigilant against the machinations of anti-social forces and responsive to the people's problems and needs. The administration should become more efficient and at the same time more humane.

To the teeming millions of the people, the Congress has always been the sole symbol of their aspirations and a many-splendoured replica of the entire nation, integrating all sections and spanning all age-groups. Its history has been singularly free of the generation gap—it has welded the wisdom of the seasoned and the enthusiasm of the resurgent in a harmonious fabric which has stood the test of time. It is this all-inclusive phenomenon called new India that transcends all distinctions and differences and which shall endoure for ever, in protecting and preserving this ideal, this reality, this truth, the AICC invites the people of India be they peasant, workers, scientists, intellectuals, administrators of all ranks, political activists and cadres in the socio-economic fields to stand by the Indian National Congress, its objectives and programmes.

Draft of Economic Resolution

New Delhi PATRIOT in English 7 Dec 80 p 5

[Text] Following is the text of economic resolution finalised by the Congress-I Working Committee.

Long before Independence, the Indian National Congress pledged itself to create a just society which ensured to every Indian human dignity and a decent standard of living. Efforts have been made since the inception of a planned economy in the early '50s to create a self-reliant and dynamic economy for meeting the needs of the millions of people spread over this vast sub-continent. The results have been remarkable.

Thus, when the Congress demitted office in 1977 there was self-sufficiency in food with 20 million tonnes of buffer stock, comfortable foreign exchange reserves, spectacular export

growth, rising industrial productivity, harmonious labour relations, optimum utilisation of infrastructural facilities and a buoyant and vibrant economy. The public sector displayed notable advances both in productivity and profits which contributed both to capital formation and economic resilience. These achievements were made possible by a carefully integrated and coordinated planning process which led to the adoption of growth stimulant measures and the creation of suitable mechanisms for an equitable sharing of gains among all sections of the society.

The advent of the Janata Party in 1977, however, set the entire economic process in a rapid reverse gear and as observed by the AICC meeting in 1979, gave rise to a situation causing serious concern all round.

It was, therefore, no surprise that when the Congress assumed power early this year it found that the economy was shattered all round — a yawning balance of payments gap; mounting inflation serious infrastructural deficiencies, crippling inflation, growing unemployment and a teeming of general discontent all round. There was decline in exports resulting in wide balance of payments gaps. The performance of the public sector fell sharply. As a consequence during 1979-80 the gross national product declined by almost 3 per cent while agricultural production fell by over 10 per cent. Widespread shortages of essential commodities with serious dislocation in the distribution system contributed to the misery of the common man. A rapid inflation of over 20 per cent was the result of a wide constellation of factors, in particular the pursuit of irresponsible fiscal and monetary policies.

The All-India Congress Committee is conscious that the inheritance of such a shattered economy would require a great deal of sacrifice and sustained efforts for the restoration of its economic health. In its election manifesto, the Congress had promised that it would resuscitate the economy and make a two-pronged attack in respect of demand and supply for containing inflation and to formulate new policies on various fronts.

The All-India Congress Committee welcomes the tax reliefs granted to almost every section of the society and the measures initiated to revive the stagnant economy.

There has been a sharp improvement infrastructural facilities — congestion in the ports has been eliminated, coal output has improved, movement of railways rationalised. The announcement of a new industrial policy has imparted greater buoyancy to investment. With a record food production of over 130 million tonnes, a good sugarcane crop, easier supply of oil seeds and a slow but steady improvement in industrial investment and production the AICC is confident that a five per cent growth in gross national product can be achieved during the current year. It also endorses the steps taken by the Government for expanding the role of the public sector which continues to be a strategic instrument in our national planning and an effective safeguard to our economic independence in the difficult days ahead.

The All-India Congress Committee notes with satisfaction the series of measures taken by the Government for giving a new orientation and imparting greater dynamism to the country's exports sector. In the long run the deterioration in the international economic situation the difficulties in the north-south dialogue and increasing protectionist measures being pursued by the developed countries will require vigorous and unconventional techniques like some of the measures recently adopted for promoting exports and minimising the constraints in our balance of payments.

The AICC welcomes the Government's new industrial policy statement made on the 23rd July 1980. The statement was framed within the broad parameters of the Industrial Policy Resolution of 1956 and was primarily intended to emphasise the areas of policy focus and direction with clarity and precision. The objectives that were spelt out in the statement included optimum utilisation of installed capacity, maximisation of production with higher productivity and employment generation, correction of regional imbalances through preferential development of industrially backward areas, promotion of agro-based industries equitable opportunities for investment and dispersal of small and growing units in rural as well as urban areas. The policy also set before it as an objective, faster promotion of export-oriented industries as well as self-reliance through deliberate and systematic import substitution.

A number of steps have been towards implementation of the policy and achievement of objectives set before it. The approval procedure including procedures of import of technology as well as capital goods critical to development have been streamlined to make them trigger points of growth. Specific policies have been initiated for export promotion and totally new line of organisations and infrastructure have been provided for 100 per cent export industries. Fiscal discipline, administered prices and a vastly strengthened public distribution network have been selectively applied to contain the situation.

As results in the recent months indicate, it is clear that the trend towards price stability has been established. The Government has placed highest emphasis in monitoring, organising and promoting industrial infrastructure with power and transport, as also availability of producer materials like steel, coal and cement.

The AICC notes with satisfaction that while the Government has not in any manner compromised on the basic structures of industrial policies, the statement is also in consonance with socio-economic objectives and would provide answers to the inflationary trend. Policies and programmes of deliberate growth pattern are not only being taken in the framework of industrial policy but also sought to be brought in different amendments to legislation impinging on the corporate sector. As a result, it is expected that the negative trend of industrial growth which has cast a shadow on the economy for some time would be reversed and it would be possible to create the base and environment on which a steady 10 per cent growth in industrial production can be framed from 1981-82 onwards.

The All-India Congress Committee is happy to note the steps taken for fulfilling the party's promises to the working class, i.e. enacting the new Bonus Act, which only confirms that our party shall be in the forefront in safeguarding the interests of the working class.

The committee also endorses the rational approach adopted by the Congress Committee towards demands of our farmers for getting fair prices for their produce and in this connection the enlargement of the terms of

reference of the Agricultural Prices Commission and the decision to accept higher prices for foodgrains, sugarcane, cotton than those recommended by the APC are important steps in this direction.

The committee views with concern the developments in the price front and notes the efforts made by the Government to control money supply, curb in public expenditure. While the inflationary forces operating in the world economy would continue to create difficulties, there is great need for the Government to be vigilant and strengthen the public distribution system so that the vulnerable sections of the society can be protected from growing burdens of inflation.

The other front where vigorous action will have to be taken relates to the resource mobilisation where public sector will have to be a pace-setter of capital accumulation. This will require a qualitative change in the pricing policy pursued by them and the committee urges the Government to implement the appropriate price reforms for the output of public sector enterprises so that more efficient use of our human and material resources is ensured in all the sectors of the economy.

Keeping in view the international factors, high priority needs to be attached towards the evolution of a sound energy policy consisting, inter-alia, of stepping up coal production, intensifying of exploration and exploitation, increasing efficiency in the use of energy, formulation of our R and D plans for utilising other energy resources, like solar, hydel and nuclear.

The committee welcomes the massive investments of over 90,000 crores in the sixth Plan and urges the Government to formulate regional and sub-regional developments strategies, particularly programmes for backward regions and hill areas, towards which a beginning has been made in the States of Assam and other north-eastern States.

The All-India Congress Committee is convinced that we as a nation can meet the challenges that are posed by the external and internal economic forces and committee resolves continue the efforts of building up a vigorous, dynamic and self-reliant economy to eradicate poverty and injustice.

The All-India Congress Committee is aware of the enormous task before the party and the people in meeting the challenges which lie ahead but is confident with the cooperation of the people at large the party would be able to overcome the crisis and lead the nation to its cherished goals of creating an economic order free from exploitation hunger, inequality and injustice.

UTTAR PRADESH CABINET EXPANDED TO 34 MEMBERS

Bombay THE TIMES OF INDIA in English 5 Dec 80 p 1

[Text] Lucknow, December 4:

Fourteen members were added to the Vishwanath Pratap Singh ministry today, raising its strength to 34.

At a simple ceremony at Raj Bahvan this evening, the governor, Mr. C. P. N. Singh, administered the oaths of office and secrecy to eight ministers of state and six deputy ministers. With the inclusion of the deputy ministers, the state now has a three-tier ministry.

Meanwhile, Mrs. Swarup Kumar Baxi, minister of state for education, and Mr. Bhanu Pratap Singh, minister of state for sugarcane, have been promoted to cabinet rank.

The ministry now has 15 cabinet ministers, 13 ministers of state and six deputy ministers.

Mr. Nirmal Kumar Khatri, who has been appointed deputy minister, could not be sworn in as he was out of the city.

The new ministers of state are Mr. Kashinath Mishra, Mr. Sachidananda Bajpai, Mr. Rajendra Tripathi, Mr. Shivanath Singh Kushwaya, Mr. Ram Ratan Singh, Mr. Dayal Krishna, Mr. Gulab Singh and Mr. Shivraj Singh.

The deputy ministers are Mr. Javed Ali Khan, Mr. Zafar Ali Naqvi, Mr. Sarjoo Prasad Saroj, Mr. Sitaram Nishad, Mr. Sunil Shastri and Mr. Jairam Gautam.

The chief minister, who returned from New Delhi after consultations with the party chief, Mrs. Indira Gandhi, finalised the list of new ministers this morning.

According to observers, the list of new entrants into the ministry indicates a move by the chief minister to consolidate his position in the Congress (I) legislature party and to win over dissidents.

Mr. Kashinath Mishra, a former student leader from eastern U.P. and a former Lohia socialist, has been a "vocal member of the Bidhan Sabha. He was considered close to Mr. Kalpanath Rai, general secretary of the AICC (I), a known detractor of Mr. V. P. Singh. In Mr. Mishra, who has been appointed a minister of state,

the chief minister now has an articulate defender on the floor of the assembly and a supporter inside the CLP (I).

Similarly, the inclusion of two more Brahmins, Mr. Rajendra Tripathi and Mr. Sachidananda Bajpai, in the ministry, is expected to help the chief minister gain greater support in the so-called "Brahmin lobby."

He has also included two Muslims, Mr. Zafar Ali Naqvi and Mr. Javed Ali Khan, a former Youth Congress (I) leader from Lakhimpur Kheri. This is seen as an attempt at placating the "Muslim lobby" in the context of the Moradabad riots.

VAJPAYEE ELECTED TO PRESIDENCY OF BJP

Bombay THE TIMES OF INDIA in English 13 Dec 80 p 1

[Text] New Delhi, December 12: With almost all state units of the Bharatiya Janata Party proposing Mr. A. B. Vajpayee, as its president, his election to that office was announced here today. There was no other candidate.

He will preside over the plenary session of the party to be held in Bombay from December 28 to 30. The meeting will be preceded by a session of the party executive.

The party returning officer, Mr. Jagannath Joshi, announcing Mr. Vajpayee's election also stated the entire process of organisational elections from the panchayat to the plenary level had been completed.

The party general secretary, Dr. Murali Manohar Joshi, claimed that since the founding of the party on April 5 last, it had enrolled 2.5 million members. The largest membership for any state was in Maharashtra--500,000. The figure was exclusive of membership of 125,000 in Bombay city.

He said the membership drive in U.P. could not be pursued in time because of floods and communal incidents.

Interestingly, according to figures supplied by him, the BJP has established base in places, including Kerala, where the Jana Sangh had none.

The elective offices in the party are for a two-year term. Mr. Vajpayee will appoint a 51-member executive.

PARTY LEADERSHIP CHIDES WEST BENGAL CPI(M)

New Delhi PATRIOT in English 10 Dec 80 p 4

[Text] Calcutta, Dec. 9.

Three Politburo members headed by party general secretary E M S Namboodiripad have reportedly criticized the West Bengal leadership of the CPI-M for its limited vision. Mr Namboodiripad along with Mr B T Ranadive and Mr Basavapunniah held wide-ranging discussions on 6 and 7 December with the State unit in respect of ideological and organisational questions.

Ideologically, the Central leadership impressed upon the Bengal party the point the task of building up the Left-Democratic understanding has not been carried out properly so far in the State. The State unit, they held, tend to get pre-occupied with West Bengal alone, more often than not, leaving out of account the national scene. [as published] But even the political co-relation of forces in the State and the party-led Government, they stressed, could hardly continue to ignore the overall situation in the country and the emergence of authoritarian and obscurantist trends. In order to do that successfully, the Central leaders, along with Jyoti Basu and Samar Mukherjee, maintained, the Left-Democratic base in general and CPI-M's own influence in particular, have to be widened.

In this context it was found out that the Salkia plenum's aims to expand the party's influence in the non-traditional areas and forge friendly relations with the democratic elements, have largely remained unattained. Partly this failure was traced to the Bengal unit's narrow vision in respect of the Left-Democratic concept, largely conditioned by the specific situation in the State.

The Central leadership was wholly for strengthening the State's Left Front, but simultaneously they laid stress on two equally important aspects involved in measuring the Front's solidity. Firstly, the proportionate growth of the parties involved and that of their class organisations like trade union and peasant bodies and secondly, widening of the front's relationships with all democratic forces.

In the background of the strident demand at the AICC(I) session to get tough with the Left-ruled States and even to reimpose emergency, despite Mrs Gandhi's contrary note, even Mr Promode Dasgupta seems to have appreciated the views of the other PB members. After the meetings were over, Mr Dasgupta in briefing the press avowed that excepting the communal BJP, the State CPI-M would invite all democratic forces to join in an anti-authoritarian platform to defend democracy.

'AUTHORITARIAN TREND' AT AICC(I) SESSION DEPLORED

Calcutta THE STATESMAN in English 9 Dec 80 p 1

Text]

NEW DELHI, Dec. 8.—Eight members of Parliament belonging to the CPI(M), CPI and Forward Bloc said today they were greatly disturbed by the exhibition of "anti-democratic and authoritarian trends" at the just-concluded AICC (I) session held in New Delhi.

In a joint statement, Mr P. Ramamurthi, Mr Samar Mukheree, Mr Bhupesh Gupta Mr Indrajit Gupta, Mr Chitta Basu, Mr Tridib Chaudhury, Mr Harkishen Singh Surjit and Mr Amar Chakravarti asked all "democratic-minded people" to raise their voice against this "conspiracy to destroy democracy and to attack the people".

Instead of critically examining the discredited economic and other policies which were causing so much suffering to the people, the AICC(I) had done an "orchestrated propaganda" for the presidential form of Government to introduce "an authoritarian personal rule totally unaccountable to Parliament" they said.

The "so-called presidential system" was sure to spell not only a variant of dictatorship but would also disrupt national unity, they said.

It was significant, they said, that the Prime Minister and other Central Ministers did not speak against this propaganda and "attack" on democracy.

The Left Party M.P.s also viewed with apprehension the demand voiced at the AICC(I) for reimposition of the Emergency although Mrs Gandhi had proclaimed that "there will be no Emergency for a thousand years".

Besides this, they said, the Governments of West Bengal Kerala and Tripura were "violently attacked" and "false cries" of breakdown of law and order were raised.

PROBLEMS OF MANIPUR CHIEF MINISTER EXAMINED

Problems Under Singh

Madras THE HINDU in English 5 Dec 80 p 8

[Text] The foreigner issue was almost settled in Manipur when Mr. Dorendra Singh gave up office a few days ago as Chief Minister. But the new head of State, Mr. Rishang Keishing still has to grapple with the unresolved insurgency.

Mr. Rishang Keishing has assumed office as Manipur's Chief Minister, at a time when none would fancy taking up the post for whenever the law and order situation deteriorates the entire blame is placed on the Chief Minister.

On instructions from the Union Minister, Mr. Zail Singh, the former Chief Minister, Mr. Dorendra Singh had to declare Manipur disturbed. Despite amnesty offers with rosy pictures of rehabilitation and stepping up of counter-insurgency operations, the legacy left by Mr. Dorendra Singh is formidable.

It is difficult to predict who will be the winner of the tug of war between the Army and the insurgents. Almost everyday the Army either kills or arrests insurgents while at the same time underground activities are only increasing.

No Novice in Politics

Mr. Keishing is no novice and has been in politics for over 35 years. He was elected twice as Member of Parliament. Since 1972, he has been associated with State politics. He has held important portfolios in successive ministries. During the Janata regime he was the Opposition leader.

Mr. Keishing and Mr. Dorendra Singh were responsible for toppling the Janata Ministry by exposing its acts of omission and commission. In the last general election, Mr. Keishing was returned on the Congress ticket and has been Deputy Chief Minister. He is popular among the masses as a teacher. He established several schools in his backward tribal area and did teaching work without remuneration. He is a teetotaller.

Charges have been made that Mr. Keishing is communal and that under his rule, non-tribals will suffer. In his first press conference after assuming office, he challenged his political adversaries to cite a single instance during his political career to support such a charge.

Initially there were three contenders for the chief ministership. The two others were Mr. Yaim Singh, Speaker, and Mr. Ngurdinglien, Agriculture Minister. However, Mr. Keishing was the consensus candidate and Mrs. Gandhi endorsed his choice.

No Policy Change

Both Mr. Dorendra Singh and Mr. Keishing have said that there is no change in the policy and programme of the Coalition Ministry. No new face or reshuffle of the Cabinet is expected.

Mr. Keishing can be confident of a stable ministry as the hopelessly disorganised opposition will not be able to rock the boat. However, he will have to work overtime to contain underground activities. At the same time he has to see to it that the security forces do not commit excesses in the name of maintaining law and order.

It is felt that if insurgency cannot be contained in the near future, President's rule may be imposed to give the Army a free hand as in Nagaland and Mizoram to extirpate insurgency effectively and quickly.

Mr. Dorendra Singh's decision to resign as Chief Minister to take up a new assignment as Ambassador in Norway was kept a closely guarded secret. His family members, close associates and the Secretariat had no inkling of his decision. Just a few days ago, Mr. Dorendra Singh had said in a radio interview: "I will have to go to Norway or somewhere else if I can be of better service to my country". But observers had felt that he would not go to Norway, a politically unimportant country be giving up the chief ministership since he enjoyed a comfortable majority. [as published] Besides he came in to limelight following his involvement in the Assam tangle.

From the moment Mr. Dorendra Singh was sworn in Chief Minister of the coalition Ministry, he had been facing difficulties from all directions. The most challenging was the burgeoning insurgency which completely paralysed the normal administration.

As Chief Minister in 1974 also, he faced the underground movement, under Mr. O. Sudhir Singh, leader of the Revolutionary Government of Manipur when Bangladesh hounded out the underground elements.

The undergrounds readily accepted the amnesty offer by Mr. Dorendra Singh. One of the leaders who surrendered and availed himself of the rehabilitation programmes was Mr. Bisheswar Singh who later went to China. He came back to India to form the People's Liberation Army during the Janata regime.

PLA made its presence felt towards the end of 1978 and struck terror throughout 1979. When Mr. Dorendra Singh was swornin in January this year, he announced an amnesty offer promising adequate rehabilitation to those who joined the national mainstream. [as published]

But by now the undergrounds had cemented their hold on the masses. None of the members of PLA and the People's Revolutionary Party of Kungleipak (P-REPAK)

surrendered. Some members of the Meitei State committee, the first underground organisation in Manipur, surrendered to the Chief Minister. As promised, they were immediately absorbed in the BSF.

Some months later, Mr. R. K. Tulachandra, PREPAK leader and Miss Sushila Devi, "charge d'affaires" were arrested from an underground hideout. Apparently under duress, Mr. Tulachandra made an appeal to his comrades to eschew violence. The followers of Mr. Maipak Sharma (Mr. Sharma has surrendered to the CRPF at Shillong, according to latest reports) branded him a counter-revolutionary. Eventually, he was expelled from the party.

A factional war followed in which R. K. Chitrasen, younger brother of Mr. Tulachandra, was killed by the Maipak group. Later, Leishabi Singh, commander-in-chief of PREPAK, was shot dead near Kohima, Nagaland by the Armed Nagaland police on July 23. Recently, Mr. Krishna Chandra, "Finance Minister" of PREPAK was nabbed from his residence.

Despite its encounters with the Army and other security forces, PLA seems to remain unscathed. In a recent press handout, it said that as it enjoyed support from the people, the Army could not make any dent on PLA. After the Army crackdown, the suicide squad of PLA has started killing persons said to be counter-revolutionaries.

Apart from insurgency, Manipur reeled under the anti-foreigner agitation. The matric examination was postponed after two examinees had been shot dead. All government offices were forcibly closed by the students.

Mediatory Role

Mr. Dorendra Singh, who is suffering from hypertension, thought several times of quitting office as he found the burden unbearable.

At this juncture, Mrs. Gandhi asked him to use his good offices to bring the Assam students to the negotiating table for talks with the Central leaders. After the two rounds of Delhi talks, when the Shillong meet was arranged, it became clear to Mr. Dorendra Singh that some bureaucrats were trying to ease him out of the Assam scene. He was not invited to the Shillong talks despite the repeated demands of the students that he should be present.

Nothing came out of the Shillong talks. Slowly but steadily, he extricated himself from the Assam quagmire. But he was summoned to New Delhi the moment some hitch developed on the basic issues. He made it clear to the Central leaders that he could not attend the talks as Manipur itself was in turmoil over the foreigner issue.

While he was hopping from Assam to New Delhi, the Manipur students accused him of neglecting the same issue in his home State in order to earn cheap popularity.

Manipur Accord

Mr. Singh signed an accord with the Manipur students according to which the District Commissioners would begin the process of detection of foreigners with 1951

as the base year. It was also agreed that the students could supervise the identification process. New Delhi seems to have no answer to the question how Manipur is going ahead with detection of foreigners with 1951 as the base year while the same has been denied to the Assam students.

Mr. Zail Singh tried to explain it away by saying that the identification in Manipur was being done without the knowledge and consent of New Delhi.

Over 29,000 foreigners appear to have been identified all over the State. Some of them have been deported to Nepal and Bhutan. However, indications are that it has opened the Pandora's box. The Assam students have decided to stick to their point. If Manipur can be conceded the demand, there is no reason why Assam should be denied the same, they argue.

Mr. Dorendra Singh has contained the armed rebellion to a considerable extent. He has almost solved the foreigner issue. His Ministry has done well in other spheres also. Yet how is it he has been removed from State politics at this critical hour?

Reports are that New Delhi has collected enough incriminating material to show that Mr. Dorendra Singh really had some connections with underground organisations. In the recent past, the Army has been arresting undergrounds with valuable documents. Several national dailies had published reports that many Manipur politicians and VIPs had helped the undergrounds with money. Two IAS officers were arrested recently in this connection.

Despite this serious charge, Mrs. Indira Gandhi could not just ask him to step down. During the Janata regime, both of them had to suffer hardship before the Manipur Emergency Excesses Authority. Besides, Mr. Dorendra Singh stood by her while she was out of power. It was in consideration of their past relationship that the Prime Minister has asked him to go to Norway as envoy.

Poster Campaign

Handbills and leaflets have appeared saying that liberation is not far off. Walls are daubed with slogans like "Indian Army should surrender to PLA".

On the other hand, the State Government has started issuing posters and handbills challenging PLA to come out and face the people if they have any conviction in their ideology. Although it has been proclaimed that change of leadership does not necessarily mean that the policies and programmes of the coalition ministry will be changed, intensification of counter-insurgency activities has been observed since Mr. Keishing took office.

Army officials are inclined to believe that sophisticated arms had been smuggled out of Burmese jungles where PLA and Naga rebels under the leadership of Mr. Tangkhul Muviah are camping. The PLA suicide squad is retaining small arms to kill counter-revolutionaries supporting the Army and police.

Although about 100 youths belonging to several underground organisations have surrendered, any large scale exodus as had happened in Nagaland is not in sight.

Meanwhile the Army officers are reported to have urged the Centre to give them a free hand to flush out the insurgents because they are concerned over their increasing alienation from the general public.

Growth of Insurgency

Madras THE HINDU in English 5 Dec 80 p 8

[Text] Parts of North-East Manipur for instance look like Nagaland and Mizoram as they were a decade ago, when insurgency had gained considerable inroads. While the Indian Army has rounded up significant elements of the Peoples' Liberation Party, including its vice-president, Ranjit Singh, military solutions alone cannot be expected to lead to a general improvement in the political climate. Defence authorities believe that action on the psychological, political and economic levels are as important as administrative action to maintain law and order.

The number of hard-core PLA elements was estimated at around 40 only. But these men, who had access to weapons and ammunition from the former Mukti Bahini elements in Bangladesh, had imparted training to at least 400 others. Many of the latter are on the run at present.

Defence authorities, however, do not think that the situation in Manipur has stabilised. According to them, stock-taking might be possible only in the middle of January. For the moment, the Army would continue its operations, so far conducted with great tact, without alienating the local citizens. Incidents, it was expected, would continue for some more time.

They pointed out that the seven north-eastern States shared a border over 4,800 km long with other countries like Bhutan, China, Burma and Bangladesh and only 110 km with India. Hence their feeling of isolation was as natural as it seemed to be complete. Communication with the rest of the country was hardly effective. It was a comprehensive policy that had led to the relative peace in Nagaland and Mizoram.

On the whole, the Burmese authorities cooperated with the Government of India, in keeping down the movement of hostile activists. But the Burmese themselves were under pressure from the insurgents. They met the Indian authorities from time to time to discuss the situation.

The psychological nature of the problem was underscored by the defence authorities by pointing out that the standards of living in the north-eastern States was on whole higher and better than those prevailing in areas like Himachal Pradesh. It was not a question of financial neglect, as one of battling for the hearts and minds of the local people, they believed.

ARMY REGIMENTS TO RETAIN CASTE NAMES

Bombay THE TIMES OF INDIA in English 13 Dec 80 p 9

[Text] Belgaum, December 12: The naming of army regiments after castes and regions will continue as it helps to inspire the soldiers, the chief of the army staff, Gen. O. P. Malhotra, said here today.

Earlier, he presented colours to the 14th and 18th battalions of the Maratha Light Infantry (MLI) at an impressive ceremony held at the MLI Regimental Centre here.

Honorary naib-subedar Namdeo Jadav, the only surviving winner of the Victoria Cross, honorary captain Keshavrao Talakdar, a centenarian who was decorated for bravery in World War I, and Mrs. Yashavanath Ghadge, whose husband was awarded the Victoria Cross posthumously, were among those who witnessed the presentation of colours.

The new colours were uncased and consecrated by Hindu, Muslim, Sikh and Christian priests before being presented to the two battalions. Captain R. Parmar of the 14th battalion and Captain Ravi Padman of the 18th battalion received the colours.

The army chief said the presentation of colours to the two battalions signified their coming of age and the confidence reposed in them by the nation. He was confident that the men of the two battalions would cherish their colours and add to their honour when the call for arms was sounded.

He extolled the great martial traditions of the Marathas dating back to the times of Chhatrapati Shivaji.

The general released the second volume of the history of the regiment titled "Valour enshrined" which covered the history of the MLI from independence to 1971.

He also released a first-day cover and card prepared by the Army Postal Corps to mark the occasion.

EASTERN NAVAL COMMAND DESCRIBED

Madras THE HINDU in English 5 Dec 80 p 11

[Text] Visakhapatnam.

"Navy Week" is being celebrated from December 1 to project the importance of the Navy. As ususl, route marches, Navy Mela and Helicopter displays are being organised in Visakhapatnam as well as in the other bases of the eastern region, namely, Calcutta, Madras and Port Blair.

The eastern fleet was born two months before the 14-day Indo-Pakistan conflict in 1971, during which it went through its baptism in fire at Coxi s Bazaar, Chitagong, Khulna and other ports of what was once East Pakistan. December 4, is observed as Navy Day, because it was on this day in 1971 that the Indian Navy crowned itself with victory over Pakistan. The Navy continues to wear its laurels well.

The Eastern Naval Command has the responsibility of watching over a stretch of over 3,000 km. of the country's coastline.

With several naval establishments, dockyard facilities and ships at Visakhapatnam and other ports on the east coast and the Bay islands, its area of responsibility extends south of Sri Lanka into the Indian Ocean and the expanse of the Bay of Bengal up to the Malacca Strait.

Despite the formation of the Coast Guard which is still in its infancy, the responsibility of rendering assistance to vessels and craft in distress in this vast area is also one of the main tasks of the eastern fleet.

The major establishments in Visakhapatnam under the administrative control of the Eastern Naval Command are INS Circars, which provides base support facilities to ships and personnel, INS Virbahu which is responsible for all submarine training and exercises, INS Satavahana which trains sailors serving in submarines and anti-submarine vessels and INHS, Kalyani, the naval hospital.

There are three naval officers in charge at Calcutta, Visakhapatnam and Madras, who head the establishments of INS Netaji Subhas, INS Circars and INS Adyar, respectively.

A fortress commander is stationed at Port Blair for the administrative control of the naval establishments, INS Jarawa and INS Kardip and the naval hospital INHS

Dhanvantari and the operational control of all Army, Navy and Air Force units stationed in the islands.

To improve the shore support and training facilities, the Naval dockyard project including a dry dock, the largest in Southeast Asia, has been started at Visakhapatnam. A new basic training establishment, INS Chilka, has been commissioned at Chilka in Orissa recently. It is equipped with all modern facilities for theoretical and professional training of recruits to all branches.

Expansion of facilities at Calcutta, Paradeep and Madras is under contemplation, to improve the flexibility of operation.

KERALA LEADER ASKS DELHI FOR DEFENSE PLANTS

New Delhi PATRIOT in English 8 Dec 80 p 4

[Text]

TRIVANDRUM, Dec. 7 (UNI).

KERALA Chief Minister E. K. Nayanar has asked Prime Minister Indira Gandhi to consider the legitimate claims of Kerala and locate the new ordnance factories and defence equipment plants in the State.

In a letter to Mrs Gandhi, Mr Nayanar said Kerala's efforts at industrialisation were not likely to bear fruit without the active support of the Central public sector units which could provide large scale employment.

Making an analysis of the 145 enterprises promoted by the Union Government with a total investment of Rs 11,100 crore between 1951 and 1977, Mr Nayanar said Kerala's share had been negligible. Moreover, the Ministries of Defence, Railways and Steel and Mines had totally neglected Kerala in the location of their industrial parts, he said.

Mr Nayanar said, the Defence Ministry, for instance, had under its control 32 ordnance factories located in six States providing emloymeht to about 1.4 lakh workmen, and nine defence units in the public sector employing about 84,000 persons. The total annual turnover of these undertakings was worth about Rs 770 crore. None of the units was located in Kerala.

PLANNING MINISTER SPEAKS ON SIXTH PLAN PROVISIONS

Calcutta THE STATESMAN in English 8 Dec 80 p 9

[Text] New Delhi, Dec. 7.--The Sixth Plan envisages an aggregate investment of Rs 1,56,000 crores in the economy in the five years between 1980-1985, Mr N. D. Tiwari, Planning Minister, told the AICC(I) session here today.

He said the plan was currently under formulation and wanted "advice and guidance" from the members present.

At this level of investment, he expected the domestic savings to go up from 22.8% in 1779-80 to 25% in 1984-85, implying a marginal saving rate of 31%. [as published]

The public sector plan outlay, he said, was placed at Rs 90,000 crores. To finance this outlay without generating uncontrollable inflationary pressures on the economy, it would be necessary for the Central and State Governments and their enterprises to undertake additional resources mobilization of Rs 19,000 crores. The Central Government and its enterprises will have to mobilize additional resources of Rs 13,000 crores while the State Governments and their enterprises will have to mobilize the balance of Rs 6,000 crores.

Since taxation as a percentage of the national income already stands at 20%, it may not be possible to raise more than Rs 7,500 crores by way of additional taxation, Mr Tiwari said. The balance of the additional resources will have, therefore, to be raised mainly through a reduction in subsidies, higher financial returns from public enterprises and other non-tax measures.

He said it would be necessary to bring about a significant reduction in the amount of subsidies from the level contained in the 1980-81 Budgets. In the case of public enterprises, it would be necessary to improve management and operational efficiency, besides adopting appropriate pricing policies. Major Central public enterprises, including the Railways, steel and coal, will have to generate much larger internal resources than they have done in the past. In the States, determined efforts will have to be made to improve the financial returns from irrigation, State electricity boards and road transport corporations.

The magnitude of additional resource mobilization in nominal terms may have to be higher if prices continue to rise, leading thereby to a rise in project costs.

Finally, he said, it would be necessary to take note of the international developments and the emerging balance of payments situation. To deal effectively with the situation it will be necessary, on the one hand, to reduce dependence on imports in general and on imports of crude oil and petroleum in particular and, on the other, to pursue a vigorous export promotion policy. The export policy should aim at securing a volume growth rate of about 10% a year.

CENTRAL COMMITTEE ORDERS MARXIST PLENUMS

Bombay THE TIMES OF INDIA in English 7 Dec 80 p 1

[Text] Calcutta, December 6.

The CPM central committee has directed the West Bengal, Kerala and Tripura state committees to hold organisational plenums in the next three months so that more purposeful steps might be taken to implement the decisions taken at the 1978 Salkia plenum of the party.

The decisions at the Howrah plenum covered some of the vital organizational aspects and issues over which there had been inner-party resentment and frustration for a long time. These included adoption and implementation of the principle of federalism and democratic centralism, expansion of the party and front bodies in the Hindi heartland, especially Uttar Pradesh, and a systematic drive to educate the rank and file in principles of Marxism and Leninism as applicable to politics and organisation.

The experience of the last two years seems to have convinced the leadership that the party has not been able to make any fresh headway at all in Uttar Pradesh. Moreover implementation of the Salkia plenum decisions in more important states like West Bengal and Kerala, which account for about 80% of the CPM in organisational terms, has not been quite satisfactory, even though it is acknowledged that the party had to face up too many changes in the overall political context in the country, including two general elections. [as published]

Three politburo members--Mr. E. M. S. Namboodiripad, Mr. M. Basavapunniah, and Mr. B. T. Ranadive--have been having a series of discussions with the state committee secretariat to arrive at a consensus on why implementation of Salkia decisions might have been tardy in West Bengal and what should be done now to revamp the process.

COMMISSION APPROVES MAHARASHTRA PLAN OUTLAY

Bombay THE TIMES OF INDIA in English 13 Dec 80 pp 1, 9

[Text] New Delhi, December 12.

The planning commission today approved an outlay of Rs. 6,175 crores for Maharashtra for the sixth plan beginning 1981. The outlay on the 1981-82 annual plan is Rs. 1,080 crores.

Present at the discussions held today at Yojana Bhavan were Mr. A. R. Antulay and his cabinet colleagues, Mr. Ramrao Adik, Mr. N. M. Tidke and Mr. S. N. Desai and from the planning commission were Dr. M. S. Swaminathan, Mr. Mohammed Fazal and Mr. Manmohan Singh. The planning minister, Mr. N. D. Tewari, presided.

Sixty per cent of the plan outlay is for the development of agriculture and allied sectors and irrigation and power. The commission agreed to Mr. Antulay's proposals for setting up a comprehensive university with medical and engineering colleges and polytechnics in the backward Konkan area from which he hails. The outlay for a medical college in the Konkan is Rs. 5 crores.

As a result of the plan investment, production in various sectors is expected to increase. The projected increase in foodgrain production is from 103.12 lakh tonnes to Rs. 125 lakhs, in cotton from 17 lakh to 20 lakh bales, in oilseeds from 8.58 to 11.60 lakh tonnes, and in sugarcane from 198.15 to 260.44 lakh tonnes.

Irrigation Potential

The irrigation potential is to be raised from 9.8 to 15.3 lakh hectares. In the power sector, the installed capacity is to be increased from 3,857 to 6,648 Mw. Of Maharashtra's 35,778 villages as much as 71 percent or 25,459 are already electrified and the rest are to be completed by the end of the sixth plan.

The number of pumpsets is to be raised from 5.98 lakhs to 8.48 lakhs. In the field of transport all villages with a population of 1,000 and above are to be linked by roads. There are 6,181 villages with a population of over 1,500 and 5,143 with a population of 1,500. An additional 10,620 buses are to be acquired for road transport. All "problem" villages are to be provided with drinking water by the end of the plan period.

Reviewing the state plans, Mr. Tewari commended the employment guarantee scheme, which had benefited villagers. He suggested that, to assist the educated

unemployed, the state could set up new units or expand existing ones, especially in backward areas. The state could also consider the feasibility of setting up "van vigyan kendras" for the Konkan and other backward areas.

The planning minister urged the speeding up of the Bombay water supply project and the Maharashtra water supply project. He also desired that the irrigation potential be created and the command area development projects accelerated.

Mr. Tewari also advised intensification of efforts to mobilise resources through economy measures and the plugging of leakages in some areas.

The chief minister suggested extension of the railway lines from Konkan to Ratnagiri, expansion of inland water transport and priority in the supply of offshore and onshore gas from Bombay High to industries in these backward regions of the state.

According to Mr. Antulay, two dams could be built, one in the upper reaches in the Sahyadris for power generation and another in the plains for irrigation. This would put to good use the large volume of water flowing waste into the Arabian Sea. His estimate was that it would cost nearly Rs. 200 crores to utilise the rain water in this region for productive purposes.

TRIPURA POLITICIANS SAID EXPLOITING TENSION

Calcutta THE STATESMAN in English 11 Dec 80 pp 1, 9

[Text] Agartala, Dec. 10.--Even six months after the June massacre in which, according to official figures, 1,200 people were killed an uneasy calm prevails in Tripura. The causes of the flare-up still exist and are getting more numerous and acute.

The three major parties in the State--the CPI(M), Congress (I) and the Tripura Upajata Juba Samiti--instead of removing the sources of tension existing between the Bengalees and tribals are trying their best to exploit them to their political advantage. Party leaders, through their speeches and actions, are not only maintaining the ethnic division, but also encouraging the hostile postures of both the communities which are now building up their own private arsenals lest they should be caught unawares again.

The hard-core extremist section of the TUJS, which has been on the run since the massacre, has divided itself into small groups and in the last few months has amply demonstrated its insurgency capability and potential. It has attacked two police camps and looted arms and ammunition, committed more than 30 dacoities to replenish its funds and essential supplies and killed and terrorized non-tribals to instill fear in their mind regarding its strength. The CPI(M) has been the main target of attack and four of its gaon pradhans and an MLA have been killed. Hundreds of tribal youths, who are still in jungles evading arrests, are swelling the ranks of the extremists about 100 of whom are in Bangladesh. The situation in the State, according to observers here, is grave and is again reaching a flash-point.

Although Mr Nripen Chakraborty, the Tripura Chief Minister, has said that the creation of a tribal autonomous district with a council is the only way to defuse tension and that the Centre should help the State Government in doing this, neither he nor the Congress (I) has the political will to do so. Besides, this is hardly the time to do it. Even now over 15,000 people, mostly Bengalees, are living in camps and places like Mandhai and Borakha are deserted.

The State administration, specially the police set-up, is in a shambles. Its virtual non-performance and failure to protect life and property during the June riots have rudely shaken people's confidence in the force. Trade unionism has also divided the force into two factions--one owing allegiance to the CPI(M) and the other to the Congress (I). The CPI(M) section of the force swears by

the Left Front Government's policies and programmes and gives red salute to Mr Chakraborty publicly, while the Congress (I) section which has a larger following does everything possible to erode the Chief Minister's authority.

As a result, discipline and morale in the force are virtually non-existent. The Chief Minister has little confidence in the force because even now he has to depend heavily on the BSF, CRP, the Assam Rifles and the Rajasthan Armed Constabulary for internal security. The State Secretariat and the district administration are the tribal support for the CPI(M) in the control of the CPI(M)-supported Coordination Committee of State Government Employees who not only change or tear up orders of departmental secretaries at their will but also pressurize the Chief Minister to withdraw his own orders.

However, it will be the outcome of the political battle between the CPI(M) and the joint front of the TUJS and the Congress (I) which will decide the future course of political events in the State. The CPI(M) is doing its best to divide the TUJS. Though the Chief Minister is trying to come to a political understanding with the arrested extremist TUJS leader Vijay Hrankhal, who has reportedly confessed to TUJS' involvement in the massacare and may turn approver when the tribunal starts its hearing later this month, he has taken the rigid stand of not having any talks with what is called the democratic section of the TUJS led by Mr Shyama Charan Tripura and the party MLAs. [as published]

The CPI(M)'s strategy is that if Mr Hrankhal with whom Mr Chakroborty is on good terms can be won over, the young extremist leader might be able to neutralize the militant youths and thus weaken the TUJS. The Marxists are more afraid of the democratic section than the extremists because the former has been able to sway the sentiment of the tribals with issues which vitally concern them. Although the CPI(M) is committed to safeguarding the tribal rights and preserving its identity, it was the democratic leaders of the TUJS who were the first to articulate clearly and forcefully the tribal demands including the creation of an autonomous district council.

Since the riots in June, there has been considerable erosion in the tribal support for the CPI(M) and the TUJS has been able to further enlarge its tribal base. The TUJS has organized social boycott of tribal CPI(M) leaders to protest against "maximum victimization" of tribals after the masscare. [as published] Many of the CPI(M) gaon pradhans, as in Amarpur, have not yet been able to return to their respective areas. It was because of the pressure from the tribal leaders in the party, some of whom have openly blamed Bengalees for the riots, that the Chief Minister was forced to release more than 1,000 prisoners, mostly tribals from jails.

To keep its tribal base in tact the party is now trying to save even those whose involvement in the massacre of Bengalees are well known. [as published] Mr Shyama Charan Tripura alleged that while cases against prominent CPI(M) activists involved in the riots had been dropped Mr Chakraborty was choosing leaders for being tried by the tribunal. "The objective of the tribunal is to crush our party politically and to enable the CPI(M) to expand its base among the tribals. The CPI(M) is eager to settle the fact as to who leads the tribals--they or us," Mr Tripura added.

An interesting development in Tripura in recent weeks has been the forging of an undeclared joint front of the Congress (I) and the TUJS against the CPI(M) which is considered their common enemy. Although the Congress (I) has never supported the demand of an autonomous district council became the interests of its Bengalee refugee supporters would be seriously affected and has nothing in common with the TUJS, it thinks that it can create problems for the CPI(M) by paying lip service to some of the tribal demands and aspirations. [as published] The party continues to be in a moribund state and the appointment of a new ad hoc committee has made matters worse for the party.

The ad hoc committee is "not acceptable" to the senior leaders of the party like Mr Sukhamoy Sengupta, a former Chief Minister. Even ordinary supporters openly say that it consists of defectors with proven bad record.

CPI SECRETARIAT DEPLORES BIHAR BLINDINGS

New Delhi PATRIOT in English 7 Dec 80 p 5

[Text] THE Central Secretariat of the CPI National Council, now in session in the Capital, has expressed its shock at the "savagery of the Bihar Police engaged in gouging out the eyes of scores of alleged criminals in Bhagalpur district" and called for resignation of the State Government.

The first report of such methods employed by the Bihar police was published in a section of the press in the Capital on 22 November.

The Secretariat issued a statement on the subject on Saturday after hearing a detailed report on the issue from Mr Jagannath Sarkar, Bihar CPI leader.

According to the Secretariat statement, the Bihar Government is resorting to "barbarous methods like blinding undertrial prisoners" and "trying to justify it in the name of so-called popular sanction" in order to hide the Government's bankruptcy. "A Government which resorts to such methods has no right to continue in power for a single day," it noted.

Referring to the protest actions by certain sections of the people against the measures taken to bring the culprits to book, the statement said: "Gangs of criminals have established a reign of terror over large parts of the State. The administration fails to protect the people from murder, loot, arson, rape and pillage. Many of these gangs flourish under the political patronage of the leaders of the ruling party who prevent their arrest or ensure their acquittal. It is widely known that a Minister of State from Bhagalpur protects gangs of hardened criminals. Capturing of polling booths with the help of known criminals has become regular practice of the cynical leaders of the ruling party. This has led to complete loss of faith in the Government the law enforcing machinery."

It further alleged that the Bihar Chief Minister tried to shield the police even after lurid disclosures were made in the Supreme Court. "It was only under the pressure of countrywide revulsion and anger of the people against such unheard of police barbarity the Bihar Chief Minister was compelled to suspend some minor police officials," the statement charged.

CSO: 4220

MINORITIES PANEL TOLD CHRISTIANS' GRIEVANCES

Bombay THE TIMES OF INDIA in English 5 Dec 80 p 5

[Text] New Delhi, December 4: Representatives of the Catholic Bishops Conference of India, the Young Men's Christian Association and the All-India Christian Forum, yesterday, presented memoranda highlighting the grievances of Christians to the chairman of the high-power panel on minorities, scheduled castes, scheduled tribes and other weaker selections, to the minister of home affairs, Dr. Gopal Singh.

The leaders included Msgr, Freustac d'Lima, deputy secretary-general of the CBCI, Dr. V. S. Lall, director of the National Council of the YMCA, Dr. M. Moses, M.P., Prof. Alexander Warjiri, M.P., Mr. I. F. Franklin, general secretary of the AICF, and Mr. K. C. Sebastian, M.P., according to an official press release.

In their discussions with the chairman of the high-power panel, the Christian representatives pointed out that concessions for scheduled castes and scheduled tribes were not made available to Christians converted from these sections. In Kerala, the state government was not allowing Christians to open private schools and colleges, although the government could hardly cater to the educational needs of 50 per cent of the student community.

'Poor Representation'

Although the representation of Christians was adequate in the armed forces and legislatures, it was very low in departments like the railways, Posts and Telegraphs, banks and public-sector undertakings.

The Christian representatives also pointed out that while certain tribes were recognised as scheduled tribes in one state, they were not recognised as such if they moved to another and were, thus, denied the concessions guaranteed to them by the Constitution.

Also, while government funds were given to private social organisations for development work, these were not extended to Christian agencies.

The representatives also gave specific examples of harassment by several state governments of schools, hospitals and welfare projects run by Christians on various pretexts. One major grievance was that even Indian Christian missionaries were not allowed to conduct services in Arunachal Pradesh, which was very humiliating to an Indian national, as this was against the Constitution.

They wanted representatives of the minorities to be nominated on all the service selection boards, public-sector corporations and banks.

A similar meeting is being held by the panel chairman, Dr. Gopal Singh, with Muslim leaders on December 6.

FAMINE 'AT DANGER POINT' IN ANDHRA PRADESH

Calcutta THE STATESMAN in English 8 Dec 80 p 11

[Text] New Delhi, Dec. 7.--Mr C. Rajeshwara Rao, CPI general secretary, has submitted a report to Mrs Gandhi on famine in the Rayalaseema and Telengana regions of Andhra Pradesh.

In a letter to the Prime Minister, Mr Rao has said: "The situation has already reached danger point. It is no exaggeration to say that if effective steps are not taken immediately, a calamity comprarable to the 1943 Bengal famine will take place in Andhra Pradesh".

Mr Rao has said that he is submitting the report after his tour to the affected areas of the districts of Nalgonda, Mahboobnagar, Kurnool, Anantpur, Chitoor and Cuddapah between November 21 and 29, along with his party colleagues.

The situation is much more serious than one thinks it to be. The irrigation tanks and wells are dried up completely. The crops have completely failed except in the areas which are irrigated by the canals of the rivers Krishna and Tungabhadra. The greenary in a few areas of black cotton soil which received rain in the recent cyclone, will, however, yield no crop. This has only eased food problem in the areas to a certain extent.

In Nalgonda and Mahboobnagar districts even the hardy castor crop has dried up as there was no rain. In Cuddapah and Anantpur districts, orange and grape gardens have been destroyed. Among the big tanks the Bukkapatnam tank in Anantpur district, which irrigates 5,000 acres and the Elagonda tank in Mahboobnagar district which irrigates 1,150 acres have not a drop of water. Under Dindi reservoir in Nalgonda district, only 3,000 of 15,000 acres could be irrigated this year.

Of 70,000 wells in Anantpur district, 50,000 have completely dried up. The same is the case with other famine affected districts. Though the peasants have removed the electric pump sets from the wells and have brought them to their houses, the electricity department is forcibly collecting Rs 15 every month as fixed charge for five horse power sets.

The report reveals the horrible state of the cattle wealth. Cattle, including bullocks, are being sold at a throwway price for lack of fodder. [as published] Some are let off so that they can fend for themselves and they are dying. Butchers while taking away cattle from the farmers are cutting off the animals legs to provide space for more cattle in the lorry.

Peasants are leaving for big cities in other States in search of work. In some villages even the well-to-do peasants are also leaving their homes in search of work and some are working as labourers in towns.

Mr Rao has appealed to the Prime Minister to take immediate steps to tackle the famine in the two regions. Mr Rao fears that "people will fall dead like dried leaves and the remaining cattle will be lost, causing untold calamity to Andhra Pradesh".

It is unfortunate that the Central and State Governments have "grossly underestimated" the seriousness of the famine in Andhra Pradesh. They fight shy of calling it a famine. They call it drought and announced a paltry sum of Rs 7.5 crores to meet the situation, which is a drop in the ocean, Mr Rao said.

CSO: 4220

MORE DETAILS ON SOVIET-INDIAN ECONOMIC COOPERATION

New Delhi PATRIOT in English 8 Dec 80 pp 7, 9

[Article by N. D. Rodionov, Economic Counsellor of the USSR Embassy in India]

[Text] SOVIET-INDIAN economic and technological cooperation has made an immense contribution to the economic self-reliance of India, and to the formation and development of various key branches of the State sector of the Indian economy. Over 70 projects in the branches of oil-extraction and oil-refining, mining and non-ferrous industry, power and coal, machine building, medicine, agriculture, education and so on, have been built or are under construction in India with the help of the Soviet Union.

At present the enterprises of Soviet-Indian cooperation produce over India's 35 per cent of steel, extract over 80 per cent and refine 30 per cent of oil, produce over 20 per cent of power, as well as the major part of electrical, metallurgical and other kinds of heavy machine equipment. The Soviet Union also helps India in developing research and designing base and training of national cadres. The Long-Term Programme, signed during the visit to India of L I Brezhnev in November 1973, envisages the implementation of cooperation in the traditional branches—ferrous and non-ferrous industry, oil and coal, machine-building and so on, as well as cooperation in new branches, such as light industry, food pulp and paper, building material industry, irrigation and so on.

FERROUS METAL INDUSTRY

Ferrous metal industry is a special branch of Soviet-Indian cooperation whose history began with the signing on 2 February, 1955 of the first agreement on cooperation in erecting a steel plant at Bhilai. At present, the Bhilai Steel Plant has 2.5 million tonne annual capacity, and the expansion of the plant up to 4-5 million tonne annual steel capacity is under completion.

The second giant of Soviet-Indian cooperation—the Bokaro Steel Plant—with 1.7 million tonne annual steel capacity will also be expanded up to 4 million tonne. In June 1979 an inter-governmental agreement on cooperation in setting up another steel plant at Vishakhapatnam with 3 million tonne annual steel capacity was signed.

NON-FERROUS METAL INDUSTRY

The Soviet Union is giving assistance in the construction of the first aluminium plant in the public sector at Korba with 100 thousand tonne annual capacity. Soviet organisations are preparing the feasibility report on the construction of an alumina plant in Andhra Pradesh with 600-800 thousand tonne annual capacity on commercial basis. An agreement on the construction of this major project is underway. It is not ruled out that in the near future the USSR and India will cooperate in setting up one more big aluminium plant.

The USSR is giving aid to India in developing the production of other non-ferrous metals. The investigations conducted by Soviet organisations for washing polymetallic ores, for extracting precious and rare metals from slags and wastes of copper-smelting production, will help to increase production of these metals and raise economic efficiency of the funtioning enterprises.

COAL INDUSTRY

The Soviet Union is rendering substantial aid in the development of India's coal industry. In the '60s, a number of modern coal enterprises were built with Soviet assistance. They included mines at Banki and Surakachhar, coal mines at Manikpur, coal washing factory at Kathara, and the central electro-mechanical workshops in Korba. In the '70s, Soviet and Indian specialists prepared a report on the complex development of the Singrauli and Raniganj coal fields. Soviet organisations have executed projects of some of the coal enterprises for these deposits and for Ramgarh, as well as a project of central mechanical workshops at Singrauli. The development of these deposits [illegible] enable India to increase [illegible]er coal extraction by 70-80 [illegible]ion tonnes annually.

On 31 October, 1980, a working programme of cooperation in coal industry was signed which envisages increase in coal production in India. It provides for cooperation in equipping Jayat, Jahangir mines, and Jharia open cast mines with two washing factories and their own thermo-electric power station.

OIL EXTRACTING AND REFINING INDUSTRY

The Soviet Union has rendered great assistance in the formation and development of India's oil extracting industry. The discovery of deposits at Cambay, Ankleshwar, Rudrasagar, Kalol and other places with Soviet assistance firmly put India as one of the oil-extracting countries. The USSR also helped India in exploring sea deposits of oil and gas. Today, the Bombay basin oil is the biggest one in India.

Soviet assistance to India in creating the national oil industry is not limited to exploration and extraction of oil exclusively; it was the logical continuation in the construction of oil refineries at Koyali and Barauni with 3 million tonne oil-refining capacity each annually.

In 1979, Indian organisations independently expanded the capacity of the Koyali Plant up to 7.3 million tonne. The construction of the Mathura oil refinery with Soviet assistance is nearing completion. Its capacity will be 6 million tonne annually.

POWER

Eleven thermo-electric power stations with a total of 3 million kilowatt capacity have been built in India with Soviet assistance. Besides this, at a number of major industrial enterprises of Soviet-Indian cooperation as the steel plants at Bokaro and Bhilai, oil refineries at Koyali and Barauni and so on, power stations for them were also built which play an important part in ensuring power to them. Thus the total power capacity built in India with Soviet assistance is 3.45 million kilowatt.

Principled agreements have been reached on cooperation in the construction in India of a big thermo-electric power station on coal. The question of cooperation in the construction of high power tension lines is being considered. The most important task of more fully using the existing power capacities is under consideration. Soviet specialists, with this aim, will assist in organising repairs and maintenance of stations built with Soviet assistance.

MACHINE-BUILDING

The successes achieved by India in the development of steel, mining, oil industries, power and other key branches of national economy are connected to a great extent with the setting up in India of heavy machine-building plants. Three big heavy machine building plants have been set up in India with Soviet assistance. They are Heavy Electricals Plant at Hardwar Heavy Machine Building Plant at Ranchi and Heavy Mining Equipment Plant in Durgapur.

Heavy Electricals Plant at Hardwar, the biggest enterprise of its kind in South-East Asia, is capable of producing annually steam turbo-generators of a total capacity equalling 1,500 MW, hydro-turbo-generators — 1,200 MW, and electrical machines — 515 MW. At present the plant meets 50-60 per cent of requirements of India.

Soviet organisations continue to render assistance to the plant in mastering new kinds of production. The production-technical cooperation of the plant with the biggest Soviet manufacturers of eletricals, 'Electrosila' and "Leningrad Metallic Plant" is underway.

The Heavy Machine-Building Plant at Ranchi with an annual capacity of 80 thousand tonnes of heavy machines and the Heavy Mining Equipment Plant at Durgapur with annual capacity of 45 thousand tonnes of various types of mining equipment play a great role in making India self-reliant in these kinds of products.

The Soviet Union's big orders for the plants at Ranchi and Durgapur, to be executed between 1980-1985, have a great significance in this connection. The orders are for about 1,200 thousand tonnes of equipment to the tune of over 3 billion rupees. These products will be supplied to the USSR and to the projects being built with Soviet assistance in third countries.

MEDICAL INDUSTRY

Soviet assistance in setting up a public sector medical industry in India is like an insurance against blackmail by the multinational drug houses. Today, the Hyderabad bulk drugs plant, the anti-biotic plant at Rishikesh, and the instrumentation plant in Madras, set up with Soviet assistance, and other public sector plants set up by India, provide a strong base for an Indian medical industry.

The Rishikesh plant meets much of the demand for life-saving antibiotics, while the Hyderabad plant meets most of the demand for bulk drugs. Today, India's public sector has a share of 40-50 per cent of the medical industry and a decisive position in bulk drugs.

The USSR is also a major buyer of pharmaceuticals from India. The two countries have plans to cooperate in the production of medicines in India from bulk drugs supplied by the USSR for export to Third World countries. A working programme of cooperation in the sphere of pharmaceuticals for the period 1980-1985 was signed on 23 May, 1980.

AGRICULTURE

Cooperation in the field of agriculture began in 1956, when the USSR helped India to set up a State farm at Suratgarh in Rajasthan. Later, the USSR helped India set up the Jetsar farm in Rajasthan and five more State farms in different parts of the country. Another significant area of Soviet cooperation is in the development of animal husbandry. Already, the USSR has supplied over 10,000 fine fleece Merino sheep and 250 Karagul sheep.

The USSR has supplied about 30,000 tractors for farm mechanisation, and is assisting India in developing sunflower and beetroot, which have significance for the edible oil situation in the country, as also for the sugar industry.

Following the working programme of cooperation in irrigation signed in April 1980, the Soviet Union is to provide know-how in the construction of canals using the 'directional' technique of blasting, a plant to manufacture pre-fabricated materials for canal construction, and also

know-how for construction of certain types of dams, etc.

NEW BRANCHES OF COOPERATION

The Long-Term Programme of Economic, Trade, Scientific and Technical Cooperation provides for the study of possibilities of cooperation in the branches of national economy which are new for the Soviet-Indian economic ties. First steps have already been taken in this direction. As a result, working programmes of cooperation in the pulp and paper industry, building materials industry, fishery in internal reservoirs, and geology have been signed. In the nearest future, working programme of cooperation in the sphere of food and light industry will also be signed.

INDO-SOVIET INDUSTRIAL COOPERATION DETAILED

New Delhi PATRIOT in English 8 Dec 80 p 5

[Text]

The USSR has committed a major financial assistance of over Rs 2,000 crores for the new four million tonne capacity steel plant in Visakhapatnam in Andhra Pradesh as part of its massive assistance programme for development of steel and other industrial base in India, reports UNI.

Some of this assistance has already been made available in the construction of 79 projects contributing to the development of basic and heavy industries in the public sector.

Among the projects of Soviet-Indian co-operation, four enterprises are in ferrous and non-ferrous metallurgy, seven in coal and mining industry, eight in oil industry, six in machine building, ten power stations, six agricultural projects and ten academic and scientific institutions.

Soviet assistance will also be forthcoming for major expansion programmes in two of the most prestigious integrated steel plants at Bhilai and Bokaro which have been built with Soviet assistance.

The Visakhapatnam plant, the agreement for which was signed between USSR and India earlier this year is expected to incorporate the latest achievements of the Soviet steel industry. Giving details of Visakhapatnam project, Mr I Kazanets, USSR Minister of Iron and Steel Industry, said the plant will have 3,200 cubic metre blast furnances, coke-oven batteries with seven metres high chambers, selective coke grinding and dry quenching, converter steel production with 100 per cent continuous casting and modern efficient rolling mills.

Mr Kazanets said in the next ten years the annual capacity of Soviet assisted steel plants in India will reach nearly 14 million tonnes, almost as much as the present production of all other developing countries of Asia and Africa.

The installed capacity of ingot steel in the six integrated steel plants, at present 11.74 million tonnes. By the mid-eighties, the installed capacity is expected to reach 14.6 million tonnes with the completion of the modernisation programmes for these plants which are already in the process of implementation.

The capacity at the Bhilai Steel Plant will be expanded from 2.5 to four million tonnes and Bokaro from the present 2.5 to four million tonnes of ingot steel. Eventually the capacities at Bhilai and Bokaro are to be increased to 5 and 5.5 million tonnes respectively. By the same period,(the produc duction of the Vizag plant will also be around 3.5 million tonnes. Including the estimated 1.5 million tonnes from the new steel plants to come up in the coming years, the total output from all the steel plants in India put together will be about 22.9 million tonnes Adding the output of the alloy steel plants and mini plants, the total figure will cross the 26.5 million tonnes mark.

By the end of the century, the figure of steel production in India may well be 40-45 million tonnes.

BIHAR CPI(M) ISSUES PRESS NOTE ON URDU

New Delhi PATRIOT in English 12 Dec 80 p 5

[Text] Patna, Dec 11--The Bihar State CP-M committee secretariat has expressed "regret and profound concern" over the 'hue and cry' raised by "certain sectarian elements in general and anti-democratic, communal, reactionary and parochial elements in particular" on the declaration of Urdu as the second official language of the State.

A press note issued by the party office here says this is an attempt to set one section of the people against the other which is frought with great danger to disturb the peaceful atmosphere of the State, the CP-M fears.

The communique further says "it may be noted here that making Urdu as the second language of the State was one of the democratic demands of the people since time memorial; [as published] As such, wise counsel over the issue, is the need of the hour which enables the vast Urdu knowing people, irrespective of caste, creed and religion, to have their day-to-day communication with the Government in Urdu as is now available to the people to have it either in Hindi or in English".

The secretariat, under the circumstances, fully disapproved these exercises of certain communal, elements in Bihar and demanded that the State Government should explain the reason behind its "rational declaration" and remove the loopholes at the earliest, if there is any, in the declaration. [as published]

The secretariat also appealed to all the left and democratic forces to extend their support and remain alert and vigilant so that these reactionary elements could not poison the peaceful atmosphere of the State on this issue.

INDIA AIDS MOSCOW IN GAMMA RAY ASTRONOMY

Bombay THE TIMES OF INDIA in English 10 Dec 80 p 15

[Text] For a change, the Soviet Union is the receiver and India, the donor. This little publicised aspect of Indo-Soviet collaboration in space sciences has now come to light with the successful completion of the first phase of an agreement, a couple of weeks ago.

The Indians Space Research Organisation and the INTERCOSMOS of the USSR Academy of Sciences signed an agreement in 1976 for a collaborative programme in gamma ray astronomy. The main objective of the first phase of the agreement was to conduct joint investigations of gamma rays through scientific balloon flights.

The Russians had to take help because India's balloon technology is well advanced. This can be compared to the ISRO utilising the Russian launch vehicles for putting its satellites into orbit.

The national balloon facility of the Tata Institute of Fundamental Research, situated at Hyderabad, places India among the world's only four countries with advanced balloon technology.

Soviet Instruments

The balloon launching station at Hyderabad offers another unique advantage to scientists from all over the world. The location is near the geomagnetic equator and the atmospheric gamma ray and X-ray background at high altitudes is relatively low. This enhances the sensitivity of the experiments.

In 1977, 1979 and 1980 scientists from Moscow Physical Engineering Institute and P. N. Lebedev Physical Institute, Moscow, brought their "Anna-6" and Natalya-1" gamma ray telescopes and integrated them with the orientation platforms fabricated by the TIFR scientists in Bombay. During the three years, nine flights were carried out.

The design of balloons, launching and tracking them and recovery of the payload were all the responsibility of the Indian side while the basic telescopes were made by the Russians. The telemetry system was also supplied by the TIFR.

Data analyses were conducted simultaneously at the TIFR and in Moscow. The earlier results were reported at the international "committee on space research" (COSPAR) proceedings.

Future Studies

The last flight was conducted on November 6 this year when Natalya-1 (named after the daughter of a Soviet scientist) floated for seven hours in space at an altitude of about 36 km and the volume of the balloon was about 5.5 million cubic feet.

The "Quick Look Data" processing was done with the TIFR computers. Further analyses will be carried out both in Bombay and Moscow. Interpretations of the latest data will be jointly presented by Indian and Soviet scientists at an international conference to be held in Paris in July next year.

The collaborative programme in gamma ray astronomy may be continued for the future satellite-borne studies too.

The study of gamma ray astronomy offers an entirely new look at our galaxy and the universe. The gamma rays--the highest energy electro-magnetic radiation--are an effective "tool" to unravel the mysteries of high energy astrophysics.

These include the formation of galaxies and interstellar clouds and even the fundamental process of creation of elements.

The principal scientists involved in the Indo-Soviet gamma ray programme, among others, are Dr. S. V. Damle of the TIFR, Dr. M. Fradkin of P. N. Lebedev Physical Institute, Moscow, and Dr. Y. D. Kotov of Moscow Physical Engineering Institute.

The United States is planning a multi-billion dollar gamma ray observatory programme during the 1980s.

The national balloon facility at Hyderabad was used by the US scientists in 1961 and 1965 for cosmic ray studies and they conducted 41 flights. The Japanese also used the Indian facility for 13 flights during 1969-74 to conduct X-ray astronomy studies.

HEAVY ENGINEERING FIRM SECURES SOVIET ORDERS

New Delhi PATRIOT in English 11 Dec 80 p 4

[Text] Calcutta, Dec 10.

Export orders worth Rs 7 crores from the Soviet Union were secured by the Heavy Engineering Corporation following a visit there by HEC chairman S R Jain.

Further orders for 15,300 tonnes of HEC equipment worth Rs 30 crore are likely to follow soon.

These orders are a sequal to the Soviet pledge to buy from the HEC on a regular basis. [as published]

The Union Government on its part has granted a non-Plan support of Rs 6 crore so that the HEC recovers from its sickness of the past few years, largely due to the stalemate in the Indian planning process.

In the next few months another non-plan grant of an equal amount, if not more, is expected from the Union Government.

Further, Union Industry Ministry and the HEC are jointly making efforts to obtain bulk orders from SAIL's Visakhapatnam Steel Project and every indications show that SAIL will place orders for machinery etc with HEC, valued at Rs 150 crore by 1983-84. [as published]

From public sector coal industry the HEC has already secured orders for 18 excavators, 17 overburden drilling rigs and two draglines. These orders are valued at Rs 40 crore, while further orders are expected from Coal India. Altogether, the HEC has orders in hand worth Rs 300 crore, out of which Rs 57 crore is from the overseas markets.

At the unit level, Mr Jain's immediate concern is to increase the operational efficiency of his enterprise. He is going all out to enlist the cooperation of the managers, executives and the work force. Fortunately the power position has improved and the plant's captive 3.5 MW generating set, diesel run, is likely to be commissioned by March next.

GANDHI TOLD COAL OUTPUT TARGET TO BE REACHED

Bombay THE TIMES OF INDIA in English 13 Dec 80 p 9

[Text] New Delhi, December 12.

The chairman of the four public-sector coal companies have assured the Prime Minister that they would be able to reach the total targeted coal production of 113.5 million tonnes for the current year and 124 million tonnes for next year. [as published]

The Prime Minister had called a meeting of the chairmen of the four companies as well as of Bharat Coking Coal Limited and the Central Mine Planning and Design Institute, Ranchi, to inquire about the reasons for stagnation in coal production and the steps that should be taken to break it.

She was informed that there had been stagnation in the eastern coalfields since 1977 but not in the central and western coalfields, which had shown substantial increases in production.

There were several reasons for the stagnation in the eastern coalfields. First, investment in coalfield development had been considerably reduced owing to slackness in demand since 1976 and the accumulation of stocks. That was a major cause for the setback. The floods of 1978, followed by poor power supply situation, were the additional contributory factors.

The constraints, she was told, had been substantially removed and production had started picking up in all these coalfields.

The Prime Minister was keen that modernisation plans should be put through without interruption so that a constant increase in production could be maintained. She also wanted productivity norms to be fixed.

Labour Co-operation

On these points, she was informed that ten-year development plans had been prepared for each mine and each project to be taken up till 1990, detailed plans for the first five years and perspective plans for the remaining period.

As regards modernisation, the chairmen told her that only equipment that were not available indigenously or within a particular time-frame would be imported.

The chairmen, on their part, wanted that there should not be any interruption in the implementation of the development programme, irrespective of whether there was demand or not.

The Prime Minister was informed that the workers were fully co-operating for fulfilling their commitment in achieving the targeted production level. They were working on all seven days in the week.

As an additional incentive for increasing production, the chairmen urged the Prime Minister to ensure a remunerative price for coal. At present, the companies are losing to the tune of Rs. 19 per tonne.

CSO: 4220

NOVEMBER INCREASES IN POWER GENERATION NOTED

Calcutta THE STATESMAN in English 8 Dec 80 p 9

[Text] New Delhi, Dec. 7.--The total power generation in November was 9,801 million units, an increase of 21% over that of November last year. For the first time thermal generation went up by 22% in a month. Another achievement has been the generation of 340 million units on November 28--the highest ever recorded on a single day, according to a Press Note. Hydro-electric production during the month achieved a growth of 20%.

The increase in generation was the maximum in the southern region at nearly 33%. In the northern region it was 20%, in the western 16% and in the eastern 14%. The Damodar Valley Corporation generated 660 MW as against 550 MW two months earlier. The improved power supply in the eastern region, particularly DVC, is reported to have established supply to the steel plants and collieries. This is reflected by the 9% increase in coal production and an output of 1.65 lakh tons of saleable steel last month by Durgapur, Bokaro and TISCO.

In order to give a new management bias to the power industry, evolve development programmes and introduce modern planning and monitoring concepts, a Central team led by the Power Secretary has been visiting different States to give on-the-spot guidance to the State Electricity Boards. Assistance is being given in the allocation of scarce material like steel and cement.

Supply of coal of required quality to power houses has gone up from 2,400 wagons to nearly 3,300 wagons a day. Efforts are being made in coordination with the Railways to step up the supply to the required level of nearly 4,000 wagons a day.

As a result of these measures, the capacity utilization has risen from nearly 42% earlier to nearly 47% at present. Official sources expect this to rise in the coming months.

The Department of Science and Technology has agreed to set up an informal working group to review plans and programmes on energy conservation and development of alternative sources of energy.

This emerged at the first national workshop on energy conservation organized by the Association of Indian Engineering Industry and the Department of Science and Technology.

The workshop agreed that the creation of awareness through a programme of publicity and films was essential to bring about energy conservation at the national and industry levels. This would be done by the Government and industry, separately and jointly. The Department of Science and Technology said it would shortly release, for public screening, two special documentary films on energy conservation.

The workshop recommended a complete review of the system of power cuts now being followed in the country. The need for taking advantage of technical development in other countries was emphasized by Mr Gurpreet Singh, chairman, AIEI Northern Region, and supported by other participants.

FOREIGN FIRMS CHOSEN FOR OIL EXPLORATION PERMITS

Calcutta THE STATESMAN in English 8 Dec 80 p 9

[Text] New Delhi, Dec. 7.--The Government has decided that the contracts with foreign oil companies for exploration in on-shore and off shore areas will be on a production sharing basis. The contractors will be expected to sell cost oil to the Government for domestic consumption at a fair market price. Preference will be given to those who offer to sell their entire share of the profit oil as well to the Government.

It has decided to offer 32 selected blocks--17 off-shore and 15 on-shore--to 34, short-listed foreign parties for oil exploration.

The 34 short-listed parties have been chosen from 67 who had submitted pre-qualifying bids in response to the Government nominee organization, the Oil and Natural Gas Commission's invitation to show interest in the exploration and development of hydrocarbons.

The negotiating team, with the secretary in the Department of Petroleum as its chairman, and secretary (Expenditure), secretary (Economic Affairs), secretary (External Affairs) and chairman, ONGC, as its members, evaluated the offers and selected 34 foreign companies, including 10 selected provisionally on the basis of their financial and technical capabilities.

Technical dockets giving geological, geophysical and other relevent information on the blocks being offered will be made available to the 34 short-listed parties at the ONGC's office in Delhi and at the Indian embassies in Washington and Paris from Monday.

Technical discussions for any further information will be arranged with specialists at Dehra Dun and will be expected to be completed by January 15. On the conclusion of the discussions, the Government will expect a specific offer in respect of a block or blocks in which foreign parties might like to work.

While the format for making the offer is being prepared, the Government, in its communication to the short-listed parties, has indicated the arrangements envisaged by it.

All liabilities under Indian laws will be on the contractor's account. The parties have been asked to indicate the share of profit oil they would like to

retain (a) if the levies are on the contractor's account and (b) if the corporate income-tax, cess and royalty paid by the contractor is reimbursed to them.

The Oil and Natural Gas Commission will be a party to the "operating agreement" as the Government's nominee.

The ONGC will be a "non-operating" partner in the exploration phase and thereafter have full rights accruing to a "non-operating" partner for effective say in decision-making.

After the short-listed parties, which include oil companies from the USA, France, the U.K., West Germany, Canada and Japan, have submitted their specific bids following clarificatory technical discussions with the ONGC, their offers will be evaluated by the Government and the contracts will be finalized with the approval of the Cabinet.

The off-shore blocks include the West Bengal off-shore (Block I and II) in the Bay of Bengal, roughly covering an area of 10,750 sq km and 12,500 sq km.

The on-shore blocks include the Sarda depression (Blocks I, II and III), which forms part of the Canga basin, with Block I covering 19,250 sq km and Block II covering about 25,000 km and the Gandak depression (Blocks I and II), forming the eastern part of the Ganga basin, covering about 26,000 sq km and 21,250 sq km.

The 34 foreign companies invited to make specific offers include the British Petroleum company, ESSCO (USA), Burmah Oil (U.K.), Gulf Oil (U.K.), Shell Exploration (Holland) and Shell Oil (USA).

CSO: 4220

PROGRAM TO EXPLORE FOR MINERALS PLANNED

Calcutta THE STATESMAN in English 9 Dec 80 p 7

[Text]

NEW DELHI, Dec. 7.—The Geological Survey of India has drawn up a big programme of mapping, investigation and exploration for various minerals during the October 1980 field season. It has deployed 340 geologists for mapping in the interior areas of the Eastern Ghats, Deccan Trap country, high altitude areas in the Himalayas and the ophiolite belt in the rugged terrain in Nagaland and Manipur. More than 45% of the total area of the country has been mapped on modern sheets. Mapping of the quaternary sediments will be undertaken in the major river basins.

Under the regional exploration for various minerals, 270 geologists and 157 rigs would be deployed for 189 investigations. In the last season ending September 1980, only a small area could be covered by air-borne survey in Andhra Pradesh because of shortage of aviation fuel. It is proposed to continue the work in the western parts of the Son-Narmada and Andhra Pradesh. Selected areas in Kerala and Rajasthan are proposed to be explored.

For iron ore, work would be continued in the Sandur-Chist belt of Karnataka and for manganese in Karnataka, Madhya Pradesh and Maharashtra. Investigation for chromite is to be taken up in the Sukinda and Nausahi areas of Orissa by drilling.

The time-barred programme for exploration of gold would be continued in the northern part of the Kolar Gold Field and its southern extension in Chittoor district of Andhra Pradesh. Under the national project for diamond exploration, the work in Madhya Pradesh and Andhra Pradesh would be expedited. A search would be conducted in parts of the southern region for precious and semi-precious stones.

During the 1979-80 field season ending September 1980, the GSI located new bauxite cappings in Visakhapatnam district of Andhra Pradesh and two mineralized zones in Chandrapur district of Maharashtra besides mapping in hard rock and quaternary areas.

CSO: 4220

SHORTFALL IN 1980 FERTILIZER PRODUCTION LIKELY

Bombay THE TIMES OF INDIA in English 5 Dec 80 p 10

[Text] New Delhi, December 4.

The production and consumption of chemical fertilisers in the country during the current year may fall short of earlier expectations.

According to the latest estimates of the Fertiliser Association of India (FAI), the total output of nitrogen this year may not exceed 22 lakh tonnes, against 27 lakh tonnes anticipated earlier.

The growth in the consumption of nutrients may be only five to six per cent against the 15 to 16 per cent estimated in the beginning of the year.

The FAI chairman, Dr. Easo John, told newsmen on Tuesday that the inadequate supply of power, coal and feedstock to the fertiliser industry were the main constraints responsible for the shortfall in production. The average capacity utilisation in the industry during the first six months of the year was only about 50 per cent against 61 per cent last year and 69 per cent in 1978-79.

Transport Bottlenecks

Transport bottlenecks had been creating further problems for the movement of inputs, as well as end-products in the industry.

The total loss in production due to the shortage of power and feedstock was estimated at 0.5 million tonnes in terms of nutrients. At least three plants had to be shut down for varying periods during the current year because of labour trouble.

The steep hike in fertiliser prices in June, last year, was one of the major reasons for the low growth rate in fertiliser consumption. The prices of agricultural products had not been raised sufficiently to compensate the farmers for the increased cost of fertiliser input, he maintained. Certain other factors, including constraints on the availability of adequate credit to farmers, were also responsible for the low consumption.

The cost benefit ratio of fertiliser use had deteriorated following the estimated 40 per cent rise in nutrient prices. Every rupee invested on nitrogenous fertiliser now brought a return of about Rs. 2.90 in the case of paddy, against

Rs. 3.62 prior to the fertiliser price hike. In the case of wheat, the return now was Rs. 3.23, against Rs. 4.46 earlier.

According to Mr. Satyanand, executive director of the FAI, the consumption of fertilisers during the current rabi season might be only four per cent higher than in the last season. The earlier expectations of achieving some 18 per cent increase in consumption would not be materialised. Apart from adverse weather conditions in some parts of the country, an inadequate availability of the right type of fertiliser material at the right time was likely to affect nutrient consumption.

The availability of railway wagons was grossly inadequate to ensure the smooth movement of fertilisers from producing units to consuming areas. Not more than 60 to 70 per cent of even the sponsored movement programme under priority was likely to materialise, he said. Road movement was hampered by diesel shortage and competing demands from other industries which could afford to pay higher freight.

Mr. Satyanand said the total capacity of nitrogen and phosphates produced in the country was expected to rise to 6.57 million tonnes and 2.37 million tonnes, respectively, by the end of the sixth plan period. It would rise further, to about 9.62 million tonnes of nitrogen and 2.85 million tonnes of phosphates by 1989-90.

Gap in Consumption

The gap in the consumption and indigenous availability of fertilisers was expected to rise from 1.34 million tonnes of nitrogen in 1980-81 to 3.10 million tonnes in 1989-90. In the case of phosphates, it would go up from 3.5 lakh tonnes now to 4.9 lakh tonnes in 1989-90.

The FAI, which was celebrating its silver jubille this year, will hold a seminar on "fertilisers in India in the 80s" here from today to Saturday, at which leading Indian and foreign experts will discuss various aspects of fertiliser production, marketing, distribution and use.

Several awards instituted by the FAI to commemorate its jubilee will also be distributed at the inaugural function of the seminar, which will be presided over by Mr. P. C. Sethi, minister for petroleum, chemicals and fertilisers.

BRIEFS

INFRARED PROJECT--Kolhapur, December 12 (UNI): The University Grants Commission has sanctioned a project--infra-red sensors--to the physics department of Shivaji University. The project is intended to develop infra-red-light sensitive materials and fabrication of infra-red photo cells. They are useful for defence equipment like radar indicators and guided missiles. This was announced here by the vice-chancellor, Mr. R. K. Kanbarkar, while welcoming Dr. Raja Ramanna, who was the chief guest at the 17th convocation. [Excerpt] [Bombay THE TIMES OF INDIA in English 13 Dec 80 p 7]

SOUTH KOREAN AMBASSADOR--Seoul, December 12 (AP): South Korea has selected Mr. Kim Chungtai, ambassador to Portugal, to fill the vacant post of ambassador of India, the foreign ministry said today. The action was the first major diplomatic shake-up since Mr. Chun Doohwan formally was installed as Korean President in September. [Text] [Bombay THE TIMES OF INDIA in English 13 Dec 80 p 13]

GUPTA ON PRESIDENCY--New Delhi, December 12 (UNI): Mr. Bhupesh Gupta (CPI) today urged the Prime Minister, Mrs. Indira Gandhi, to make a categorical statement that no change was called for in the existing system of government. Speaking on a bill moved by him in the Rajya Sabha seeking an amendment to the second schedule of the constitution, Mr. Gupta said under the constitution, the President enjoyed no executive powers. All the powers were vested with the Prime Minister, who was accountable to Parliament. Mr. Gupta appealed to the ruling party members to close the controversy once for all whether the present system should be replaced by a presidencial one. Mr. Gupta, said the demand voiced by some ruling party members, including the Maharashtra chief minister, Mr. A. R. Antulay, for the presidential system was unwarranted and provocative. He said the country wanted a president in Rashtrapati Bhavan with high moral authority to look into complaints from anyone. He suggested improving the present system further by granting proportional representation in legislatures. Mr. Gupta later withdrew his bill. [Text] [Bombay THE TIMES OF INDIA in English 13 Dec 80 p 13]

STEEL IMPORT PLANS--New Delhi, December 12 (PTI): The Centre has liberalised imports of steel as indigenous production was likely to be inadequate to meet the demand, the Lok Sabha was informed today. Steel Authority of India Limited (SAIL) was planning to import 692,000 tonnes of steel under the buffer scheme, the commerce and steel and mines minister, Mr. Pranab Mukherjee, said. Adequate foreign exchange has been made available to SAIL, as the canalising agency to fulfill the demands for imported steel placed on it by engineering units, Mr. Mukherjee told Mr. Chiranji Lal Sharma in a written reply. Mr. Mukherjee said that these would be over and above the buffer imports. In addition, actual users have also been allowed direct imports of "restricted items". [Text] [Bombay THE TIMES OF INDIA in English 13 Dec 80 p 13]

SUBMARINES TO INDIA--A shipbuilders firm is close to conclusion of a contract for the supply of two submarines for the Indian Navy, Indian Ambassador Ali Mohammad Khusr said on Thursday after three days of talks in this North German city. [Text] [Karachi DAWN in English 12 Dec 80 p 20]

OIL FROM ALGERIA--India has signed an agreement with Algeria for import of 500,000 tons of crude oil. The bulk supply will be available during the current year at $40 a barrel. The agreement was signed in Algiers yesterday. [Text] [BK061600 Delhi Domestic Service in English 1530 GMT 6 Jan 81]

TRADE WITH GDR--The two-way trade between India and the GDR is expected to touch 2 billion marks during the current year. Under a trade agreement signed in Berlin, trade and technical cooperation between the two countries will be enlarged over a 5-year period. Talks are in progress for cooperation in utilization of lignite in Rajasthan, Gujarat and Jammu and Kashmir. [Text] [BK071625 Delhi Domestic Service in English 0830 GMT 7 Jan 81]

EXPORT-IMPORT BANK--The government has decided to set up an export-import bank with an authorized capital of 2 billion rupees initially which may later be increased to 5 billion rupees. The decision to set up the bank has been taken in view of the growing volume and complexity of international trade and its credit needs. It will function as a lead bank for financing and promoting exports and will be the principal institution for coordinating the working of another financial institutions. Briefing newsmen about the union cabinet's decision on 7 January, an official spokesman said short-term export credit will continue to be handled by the commercial banks. He said the proposed bank will be a statutory corporation owned by the government. [Text] [BK071625 Delhi Domestic Service in English 1530 GMT 7 Jan 81]

NEW BHUTANESE AMBASSADOR--New ambassador of Bhuta Dr Tashil Tobgyel, while presenting his credentials to President Sanjiva Reddy at Rashtrapati Bhavan in New Delhi on January 7, said that his country has been able to establish social and economic infrastructure with the cooperation extended by India. [Excerpt] [BK071515 Delhi ISI Diplomatic Information Service in English 1436 GMT 7 Jan 81]

CEMENT FACTORY IN INDONESIA--The Projects and Equipment Corporation of India, a government of India undertaking, has been awarded a contract in Indonesia for setting up Indarung III Cement Plant at Pandang (Indonesia). This was one of the projects identified and discussed in detail during May 1980 when an Indian delegation led by Dr Charanjit Chanana, minister for industry, visited Indonesia. [Text] [BK071515 Delhi ISI Diplomatic Information Service in English 0845 GMT 7 Jan 81]

THREAT FROM PAKISTAN--The Communist Party of India central executive says that the danger to the country's security has increased in view of acquisition of arms by Pakistan in a big way and, what it called, the U.S.-China axis. Briefing newsmen on the 4-day meeting of the executive in New Delhi, party General Secretary C. Rajeshwar Rao said the executive felt that a negotiated settlement of the foreigners issue in Assam is now possible. He said the Assam agitation leaders have alienated themselves from the people and cannot prolong the movement. [Text] [BK091041 Delhi Domestic Service in English 0240 GMT 9 Jan 81]

GOODS TO USSR--The Soviet Union is to import from India cosmetics, detergents and chemicals worth about Rs. 217 crores under contracts signed in Bombay and New Delhi for the purchase of washing powders, dyes, perfumes, shampoos, soaps, toothpaste and chemicals and detergents, to be supplied to the USSR in the period 1981-85. The contracts were signed by V. A. Ganko, director, "Arochim", from the Soviet side, and from the Indian side, by representatives of the firms Tata exporters, Hindustan Lever, Lakme and Sarabhai International, etc. Speaking at a press conference, Mr. Ganko said that such large-scale imports on a long-term basis facilitate the growth of Indian production and sales on a planned basis meeting the interests of both the peoples, thereby serving the purpose of expanding bilateral trade. [Text] [Bombay THE TIMES OF INDIA in English 5 Dec 80 p 10]

CPI(ML) SPLIT--The split in the CPI(M-L) between the two groups led by Mr Satyanarain Singh and Mr Chandra Pulla Reddy appears to have affected the trade union wing. In a recent move, the Reddy group removed Mr Dev Nathan from the post of general secretary of the Indian Federation of Trade Unions. He has been replaced by Mr Phani Bagchi, who belongs to the Reddy group. A spokesman of the Satyanarain Singh group said in Calcutta on Friday that the members of this group were not aware of Mr Dev Nathan's removal. NEW BENGAL COMMANDER--Major-General S. S. Pathania took over in Calcutta on Monday as the General Officer Commanding, Bengal area. According to a Press Note issued by the Defence Ministry, Major-General Pathania, an infantry officer, had been commanding a division before assuming the new charge. He succeeded Major-General Salim Caleb, who retired recently. [Text] [Calcutta THE STATESMAN in English 9 Dec 80 p 3]

CP(ML) LEADER ARRESTED--The CPI(ML) Mr Santosh Rana, has condemned the arrest of the party's general secretary, Mr Satyanarayan Singh on Sunday at Jadugode in Bihar under the National Security Act. Two other workers of the party, Mr Biren Ghosh and Mr Nimal Pal, were also arrested under the same Act in Santal Parganas in Bihar. [Text] [Calcutta THE STATESMAN in English 9 Dec 80 p 13]

BREZHNEV BOOK TRANSLATIONS--Soviet Union President Leonid Brezhnev's three books, Small Land, Rebirth and Virgin Land in Hindi and Urdu translation were released on Tuesday by CPI Leader Bhoginder Jha, MP, in New Delhi at a simple function. The books deal with various impediments faced by the Soviet Union. They heavily draw on the personal experience of Mr Brezhnev in a war ravaged economy after the Nazi invasion. A senior diplomat in the USSR Embassy Mr S L Semivols said Indo-Soviet friendship had been strengthened during Mr Brezhnev's leadership. Hindi CPI daily JANYUG's Editor Mr H K Vyas also spoke on the occasion. The reprints of Mr Brezhnev's book have been published by the People's Publishing House.

BHILAI RECORD OUTPUT--Raipur, December 4: The Bhilai steel plant recorded its highest production of the year last month when 152,222 tonnes of saleable steel and 178,220 tonnes of ingots were produced. Availability of coal enabled the plant authoritis to recommission the blast furnace number six which had been lying idle so far. DEFENSE HELICOPTER--New Delhi, Dec 3. Hindustan Aeronautics is designing an advanced light helicopter for meeting the future needs of the three defence services, the Prime Minister Mrs. Indira Gandhi said in a written reply in the Lok Sabha today.--PTI. [Text] [Madras THE HINDU in English 5 Dec 80 p 6]

BIHAR MINISTER DIES--New Delhi, Dec. 7.--The Bihar Minister of State for Education Mr Hardeo Upadhyaya died at the All-India Institute of Medical Sciences here early today, reports UNI. He was admitted to the institute on December 3 after a paralytic stroke. Mr Upadhyaya was born in a village in the Dhanaha police station area of West Champaran district, adds PTI. He was 57. After completing his school education he went to Varanasi where he did his M.A. in Hindi. He was a freedom fighter and was jailed in 1942. He courted arrest when Mrs Gandhi was sent to jail during the Janata regime. He was elected to the Bihar Assembly in 1972, 1977 and 1980 from the Dhanaha constituency. He is survived by his wife, two sons and a daughter. The body of Mr Upadhyaya was taken to Patna in a specially chartered plane piloted by Mr Rajiv Gandhi. [Text] [Calcutta THE STATESMAN in English 8 Dec 80 p 9]

CONGRESS(I) ELECTIONS--New Delhi, December 7 (PTI): Organisational elections in the Congress will be held in April-May, 1981, after a lapse of nine years, Mr. Karunakaran, former chief minister of Kerala, announced in the AICC (I) today. The elections are being held on the recommendation of the three-member committee constituted by the party president, Mrs. Indira Gandhi, in August. The election schedule recommended by the committee was approved by the Congress (I) working committee on Friday, Mr. Karunakaran said. The time-table for election of the party president is: Last date of nominations, May 16, scrutiny and publication of list, same day, last date for withdrawal, May 25, and poll, if necessary, on May 31. APPOINTMENT OF IZAAC HINDOM AS DEPUTY GOVERNOR OF IRIAN JAYA

Jakarta TEMPO in Indonesian 29 Nov 80 p 39

[Article: "From Deputy Governor to Trikora [People's Tri-Command]"]

[Text] Minister of Internal Affairs Amir Machmud at the end of last week installed Izaac Hindom in office as deputy governor of Irian Jaya, replacing Ellias Paprindey. Has this native son already had more opportunity?

The appointment of Izaac Hindom, 45 years old, born in Fak-fak, as deputy governor of Irian Jaya, tends to bring out two different views at present. That is, whether or not the office of governor of that province must be entrusted to a native son of that area.

The difference of view began to be heard strongly as the assignment of Governor Soetran came to an end in the middle of August and until he was installed in office as acting governor. Those who wanted Soetran's post to be turned over to a native son of the area hold the view that the position will be the key to the future success of the development of the area. This would also mean giving a greater opportunity to people from the region joining in developing their own area.

People holding this view go so far as to say that, no matter what happens, the post of deputy governor should not be held by an outsider. This view starts from the complaint that, up to now, native sons have not had the opportunity to hold important positions in Irian Jaya. Indeed, it is charged that Fllias Paprindey, as deputy governor under Governor Soetran, was just a symbol. But this group feels that their efforts will have been wasted after the installation of Izaac Hindom in office. "This means that the combination of Soetran (from outside the area) and Paprindey (a native son) will be repeated," said one of this group, a university student from Irian Jaya who is studying in Yogyakarta.

On the other hand there is the view of those who attach no great importance to the question of whether an official is a native son of the area or not. "That difference involves a view which is no longer needed," says an official in the Ministry of Internal Affairs who did not wish to be named. "The important thing is whether a governor is considered capable of doing the job or not."

However, is it true that native sons have not had an opportunity? "It is time for native sons of Irian Jaya to be given more opportunity," said Vice President Adam Malik, when he visited the area 2 months ago. Nevertheless, Adam Malik also admitted that, up to now, "the preparation of officials who are native sons of the area has not been given enough attention."

For Izaac Hindom, who began his career as a subdistrict officer in Teluk Etna, District of Kaimana, Regency of Fak-fak, opportunity for native sons of the area does not mean that they must remain in their own region. "A native son of Irian must be able to hold any job, anywhere in Indonesia," he says. If a native son must be the leader of his own area, Izaac Hindom fears, that may lead to a kind of tribal feeling.

Opportunities for native sons of Irian Jaya in fact do exist. Apart from the post of deputy governor, 4 out of 9 bureau heads (Health, Development, Supply, Regional Economic Development) are also native sons of the region. Of 4 governors of Irian Jaya the first 2 were native sons, that is, E J Boney and F Kaisiepo. In addition 5 out of 9 regents are also native sons. That is, the regents of Jayapura, Merauke, Yapen Waropen, Paniai, and Manokwari are native sons, as is the mayor of the administrative city of Jayapura.

Trikora

There is still one matter which has become a kind of crutch. That is, the difference of treatment between former government employees and those who fought to liberate Irian Jaya under the Trikora--as also mentioned by Adam Malik. The government's appreciation of the latter was shown in 1979 in the form of gifts of money. However, later on a scandal arose out of the manipulation of the money in the form of "Trikora prizes," which was discovered by the Irian Jaya Regional Security Office last August. Those involved in the manipulation of funds reportedly were allowed to leave office in an honorable way and then were attached to the staff of the governor as office specialists.

Up to the present people are still coming in to the Veterans Administration Office in Jayapura, registering as having fought in the Trikora campaign. An opportunity to register indeed is still open until 31 December 1980. Up to the middle of November the total number of those who fought in the Trikora campaign is listed at 3246 (of whom 140 were killed). Meanwhile, state employees having the right to receive "Trikora prizes" in Irian Jaya total 1328.

Willem Ayatanoy, 45 years old, a former combatant in the Trikora campaign, currently lives in a hut in Bukit Polimak II. He has no permanent job. He is the father of 5 children and says, "I can only work when someone needs a worker." Aser Samory, 63 years old, who once was a member of the Trikora Revolution Command in Yapen Waropen, and was once even a veterans" representative in the provincial council, is now a daily-paid harbor worker in the area where he was born.

'VODK' REPORTS RESULTS OF FIGHTING AGAINST VIETNAMESE

Southwest Region

BK180235 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 17 Dec 80

[Excerpt] In November, our comrades in arms on the southwestern region battlefield put out of action 671 troops of the Vietnamese aggressors, including 3 Soviets, a Vietnamese provincial governor and a Vietnamese deputy provincial governor dead. We destroyed 2 trucks, 4 motorcycles, a pistol, an M-30 machinegun, an M-79, 6 B-40's, 9 AK's, a C-25 radio set and 10 military barracks; and seized an M-79, 17 AK's, a carbine, 32 B-40 rockets, 910 AK rounds, 10 mines, 7 handgrenades, 50 cans of humanitarian food aid and a quantity of other materiel. Compared with the 500-enemy-loss-per-month plan, our comrades in arms carried out 134.2 percent of the plan, overfulfilling it by over 34 percent. In their efforts to build a primitive weapons system, our comrades in arms produced and planted 1,612,000 new punji stakes and dug 1,200 punji pitfalls.

Moung-Pursat-Koas Kralar

BK241430 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 21 Dec 80

[Excerpt] In November our comrades in arms on the Moung-Pursat-Koas Kralar battlefield, fully supported and assisted by our people, put 158 of the Vietnamese aggressors out of action. We destroyed a truck and an AK, and seized 500 rounds of AK ammunition.

Concerning the system of primitive weapons, we made and planted 94,000 new spikes, dug 450 punji pitfalls, and set 200 automatic bows.

Snipers in Phnom Penh

BK260624 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 25 Dec 80

[Text] On 10 December, our guerrilla snipers shot at Vietnamese troops in Tuol Tapung market in Phnom Penh city, killing two of them.

Long live our courageous guerrillas of the Phnom Penh battlefield!

Destruction of Two Tanks

BK270450 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 24 Dec 80

[Excerpts] On the eastern region battlefield, Memot District, on 15 and 16 December our guerrillas attacked the Vietnamese troops at Toek Chreou and ambushed them while they were moving from Dambe, killing five and wounding two. On 18 December, we attacked the enemy between Phumi Roluos and Phum Dong, setting a truck on fire, killing three and wounding four. We seized a rifle and quantity of documents. In all, in Memot District we killed or wounded 14 enemy troops.

On the Sisophon south of Route 5-Bavel battlefield, on 18 December an SRV truck and two T-54 tanks ran over our mines and were destroyed. Over 10 Vietnamese troops who were riding these truck and tanks were killed.

Enemy 'Routed' From Positions

BK280243 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 24 Dec 80

[Text] After successively attacking the defense system east of the Samlot District office, our armymen and guerrillas besieged the Samlot defense system and the positions between Samlot and Route 10.

From 10 to 17 December, we exerted strong pressure on six positions along the road from Samlot to Route 10 and routed all Vietnamese forces from them. These positions were at O Smach, Khbal Pralean, O Chak Khnea, Khbal Phe Chunlong Pnhiev, Kompot and Dodong. In these positions, we noted foul-smelling waste in the trenches.

During this attack we put 58 enemy troops out of action and destroyed 8 AK's and 3 B-40's. We also destroyed four barracks and a quantity of other materiel. The communication line from the Samlot District office to Route 10 was cut.

Long live the valiant armymen, guerrillas and people on the Samlot battlefield, Battambang Province!

Eastern Region Battlefield

BK020858 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 1 Jan 81

[Except] On the eastern region battlefield, in Memot District, our guerrillas attacked the Vietnamese enemy aggressors at the Phum Roluos barracks and east of Toek Chreou on 20 and 22 December respectively, killing five and wounding four. In Snuol District, they attacked the Vietnamese east of Snuol on 20 December, killing two and wounding four.

Attack at Sisophon Battlefield

BK020900 (Clandestine) Voice of Democratic Kampuchea in Cambodian to Kampuchea 2330 GMT 1 Jan 81

[Text] From 26 to 29 December some 3,000 Vietnamese troops escorted by 6 tanks and several 105mm and 130mm cannons launched an operation in an attempt to wrestle (Phum Ta Pum) in Sisophon District, south of Route 5, back from us. Our army and guerrillas attached to the Sisophon battlefield south of Route 5 split into small groups to attack the Vietnamese aggressors from every direction. After 3 days and nights of fierce fighting, we killed 137 Vietnamese troops, wounded 129 others--a total of 266 casualties--and destroyed 2 tanks, completely blocking the advance of the enemy. We seized a large quantity of assorted weapons, ammunition and war materiel. Our army and guerrillas are continuing to smash the Vietnamese enemy operation.

Long live our courageous army, guerrillas and people of the Sisophon battlefield south of Route 5!

PRK LEADERS STRESS INCREASING LITERACY

Heng Samrin at Meeting

BK290644 Phnom Penh SPK in French 1430 GMT 26 Dec 80

[Text] Phnom Penh, 26 Dec (SPK)--A meeting held by the Ministry of Education to review the anti-illiteracy campaign ended on Tuesday [23 December] in the presence of several ministers and vice ministers. Heng Samrin, president of the KNUFNS and KPRC and chairman of the Central Anti-Illiteracy Campaign Committee, was also present.

In his report, Minister of Education Chan Ven revealed that some 471,260 adults have attended 14,313 illiteracy elimination classes. Throughout the country there are 20 teachers' schools, 1,443 level-II and level-III teachers, 22,000 level-I teachers and 20,118 retrained teachers, the minister pointed out.

Speaking at the meeting, President Heng Samrin stressed that the KNUFNS and KPRC have paid proper attention to mass education work and called on the cadres of the Central Anti-Illiteracy Committee to do their best to make the 3-year anti-illiteracy plan a success.

Minister of Information, Press and Culture Keo Chanda highly appraised the initial successes of the campaign and praised the great efforts of both teachers and the people.

Literacy, Pedagogic Congress

BK271402 Phnom Penh Domestic Service in Cambodian 0400 GMT 24 Dec 80

[Text] On the afternoon of 23 December a ceremony closing the literacy and pedagogic congress was held at the Phnum Don Penh High School in the presence of Comrade Keo Chanda, minister of information, press and culture, chairman of the national anti-illiteracy committee and high representative of Comrade President Heng Samrin; Comrade Chan Ven, minister of national education and chairman of the Phnom Penh Municipal People's Revolutionary Committee; and Comrade Men Chhan, minister of agriculture. Also attending as guests of honor were comrade vice ministers, the comrade chairman of the Kampuchean Youth Association for National Salvation, comrade cadres and

personnel of various offices and ministries under the central organization, comrade cadres from all provinces in the PRK and several comrade Vietnamese experts. The participation of pioneer youths further heightened the solemnity of the ceremony.

On this occasion, the comrade minister of national education delivered a detailed speech summing up the work of the literacy and pedagogic congress. He said that the main points of literacy reported on by provincial and municipal delegates drew the attention of the congress to the key procedures for motivating and exhorting illiterate people to attend courses and the instructors to teach them. He stressed that the illiteracy eradication effort was a revolutionary duty, meaning that this campaign should be carried out indefinitely. Therefore, you must learn in order to gain approval from the higher authorities and to improve your own livelihood as well as to avoid personal shame, he said. In order to improve the revolutionary process, our duty is to fight against the three basic enemies--namely, the aggressors, famine and ignorance. Your study, he stressed, is a show of gratitude to the front, and a show of affection for the KNUFNS. To make your study successful, the comrade minister emphasized, the provincial and municipal committees should issue circulars and other notices to their subordinates so that literacy courses are opened everywhere and that literate heads of production solidarity groups capable of teaching are appointed literacy course instructors in order to facilitate the assembling of pupils and the scheduling of courses at the convenience of the pupils to ensure their punctuality. Regarding the technique of classifying pupils, the comrade said that the pupils should be classified according to their age in order to avoid reticence among them.

In conclusion, the comrade stressed: On behalf of the Education Ministry, I sincerely praise all of you for making every effort to make our education sector progress rapidly along the socialist educational path.

Later on, after awards were distributed to provincial cadres attending the literacy and pedagogic congress, Comrade Presidium Chairman Keo Chanda made a recommendation to the congress participants coming from all parts of the PRK. The highly significant address of the comrade presidium chairman is as follows:

[Begin recording] Up to the present, the education sector, including general education and adult education, has been gaining great momentum throughout the country. At the same time, however, we should not overlook the question of the quality of knowledge. Therefore, pedagogy is an important matter in our new educational system. It is in this sense that we have opened the pedagogic congress along with the literacy congress. You comrades have discussed scientific and technical ways to promote education and pedagogy along the Marxist-Leninist socialist line, seeking means to make our new educational system truly democratic and revolutionary and to advance it toward genuine socialism. [words indistinct] we are greatly proud of the success of this literacy and pedagogic congress. It is one more success on top of the many brilliant successes we have already achieved in every field. These results eloquently prove that the pure Marxist-Leninist line of our KPRC is strongly supported by national and international circles.

Within a period of only 2 years, many countries have recognized us. This testimony should be enough to convince some other segments of international opinion that the correct policy of our new regime certainly serves national interests and seeks justice, peace, unity, progress and happiness for the people.

Dear friends, it is true that we have won successes, but we should not become complacent because of these successes. On the contrary, we should heighten our revolutionary vigilance in order to be more successful in our tasks of serving the nation. Upon your return, all you comrades should reassess the new duties regarding adult education and pedagogy by convening meetings of anti-illiteracy committees from the provincial to the grassroots level in order to make consultations, discuss questions relating to the people's livelihood and formulate plans to fight illiteracy. Cooperation should be strengthened among all services concerned in order to completely eradicate illiteracy. The question of illiteracy is an important issue. We must combine our forces in order to achieve success. For this reason, the KPRC regards this illiteracy eradication campaign as a major task among the most urgent tasks to be carried out. Therefore, all the educational cadres, personnel and representatives of all offices, ministries, factories, enterprises and associations throughout the country at all echelons should fight, create conditions and provide each other with facilities in order to make the literacy effort a complete success. [words indistinct] various mass organizations, such as trade unions, women's leagues and associations, and youth associations play an important role in promoting adult education.

I am confident that all of you will make this congress a worthwhile effort by making the development of adult education successful. The results of your work will be tabled at the congress to be held by the end of next year. [end recording]

This ceremony ended at 1730 in an excellent atmosphere of cordiality and solidarity.

CSO: 4200

'MOSCOW RADIO' INTERVIEWS PRK'S MEN CHHAN ON AGRICULTURE

BK271129 Moscow Radio in Cambodian to Kampuchea 1330 GMT 20 Dec 80

[Text] The Kampuchean people are exerting efforts gradually to eradicate the consequences left behind by the oppressive claws of the Pol Pot-Ieng Sary regim, stooges of Beijing. One of the most important features in the reconstruction of the devastated national economy is the daily growth of agricultural production.

Our Phnom Penh-based correspondent interviewed Comrade Men Chhan, minister of agriculture of the PRK, who said: among the most urgent tasks of rehabilitation and revival of Kampuchea facing the KNUFNS and KPRC following the liberation of Kampuchea from the claws of the murderous regime, there was at the forefront the task of reactivating agricultural production. The agricultural field of my national economy, like all other fields, was badly damaged, said Comrade Men Chhan. Moreover, during their hasty flight from the country, the Pol Pot elements destroyed all the rice grain and seeds which were stockpiled at that moment in their brutal attempt to starve the populace. For this reason, the first year after liberation was a most difficult year for us. However, thanks to the fraternal assistance of Vietnam, the Soviet Union and other socialist countries, our Kampuchean people were able to stave off the danger of famine.

Now, as the second anniversary of liberation is drawing near, we can say with a legitimate pride that we have achieved great successes and have rebuilt agricultural production. Thanks to the permanent support and encouagement of the KNUFNS and KPRC, in 1980 our rice acreage has been expanded to an adequate extent. Of the targeted 1.5 million hectares of land, 1.3 million hectares have already been sown to rice seeds. In this connection, some provinces have even overfulfilled plans. We expect to harvest 1.5 million tons of unthreshed rice this year. We are confident that, in fact, rice cultivated in Kampuchea will gradually increase in volume. All the successes achieved are not confined to the agricultural field alone. There are many other sectors which are as important to our Kampuchean people such as fisheries and rubber plantations. Our successes in the agricultural field is only a part of the overall achievements of the PRK, a country which is confidently overcoming all hardships in the era of national reconstruction, concluded Comrade Men Chhan.

'TASS' DELEGATION VISITS--Phnom Penh, 19 Dec (SPK)--At the invitation of the press agency of Kampuchea, SPK, a delegation of the Soviet press agency, TASS, led by Kaljo Krell, director of the telegraphic agency of the Soviet Socialist Republic of Estonia, arrived in Phnom Penh today for a friendship visit to Kampuchea. The delegation was welcomed at the airport by Dith Mounty, deputy director general of SPK, and other SPK officials. [Text] [BK200620 Phnom Penh SPK in French 1432 GMT 19 Dec 80] Phnom Penh, 29 Dec (SPK)--The delegation of the Soviet press agency, TASS, led by Kaljo Krell, director of the telegraphic agency of the Soviet Socialist Republic of Estonia, left Phnom Penh on Monday [29 December], ending its 10-day visit to Kampuchea. On hand to see the delegation off were Em Saman and Dith Mounty, deputy directors general, and other personnel of SPK. While in Kampuchea, the delegation was

cordially received by Minister of Information, Press and Culture Keo Chanda and SPK deputy director general Em Saman. The Soviet guests visited the Toul Sleng Prison, the National Museum, the ancient Royal Palace, the Kompong Speu Orphanage and a textile mill in Phnom Penh and attended a reception given in their honor by the SPK management. [Text] [BK300955 Phnom Penh SPK in French 1436 GMT 29 Dec 80]

SRV WOMEN'S UNION CONGRATULATED--Phnom Penh, 23 Dec (SPK)--On the occasion of the 36th founding anniversary of the VPA, Mrs Mean Saman, chairperson of the Kampuchea Women's Association for National Salvation Central Committee, has sent a message to Mrs Nguyen Thi Dinh, chairperson of the Vietnam Women's Union, expressing her gratitude to Vietnamese mothers and spouses whose sons and husbands have taken part in the liberation and defense of the Kampuchean people. On the same occasion, Mrs Mean Saman has sent a message of congratulations to the Vietnamese combatants. The message expressed the admiration of the Kampuchean Women's Association for the Vietnamese combatants' spirit of proletarian internationalism and its profound gratitude to those who have sacrificed themselves for the life and security of Kampucheans and for Kampuchea's revolutionary cause. [Text] [BK230936 Phnom Penh SPK in French 0359 GMT 23 Dec 80]

ARMY AUTOMOBILE REPAIR WORKSHOP--Phnom Penh, 19 Dec (SPK)--An army automobile repair workshop in Tuolkouk, Phnom Penh, was inaugurated on Monday [15 December] in the presence of Di Phin, chief of the General Logistics Department of KPRAF. Speaking at the occasion, Di Phin stressed the great contributions made by the party, government and people of Vietnam, in particular, the cadres and workers of Vietnam People's Army Factory 2,715, for the restoration of the KPRAF logistical units. He also praised the efforts made by Kampuchean military officials in recovering and repairing damaged machinery. Di Phin thanked the personnel of factory 2,715 for the sympathy, militant solidarity and friendship accorded to its twin factories in Kampuchea. [Text] [BK200658 Phnom Penh SPK in French 1430 GMT 19 Dec 80]

BREZHNEV, TIKHONOV RECEIVE GREETINGS--On 9 December, Comrade Leonid Brezhnev, secretary general of the CPSU Central Committee and chairman of the Presidium of the USSR Supreme Soviet, and Comrade Nicolay Tikhonov, chairman of the USSR Council of Ministers, sent a thank-you message to Comrade President Heng Samrin. The message reads: We extend our deepest thanks to you for your warm greetings and sincere wishes on the occasion of the 63d anniversary of the Great October Socialist Revolution. Based on the principles of Leninism and proletarian internationalism, the Soviet Union has pledged to further strengthen the relations of friendship with your country for the benefit of the Soviet and Kampuchean peoples and for enhancing peace and stability in Southeast Asia and in the world. We wish the heroic Kampuchean people greater successes in reviving the nation and in building a peaceful, free, independent and Democratic Kampuchea and in advancing toward socialism. [Text] [BK200923 Phnom Penh Domestic Service in Cambodian 0400 GMT 17 Dec 80]

INDIAN ARCHEOLOGY DELEGATION--From 14 to 24 November, a three-member Indian delegation in archeology paid a visit to the PRK in order to conduct an investigation on and prepare a plan for repair and protection of the ancient temples. The delegation visited the ruins in Siem Reap Province and called at the minister of information, culture and press and chairman of the board of directors for the conservation of national heritage. A memorandum was signed to pave the way for future action between the Indian and Kampuchean governments. [Phnom Penh Domestic Service in Cambodian 1100 GMT 6 Dec 80 BK]

CINEMATOGRAPHIC DELEGATION RETURNS--According to a station correspondent, after successfully taking part in the movie festival held from 21 to 28 November in Leipzig, the GDR, the PRK cinematographic delegation led by Comrade Mau Ayut, deputy head of the cinematographic directorate of the Ministry of Information, Culture and Press, returned to Pochentong Airport safely at 1130 on 12 December. At the airport the delegation was cordially greeted by Comrade (Soen Kun), chief of the foreign cultural relations service, many cadres and personnel of the ministry's cinematographic directorate. ENEMIES OF LPDR, STATUS OF SRV TROOPS IN PRK DISCUSSED

Vientiane SIANG PASASON in Lao 4 Oct 80 p 2

[Article in "Letters Answered" Column]

[Excerpt] [Question] Who are our enemies at present?

[Answer] The Party Central Committee Resolution 7 identified the nation's enemy as primarily imperialist America. A dangerous enemy directly opposed to our revolution is the reactionary Beijing power holders.

[Question] To the editor. What is the objective and the target of the Vietnamese troops in Kampuchea? The imperialist and international reactionary groups speak of this matter continuously. Please take time to explain this to me. Bouakeo, worker, Vientiane Port.

[Answer] The Vietnamese troops in Kampuchea are acting at the request for aid by the Kampuchean People's Revolutionary Council to wipe out the "Pol Pot-Ieng Sary" remnants and lackeys of the Beijing power holders. This is in accordance with the treaty of friendship, peace, and cooperation that both parties signed. Both nations have fallen victim to the same aggression from outside and have the same enemy. Therefore, it can be said that the Vietnamese soldiers are fighting the enemy in Kampuchea or in the northern part of Vietnam itself. They are fighting the doctrine of Chinese big-nation expansionism.

Vietnam sent troops to Kampuchea not to invade, as the Chinese big-nation expansionists and the imperialists have said. We look at history and recognize the problem very clearly. The Vietnamese forces entered Kampuchea on this occasion, not for the first time but for the third time. The first time was to oppose French colonialists. The French were defeated. The Vietnamese soldiers returned to their own land. The second time was to fight American imperialism. After America was defeated, the troops went back to Vietnam. The third time was to confront Chinese big-nation expansionism. When China ceases to conspire with imperialists in support of the Pol Pot-Ieng Sary remnants and the Khmer reactionary faction, Vietnam is ready to withdraw its troops to return home.

The past is like the present. The imperialists and international reactionary forces have propagandized falsely, slandered, and repeatedly misrepresented the facts about Kampuchea and all the nations in Indochina. They act as people of good will and with concern for bringing peace in this region. They speak only of Vietnamese troops but they do not address what occurred before the Vietnamese troops entered Kampuchea.

The progressive peoples of the world will not forget that 3 million Kampuchean people perished and the social and economic base was destroyed. Why? Who caused it? On this subject children without knowing the situation thoroughly understand and recognize that it was the Chinese power holders. At the time of the American war of aggression in Indochina, the American imperialists punished the Kampuchean people without limit.

The American shells and B 52 bombs became the painful sears and wounds that the Kampuchean people suffer right up to now. Looking at the world in broad terms, we see that America has built more than 200 military bases throughout the world. For what purpose? If not for aggression, it is to threaten peace and for the rights and benefit of American capitalists in taking everything for themselves. On the contrary they do not talk of withdrawing troops from those military bases. Therefore, the fact that they slander and press demands against the Vietnamese troops in Kampuchea is not unexpected. But these are the words of people who are on the losing side.

COLUMNIST STATES HOPES FOR GOOD RELATIONS WITH THAIS

Vientiane VIENTIANE MAI in Lao 17 Oct 80 pp 2, 4

[Article in 'Talking Together' column: "Good Will Can Never Spoil" by Thipthieng-chan]

[Text] On 11 October 1980 Phao Phimmachan, [as published], chairman of the Vientiane Province administrative committee, sent a letter of invitation to Kuson Santitham, governor of Nong Khai. In this letter he stated as follows. "I have received your letter NKh 25/17665 of 4 October 1980 sent to Vientiane Province and am pleased that you, the governor of Nong Khai Province, have invited Vientiane Province to join in consultation on the boat races for 1980, for which Nong Khai will be the host." The letter of invitation continued: "to develop and revive the fine relationship of solidarity between Vientiane Province and Nong Khai Province to its former status I again invite you and your delegation to visit Vientiane because on several occasions I with my group have visited Nong Khai on your invitation. On 25 March 1980 and on 27 June 1980 I myself invited you and your committee to come to Vientiane by oral communication. Then I sent an official letter No 1370, Vientiane Province, 19 June 1980 and No 1472, 2 July 1980, but you did not reply."

The letter closed with "I hope that you and your committee will visit Vientiane Province at this invitation."

It is generally known that the friendly relationship between Laos and Thailand in general and between Vientiane and Nong Khai in particular, was broken in June 1980, because the ultra-rightist reactionaries, Beijing's henchmen caused confusion and destruction in order to damage the friendly relationship between the Lao and Thai people. Although the tense border conditions and relations on both sides became even more seriously clouded, with the good will of the Lao and to operate in conformity with the spirit of the joint Lao-Thai communique, signed by Kaysone Phomvihan and General Kriangsak Chamanan in 1979, in particular for Vientiane Province in June 1980, Phao Phimmachan [as published], chairman of the Vientiane Province administrative committee, in his capacity as the chief of the Border Commission, went to Nong Khai to discuss and to rectify the quarrels and murky disputes, to answer the aspirations of the peoples of both sides. Not only that but Phao Phimmachan also issued an oral invitation and a letter directly to the governor of Nong Khai Province to visit Vientiane. His purpose was to seek ways to resolve the obscure contentions that had arisen from the unilateral actions of the ultra-rightist [illegible] of Beijing and to restore normal relations. But he did not receive an answer from [illegible] Thai. However, with the good intentions of [illegible]tiane Province toward Nong Khai Province, once again Phao Phimmachan sent a letter of invitation to Kuson Santitham to ask him to come to Vientiane. The substance of the letter was given above.

Certainly this would be one more crystal-clear demonstration of good will of the Lao, particularly Vientiane Province, who at all times seeks a means to boldly resolve the various quarrels and restore normal conditions, to answer the aspirations of the Lao and Thai peoples, and to follow the joint communique of the two governments signed in 1979.

Vientiane Province and Nong Khai Province have territory that is almost contiguous, separated by the Mekong River. The Mekong can be compared to the blood of the peoples of both sides. It is a river of peace. The peoples from both banks from ancient times considered it a source of mutual livelihood. There never was any ill feeling or distrust. Both sides are of the same family. They have similar beautiful traditions and customs continuing from long ago and no enemy has been able to fracture their solidarity and friendship.

The Lao and Thai people, and particularly those of Vientiane and Nong Khai recall the incident of last year very well. That day the friendship of the two sides bloomed like a shinning star, like the sun that appears at dawn. The rays overcame the darkness of dogma [lattikan] by their brightness. Lao-Thai friendship opened up. The Mekong River at that time was a witness. The current of friendship opened its arms to the rowboats of both sides, Lao and Thai, cheering and hailing each other. Both sides were full of enthusiasm, smiling faces, showing a spirit of friendship. Every one of us Lao is proud of this friendly relationship and praises tirelessly the results of the friendship agreement that is being brought back to bloom. We feel that the tears of gladness glad to show the true spirit of the Thai people sitting on the dias at Wat Khok Nin. These sounds of joy are buried deeply in our hearts. The Mekong is an excellent witness to the cordiality and friendship of our two peoples. Situations pass away like the flow of the river, but in our hearts we bear and remember. We long for and hope in those things that join us in peace, friendship as neighbors and brothers.

This incident occurred a year ago. Our feelings are the same as if it had been an hour. We still hope and wait with attentive spirit. The energy of hope in the hearts of the Lao-Thai brothers will truly have fruitful results when the Thai accept the proposal with the good intentions of the Lao through the letter of invitation from Phao Phimmachan. Only then will the dark clouds become bright and Lao-Thai friendship will be serene as the Beijing lackey ultra-rightist reactionaries disappear from Thailand.

LAO-THAI AGREEMENT ON ELECTRICITY PURCHASES NOTED

Vientiane VIENTIANE MAI in Lao 18 Oct 80 pp 1, 4

[Text] On 16 October 1980 the Electricity Generating Authority of Thailand [EGAT] representatives, with Kasem Chatikawanit, EGAT director as chief, paid a friendly visit to Vientiane at the invitation of the director of the Lao Electric Company to attend a conference on the problem of the sale of electricity between the two electricity authorities of Laos and Thailand.

The consultative conference opened at 1500 hours on 16 October and continued until the morning of 17 October 1980 at the auditorium of the Lao Electric Company.

Khammon Phonkeo, director of the Lao Electric Company, was the leader of the Lao delegation, while Kasem Chatikawanit, EGAT director, was head of the Thai group.

On this occasion Khammon Phonkeo spoke of the purpose of meeting together, referring to the good relations between the two organizations. However, in the recent past world economic conditions have changed and [prices] have become very high, the Lao are proposing to the Thai a change in the price of electricity that Laos furnishes to Thailand, to conform to the new situation and the spirit of the joint Lao-Thai communique, with equity for both and to their mutual advantage.

Kasem Chatikawanit expressed pleasure on their visit to Vientiane to discuss electricity with the Lao delegation at this time, along with stating his deep appreciation for the warm welcome by their close Lao neighbors, mentioning the continual history of good relations between the Lao and Thai electricity organizations. After frank discussion the two sides agreed as follows.

1. The Lao Electricity Authority is pleased to sell as much electricity as it can and the Thai Authority is ready to purchase electricity from Laos after the expiration of the present agreement, by making a new agreement.

2. The Thai authority will purchase an increased amount of electricity from Laos after the Lao authority has installed a new generator, the fifth one, at the Nam Ngeum Dam.

3. Since at present international organizations are doing research on the cost of installing the fifth unit at Nam Ngeum Dam and research on the data and various figures concerning EGAT, both sides agree to take the research data of the international organization for study as a reference in deciding the new price of electricity that Laos will sell to Thailand.

4. In the event the international organization gives the data before the expiration of the present treaty, that is, before November 1980, both sides agree to meet for negotiation at a suitable time, with the approval of their respective governments, to draw up a new purchase agreement to replace the present one, although the present agreement has not yet expired and is still in force.

The EGAT delegation which came to Laos returned to Thailand in the afternoon of 17 October 1980.

MEMORANDUM REFUTES THAI FEARS OF ELECTRICITY CUTOFF

Vientiane VIENTIANE MAI in Lao 21 Oct 80 p 2

[Text] On 16-17 October 1980 the delegation of the Electricity Generating Authority of Thailand [EGAT], led by Kasem Chatikawanit the director, came to Vientiane at the invitation of the head of the Lao Electric Company to attend a consultative conference on problems of interest to both parties, which concern the sale of electricity between the two organizations.

Both parties reviewed various problems that remain, particularly the adjustment of the price rate structure according to the supplementary agreement signed at Bangkok, Thailand, 6 October 1975, to preserve the fairness and equality for each side to receive mutual benefit, conforming to the new conditions and in the spirit of the joint Lao-Thai communique.

At the same time both sides are prepared to study a new sales agreement to replace the old one which expires at the end of 1980. A summary of the substance of that agreement follows.

The Lao Electric Company is pleased to continue the sale of electricity it produces to Thailand, according to the agreement. In addition the Lao Electric Company has arranged for the installation of the fifth electric generator at Nam Ngeum Dam to distribute electricity for sale to Thailand according to demand. The Thai will continue to purchase electricity from Laos and are pleased to buy more, after the installation of the fifth new generator at Nam Ngeum Dam is completed and put into operation.

There were other questions which the Lao Electric Company and EGAT agreed upon, such as cooperation on a draft agreement that both sides would submit to their respective governments. The agreement that the Lao Electric Company proposed to EGAT received unanimous approval. The Thai expressed their appreciation for the visit to Laos and the joint study of problems relating to electricity with the Lao, which created warmth, satisfaction and a good relationship based on being brothers and neighbors. They praised the Lao who received the Thai delegation with honor.

In addition to consultation and signing the agreement for the sale of electricity, the Thai delegation fruitfully considered their past cooperation and looked to the future with confidence. An EGAT representative gave an interview to Lao press and radio representatives emphasizing the cooperation of both organizations which facilitated these proceedings in every instance. The Lao have arranged to sell electricity to Thailand as usual on a continuing basis.

Previous distorted propaganda and slanderous Thai mass media reports that Laos would cut off the electricity sent to Thailand were meant to create problems between Laos and Thailand. The answer given by the EGAT representative in response follows.

"The reports issued by the Thai mass media that Laos would cut off electricity sold to Thailand is, I believe, a misunderstanding. Good understanding sometimes is misrepresented in other matters and is of no benefit. As for the rumor that Laos would cut off electricity published in the Thai press, I myself informed the Thai press and think that it was a misunderstanding. This report had no basis in fact but was simply a fabrication by some elements of the media and some people. The cooperation between the Lao Electric Company and EGAT has been excellent because the sale of electricity is beneficial for both sides. We think there will be no further obstacles."

After the interview the host arranged a reception and proposed a toast to unity and success in the meetings of the two groups. At 1030 hours the delegation returned home.

HATSAIFONG FLOOD LOSSES DESCRIBED

Vientiane SIANG PASASON in Lao 26 Sep 80 p 2

[Excerpt] Foodstuffs that all the people in the Hatsaifong District area worked hard to produce in the cultivation season this year were first rice, then sugarcane, beans, hot peppers, eggplant, and other crops. An estimate of the losses from the floods this year throughout Hatsaifong District, affected more than other locales in Vientiane City-Province, was, of the total 6,272.5 hectares planted in rice, about 1,581.5 hectares or 25.21 percent. The figures for loss in this year's flood, compared to past years, were at a much lower level, because both the party and state were concerned and kept in close touch by rallying a group to fight the flood vigorously and promptly, to meet the situation. This group consisted of all the soldiers, cadres, the irrigation technicians, workers, organization workers from ministries, sections, departments, and factories at various places throughout the province. The Vientiane Municipality joined with the local administrative authorities and the people of Hatsaifong District. They put forth effort, fighting against time and current, to save the crops that were disappearing, along with dispersing the water that flowed in, to give a better life for a new day to come.

To compensate for the losses from this natural disaster Comrade Saiphon Nolavong, Hatsaifong District Agricultural Service Committee, stated that the district agricultural service was undertaking three major actions: surveying the loss after the flood, mobilizing the people in the disaster area to plant replacement crops, or preparing and expediting the transplanting of a second crop of rice, or preparing dry season rice fields, such as in Sithan Tai Canton, Sala Kham Canton, Ban Hom Canton, and Pho Si Canton. Along with this, in order to meet the threat of plant pests that might arise in the flooded area, the district agricultural service prepared insecticides, sprayers, oil, and cadres to combat the pests in time. Especially in Hatsaifong District our people had anti-pest units assigned to the Sala Kham Rice Experimental Center, which were on alert at all times. Those who went to mobilize the people planting replacement crops or for transplanting a second crop of rice, or preparing dry season rice fields, were cadres of the intensive agricultural program joinung with the Mobilization Committee and the administrative authority of each locality. According to the plan that the district issued for planting in the coming dry season, they will rally the people to plant dry season rice to raise the living standard, plant tobacco to supply the Lao Tobacco Factory, plant corn to supply the Tha Ngon Animal Food Factory. In Sala Kham Canton alone, according to the records which that canton committee forwarded,

eight villages that reported they will work dry rice fields have a total of 376 households as members, working 174 hectares of rice fields. However, the district still will have to survey first the actual conditions in each place, in order to study what produce is suitable for each locale, in what form, or determine whether any place ought to pursue agriculture, to act in accord with the substance of the spirit of Resolution 7 of the Party Central Committee.

FINANCE MINISTRY REVEALS SHORTAGES OF FUNDS FOR SALARY PAYMENTS

Vientiane VIENTIANE MAI in Lao 3 Oct 80 p 1

[Text] In many provinces and regions the payment of salaries to all the state cadres, especially the cadres who work in scattered locales, such as teachers, and particularly for these teachers, has a bad effect on their morale, their living standards, and their teaching.

After research and inquiry into the reasons for the delays in payment the Finance Ministry advised the provincial finance departments and the provincial education departments to take the following remedial steps.

1. The Standing Committee of the Council of Ministers is of the opinion that in cases where the provinces' budgeted income is not sufficient to pay salaries, all the state cadres in that province will draw funds for national defense and for teacher pay first.

2. Where the revenue is inadequate the provincial administrative committee is authorized to borrow in advance funds from the provincial bank to pay for national defense and for the teachers.

3. The solution to the cash funds must receive immediate attention. If the cash received at the bank is not enough for the payments, the provincial administrative committee has the duty and must help encourage the flow of cash into the bank as the highest priority. The bank then will be asked to issue payment.

4. In keeping records for disbursements, to avoid red tape, follow these procedures.

--Once every 3 months the principal of the school makes a list of names of those to be paid monthly. Then he submits it to the province.

--The chief of the provincial education department, the budget chief for the provincial education department, and the chief of the provincial finance department, sign in acknowledgment and consider this document the basis for authorization of salary payments.

--The provincial bank will designate a bank branch to receive funds and will write this agreement on the withdrawal account.

5. At the beginning of the month or term, for teachers in remote areas each person will receive his salary at the designated bank branch. In emergency circumstances he must give a letter of authorization to another person to accept in his stead, on each occasion, the salary due. If the school principal receives the salaries for all, he must have a letter of authorization from each person, for each occasion, likewise. When he has received the money, he is prohibited from using those funds for any other purpose. He must turn the money over to each teacher.

This order will be in effect as of the beginning of September 1980.

Vientiane 29 August 1980
Deputy Minister of Finance

Signed and sealed Boutsabong Savannavong

PROBLEM AREAS OF RURAL TRADE, FOREIGN STUDY, FOOD SHORTAGES DISCUSSED

Vientiane NOUM LAO in Lao, No 42 15 Sep-1 Oct 80 pp 4, 13, 16

['Answers to Letters' Column]

[Excerpts] [Question] What is our state doing to distribute goods to improve the living standards of the people in rural areas everywhere?

[Answer] In reference to the movement and distribution of goods it is necessary to speak of routes and vehicles. According to the policy and decisions of the upper echelon that were just issued, the communication routes that are militarily strategic and important are built by the state. The roads between local areas are controlled by those areas, with the state giving aid as needed. The means of transportation that we must depend on in the final analysis are such that we have, cars, carts, wagons, horses, boats. But there is the problem that our people must move from the mountains in remote areas to settle on the plains or along the rivers for convenience in building communications routes. Another matter for the local administration organizations is that the trade cadres must be concerned for the people in distant regions. If we understand this and act, we could be able to gradually correct the situation.

[Question] Not very many students from rural areas have gone to study abroad. The authorities make the criticism that they don't have enough education. How can they when there is only an elementary grade school? Therefore in some areas people do not want their children to further their schooling because then cannot go anywhere to study.

[Question] Some rural areas have food and goods shortages, but we think that the leadership in these places have not given sufficient attention to the matter.

[Answer] When students are sent abroad to study or take specialized subjects, the educational level is a vital problem, but more important is that the job requires that person to acquire knowledge to use in his work. In each province there is an upper secondary school. The districts have secondary schools, with two or three exceptions. When a pupil completes elementary school, he continues at secondary and upper secondary school. When he does not study abroad after graduation, he continues at the university or technical schools. There are still many important fields. Isn't that so, comrade? Therefore, you shouldn't raise the issue that although one studies, one can go nowhere, thus clouding the future of their children. If it is done that way, it would be a great mistake. Right, comrade?

[Answer] Since the destruction caused by ruinous natural disasters, the people have resettled. If any place still has a shortage of food or necessities without reason, it is because there is little liaison. The people are not yet in control of production, because the leadership in local areas lacks close contact and fails to guide their people in raising their living standards.

USE OF PRIVATE TRADERS BOOSTS PRODUCTION AT GARMENT FACTORIES

Vientiane VIENTIANE MAI in Lao 26 Sep 80 pp 1, 4

[Text] According to the report of Comrade Soulivong, Committee for Garment Factories, under the Vientiane City-Province Industry and Trade Service, since 1 September 1980 the garment factories consolidated various sections and work units to conform with the performance standards of an independent enterprise. As owners they aimed at doubling their capability and expanded production day by day to a higher level in order to meet society's demands sufficiently and on time.

Only a short time after the improvement they have increased tremendously their production capacity in every garment factory. Before the improvement of the garment factory they were able to make only some 4,000 garments of various types a month, averaging 33 per worker per month, but afterwards in a period of over 20 days they were able to produce more than 10,000 sets of work clothing, school uniforms, business suits, and a variety of ready-made clothing. In this amount there were 60 ready-made business suits and more than 10,000 trousers, jackets, and work clothes. Therefore, if a worker could raise his average output to 60-80 pieces a month, for one day it was a triple increase in production.

Comrade Soulivong reiterated that besides the factory production they have put private traders under contract to make various garments. On this basis both parties have reaped great benefits. Thus the factory production capacity expanded greatly ansering fully and continually the mass desires and needs.

At present the state garment factory cadres and workers in Vientiane City-Province have raised their morale as factory owners and have concentrated their efforts on making goods to serve students and workers. They have produced 60,000 ready-made garments in enthusiastic endeavor. Their purpose was to score achievements for the celebration of the fifth anniversary of National Day on 2 December.

BRIEFS

NAM SOUANG IRRIGATION WORKS--In the first 6 months of 1980 all the workers of Construction Company 1, Department of Irrigation, Ministry of Agriculture, Forestry, and Irrigation, scored achievements with excellent results in welcoming National Day. In that period in actual performance they were able to complete 40 percent of the construction work on the Nam Souang Reservoir Irrigation Works. They dug 150,000 cubic meters of canal, covered the dam with 242,483.69 cubic meters of dirt, excavated 58,762.68 cubic meters of canals, dug 23,958.63 cubic meters of dirt from canals, screened 2,000 cubic meters of stone and sand, planted 1,500 cubic meters in grass, excavated 24,390 cubic meters for the base of the dam, and dug up 7,98..66 cubic meters of rock [as published]. In working with reinforced concrete, they put in 423 cubic meters, and made concrete support pillars for a bridge amounting to 132.52 cubic meters. At present the workers continue to strive in their specialized tasks determined to complete the Nam Souang construction project quickly. [Text] [Vientiane VIENTIANE MAI in Lao 26 Sep 80 pp 1, 4] 9615

NAIL FACTORY PRODUCTION--In the first 6 months of 1980 the workers of the nail production unit under the Lao Industrial Factory, Vientiane Industry and Trade Service, performed their specialized tasks enthusiastically and scored achievements with great success to welcome the National Day. During this period they were able to produce nails of various kinds as follows: 2.784 tons of size 15 nails, 3.537 tons of size 12 nails, 1.794 tons of size 10 nails, 5.115 tons of size 6 nails, 0.093 tons of size 5 nails, 0.093 tons of size 4 nails, 0.923 tons of size 3 nails, 1.023 tons of size 2 nails. These are used in construction throughout the country. The workers are now striving to fulfill the plan for the last 6 months of the year and exceed the estimated target. [Text] [Vientiane VIENTIANE MAI in Lao 29 Sep 80 p 1] 9615

ELECTRICITY PRODUCTION--From January to August 1980 all the workers of the Lao Electric Company, which is under the Ministry of Industry and Trade, raised their sense of responsibility on their jobs to achieve splendid results. In this period they were able to produce at the Nam Ngum Dam 546,798,280 kilowatt hours of electricity. They distributed a total of 208,331,500 kilowatt hours and completed 98 percent of the expansion of the network from Km Post 21 (Paksan) to Nabong, a distance of 12 km, in order to serve the irrigation system. They finished five percent of the work from Nabong to Naphok, 15,88 percent complete to the Land Control Department, a distance of two km, 79 percent to the Administrative Center, a distance of four km, 20 percent to the Veun Kham Agricultural Settlement, a distance of six km. The workers are now continuing to put forth great effort on their specialized tasks with enthusiasm to fulfill the plan for the last 6 months of the year and exceed the target. SRV ART TROUPE--Hanoi, VNA, December 25--The Bong Sen (Lotus) ensemble of Ho Chi Minh City left Vientiane today, concluding its tour of Laos in honour of the fifth anniversary of the founding of the Lao People's Democratic Republic. In its 25-day tour, the ensemble gave 30 performances to audiences totalling forty thousand. Prime Minister Kaysone Phomvihane, secretary general of the People's Revolutionary Party Central Committee; chairman Souphanouvong, president of the People's Supreme Assembly; and other high-ranking Lao officials attended the first performance. The ensemble's tour included performances in the southern province of Champassak, and at army units and factories. [Text] [OW251651 Hanoi VNA in English 1539 GMT 25 Dec 80]

HOUAI SAI POPULATION STATISTICS--Houai Sai is one of the several district towns of Luang Namtha Province. Houai Sai District has a contiguous border with Thailand. Its population exceeds 20,000 persons. [Excerpts] [Vientiane SIANG PASASON in Lao 14 Oct 80 p 2] 9615

GYPSUM MINING--Vientiane (KPL). At the end of September all the workers of the Dong Hene Gypsum mine, Savannakhet Province, began in competition to score achievements to celebrate the fifth anniversary of National Day on 2 December with enthusiastic endeavor. The gypsum mine in Savannakhet Province started experimental production from the end of March 1980. In the past period all the workers united their efforts with full alertness in production, so that their productive capacity continually increased day by day. In scoring achievements to welcome National Day on 2 December they set for themselves an estimated goal. Along with production they strove to open up the surface of the ground to achieve greater production. Up to now they have excavated 10,000 cubic meters. [Text] [Vientiane KHAOSAN PATHET LAO in Lao 4 Oct 80 p A5] 9615

TEXTILE PRODUCTION--From January to September 1980 all the workers at the Phon Sa-at textile factory, which is under the Vientiane City and Province Trade Service, scored excellent achievements. During this period they were able to produce cloth and knitted goods exceeding their estimated goal: 16,404.87 meters of cloth, exceeding the plan's goal by 19 percent; 3,888 striped skirts; 1,215 "khan" skirts; 140 flower patterned skirts; 12 silk skirts; 807 sarongs; 886 bath cloths; 4,729.67 meters of cloth for dressmaking of all kinds, with a value of 288,400.31 kip. According to the plan the goal was 3,000 pieces of embroidered and knitted goods, but they were able in fact to produce 9,094. Among these were 771 tablecloths, 81 dish towels, 1,115 cotton bags, 450 shirts, 244 dolls, 67 belts, 256 hats, 552 wood boxes, 1,025 purses, 14 pairs of small shoes, 2.82 embroidered skirt borders [as published], 119 articles of silver, 1,559 pieces of other knitted items, exceeding the estimate by 303 percent. The cadres are now continuing their work joyfully to welcome the fifth anniversary of National Day on 2 December. [Text] [Vientiane VIENTIANE MAI in Lao 17 Oct 80 pp 1, 4] 9615

SAYABOURY TRADE FIGURES--Vientiane (KPL). In 1980 products of Sayaboury District, which it received from the provincial trade company for sale to the people, were valued at 2 million kip. Among these textiles accounted for 70 percent, agricultural tools 10 percent, school supplies 10 percent, and the rest miscellaneous. Besides this they purchased from the people forest products worth 11,683 kip, most of which were nothaphoebe umbelliflora Bl, bamboo, animal bones and valuable hides. They exceeded the estimate of the plan. In 1980 the Trade Service of Sayaboury District established two additional people's cooperative stores. Beginning in 1976 there were

eight people's cooperative stores in the district. The district administrative authorities encouraged many private businessmen to receive their trade rights from the state to sell to the people of the small villages at a distance from the district town at official prices. The trade organization of the district appointed cadres to buy and sell, going not less than four times a year to various rural areas. So it made possible the flow of goods into the hands of all the people who live in remote places. Every person could buy, sell, or exchange goods with others everywhere. Thus they were able to fulfill the plan beyond the estimate. [Text] [Vientiane KHAOSAN PATHET LAO in Lao 16 Oct 80 p A4] 9615

SAYABOURY LUMBER EXPORTS--Vientiane (KPL). From the beginning of the year to September 1980 the sawmill at Pak Lai District, Sayaboury Province, produced 1,755 cubic meters of finished lumber. In the spirit of emulation the more than 70 workers in the sawmill scored achievements. In the past 5 years the Pak Lai District sawmill had an important role in the development and building of the new regime, consisting of the construction of a hospital, school, rice warehouse, and shops. It exported lumber, to exchange for imported products. It sold wood to the people for a great deal of housing. [Excerpts] [Vientiane KHAOSAN PATHET LAO in Lao 16 Oct 80 p A2] 9615

SAVANNAKHET LUMBER PRODUCTION--Vientiane (KPL). From the beginning of the year to the present all the workers at Sawmill No 6, Savannakhet Province, put forth effort to fulfill the production plan: 1,159,426 cubic meters of finished lumber. In this amount were 993,825 cubic meters of softwood. Sold domestically and abroad were 1,102,589 cubic meters, which brought good revenue to the local area. The sawmill workers are now determined to produce much more than formerly to score achievements in welcoming the fifth anniversary of National Day on 2 December with enthusiasm. VIETNAMESE IRRIGATION DELEGATION--Vientiane, 29 Dec (KPL)--A delegation from the Socialist Republic of Vietnam headed by vice-minister of irrigation, Dinh Gia Khanh, on December 27 arrived here for a friendship visit. Welcoming the delegation at the Wattai Airport were Khamphet Phommavan, vice-minister of agriculture, forestry and irrigation and other high-ranking officials. Dam Xuan Dung, economic counsellor of the Vietnamese Embassy to Laos, was also present at the airport. During its visit to Laos, the delegation will review the implementation of the cooperation in the field of irrigation between Laos and Vietnam in 1980 and will map out the programme of cooperation for 1981. LAO RESIDENTS IN FRANCE--Vientiane, 26 Dec (KPL)--The Central Committee of the Lao People's Revolutionary Youth Union [LPRYU], on December 24 held here a reception in honour of the delegation of the Union of Lao Residents in France, led by its secretary general Sithamma. Among those present at the reception were Thonglai Kommasit, president of the LPRYU CC, and Souvannalat Saingavong, vice secretary general of the People's Supreme Assembly. Speaking on the occasion, Sithamma expressed his joy over the great achievements gained by the Lao people of all nationalities in national construction and defence under the clearsighted leadership of the Lao People's Revolutionary Party Central Committee and the government of the Lao People's Democratic Republic. He said that he has witnessed with his own eyes the tasks carried by the Lao people for leading the motherland towards prosperity and socialism. "Everything is completely different from the fabrications made by the Lao reactionaries living in France," Sithamma said. The head of the visiting delegation of the Union of Lao Residents in France also told the participants about the living conditions of Lao refugees in France which he said are conducted under the oppression of the French capitalists. CPM NEW YEAR MESSAGE BROADCAST

BK021535 (Clandestine) Voice of the Malayan Revolution in Malay to Malaysia and Singapore 1030 GMT 1 Jan 81

[Communist Party of Malaya Central Committee's New Year Message]

[Text] In conjunction with the arrival of 1981, the Party Central Committee and Comrade Chin Peng extend their warmest greetings and pay their highest tribute to all party members, all commanders and fighters of the Malayan National Liberation Army, all members of various revolutionary mass organizations, revolutionary comrades and patriots who never yield in enemy's jails and to the revolutionary people of all nationalities.

In the past year the Revolutionary Army and people were united in action and scored new achievements on all fronts. Our base areas and guerrilla zones have become more stable and extensive. The struggle launched by workers, peasants and the people of all strata against exploitation and persecution continued to make headway.

On 30 April last year, the Revolutionary Army and people warmly celebrated the 50th anniversary of our party. The CCP and other fraternal parties sent congratulatory cables or letters to our party and highly appraised our party's heroic struggle over the past 50 years. This is a powerful support and great encouragement to our revolutionary struggle.

On 28 April our Party Central Committee issued a programmatic statement entitled: Long Live the Communist Party of Malaya. It reaffirms the party line and program, sums up our past experience, analyzes the present situation, puts forth a specific program for the present time and shows the direction of our struggle in the days ahead.

In the new year, under the guidance of the 28 April statement we should unite all the forces that can be united, actively develop and expand the National Liberation Front, vigorously launch a mass movement and strive to win new victories in the struggle to protect the people's immediate interest and to oppose the Soviet-Vietnamese aggression and expansion.

STATE BANK GOVERNOR REPORTS ON ECONOMIC STATE

Karachi DAWN in English 25 Dec 80 pp 1, 17

[Text]

The State Bank Governor, Mr. A. G. N. Kazi, yesterday said with higher rate of growth achieved in the first four months in agriculture, manufacturing sector and exports, economic outlook for the current year was bright.

Addressing the 29th annual general meeting of the Institute of Bankers in Pakistan, he discussed the progress achieved during the first four months of the current fiscal year in various sectors and noted that overall performance had been satisfactory.

At the very outset, he said it had been customary at the meetings of the Institute to say a few words about the prevailing economic situation. The annual report of the State Bank in respect of the last financial year was published recently and it was not necessary to deal with the past economic performance. He accordingly confined his comments to the recent developments in the current fiscal year.

Mr. Kazi said the Annual Plan for the current year projected an overall growth rate of 6.6 per cent which was in line with the growth actually attained over the last three years.

The target for agricultural growth was five per cent and that of manufacturing 10.6 per cent. So far, by and large, agricultural production had been satisfactory, he noted.

COTTON CROP

Mr. Kazi pointed out that the latest assessments of cotton crop were that the crop would be around 4 million bales which was less than the record crop of last year's 4.3 million bales. Paddy crop was also reasonably good except that in the Punjab both the acreage and production of IRRI rice had gone down. In the circumstances, significant agricultural growth would be attained only if there were exceptionally good harvest of wheat and sugarcane crops.

Referring to industrial production, he said the position was that the figure for the first four months showed a satisfactory growth.

Mr. Kazi said, "Even our chronically sick textile industry recorded a growth of 10 per cent as compared to corresponding period of last year."

Due to completion of major fertilizer projects, the output of fertilizer had increased by 23 per cent. Cement production had gone up by 10 per cent, cigarettes 11 per cent, paper-board and chip-board by 10 per cent, chemicals 7.3 per cent and mild steel products by 28 per cent. The only items which had so far recorded a decline were safety matches and caustic soda. Given a reasonably good production of sugar this year, it should not be too difficult to attain the largetted growth in industry, he remarked.

EXPORT TARGET

Mr. Kazi said exports for the first five months from July to Nov. 1980 stood at more than 9 billion rupees being about 13 per cent higher than the exports during the corresponding period of last year. This was slightly less than the export growth target of 15 per cent and it was likely that the export target would be attained.

Referring to remittances from overseas Pakistanis, the State Bank Governor said the amount thus received during the first quarter of the fiscal year was much higher than what had been projected. Accordingly he expected that the total foreign exchange earnings were likely to be substantially above the level budgeted.

However, partly due to rise in oil prices imports totalled about 21 billion rupees during the first five months of the current fiscal year, representing a sharp rise of 29 per cent over the imports during the corresponding period of last year.

Mr. Kazi pointed out that despite the growth in the volume of exports, the trade gap had continued to widen. The gap, he said, would be covered by the increased remittances and to the extent necessary from Extended Fund Facility finalised recently with the IMF.

RATE OF INFLATION

The State Bank Governor also referred to prices and said consumer price index had risen by 8.2 per cent during the first four months as compared to the increase of 7.3 per cent recorded during the corresponding period of last year.

He said if the average consumer price index for the period July to Oct. 1980 was compared to the average index for the same period last year, the annual rate of increase worked out to about 11.4 per cent, which was close to the rate of inflation registered during the last fiscal year.

If monetary expansion was held down to the agreed ceiling of 14 per cent during the current fiscal year, the price situation should gradually improve. Upto November 1980, monetary expansion had been only 2.3 per cent and domestic credit expansion 6.2 per cent. Banks could make a significant contribution to price stability if they adhere to credit ceilings assigned to them, he observed.

Earlier, the State Bank Governor distributed prizes relating to Banking Diploma and Certificate Examinations.

The M. A. Mozaffar Memorial Gold Medal for 1980 was awarded to Mr. Kassim Parekh, Senior Executive Vice-President of Habib Bank, for rendering valuable services to banking.

TRIPARTITE LABOR CONFERENCE TO BE INSTITUTIONALIZED

Karachi DAWN in English 22 Dec 80 p 1

[Excerpts]

The Government today announced its intentions to institutionalise the tripartite labour conference to govern future labour-management relations and boost productivity of industry in public and private sector.

At a Press conference, the Labour Secretary Mr M. A. Kazmi said the forthcoming tripartite labour conference was going to be of "vital importance" and its recommendations would guide "heavily" the formation of new labour policy.

President Gen. Mohammad Zia-ul-Haq will inaugurate the three-day conference on Dec 28. Immediately after the inaugural session, 180 delegates would go into business sessions.

Draft labour policy will be circulated among the delegates and groups would be formed to analyse the draft policy and other steps being taken by the Government for the welfare of workers. The plenary session will be held on Dec 30.

Mr Kazmi said the participants will be given adequate time to study the draft policy and the Government would also try to publish the policy before the inauguration of the conference.

Out of 180 delegates, 60 each have been drawn from workers, employers and Government and Mr Kazmi said every shade of opinion among the worker would be represented in the conference. He said delegates had been selected in a manner that would ensure representation of workers and employers to have a meaningful dialogue.

CRITERIA FOR JOINT FISHING VENTURES

Karachi DAWN in English 22 Dec 80 pp 1, 6

[Text]

The Federal Government has announced criteria for joint fishing ventures in exclusive 200 nautical miles economic zone of Pakistan.

This has been done to facilitate the intending Pakistani entrepreneurs to collaborate with foreign fishing companies to exploit the marine resources.

The criteria for joint ventures include certain clauses to protect the interest of small fishermen as well as to benefit the country.

According to the criteria the duration of joint venture agreement, that would be extendable by Government, shall not be less than one year, and it would be counted from the date of arrival of foreign vessels in Pakistan waters.

Under the agreement the Pakistan Government will be eligible to terminate the agreement at any time by a written notice, but the period of notice will not be less than one month.

Fishing will be allowed beyond 25 miles along the Sind coast and beyond 12 miles along Baluchistan coast upto 200 nautical miles in the exclusive economic zone of Pakistan. No fishing for any kind of fish will be allowed in the territorial waters, it adds.

The marketing and export of catch will be sujected to prior permission in writing from the Government and to the prevalent rules and regulations.

According to the criteria, the percentage of equity to be shared between the Pakistani firm and their collaborators as well as other terms and conditions of sharing the operational expenditure of the vessels and catch will be determined by mutual agreement between the Pakistani firm and their collaborators.

It stipulates that the contracting party shall pay to the Government royalty as high as possible, but not less than 10 per cent of the total catch. The contracting party shall open, maintain and operate a foreign exchange account and deposit therein for payment to Government as high as possible but not less than 30 per cent of the exportable catch value.

The income from the joint fishing ventures shall be exempted from Income Tax duties until June 31, 1985 and subject to such further extension or otherwise as allowed by the Central Board of Revenue.

The criteria also stipulates that foreign fishing vessels during their presence in Pakistani waters will employ Pakistani crew which will not be less than 50 per cent of the total deck-hands on board.

The foreign collaborators will also impart training to Pakistanis in the marine fisheries so that the local fishermen could use the latest techniques and benefit from their experience.

The foreign vessels in Pakistani waters will abide by all the laws, rules and regulations in force in Pakistan and shall be liable to the prescribed penalties applicable for violating any such laws, rules and regulations, the criteria adds.—PPI

PHILIPPINES SEEKS 800 MILLION DOLLAR LOAN

Manila DAILY EXPRESS in English 18 Dec 80 pp 11, 12

[Text] The government plans to raise $800-million worth of financing from foreign and local sources to finance the additional cost and safety equipment for the country's first nuclear power project in Bataan.

Finance Minister Cesar Virata said in an interview Tuesday night that about $550 million will be raised from foreign sources, while the remaining $250-million will come from the government.

The finance minister said he has started talks with the Export Import Bank of the United States to provide the bulk of the funds through additional loans or the grant of guarantees.

An alternative is for the government to float bonds again in the United States, Japan or Western Europe.

The nuclear power project was originally estimated to cost $1.1 billion, but this went up to $1.8 billion because of the additional safety equipment that have to be installed.

To finance the project, the government had floated bonds in the US capital market, and got loans and guarantees from the US Eximbank.

Virata said that $250 million of the additional financing required will be in the form of equity contribution of the government through the National Power Corp.

The finance minister said that a big portion of the additional financing required represents interest costs. About $80 million needed to buy the safety equipment.

Virata also disclosed that he has negotiated for a $100-million multi-purpose credit line from the US Eximbank for the Development Bank of the Philippines.

He added that the country will seek $1-billion worth of official development assistance (ODA) from its major creditor countries during the World Bank-sponsored consultative group meeting to be held in Paris from January 29-31, 1981.

On top of the ODA, additional financing for development in 1981 will come from the World Bank, Asian Development Bank, the Overseas Economic Cooperation Fund

(OECF) of Japan, the US, OPEC fund, International Fund for Agricultural Development (IFAD) and the Kuwait Fund among others.

Furthermore, the Philippines is entitled to draw about 200 million special drawing rights (SDR) from the International Monetary Fund (IMF), and $100 million from the structural adjustment loan granted by the World Bank.

JAPANESE AID--Tokyo, 24 Dec KYODO--Japan and the Philippines exchanged notes Wednesday on yen 2,000 million (about dollar 9.5 million) grant aid designed to increase the later's food production, the Foreign Ministry said. A ministry spokesman said the notes were exchanged in Manila between Japanese Ambassador Hideo Tanaka and Philippine Foreign Minister Carlos Romulo. The grant will be used to purchase fertilizer, agricultural chemicals and machinery, the spokesman added. [Text] [Tokyo KYODO in English 0924 GMT 24 Dec 80]

FISHERIES IMPROVED--President Marcos today disclosed the government's plan to restore the subsidy on fuel used by small fishermen on their motorized fishing boats, the president announced this following receipt of reports that many small fishermen had stopped going out to sea because of the prohibitive cost of fuel. According to the president, he has already ordered a study on the restoration of the subsidies. In another move, the president also disclosed that some local fishing firms are tying up with New Zealand companies in joint fishing ventures. This means Filipino fishermen can fish in New Zealand seas for mackerel, while New Zealanders can also come here to fish for tuna. The president said this joint venture arrangement could help the country become self-sufficient in fish. [Text] [HK040421 Manila FEBC in English 0400 GMT 4 Jan 81]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

JAPANESE ASSURE NEW ZEALAND ANTARCTIC SURVEY ONLY SCIENTIFIC

Wellington THE EVENING POST in English 13 Dec 80 p 9

/Text/

AN executive director of the Japan National Oil Exploration said yesterday that a seabed survey in the Bellingshausen Sea was purely scientific and not aimed at developing the area's oil resources.

Mr Yasufumi Ishiwada is the leader of a team of scientists on board the Hakurei Maru, now visiting Wellington on the way to the Antarctic. The ship will arrive on site for its first round of sampling on Christmas Eve.

Speaking through an interpreter, Mr Ishiwada said that the report on the survey would go to the Japanese Ministry of International Trade and Industry, which is funding the expedition, but results would also be published and data could be made available to other countries on a reciprocal basis.

Studies

He said the team would be studying the source rock potential for hydrocarbons, the type of reservoir rocks on the seabed, the age of organic material there, and the geological age of the sediments.

Asked how he could separate the scientific from the commercial implications of such a study, he said Japan would hardly publish the results if its purposes were commercial. Japan, with 3 percent of the world's population, used 10 percent of the world's oil, and had a responsibility to prospect for oil.

If New Zealand wanted printouts and tapes from the survey, it could make an approach through diplomatic channels. Japan would provide the information according to the information it could get back or the state of scientific contacts with another country.

Mr Ishiwada said the United States' National Science Foundation was already advanced in its oil explorations with the ship Glomar Challenger, and had begun seabed drilling. Japan had no immediate plans to start Antarctic seabed drilling.

He cited West Germany, Poland and the Soviet Union as countries that were making similar studies in the Antarctic, but said that, because of the technical problems, there was unlikely to be exploitation of Antarctic oil until next century.

The six-year-old Hakurei Maru is a 1821-tonne geological survey ship designed to investigate seabottom minerals. She has five laboratories on board, and equipment for sample dredging and taking core samples as well as seismic reflection surveys.

Of the 23 scientists on board, most are from the oil corporation and the Japanese Geological Survey. One represents a private petroleum exploration company.

The ship will sail south on Monday. She will take a short break from drilling to visit Chile next month, and then call at Wellington on February 22 after drilling at four sites in the Bellingshausen Sea.

RAO QUESTIONED ON AUSTRALIAN PRESS LEAK

Calcutta THE STATESMAN in English 5 Dec 80 p 9

[Text] NEW DELHI, Dec. 4. -- The Minister for External Affairs, Mr P V Narasimha Rao, told the Lok Sabha during question hour today that the Indian High Commissioner in Canberra had been in touch with Australian Foreign Office officials over the remarks made recently by the Australian High Commissioner in India about the functioning of the Government of India.

The Indian High Commissioner had written to the editor of The Age--which had published the remarks--saying that the assessment attributed to the Australian diplomat was far from correct.

Mr Rao was asked by two members whether in a recent despatch appearing in Australian newspapers, the Australian High Commissioner in India had made certain remarks about the functioning of the Government, stating that a military type of Government was talked about in certain quarters, and, if so, the details thereof and the reaction of the Government.

The External Affairs Minister's reply to the first part was: "Yes, sir".

To the second part of the question his reply was: "An Australian daily, The Age, published an article by one free-lance journalist--Laurie Oakes--on November 6, 1980, citing excerpts from the despatch (which was apparently leaked to Mr Oakes) sent by the Australian High Commissioner in New Delhi, Mr Gorden Noel Upton, to his foreign office on October 3, 1980, wherein Mr Upton is alleged to have made critical comments on the performance of the Prime Minister since she assumed office and alluded to the possibility of a military take-over.

"It is usual for diplomats to send their assessments to their Governments on the situation prevailing in the country to which they are accredited and these assessments are treated as confidential. The Indian High Commissioner in Canberra has been in touch with the Australian Foreign Office officials. He has also written a letter to the editor of The Age to show that the assessment attributed to Mr Upton was far from correct.

On November 17, 1980, the Ministry of External Affairs in New Delhi was informed by the Department of Foreign Affairs in Canberra that the Australian Government attached the greatest importance to relations between India and Australia, and that they were concerned over recent developments. They have since issued an official Press release expressing their deep regret for the embarrassment this article had caused in particular to the Prime Minister of India.

> The Press release said that the High Commissioner had made clear his constructive concern about the problems facing India, as he saw them, and his desire to see relations between Australia and India continue to develop in a positive way. They said it was the journalist who, while commenting on the stolen report, had alleged that the Australian High Commissioner had held Mrs Gandhi "in low esteem" or "had a lack of respect for her". In view of the above circumstances, the Government does not feel that any further action is called for".

COMMERCE MINISTER ON INDO-SOVIET COOPERATION

New Delhi PATRIOT in English 9 Dec 80 Supplement pp 1,2

[Article by Pranab Mukherjee, Minister of Commerce: "Partners In Trade and Development"]

[Text] INDIA and the Soviet Union have had many and varied links in the course of centuries. From the early days the Soviet Union has commanded our respect and admiration. Their understanding of and sympathy towards the struggles of colonial and newly freed peoples was evident from the beginning. There has been similarity of outlook between our two countries on these and other issues and the area of mutual understanding has steadily enlarged. This association was consecrated in the Treaty of Peace, Friendship and Cooperation which we concluded in 1971, providing for a comprehensive framework for our relationship. The USSR has consistently supported India's efforts at achieving economic self reliance. The 15-Year Treaty lays down the concrete guidelines for the further strengthening of cooperation between the two countries to consolidate and expand mutually advantageous and comprehensive cooperation in the fields of economy, trade, science and technology as well as to expand trade. I have no doubt that the Treaty has so far served its aims and objectives fully and adequately.

Ever since the dawn of independence, India has been seeking for cooperation and friendship with all countries The response from the leaders of the Soviet Union have assured us that the two countries, having two different economic and a social systems, can co-exist peacefully and march ahead on the basis of mutual friendship and understanding. In the beginning there was no effective channel of established economic links between India and the USSR. New instruments of trade and economic relations were therefore designed. As a part of the pursuit of these objectives, the first Trade Agreement with the USSR as signed in 1953, for a period of five years.

India's total volume of trade with the USSR during 1953 amounted to only Rs 1.3 crore (imports: Rs 0.7 crore; exports: Rs 0.6 crore). But in the following years after the signing of the Trade Agreement, an impressive expansion took place and by the end of 1958, the total volume of trade recorded a peak level of Rs 88 crores (imports: Rs 67 crores; exports: Rs 21 crores). The Trade Agreement did not stipulate any definite commitments on either side regarding the volume representing quantum and value of each commodity traded and the trade deficit on either side was agreed to be adjusted against payment in covertible currencies.

Both countries had a fresh look at the pattern of trade and particularly the imbalance and decided to enter into a balanced bilateral trade with payments in Indian rupees. This Trade and Payments Agreement which was to be valid from 1959 till 1963 helped to a considerable degree in scaling down the continuing trade imbalance. The large trade deficit which amounted to Rs 45.3 crores in 1958 dwindled to Rs 6.4 crores in 1963. A new system of trading based on bilateral clearing arrangement through rupee account in India was thus initiated. The beginnings were small and the range of commodities traded was narrow. Imports consisted of a few non-ferrous metals, dyeing and tanning materials, newsprint, raw coton and some chemicals and exports consisted of traditional commodities, like Pepper, Shellac and raw hides and skins. In the first five years, the total trade turnover amounted to Rs 440 crores.

In the Agreement beginning

In 1964, the two countries entered into long term planning of imports and exports for the first time and a long term plan for the first three years was prepared. The period 1964-70 (the Trade Agreement, initially valid for five years till 1968, was rolled on for two more years till 1970) saw a significant diversification of India's exports through the addition of a range of textile products, including cotton and woollen knitwear, bed linen, coir goods, various drugs and chemicals, automobile parts and miscellaneous engineering goods, and the two way trade reached a figure of Rs 1226 crores (imports: Rs 902 crores; exports: Rs 1 024 crores).

The fourth plan (1971-75) maintained the growth trend of trade and the total turnover during this period increased to Rs 2,481 crores (imports: Rs 838 crores; exports: Rs 1,593 crores). The exports from India saw a substantial diversification when items, like storage batteries, batteries, garage equipment, hand tools, miscellaneous consumer goods, paints, varnishes, etc. entered the Soviet market.

During the last visit of President Brezhnev to India in 1973, the two sides took note of each other's long term requirements and agreed to consider these in the formulation of their respective Five Year Plans and to meet each other's requirements to the extent possible so that trade between the two countries may expand substantially by one-and-a-half to two times by 1980. The joint Indo-Soviet declaration signed by Mrs Indira Gandhi and Mr Brezhnev made a specific mention of this objective.

The current Trade Agreement for the period 1976-80 was signed in New Delhi on the 15th April 1976 and took special note of the objective in the joint Indo-Soviet Declaration. The Agreement continues the existing pattern of trading in rupees through a single clearing system. The two sides have agreed to facilitate participation in trade fairs and exhibitions and to strengthen and expand business contacts between Indian trading and industrial organisations and the Soviet Foreign Trade Organisations. The Trade Agreement envisages a total trade turnover of Rs 5,000 crores during 1976-80. USSR has agreed to take new items like dry core cables, wood veneers, etc. The two day trade is likely to reach a figure of Rs 1600 crores in 1980, the last year of the Agreement period, which will be nearly four times the level reached in 1973 and thus far exceed the objective of the Joint Declaration.

Traditional goods such as tea, coffee, spices, tobacco, cashews, jute and cotton textiles still constitute an important share in India's exports to the USSR. For these products we have found in the USSR an assured and additional market. It has contributed towards realisation of a stable unit value in the international markets. For some of these goods, the USSR has been the principal market. Over the years, we have established a steady and growing market in the USSR for our exports like tea, coffee, spices, etc. In terms of value (year 1978-79) USSR accounts for 17% of our total exports of tea, 24% of Coffee, 30% of cashew, 22% of tobacco, 20% of jute goods, 33% of mica.

For a number of manufactured products, USSR is a growing market. Drugs and medicines, paints, enamels, dyestuffs, cosmetic goods, carpets and a host of engineering goods have found their way to the USSR market in recent past and it is our expectation that there will be greater demand for consumer goods

for which India has built up and can build up enough capacity to cater to the Soviet market. Indian goods, especially in the engineering sector are getting popular for their quality and workmanship and are increasingly accepted in the Soviet market.

To popularise the Indian goods and to bring them nearer home to the people of the USSR, we conducted a wholly Indian Exhibition in Moscow in August 1978. The exhibition, the largest of its kind by any other country, attracted a record crowd and has created a greater awareness of the quality and competitiveness of Indian goods especially in the manufactured sector. Cosmetics handicrafts, spectacle frames, fruit juices, hand tools machine tools garage equipment and a number of other consumer durables were a big attraction. The exhibition has resulted in additional contracts worth more than Rs 100 crores.

The bilateral rupee trade with the USSR has enabled India to obtain essential import requirements, like crude oil, other oil products, fertilizers, steel, non-ferrous metals newsprint, asbestos and other industrial raw materials, essenital for the growth of the economy. These important raw materials are made available to us under rupee payments for which we would otherwise have to spend from free foreign exchange resources. Our total imports from the USSR increased from Rs 0.7 crores in 1953 to Rs 83 crores in 1963, Rs 114 crores in 1973 and Rs 328 crores in 1978. This increase in imports is partly due to the increase in prices of various important commodities, particularly petroleum products, and others. Our endeavour has been to import only such machinery, equipment and raw materials which are not indigenously manufactured or indigenous manufacture is short of our demand. The requirement is carefully screened by the authorities concerned and only essential imports are allowed. The quality of some of the machinery and equipment manufactured in the USSR compare favourably with world standards.

The composition and structure of our imports have also been changing in keeping with the changing requirements of Indian economy. In the beginning machinery and equipment constituted the most important items of import. With the growth in indigenous production there has been a steady decline in the import of conventional machinery and its place is now being taken by items such as petroleum products, fertilizers, non-ferrous metals, etc. Crude and petroleum products from the USSR account for nearly 65% of our total imports from the country; non-ferrous metals asbestos, news print, fertilizers and other industrial materials 17%; and machinery 13%.

During the visit to India of the former Prime Minister of the USSR, Mr Alexei Kosygin, a long-term Programme of mutually beneficial economic cooperation in the development of important sectors of the Indian economy and bilateral trade exchanges was concluded in March 1979. The Programme envisages among other things, a growth rate of mutual trade by one-and-a-half to two times between 1981 and 1985 and similar rate of growth between 1986 and 1990. This Programme is expected to go a long way in determining the trade perspective for mutually beneficial respectives for mutually beneficial economic trade scientific and technical cooperation on a long term basis proiding for rapid growth of trade between the two countries.

The distinctive feature of Indo-Soviet economic cooperation in the last 25 years has been the Soviet Union's willingness to assist India in the key sectors of economy in India's efforts to achieve economic self reliance, as for example, steel, heavy machine building, power generation, oil exploration, refining, coal mining, agriculture drugs and pharmaceuticals. In the field of steel, in particular, Bhilai and Bokaro stand out as monuments of Indo-Soviet cooperation. Vishakhapatnam is yet another milestone in this direction. With the expansion programme envisaged for Bhilai and Bokaro and the commissioning of Visakhapatnam steel plant, I expect that the growing demands of India for steel required for the many sectors of the economy will be adequately met. The Long-term Programme of economic, trade, scientific and technical cooperation signed last year has set the pace for increasing and diversifying such cooperation.

We are in the process of concluding a new Trade Agreement for the next five years and it is our aim to double the two way trade during this period (1981-85). We also propose to supply to the Soviet Union new engineering goods, like freight containers, electric motors, folk lift trucks, handloom manufactures and handicrafts in a large measure having regard to the declaration in the Long-term Programme to promote labour intensive goods from India.

The expansion of the two way trade and the multi-faceted cooperation between the two countries underlines the basic faith in the principles of co-existence and cooperation between States irrespective of their political and social ideologies.

CSO: 4220

HOUSE TOLD DETAILS OF NATIONAL SECURITY BILL

Madras THE HINDU in English 11 Dec 80 p 7

[Text]

NEW DELHI, Dec. 10.

The National Security Bill contains sufficient safeguards against misuse and ensures justice and fairplay to the person prepared to be detained under it, according to the Home Minister, Mr. Zail Singh.

Moving the Bill for consideration in the Lok Sabha today, the Home Minister said the Bill enables the Central Government or the State Government to order detention of a person if it is satisfied that it is necessary to do so to prevent him from acting in any manner prejudicial to the defence of the country or its security.

It also enables the Central or State Government to order detention of a person, if satisfied with respect to him, that with a view to preventing him from acting in any manner prejudicial to the security of the State or the maintenance of public order or the maintenance of supplies and services essential to the life of the community, it is necessary to do so.

Mr. Zail Singh said the Bill further enables the State Government to authorise a District Magistrate or a Commissioner of Police to exercise the detention powers in his jurisdiction during such period as the State government may specify in the order of conferring such powers.

He said that under Section 8, the authority ordering the detention shall communicate to the person detained ordinarily, not later than five days and in exceptional circumstances not later than 10 days from the date of detention, the grounds for the detention and shall afford him the earliest opportunity of making a representation against the order.

Further, under Section 9 of the Bill, the Central or State Government shall constitute advisory boards. These boards will review all the detention orders passed under the Bill seven weeks from the date of detention. The detention can continue only if the advisory board is of the opinion that there is sufficient cause for the detention.

Maximum Period of Detention

The Home Minister said "If the advisory board does not find sufficient cause for detention, the Government shall revoke the order and release the person forthwith. The maximum period for detention under Section 13 of the Bill will be 12 months but the Government has power to revoke or modify the detention order at any earlier time".

Mr. Zail Singh said some members expressed certain apprehensions of the possible misuse of the enactment and recalled in this connection the applications of provisions of Maintenance of Internal Security Act.

"Apparently their fears and apprehensions grow out of a wrong interpretation of the provisions of the ordinance, which have been incorporated in the Bill with only one exception. There is no justification to say that a person can be detained for an indefinite period, or that the grounds of detention need not be disclosed to the detenu. The provisions are specific and leave no room for surmises", he said.

"Ushering in Totalitarianism"

Mr. A. B. Vajpayee, leader of the Bharatiya Janata Party, assailed the National Security Ordinance as a measure "ushering in totalitarianism" in the country.

Moving a resolution disapproving the orddinance promulgated on Sept. 22, he said power was being "centralised in an uncontrolled and unlimited way into a despotism".

Mr. Vajpayee said the measure was positively an alarm bell. "Today it was the liberty of the individual, tomorrow it would be the fundamental rights of the citizens", he warned.

He said an atmosphere was unwarrantedly built up that the security of India was imperilled and individual liberty meant nothing. But the fact was that social tensions were increasing on account of inequalities and Government was not prepared to face the situation.

DETAILS OF WORLD BANK LOAN FOR BOMBAY HIGH TOLD

Madras THE HINDU in English 11 Dec 80 p 6

[Text]

NEW DELHI, Dec. 10.

The World Bank has officially announced the grant of a loan of $400 million (about Rs. 320 crores) to the Oil and Natural Gas Commission to finance the foreign exchange cost of the development of the Bombay High offshore oil and gas fields, located about 160 km from Bombay.

The loan is repayable in 20 years including a five-year grace period. It will carry interest at the rate of 9.25 per cent. However, the Government of India which will be the recipient of the loan will charge an interest of 10.75 per cent to ONGC which will be utilising the loan.

The Bombay High development programme, the total cost of which is at present estimated at Rs. 658.56 crores aims at achieving a production potential of 240,000 barrels of oil per day (equivalent to about 12 million-tonnes a year) by mid-1982.

The principal components of the project are the drilling of 64 development wells, construction and installation of 15 production platforms, construction and installation of a three-deck processing platform in the Bombay High South and a separate living quarters platform.

The project also includes about 133 km of sub-sea flow lines, expansion of shore facilities, extension of telemetry and tele-control installations, engineering and technical services and reservoir consultancies.

The present loan of $400 million is the second to be sanctioned by the World Bank which had earlier given $150 million in 1977 for Bombay High Phase III which included production wells, production and production processing platforms with a combined capacity of 180,000 barrels per day (about nine million tonnes of oil per year) and ancillary facilities. This phase is expected to be completed later this month.

The total cost of the Bombay High development programme which will be financed by the World Bank loan had shot up from the earlier estimate of about Rs. 515 crores to over Rs. 600 crores on account of the slippages in the programme and the consequent escalation in costs.

The total proposed outlay on off-shore oil and gas exploration and production during the Sixth Plan period is Rs. 2,232 crores. Apart from its efforts to step up off-shore production to 12 million tonnes by 1981-82 and to 15 million tonnes by the end of 1985 in the Bombay High, ONGC is hoping to squeeze an additional production of about 5 million tonnes per year from the other off-shore structures at R-12 (Ratnagiri), B-37, B-38, R-7, R-9 and North Bassein.

With luck, therefore, the offshore production could go upto 20 million tonnes by 1984-85. ONGC also proposes to incur an expenditure of Rs. 1,138 crores for onshore exploration during the Sixth Plan and if onshore production yields eight million tonnes the total indigenous oil production might go upto 28 million tonnes by the end of the Sixth Plan.

During the Sixth Plan, ONGC is planning to carry out 100,000 line km of seismic surveys in the off-shore areas and will be drilling 95 exploratory wells and 230 development wells. This is regarded as a big increase in view of the fact that ever since offshore oil production began in the Bombay High in 1976, ONGC has drilled only 88 exploratory and 40 development wells.

CSO: 4220

SATHE DEFENDS ALL-INDIA RADIO OBJECTIVITY

Bombay THE TIMES OF INDIA in English 11 Dec 80 p 5

[Text]

NEW DELHI, December 10 (UNI): The information minister, Mr. Vasant Sathe, today denied in the Lok Sabha the allegation made by Mr. Chandrajit Yadav (Lok Dal) that All India Radio and Doordarshan were not objective and impartial and blacked out opposition viewpoints in their bulletins.

Mr. Sathe said in a statement that an analysis of about 300 major news bulletins of AIR since September showed that the news of opposition parties figured in the bulletins almost every day. Opposition items were carried nearly 450 times during the period. The opposition parties and leaders figured on more than 350 occasions in the parliamentary reviews in about 15 working days beginning from November 17. The coverage of the opposition members was sometimes as much as 44 times in a day, Mr. Sathe said.

Mr. Sathe said that a detailed study of the major English bulletins and "Today in Parliament" revealed that the number of Lok Sabha opposition MPs mentioned in about 15 days from November 17 to December 4 was 47 as against 34 of the Congress (I). The number of times Lok Sabha opposition MPs were mentioned was 151 against 73 of the Congress (I).

ENERGY MINISTER TELLS SIXTH, SEVENTH PLAN AIMS

Bombay THE TIMES OF INDIA in English 1 Dec 80 p 6

[Text] Cochin, November 30 (UNI): India plans to add 20,000 Mw. of power-generating capacity during the sixth plan and has identified 27,000 Mw. of new projects for the seventh plan period, according to Mr. D.V. Kapoor, secretary, Union ministry of energy.

Inaugurating a two-day national convention of the Indian Institution of Plant Engineers, he said an integrated 15-year power plan was also under preparation.

Mr. Kapoor, however, stressed the vital importance of conservation of energy. Predictions indicated that the world oil supplies would peak off by the early nineties and then show a declining trend for the next 30 years before finally depleting themselves. Large areas remained unexplored. But even if more oil and other fossil fuels were discovered, this would only delay the day of reckoning, he said.

Mr. Kapoor called upon plant engineers to develop and implement an integrated approach towards "optimum energy utilisation."

He said the government was actively engaged in organising an enlarged and modern braining programme for operators and engineers in the power supply industry to sort out their technical problems.

The cost of installing one kw. of power together with associated transmission and distribution network was roughly Rs. 13,00 and it was therefore unforgivable to compromise with inefficient operation, he pointed out.

Mr. Kapoor said that at the present level of electricity consumption, conservation of ten per cent of electricity could reduce the capacity requirement by about 2,000 Mw. leading to a saving in investment of over Rs. 1,000 crores apart from substantial recurring savings in the consumption of fuel.

This meant that 8,000 million units of energy could be saved and made available to overcome power shortages experienced in the country.

Mr. Kapoor asked power engineers to identify such possibilities in existing industries and to pursue their implementation.

He suggested better insulation, installation of waste-heat boilers, improved bearings and a system of "energy audit" as some methods to achieve significant energy savings.

About 150 delegates from all over the country were attending the convention.

DELHI APPROVES MANIPUR SIXTH PLAN OUTLAY

Bombay THE TIMES OF INDIA in English 11 Dec 80 p 5

[Text]

NEW DELHI, December 10: The sixth five-year plan of Manipur will have an outlay of Rs. 240 crores and the annual plan for 1981-82 Rs. 43 crores.

Approval of the size of the plan was given at a meeting between Mr. N. D. Tiwari, Union planning minister, and the chief minister of Manipur, Mr. Rishang Keishang.

Mr. Tiwari advised the state to improve the quality of implementation of plan schemes and ensure achievement of physical targets.

Mr. Tiwari asked the chief minister to have the irrigation projects of Thoubal and Khuga properly investigated and examined by the Central water commission and the Central electricity authority.

The chief minister remarked that the state plan would help create more employment opportunities and improve the living standards of hill people.

He assured the Centre that the state would not take recourse to deficit financing and would plug leakages in the collection of electricity tariff and take measures to reduce losses in electricity generation and transmission as well as management of the state transport.

Among the industries proposed to be set up in the state are a starch and glucose project, sugar and distillery plant, spinning mill, khandsari factory and cement factory.

OFFICIAL RELEASE ON CPI(M)-RSS CLASHES NOTED

Madras THE HINDU in English 28 Nov 80 p 1

[Text] Trivandrum, Nov. 27. The leaders of the CPI-M and the RSS, at a conference convened by the Chief Minister here on Wednesday night, agreed to help in restoring peace in Tellicherry and other places in the State but, according to reports reaching State headquarters, clashes erupted in Tellicherry this morning too, resulting in the death of one more RSS man.

The conference with the Chief Minister was preceded by talks between RSS leaders and the marxist Home Minister, Mr. T.K. Ramakrishnan. The RSS leaders are reported to have expressed fear that the police was in league with the CPI-M in the latter's "operation wipe-out" launched against the RSS.

The Home Minister is understood to have assured the RSS leaders that neither the CPI-M nor the Government believed in physical confrontation and that violence, from whichever quarter, would be put down without fear or favour.

The RSS leaders later met the Chief Minister. The Home Minister and three representatives of the CPI-M were also present then. The Chief Minister urged both sides to desist from continuing the physical clashes and promised impartial action while dealing with cases of violence.

Both the RSS and CPI-M leaders told the Chief Minister that they would impress upon their ranks to give up the path of violence. Since this would take a couple of days, they suggested that the police vigil be stepped up. The Chief Minister particularly expressed his appreciation of the gesture of cooperation from the RSS leaders.

Meanwhile, the Government in an official release described as "exaggerated" reports in a section of the press on the political clashes in the State. The release reiterated the claim that political clashes had been on the decline since the LDF Government came to power in January last.

The release added: "As a result of the 343 clashes had taken place in different parts of the State since January 25, 1980, 187 CPI-M workers have been injured. Also injured were 138 RSS workers and 17 others. Of those killed in these clashes nine belonged to the CPI-M and six to the RSS.

"In Tellicherry where the largest number of clashes had taken place, the number of RSS men responsible for the clashes was 82 and that of the CPI-M workers 60. The number of victims was 75 CPI-M workers and 60 RSS workers. What is clear from these facts and figures is that these clashes do not denote either the strength or weakness of the organisations. On the contrary, they prove that all sections have suffered losses.

INFORMATION MINISTER SPEAKS TO PRESS IN BANGALORE

Bombay THE TIMES OF INDIA in English 1 Dec 80 p 9

[Text] Bangalore, November 30: The alternative to the present government is chaos, the Union minister for information and broadcasting, Mr. Vasant Sathe, said here today.

He said by supporting the farmers' agitation and the agitation against the price rise at the same time "you will be pushing the country towards anarchy."

Participating in a "meet the press" programme of the Karnataka Union of Working Journalists, Mr. Sathe said the only force that one could see around was the military force. But was there any country where the military had taken over and democracy thrived, he asked.

He said he could understand enlightened and constructive criticism. "But for heaven's sake, do not encourage anarchy and destabilisation."

Mr. Sathe justified the national security ordinance which was aimed at checking anti-social elements and economic offenders. No one in a democracy had a right to uproot rail tracks or destroy public property. If the government brought in a measure to check such activities, "are you going to make a hue and cry in the name of individual freedom?"

No Censorship

Mr. Sathe said there would be no press censorship. There was not a single act of his ministry so far to bring pressure on the press. Yet what was the situation? There was an attempt to shake the confidence of the people in measures taken by the government to control anti-social and lawless elements, he said.

He referred to reports of the blinding of undertrial prisoners by the police in Bihar. He had no doubt that this would be dealt with firmly and the guilty would be punished. But if the press played it up, it would demoralise the police force.

Mr. Sathe criticised the tendency in a section of the press to publish news without verification and then publish the contradiction without giving it the same importance as the original story. He had been trying to be fair to the press, but he himself had been misquoted "deliberately."

MORARJI DESAI HOLD DELHI PRESS CONFERENCE

Bombay THE TIMES OF INDIA in English 6 Dec 80 p 13

[Text]

NEW DELHI, December 5.

MR. MORARJI DESAI today predicted that Mrs. Indira Gandhi's government would collapse under the weight of its own sins and then a national government could be formed to fill the vacuum and hold fresh elections.

At a crowded press conference here this morning, the former prime minister said this was not an astrological prediction — "I never go to astrologers" — but one could call it a "hunch."

After the mid-term poll, any government that came in would be a better government than the present one which had proved its incapacity to solve the peoples problems.

Mr. Desai said the presidential form of government was not the panacea for the present ills. On the contrary, it could easily lead to a dictatorship.

Mr. Desai refused to go into details about his controversial remark made yesterday that the Soviet leaders had told him, when he was prime minister, that "India should teach a lesson to Pakistan." He brushed aside a question by saying: "Whatever I have revealed is enough."

MID-TERM POLL

About the formation of a national government, he said it could be an all-party government, but it would be only an interim arrangement — until the elections were held.

The mid-term poll would throw up the alternative leadership. Even the Janata party could become strong enough to form a government on its own.

The Janata party would welcome back those who had left it — but not those who had broken the party — unless of course they publicly apologised for what they did.

Mr. Desai felt that the by-election results were never a proper index to the people's will when it was pointed out that the recent by-elections had returned the Congress(I) candidates with overwhelming majorities.

The veteran Janata leader, however, did not think that emergency conditions had returned to the country. The passing of the national security ordinance was not equal to imposing an emergency, but if the ordinance was misused, "the people will throw this government out."

Regarding Assam, Mr. Desai said it was wrong on the part of the Congress (I) to form a government in the state without solving the problem. When it was pointed out that the installation of a government had become imperative for fulfilling a constitutional obligation, he replied: "Why not hold elections? If they hold elections, they will be voted out."

"I could have solved this problem within one month. During the Janata government this problem did not appear. Even then, we took certain measures," Mr. Desai asserted.

He supported the students' demand that the problem should be solved according to the constitution. When he was prime minister, he had not seen in the film any commitment made to Bangladesh.

PTI & UNI add:

The Janata party president, Mr. Chandra Shekhar, and the party general secretaries, Mr. Surendra Mohan, Mr. Ramakrishna Hegde and Dr. Subramaniam Swamy, were present during the 45-minute press conference.

The former prime minister ruled out any possibility of military take-over of the country. The military was far more disciplined and patriotic. Moreover, the people too would not allow dictatorship to establish itself in the country, he added.

Commenting on the Australian envoy's despatch, Mr. Desai said there was nothing unusual about all envoys sending reports to their countries and asked newsmen to leave the matter at that.

Asked if he would write to the Prime Minister about the solution he had in mind to settle the Assam tangle, Mr. Desai said he was not in favour of writing to her. But he would not mind meeting Mrs. Gandhi if the latter invited him.

MARXIST LEADERS DISCUSS PRESIDENTIAL SYSTEM

Bombay THE TIMES OF INDIA in English 6 Dec 80 p 9

[Text] BANGALORE, December 5.

MR. E. M. S. Namboodiripad, CPM leader, today warned Mrs. Gandhi that if she went in for a presidential form government, she would meet with the same fate as that of Bangladesh's Mujibur Rahman.

Mr. Rahman had thought that a presidential system was a solution to save Bangladesh from chaos, but he himself had become its victim, Mr. Namboodiripad pointed out.

His party would tell Mrs. Gandhi, he said, that she was wrong in thinking in terms of a presidential system in place of the present system of parliamentary democracy. "We are in the midst of a crisis and a presidential system is not a way out." Neither a presidential system nor a parliamentary democracy could survive without certain basic principles.

He argued that someone might opt for a military rule if both the parliamentary and presidential systems were thought to be failures. Pakistan provided an example of how the presidential system and military rule alternated. A change in the system would not help even Mrs. Gandhi.

Asked if he was committed to parliamentary democracy, Mr. Namboodiripad said he was not prepared to discuss the merits and demerits of parliamentary democracy or a presidential system since "we are not starting on a clean slate." But he added that any upsetting of the system now would be harmful.

PM'S STAND

Mr. M. Basavapunniah, a member of the CPM politburo, recalled that his party had long ago spelt out its policy in favour of parliamentary democracy and the necessity to have two houses of legislature.

Mr. Namboodiripad said that there was nothing new or wrong in the CPM government in West Bengal organising a bandh. A similar bandh had been organised two months ago in Kerala by the left alliance government there, with the Congress (I) also calling for the bandh on the same issue (price rise) and on the same day. The difference was that the thrust of the left alliance was against the Centre and that of the Congress (I) was against the state government. Dr. B. C. Roy, when he was Bengal's chief minister, had organised such a demonstration against the Centre. When Mr. Nehru was the Prime Minister, Mrs. Gandhi, as the Congress president, had started the "notorious liberation" struggle in Kerala with the intention of paralysing the state government (of which Mr. Namboodiripad was the head at that time).

Mr. Namboodiripad and Mr. Basavapunniah shared the view that the people had to be told the truth about prices. What could the states do when there were no stocks from the Centre? The responsibility of distributing whatever was available rested with the state government. Mr. Namboodiripad claimed that Kerala had the best distribution system.

Mr. Namboodiripad sought to play down the clashes between the CPM and the Congress (U) elements, both partners in the Kerala government. Quarrels among left and democratic forces were the birthpangs of a new force, while disputes in some other parties, such as the Congress (I), were the agony of a dying force. This distinction had to be understood clearly.

He did not want the press to whip up the dead horse of the clashes between the CPM and the RSS in Kerala. The chief minister had called for a conference and some agreement had been reached. On a merger of the CPM and the CPI, Mr. Namboodiripad said that while the two parties were not interested in any merger, the press seemed intent on merging the two parties.

Mr. Namboodiripad and Mr. Basavapunniah rejected the contention that the farmers' stir was organised by "kulaks" and, therefore, left parties should stay out of it. They wanted remunerative prices for the peasantry and also a wage rise for the working people. Anyone who opposed either was not genuinely left. There was nothing wrong in left parties participating in the farmers' agitation. A parallel was drawn with the freedom movement, led by "capitalists," but "did we not also participate in it?"

SOUTHERN NAXALITES HOLD SECRET CONVENTION

Bombay THE TIMES OF INDIA in English 6 Dec 80 p 9

[Text]

TRIVANDRUM, December 5.

NEARLY 200 Naxalites of southern states held a secret convention recently at Trichur in Kerala and drew up a plan to spread the movement among students.

According to reliable sources, the strategy would be to gain influence among the students by cultural and political propaganda.

At present, all student organisations, particularly in Kerala, are controlled by political parties which are opposed to the Naxalites.

The Naxalites are reported to have decided not to expose themselves too much to the police who were on the offensive in all the southern states. Propaganda must precede action, the Naxalites felt.

The convention concluded that the political situation in the country as a whole was appropriate for the movement to spread. The deepening economic crisis and disenchantment of the people with almost all the political parties would be conducive to the spread of the extremist political philosophy.

Although there is no formal ban on the Naxalites in any part of the country, the leaders of the movement felt that repressive measures had been launched against them by the police. The police action in Tamil Nadu proved this.

The only way to keep the police off the Naxalite track, the leaders felt, was to confine the activities to open propaganda. The essential message of the propaganda would, however, be the elimination of all vested interests by mass action.

The Naxalites have been encouraging the show of a Chinese film, "From victory to victory", in theatres in Kerala. The censor board had cleared it. Legally, therefore, there was no ban on screening it.

But in certain places like Trivandrum, theatre owners refuse to screen it. Pressure has allegedly been brought to bear on them to keep away from the "victory" picture.

DETAILS OF GANDHI 30 NOV PRESS CONFERENCE REPORTED

Bombay THE TIMES OF INDIA in English 1 Dec 80 pp 1, 9

[Article by K. Vikram Rao: "Pak Build-Up May Figure in Talks"]

[Text] Rae Bareli, Nov. 30. The issue of Pakistan building up its war machine may figure prominently at the high-level Indo-Soviet talks on Monday, when the Soviet President, Mr. Leonid Brezhnev, arrives in New Delhi on a state visit.

This was indicated here today by the Prime Minister, Mrs. Indira Gandhi, at a press conference. Earlier Mrs. Gandhi said at a rally of Congress (I) and Youth Congress (I) workers that a threat of war had emerged. She added: "There is no reason for a war to break out. Still we shall have to prepare ourselves to face it." After every war India had emerged stronger, she said, recalling the 1971 Bangladesh victory.

Mrs. Gandhi's remarks came 48 hours after the disclosure by the external affairs minister, Mr. Narsimha Rao, in the Rajya Sabha that Pakistan had frequently violated Indian air space and the United States, China and Saudi Arabia had supplied arms to Pakistan.

Asked if she proposed to discuss the issue with the Soviet President, the Prime Minister told newsmen that this would be a topic of discussion and mutual interest. Asked if she would review the offer of a no-war treaty with Pakistan, Mrs. Gandhi said: "We had made such an offer in the past and Pakistan had turned it down. Why again?"

When a newsman drew her attention to the reported statement by the Chinese vice-premier that Sino-Indian talks on the border issue could be held despite the fact that some Indian territory was under Chinese occupation, Mrs. Gandhi replied that she favoured negotiations.

Mrs. Gandhi ruled out any change in the leadership of the U.P. Congress(I) ministry in the wake of reported criticism by party MPs of the style of administration of the chief minister, Mr. Vishwanath Pratap Singh.

"The press reports of my party MPs' meeting were not accurate. Not a single MP or MLA of my party ever complained to me against the U.P. government," she said.

Opposition Flayed

Mr. Vishwanath Pratap Singh was present when she told newsmen that perhaps the only issue was that the chief minister could not give time to some party MPs who sought

an appointment with him during his recent visit to New Delhi. "He (Mr. V.P. Singh) was busy with the planning commission. Hence he could not meet them", she remarked.

Asked about the role played by opposition parties in national development, Mrs. Gandhi remarked: "They are irresponsible." Earlier she said at the Rae Bareli development seminar, that opposition parties had launched the so-called kisan agitation for a higher sugarcane price.

She stated: "When they were in power, the standing sugarcane crop was burnt down by cultivators because of low cane prices. We raised the cane price to Rs. 20 a quintal."

The Prime Minister said she would not be cowed down by such threats of agitation. "I have never given anything under duress." She ridiculed the Lok Dal and other opposition parties, which campaigned for higher sugarcane prices for growers on the one hand and demanded sugar at a lower price on the other.

Inflation Checked

Mrs. Gandhi held the opposition parties responsible for destroying the country's economic infrastructure, particularly in the sphere of industry. She reminded them that huge amount of government money wasted on meeting the agitation threat could well be used in schemes for helping agriculturists.

In a passing reference to yesterday's violent incidents in Allahabad, Mrs. Gandhi said students who complained of shortage of buses tried to set fire to buses in protest.

About the price situation she said at the seminar that the Union finance minister, Mr. R. Venkatraman, had told her that there was a rise of 23 per cent in the price level during the Lok Dal regime. Now it was only 13 per cent.

She said the phenomenon of high prices was the result of the damage done to the national economy by the previous Janata and Lok Dal regimes and the Iraq-Iran war, which affected oil supply.

Mrs. Gandhi said in Nigeria a stretch of desert had been developed into a green belt through large-scale plantation of neem trees. This had been conveyed to her by the Indian envoy in Nigeria.

Mrs. Gandhi gave a new slogan: to the nation: "Grow one plant for every child." She said usar (arid) land could be reclaimed by growing plants requiring less water and using chemical fertiliser.

She later addressed another seminar on development at Amethi, a constituency represented by the late Sanjay Gandhi. The Prime Minister was accompanied by Mr. Vishwanath Pratap Singh, and the MP from Rae Bareli, Mr. Arun Nehru. Ministers of the U.P. cabinet were also present to take any on-the-spot decisions that might have to be taken in regard to development schemes in the district.

Stressing the need for the people's involvement to make development plans a success, Mrs. Gandhi commended the Haryana experiment. She said: "In Haryana the government

took one single project every year, like irrigation, road repair and link roads, and completed it before taking up another scheme. With the result, the state developed from a backward state into a highly advanced state."

Addressing the seminar in Amethi, Mrs. Gandhi broke down while referring to her son, Sanjay Gandhi, who had launched development schemes in backward Amethi.

Human Resources

Mrs. Gandhi pleaded for harnessing human resources for accelerating the growth rate. Accusing the opposition parties of impeding the nation's march to progress, the Prime Minister said agitations merely diverted one's attention from important economic projects.

She said with the oil crisis becoming sharper people would have to resort to other energy sources. Solar energy could be one. "In my own household we have been using solar energy for heating water," she said.

Mrs. Gandhi declared that freedom fighters would get more benefits. The U.P. chief minister stated that all freedom-fighters in the state would now get Rs. 100 a month.

PTI adds: Mrs. Gandhi said that she would not decide whether Mr. Rajiv Gandhi should contest a Lok Sabha by-election. "Who am I to decide," she remarked at a press conference.

It was the Congress (I) parliamentary board alone which would decide who should contest an election from where, she added.

New Delhi (PTI): The Prime Minister, Mrs. Indira Gandhi, returned here after a two-day tour of Uttar Pradesh.

INTELLIGENCE AGENCY 'RIDDEN WITH DISCONTENT'

Calcutta THE STATESMAN in English 3 Dec 80 p 9

[Text] New Delhi, Dec. 2.--The Research and Analysts Wing, which was viewed with awe and even with a certain amount of dread till recently, has surfaced as a discontent-ridden agency. This, at least, is the impression one gets after the recent incidents involving men and officers of the organization in the capital.

As is natural in such a situation, when the spotlight is turned on a secret service organization, there is embarrassment all round.

While much has already been said about the immediate cause of the recent trouble, senior officials feel if the staff of such an organization resort to agitation the service gets demoralized.

What is more sinister, for the information-gathering sources at home and abroad, is that the agitationists have named some of the officers. Once the names and areas of responsibilities of the officers, even some of them, are revealed, the cover is lost. The gainers invariably are the counter-espionage agencies of foreign countries, particularly Pakistan and China.

Officials say that any intense spotlight on RAW would do the organization incalculable harm. And it is not the same things as, say, the exposes on the CIA which has, over the years built up a lot of resilience. RAW, on the other hand, despite its despicable though brief involvement in gathering domestic intelligence, is truly RAW in many respects.

The organization was formed in September, 1968 by bifurcating the Intelligence Bureau with officers and men working on foreign intelligence being transferred to the new agency. In its anxiety to build up the administrative infrastructure quickly the agency recruited a number of officers and men at different levels, not being very particular about their age group and other such criteria. The pre-Bangladesh situation resulted in more recruitment of a similar type.

When the Desai Government assumed power in 1977, it viewed RAW with a lot of suspicion because of its involvement in domestic intelligence. The organization was put on a massive reduction diet, which meant lesser avenues of promotion.

The Haphazard recruitments and the sudden choking of promotional avenues have been the twin major causes of discontent. The authorities are reported to have resorted to a lot of permutation and combination to ease the situation at least partially.

Staff councils were formed in various regions and an apex council at the headquarters in July last year. After a series of meetings the council made 41 recommendations of which 18 were implemented. Seven recommendations were rejected as not feasible. The others are in different stages of implementation.

Impartial observers feel that while the genuine grievances of the staff should be attended to, any involvement by politicians in the name of taking up the employees' causes would, in the long run, destroy the organization.

RAW employees of cabinet secretariat continued their pen-down strike for the sixth day today, adds PTI.

The employees have been demanding withdrawal of criminal prosecution and suspension of 32 employees.

Meanwhile, large police forces have been deployed outside the multi-storey RAW building in south Delhi as a "precautionary", measure and to prevent law and order problem, police sources said.

CSO: 4220

INTELLIGENCE FEARS 'FOREIGN' DANGER IN ASSAM

Calcutta THE STATESMAN in English 2 Dec 80 p 9

[Text] The Army intelligence feels that the Centre must find an early solution to the Assam problem if certain foreign Powers are to be prevented from taking advantage of the situation in the strategically vulnerable areas in the North-east. The possibility of certain foreign powers being already interested in the area cannot be ruled out, it added.

Senior officials of the Eastern Command said in Calcutta on Monday that the North-eastern States, such as Manipur, Tripura, Nagaland, Mizoram and Arunachal Pradesh had only a 700 km border with the mainland. India, as compared with a 3,400-km-long border they had with the neighbouring countries.

The officials feel that the police and para-military forces are in a position to deal with the disturbances in Assam though the presence of the Army is also required. The direct involvement of the Army in Assam now consists only in guarding some oil installations and pipelines. The official sources did not rule out the possibility of violent incidents in Assam if the Government took some strong measures, but did not think that there was any fear of the movement going underground and the growth of insurgency.

The growth of insurgency was likely to occur when a supply of foreign arms and aid was available and the insurgents found a safe sanctuary in an adjoining foreign territory. The problem in Manipur had been aggravated by the State's proximity to Burma. The insurgents could cross over and seek refuge in Burmese territory. The Army was handicapped by the nature of the terrain at the Burmese border and it was difficult for them to seal the border.

The Army officials fear that violent incidents will continue in Manipur. They cite the instances of Nagaland and Mizoram. It is believed, however, that the Army will be in a position to declare the situation in Manipur to be "under control" by the middle of January next year. This will mean that there will be no open terrorist activity, that the insurgents will not be in a position to do what they like and threaten people.

The Army is proceeding gradually to control the situation in Manipur. A few arrests are made every day. The deputy commander of the PLA, Mr Ranjeet Singh, has already been arrested. It has been estimated that there are about 40 hard-core PLA elements in Manipur with about 400 followers. The Army has succeeded in arresting several of these hard-core elements. The activities of PREPAK, they say is already under control. The PLA, however, is reportedly training new recruits.

The official sources ruled out the possibility that arms and weapons controlled by the Army were finding their way to the insurgents in Manipur. They agreed, however, that there was a thriving market in arms mainly rifles. Weapons used in Nagaland and Mizoram fetch a high price in Manipur. Mortars that the insurgents use are said to be old ones which activists who had gone to Lhasa for training had brought with them.

Following the resumption of duty by the employees of Oil-India on Saturday the Army engineers have stopped pumping oil through the pipeline from Jorhat to Barauni. The employees of the Oil and Natural Gas Commission were, however, yet to resume duty. Army engineers were manning the installations of the ONGC and carrying out the collection and conditioning of oil. They were hauling out oil from wells and storing it in overhead tanks.

The Army was told to flush the oil accumulated in the pipeline for over 10 months. It was feared that the oil inside the 7-30-km long pipeline would become stagnant and damage the pipeline. The Army engineers flushed out more than 90,000 kilolitres of oil from the pipeline and pumped in fresh oil. They also lifted oil from wells at the ONGC installations at Jorhat, but did not lift oil from the Oil India installations, for the machinery there was too sophisticated to be handled with only a few weeks' training. The flushing operation started on November 3 and lasted for 23 days.

At present, some Army units were guarding the pipeline along with police and paramilitary forces. Though the Oil India employees have resumed duty oil is not being pumped out of Assam. The total storage capacity of oil in the tanks in Assam is about 75,000 kilolitres. The tanks would be full if the Army continued its collection and conditioning operations for another week the official sources said.

CIRCULATION OF INDIAN DAILIES INCREASES

New Delhi PATRIOT in English 3 Dec 80 p 5

[Text] The circulation daily newspapers in India for the first time crossed the one crore mark in 1977 reports UNI.

The circulation was estimated at 10,472,000 in 1977 as against 9,383,000 in 1976--an increase of 14.3 per cent.

This has been stated in 'Press in India 1978', which was laid on the table of the Lok Sabha on Tuesday. The registrar of newspapers for India is required under the press and registration of books act to present a report on the state of papers to Parliament every year.

The total number of newspapers in the country rose from 13,320 in 1976 to 14,531 in 1977. The circulation of newspapers increased from 34,075 copies in 1976 to 37,437,000 copies in 1977, representing--a growth of 9.9 per cent.

Hindi continues to have the largest number of newspapers 3,736 but English newspapers, with a circulation of 90 lakh copies, continued to lead. Bengali had the distinction of having the highest circulated daily as a single edition.

Maharashtra had the largest number of newspapers, followed by Uttar Pradesh, Delhi, West Bengal, and Tamilnadu. Out of 14,531 newspapers, 9073 were owned by individuals.

Out of 14,531 newspapers in the country, 929 were dailies and 4,225 weeklies.

As many as 1,210 newspapers began publication in 1977. Of these 430 were in Hindi, 166 in English and 124 in Bengali and rest in other languages. The newspapers were published in 68 languages and dialects.

There are 23 newspapers which are being published for more than 100 years and 300 are more than 50 years old.

Among big newspapers, 53 were dailies and tri/bi-weeklies. There were 94 medium and 499 small dailies including tri-bi-weeklies.

In circulation, small newspapers had the largest share with 41.1 per cent, followed by big newspapers with 40.6 per cent. Medium newspapers claimed the remaining 18.3 per cent.

'Individuals' continued to be predominant unit of ownership. As many as 9073 or 52,4 per cent of the total. Newspapers published in 1977 were owned or 37.6 per cent belonged to by 'individuals' Remaining 5,458 societies/associations firms partnerships, joint stock companies and the Government, among others.

Central and State Governments accounted for 516 newspapers, including one daily. Of these 286 belonged to Central Government and the rest to various State Governments.

EDITORIAL SCORES 'BARBARISM' IN BIHAR

Calcutta THE STATESMAN in English 2 Dec 80 p 8

[Editorial: "Barbarism in Bihar"]

[Text] That the quality of certain features of life in Bihar falls rather short of civilized canons was evident last year when the Supreme Court found it necessary to order the State Government to release hundreds of prisoners who had already languished in jail far longer than they would have been imprisoned even if awarded the maximum sentences for the offences with which they had been accused, but never tried. But not even persistent violation of legal morality offered reason to suspect the authorities in Bihar of the kind of brutality that has now been exposed. The Chief Minister's plea that 15 police officials have been suspended for "negligence" cannot exonerate an administration that, in certain respects, seems as barbaric as it is callous; nor does Mr Jagannath Mishra gain much by arguing that 31, not 87 prisoners were blinded. The cruelty would have been as heinous, and the Government's guilt as ineradicable, even if a single man had been deprived of his eyesight. It is pointless, perhaps, to dwell on human aspects of this tragedy in a State whose norms so often violated ordinary notions of decency. But all the evidence suggests a degree of criminal complicity that demands the Centre's instant investigation if India is to preserve any self-respect as a modern nation.

The Chief Minister's present not very convincing display of concern, for instance, should not distract attention from the fact that he tried for as long as it was possible to make out that the victims were blinded by villagers in "encounters before their arrest". No less culpable was the cavalier attitude of the State Home Secretary who not only took no notice of the Bhagalpur Central Jail Superintendent's report confirming the outrage, but sought to justify official callousness by arguing that Patna receives "thousands of reports from all over Bihar every day". Given this implicit condonation at the highest levels of State administration, it might be morally wrong to punish only those who were directly responsible for the atrocities. Nevertheless, the pattern that appears to have emerged calls for detailed inquiry into the methods of the police force, especially in the five thanas of Bhagalpur district where the crimes seem to have been committed over a period of ten months. The sequence appears to be to accuse men of dacoity and haul them to the police station where they are first beaten up, their eyes then punctured and finally, their faces disfigured with acid. No question of justice or even of maintaining order is even remotely relevant to such enormities. It also goes without saying that people who are able to gratify corrupt officials are spared the treatment. The final irony is that such brutality might never have come to light if jail personnel had not applied for additional staff to escort blinded prisoners.

Horror over these revelations must, admittedly be tempered with the awareness that atrocities are a feature of India's prison life. Inhuman congestion, the frequent absence of basic sanitation facilities and the resultant squalor neither indicate, nor encourage, respect for people who may have fallen foul of the law even if no attempt is ever made to establish their guilt. But indifference is also compounded by the cynicism of legal officials, policemen and warders, all of whom distort the corrective system into a vindictive one. Bihar is by no means the only State where prisoners are bullied, deprived of their rights and subjected to various forms of savage treatment. But nothing quite so repugnant as the Bhagalpur outrage has ever before been reported. It is a sombre reflection not only on Bihar's police and civil service, but also on the political leadership and social climate of a State that not only perpetrates such evil but tries to cover it up until confronted with irrefutable evidence.

INTUC WARNS SIXTH PLAN MUST AID 300 MILLION POOR

Bombay THE TIMES OF INDIA in English 1 Dec 80 p 9

[Text] Udaipur, November 30 (PTI). The Indian National Trade Union Congress (INTUC) today warned of a "law and order problem" if the sixth plan failed to provide basic amenities to the over 300 million people who were still below the poverty line.

The INTUC, currently holding its 22nd session here, pointed out that the "impressive record of achievements during the last 30 years was insufficient to meet the increasing demands."

Unemployment had increased, prices had gone up, inflation was running high and communal tensions continued, felt over 3,000 delegates, including a dozen from foreign countries.

The INTUC said disparities in income and earnings between sections of the population and between rural and urban sectors were widening and above all the people's moral fibre was gradually "weakening".

The Union communications minister, Mr. C.M. Stephen, and the minister for civil aviation and tourism, Mr. A.P. Sharma, who is also president of the INTUC, are also attending the session.

The INTUC session also expressed "deep concern" over the increasing signs of Naxalite activities, which were reflected in the "indiscriminate violence and killings."

It, however, pointed out that an analysis would show that all this was a manifestation of the "twin problems of poverty and unemployment". The INTUC felt that it was, therefore, imperative that the eighties should become a "different and new decade."

"Moral values will have to be restored so that instead of mutual suspicion, mutual conflict and mutual rivalry we open up a new era of mutual trust, mutual service and mutual co-operation," the INTUC appealed.

Mr. Sharma, in his presidential address, appealed to the people, particularly the labour class, to help the Prime Minister, Mrs. Indira Gandhi, solve the formidable problems left by the Janata and the caretaker governments earlier.

He said the new government was faced with an economy which was in a mess. "Prices had soared high beyond the limit. The rate of inflation was beyond comprehension and unemployment was unmanageable," he said.

HISTORY OF INTUC SUPPORT FOR GANDHI REVIEWED

Bombay THE TIMES OF INDIA in English 6 Dec 80 p 7

[Article by T. E. R. Simhan: "INTUC Links With Cong.(I) Strengthened"]

[Text]

THE Indian National Trade Union Congress (INTUC) has come a full circle since its Nagpur session held in November, 1971. The just-ended Udaipur session of the organisation completed the unfinished political tasks and set at rest, at least for the time being, all its earlier conflicting, contradictory and confusing stance in regard to its relationship with the Congress party led by Mrs. Indira Gandhi.

The Nagpur session was held at a time when Mrs. Gandhi's leadership and popularity was unassailable and all-pervasive, thanks to her role in the liberation of Bangladesh and the massive election victory she achieved subsequently. That was also the time when the INTUC, claimed to be India's largest trade union centre on the basis of verified membership, was virtually "orphaned" by the exit of the Textile Labour Association in Ahmedabad, which nurtured the former till 1971. The organisation was thus faced with a situation where its political options were limited. The only course left to it then was to extend its "unstinted and unreserved co-operation and support" to what it termed with a pride, "the man of the hour" viz. Mrs. Gandhi.

The Nagpur resolution paid its quick dividends. The INTUC was allowed to remain unchallenged and undisturbed. But the Congress party shrewdly permitted the existence of the newly-floated labour cells both at the AICC and DCC levels, thus introducing a diarchy on the labour front. The Congress ministers conferred both with the INTUC and cells while at the same time proclaiming in public that the INTUC was the accredited platform for the Congress trade unionists. Interestingly, many of the INTUC leaders hold responsible positions in the labour cells along with the HMS leaders who have joined her camp. Mr. Nand Kishore Bhatt, the newly-elected president of the INTUC, is the chairman of the AICC labour cell.

Be that as it may. The period between post-emergency and pre-1977 election saw the INTUC adopting a detached attitude to Mrs. Gandhi's leadership with some top leaders adopting in private a different, if not diffident, posture about the organisation's support to Mrs. Gandhi in the 1977 elections. The results of the 1977 elections encouraged such leaders to adopt a lukewarm attitude towards Mrs. Gandhi. Indeed, some prominent leaders of the INTUC joined the Janata party after her defeat while some even talked of forming a labour party. They, however, continued to be in the INTUC which situation eminently suited the top echelons to proclaim that the INTUC was independent and not an appendage of Mrs. Gandhi as was being propagated by many. Even during Mr. Nehru's time, similar accusations were made, which the INTUC promptly rebutted citing its constitution and many other instances when it adopted in independent time of thinking.

DIVIDED HOUSE

Thus one found the INTUC to be a politically divided house even as late as 1979 end. No wonder, therefore, when the organisation's highest policy-making body viz. general council met in October, 1979, it could adopt only a one-line "majority" resolution recommending to the affiliated unions to support Mrs. Gandhi's candidates in the January, 1980 general elections. There were many who advocated a neutral stand by the INTUC. Some of the prominent office-bearers were not enthusiastic in adopting any open stand.

Contrast this situation with the way the organisation faced the assembly elections held after the 1980 Lok Sabha polls. The tone and tenor of the resolution supporting Mrs. Gandhi speaks for itself: "The INTUC is convinced that it is imperative that in all these states the Congress (I) must be returned to power in order to have a stable government which can work in complete harmony and understanding with the Centre. This can quicken the pace of economic growth and at the same time ensure social justice to all sections and minorities."

Perhaps, it was this kind of indecisiveness on the part of the leadership that prompted the Congress party to create labour cells so that the party is not failed at a crucial hour on matters pertaining to the industrial workers.

In line with its recent thinking, the Udaipur session, while reiterating its Nagpur policy of unstinted co-operation, went one step further to assert that the relationship between the INTUC and Mrs. Gandhi was inseparable and inevitable. Mr. G. Ramanujam, general secretary, was perhaps not exaggerating when he told the delegates that the INTUC looked upon Mrs. Gandhi as its "mother" for support and care. Mr. Ramanujam and his colleague Mr. C. M. Stephen, communications minister, naturally, therefore, exhorted the workers to extend all their support and co-operation to Mrs. Gandhi.

The Udaipur session has thus positively answered the oft-repeated question about the nature and content of the INTUC-Congress (I) relationship and put an end to all the suspense and vacillations that it maintained since 1971.

Of course, the top bosses of the organisation would continue to assert that the INTUC is an independent institution, having its own constitution,

rules and regulations as they did during Nehru's time. But the fact remains that the organisation chose only those as president and general secretary who had received Mrs. Gandhi's blessings.

The team chosen at Udaipur (Mr. Bhatt and Mr. Ramanujam) too, was the choice of the Prime Minister.

Until the TLA parted company in 1971 from the INTUC, it used to be the king-maker of the INTUC.

But the moot question is not so much whether or not the INTUC considers Mrs. Gandhi as its "mother", but if she travels in the same wave length as the former does.

The question assumes added relevance when one looks at the matter-of-fact routine message she sent to the Udaipur session. Not a line has been mentioned in that message about the role of the INTUC, leave alone giving a word of appreciation.

This is not, however, to deny the fact that Mrs. Gandhi did pay fulsome tributes (particularly during the 1974 railmen's strike) in the past for its role. One possible explanation to her subdued interest in the INTUC may be that she is only reciprocating now the same lukewarm attitude she got till the other day from the top brass of the INTUC. All the same, she is too shrewd a politician not to recognise the vital role of the INTUC can play in her efforts to lift the economy from its slumbers.

The INTUC rose as one man when occasion demanded and gave its mite to boost production and increase productivity. There is, therefore, no reason to even think that it will not do so in future given its due place and recognition. Now that the emotional integration of the INTUC with her is total and spontaneous, it is a safe guess that Mrs. Gandhi will be equally unreserved and responsive to the sentiments of the INTUC.

LINKS WITH REDS

Another significant political feature of the Udaipur session is the attendance of the TLA leaders as "distinguished guest" on the invitation of Mr. A. P. Sharma, the outgoing president of the INTUC and transport minister in Mrs. Gandhi's cabinet.

Mr. Kanti Mehta, a senior vice-president with constructive and sober attitude, has been chosen by the INTUC to meet the TLA leaders and work out modalities and areas of co-operation between the two centres, who believe in freedom, democracy and all that it goes with it.

The task of bringing the two organisations closer, if not total merger, is not going to be easy, particularly when their political thinking and inclinations are dissimilar.

One of the major grievances of the TLA when it decided to "keep aloof" from the INTUC in 1971 was that the latter was hobnobbing with the communists. Such a situation ceased to exist today from all available indications though there may be individuals in the organisations who might have been at one time card-holders. (The Congress party too is faced with a similar situation).

TLA's major grievance having been removed, one hopes that it takes positive recourse to close the gap between it and the INTUC. In this connection, the TLA's call on the occasion of its foundation day on December 4 to national trade union centres like the INTUC to forge a united battle for the amelioration of working and living conditions of labour as a welcome step in the right direction.

CLOSING DAY OF INTUC CONVENTION REPORTED

Marked by 'Angry Speeches'

New Delhi PATRIOT in English 3 Dec 80 p 7

[Text] Zawar Mines (Udaipur), Dec. 2. The concluding session of the 22nd convention of the INTUC was marked by angry speeches against the rising prices. It was felt that resolutions alone could not solve the problem.

Some of the delegates went to the extent of saying that the price level today was much higher than that during the Janata regime and that the present ministers were in conclusion with the traders. While another felt that it was not sufficient to say that Mrs Indira Gandhi was worried about the situation.

The INTUC out going President and the Union Minister for Tourism Mr A P Sharma who was presiding over the session clarified the position.

Mr Sharma said that the prices of sugar had gone up because of the previous government had not handled the situation properly, with the result that the production of sugar cane had gone down. But he expected the price of sugar to decrease once the present harvest came in the market.

Earlier general secretary Ramanujam while presenting his report said the problems of unemployment, price rise economic disparity inflation, and welfare of the workers had assumed new dimensions. He demanded a greater role for the workers in the economic planning of the country he asserted that trade union should also be modernised. The trade union movements should not stop at the gates of the factory and industries, he added.

He gave a call to deal with the problem of unemployment on a war footing. Mr Ramanujam expressed concern over the under utilisation of capacity in the key industries. He felt unless these industries were properly managed low industrial growth and a poor production level were bound to be there.

Replying to a question Mr Sharma revealed that the INTUC wanted to implement the Rath Committee report for the time being till connection were made in it.

He also made it clear that he stood for productivity linked bonus policy. He also subscribed to the idea of Workers representation on the Planning Commission.

Officials Elected

Bombay THE TIMES OF INDIA in English 3 Dec 80 p 15

[Text] Udaipur, December 2 (PTI): Mr N. K. Bhat was yesterday unanimously elected president of the INTUC for 1980-81. Mr. A. G. Ramanujan was re-elected general secretary.

Mr. V. R. Hoshing of Maharashtra president of the Rashtriya Mill Mazdoor Sangh, was elected treasurer. The election was held at the general council meeting of the INTUC which concluded its two-day session here last night.

The council also elected seven vice-presidents. They are Mr. Kanti Mehta (Bihar), Mr. Subroto Mukherjee (Bengal), Mr. V.P. Marakkar (Kerala), Mr. B.G. Gopal (Bihar), Mr. A. T. Bhosle (Bombay), Mr. S. Sanjiva Reddy (Andhra Pradesh) and Mr. K. P. Tripathi (Assam). It also elected a 41-member working committee.

ANDHRA PRADESH CABINET EXPANDED TO RECORD 61

New Delhi PATRIOT in English 3 Dec 80 pp 1, 7

[Text] Hyderabad, Dec 2 (UNI) Andhra Pradesh today set a new Indian record for the largest Council of Ministers as the strength of the Anjiah Ministry rose to 61 with the induction of 16 Ministers of Cabinet rank and 22 Ministers of State.

Thirty-seven Ministers were sworn in this evening, raising the strength of the Ministry to 60. Half an hour later, the figure went up to 61 with the swearing in of one more Minister of State.

Governor K C Abraham, administered the oath of office and secrecy to the new entrants.

The Ministry now comprises 39 Ministers of Cabinet rank and 22 Ministers of State.

The Chief Minister told newsmen that he might add one or two in order to ensure representation to all districts.

ARC Limit Exceeded

By having a Ministry of 61, Mr Anjiah has far exceeded the prescribed limit of 10 per cent of the combined strength of Assembly and Council suggested by the Administrative Reforms Commission. Even so, Khammam district has gone unrepresented while seven Ministers hail from Guntur district.

When the Channa Reddy Ministry bowed out of office, it had a strength of only 27.

Among the 38 sworn-in today was Mr M A Aziz, president of the APCC-I.

There was a last minute change in the list of Ministers of State from the one announced to the press earlier by Mr Anjiah. While Mr G Vedantha Rao found himself included Mr Venkateswara Rao whose name appeared in the first list was omitted.

However, half an hour later Mr Venkateswara Rao was the 38th to be sworn-in as a Minister of State.

The following Ministers were sworn in today:

Ministers of Cabinet rank: E Ayyappa Reddy, M A Aziz, Chebrolu Hanumiah, M M Hashim, C Jagannathrao, N Janardhan Reddy, Mrs T Lakshmikanthamma, M Manik Rao, D Munuswamy, R Ramalinga Rao, K Rosiah, N Srinivasulu Reddy, Bhattam Sriramamurthy, G V Sudhakar Rao, Sangeetham Venkatreddy and G Vedantha Rao.

Ministers of State: S Alwar Das, T Bala Goud, N Chandrababu Naidu, P Janardhan Reddy, K E Krishnamurthy, G Nageswara Rao, N Narasappa, K Uapiah, C H Parasurama Naidu, Gyana Prakasa Rao, C Rajanarasimha, Y S Rajasekhar Reddy, Goka Ramaswamy, D Ravindra Naik, Mrs B Rukmuni Devi, K Sathyanarayana Raju, M Srinivasa Rao, Majji Tulsidar, P Venkatrao, Mrs M. N. Vijayalakshmidevi, K.V Krishna Reddy and Mr Venkateswara Rao.

Twelve former Ministers are back in the Cabinet with the inclusion of Mr N Janardhan Reddy, Mr M M Hashim and Mr K Rosiah, all those in the Channa Reddy Ministry, barring four are in Mr Anjiah's Cabinet.

The Chief Minister also set a new record by including four women in his team, two of them with Cabinet rank.

There are n all 27 Ministers belonging to the minorities, backward classes, scheduled castes and tribes. There are three Muslims and two Christians.

Thirty-four of the 61 Ministers hail from the Andhra region and the remaining from Telangana.

Return to Cabinet

Also back in the Cabinet are three of the seven Ministers dropped by Dr Channa Reddy in May 1979--Messrs M. Manik Rao, G. V. Sudhakarrao and S Venkat Reddy--and Mr G Ramaswamy who resigned from Channa Reddy Ministry in March 1979.

Six new faces among the New Cabinet Ministers include PCC-I president M.A. Aziz chairman of Coastal Andhra regional planning and development committee, G. Vendantharao, Mrs T Lakshmikanthamma, Messrs. E. Ayyapu Reddy C. Jagannadharao and N Srinivasui Reddy.

Four other ex-Ministers staging a come-back are: Messrs Ch. Hanumayya D. Muniswamy, R Ramalinga Raju, Bhattam Sreeramamurthy and C. Rajanarasimha (Minister of State).

Two Parliamentary Secretaries have been promoted to the Rank of Minister of State. They are: Mr K E Krishna Murthy and Mr D Ravindra Naik.

VACANCIES IN CENTER, STATE ASSEMBLIES NOTED

Calcutta THE STATESMAN in English 3 Dec 80 p 5

[Text] New Delhi, Dec. 2.--Nineteen seats are vacant in the Lok Saba, two in the Rajya Sabha and 30 in State Assemblies, the Lok Sabha was told during question hour today. Of the vacancies in the Lok Sabha, 12 are from Assam.

Elections seats from Assam, it was stated in a written reply to a question, were to be held "after the situation in the State is normalized."

There was one vacancy from Meghalaya Election to it was to be held "only after the issue of foreign nationals is settled".

There were five vacancies from Uttar Pradesh and one from West Bengal. These seats had become vacant during the past few months.

As for the Rajya Sabha, one vacancy was from Delhi and it was caused by retirement. The biennial election to fill it would be held "after the election to the Metropolitan Council of Delhi". The second was a "casual vacancy" from Andhra Pradesh.

The vacancies in Legislative Assemblies were: Andhra Pradesh--2, Assam--2, Bihar--4, Himachal Pradesh--2, Manipur--1, Meghalaya--2, Tripura--3, Uttar Pradesh--7 and West Bengal--7. No decision had been taken to hold by elections till now.

The question, a starred one requiring oral answer, evoked a volley of supplementaries.

Mr. Shivraj Patil, Minister of State, who replied on behalf of the Law Minister repeatedly refuted, by implication, the charge that the Election Commission was prepared to hold some of those by-elections but that it was under pressure from the Government not to do so.

Mr. Patil, kept saying that the commission was an independent body under the Constitution, it was strictly for it to take whatever decision had to be taken, and there was no question of anyone directing it one way or another. The only factor influencing commission in reaching a decision was the "prevailing situation" Mr Patil added.

The answer did not convince several members, most of them from West Bengal. Mr. Niren Ghosh (CPI-M) pointed out that some by-elections had been announced and then cancelled on instructions from the Centre.

Mr Indrajit Gupta (CPI) had a very pertinent question to ask: If the commission was an independent entity, how was it that questions relating to it were admitted for answering and a Minister actually answered them? "He should not take it upon himself to answer them."

Mr Balram Jakhar, Speaker, told him: "I shall look into it."

In a written reply to another question whether it was a fact that some by-elections in some States had been postponed, the Government said: "Under Section 149 and Section 150 of the Representation of the People Act, 1951, when the seat of a member elected to the House of the People/Legislative Assembly of a State, becomes vacant or is declared vacant or his election to the House of the People/Legislative Assembly is declared void, the Election Commission shall subject to the provisions of sub-section (2) thereof, by a notification in the Gazette of India, call upon the Parliamentary constituency/Assembly constituency concerned to elect a person for the purpose of filling the vacancy so caused before such date as may be specified in the notification. The Election Commission has not so far issued the notification for holding by-elections in some States."

GOVERNMENT REVISES ROAD DEVELOPMENT POLICY

Bombay THE TIMES OF INDIA in English 1 Dec 80 p 13

[Article by Mavin Kurve: "Policy Switch in Nepal Road Development"]

[Text] Kathmandu, November 30. After six friendly nations, including India, have helped build 2,500 km. of roads in the last 25 years in Nepal, the Nepalese government has been forced, by economic considerations, to review and partly reverse its own road development policy.

Informed sources say that the unexpected change has been prompted by the high annual cost of repair and maintenance, low utilisation of highways and above all, the spiralling costs of fuel, on the one hand, and of road construction material on the other. (Both fuel and construction material are imported).

Programmes for the next five years lay greater stress on trek trails, mule trails, suspension bridges, ropeways, river navigation and electric railways.

Yet another factor for the policy switch is said to be "ecological damage caused by road development" in areas where forests have had to be felled and alignments cut through hills for economic reasons.

Experts concede that "as far as they go" highways built in Nepal with Indian, Chinese, British, Swiss, Soviet and American aid have helped in national and emotional integration, in evolution of national markets and obviating journeys through Indian railheads and customs, check-posts to reach neighbouring Nepalese districts.

Economic surveys in districts adjoining highways have, however, revealed that only "nominal benefit" has accrued from such facilities. The policy makers now want some time to consolidate the cost-benefit aspect of the highways to promote transport and trade and "make them pay more" before launching new road construction programmes.

SOVIET MILITARY EQUIPMENT FOR INDIA LAUDED

New Delhi PATRIOT in English 9 Dec 80 Supplement p 10

[Text] Given the tricky nature of arms deals wherein the supplier seeks to gain political leverage over the buyer, Indo-Soviet cooperation on military equipment is unique in that it allows full reign to Indian perception of its national interest and at the same time promotes self-reliance in its own defence. Indo-Soviet military cooperation was born because of attempts to circumscribe this country's freedom of action as a sovereign, non-aligned nation and it has grown under the compulsion to be able to make a free choice on international issues.

It is the end product of bitter lessons learnt at the hands of those who profess to be protectors of the free world. Similar lessons have been learned by emergent nations of Asia, Africa and Latin America whose leaders had to break the yoke of colonialism or overthrow a dictatorship. They have had eventually to turn to the Soviet Union for help.

For India, the MiG aircraft has come to symbolise Indo-Soviet military cooperation. Yet it was with a helicopter, the Mi-4, bought specifically for logistic support and utility duties on the Himalayan front in October, 1980, that the two countries began the long cooperation. The Mi-4 has been used in every military operation since then--in Goa in 1961; it was for many forward troops the only tenuous link during the 1962 Chinese invasion; it was operational in 1965 against Pakistan and in 1971 did a grand job of "airbridging" during Operation Cactus Lily in Bangladesh.

Since then the Soviet role in Indian defence preparedness has been two-ply -- that of stepping into the breach left by Western governments' refusal to supply the requisite equipment and of modernising the three wings of the Indian armed forces at prices generally less than half those of Western equipment and payment in rupees instead of scarce hard currency.

[as published]

Thus the acquisition of the AN-12 medium transport aircraft in March, 1961, upgraded the IAF's ability to reach out into the wastes of Ladakh to air-supply the forward pickets. It is only just now, after nearly 20 years of service that the Government of India, has decided to replace it with another Antonov of modern design.

The late 50s and the turn of the decade witnessed several developments that changed the geo-stratgic environment in the subcontinent. Pakistan had opted for a Western military alliance, joining Cento and Seato in a bid to bolster the policy of US Secretary of State John Foster Dulles to create a ring of pro-American alliances around the Soviet Union and China, the two Communist monoliths. The Government of India was under pressure to join the US and Britain as a bulwark against communism. For throwing in its lot with US-sponsored alliances Pakistan not only received support at all world forums for its claims on Kashmir but its troops were provided with sophisticated weaponry like the Patton tanks and the Sabrejets.

Drawing from post-Independence experience Mr Krishna Menon, when he became Defence Minister decided to implement a plan for self-sufficiency in weaponry. India signed an agreement with the Soviet Union in 1961 to purchase some MiG-21s and manufacture the rest within the country. The MiG-21 gave the IAF mach 2 capability, a quantum jump in speed compared to the redoubtable Gnat interceptor. The MiG project has improved from generation to generation and it is now proposed to acquire the swing-wing MiG-23s and a more powerful power plant.

about, the Chinese attacked in 1962. The US and Britain led a Western task force to refurbish India's northern defences. The US set up radars to give early warning against China and Britain helped train Indian air crew and ground engineers to the use of the new system. All along, Prime Minister Jawaharlal Nehru, a man broken by the perfidy of the Chinese, was subjected to heavy pressure to bring India under the US nuclear umbrella like Japan and to lend this country to anti-communist activities. The founder of non-alignment staved them off, all the while striving to find equipment for the massive expansion of the Indian armed forces. The strength of the Air Force and the Army was doubled but from the start both the US and UK were reluctant to supply much-needed combat aircraft and the French refused to allow the manufacture of the Mirage in India.

The Soviet Union on the other hand showed no such hesitation. While they are reputed to be hard bargainers they made available to India surface to air missiles (SAM) to tackle high-flying aircraft, bringing India into the missile age. Since then other generations of SAMs have been added to India's air defence ground environment system (ADGES) which is a network of radars, anti-aircraft guns and missiles stretching from Kutch to Arunachal Pradesh

Simultaneous with strengthening the air environment against intruders the Soviet Union helped modernise and equip an expanding Indian Army. The British-made 20-pounder field gun was inadequate. The 130 mm medium guns and tanks, bridging equipment and armoured personnel carriers came from the Soviet Union and other socialist bloc countries. All this brought India up-to-date with the modern concept of swift mobility which paid off dividends in 1971 in Bangladesh. To cater to the changing tactics of warfare and provide infantry and armour with better protection against air attacks India has received rapid-fire multi-barrel weapons which can be used against static defences as well. The latest is the T-72 tank.

The Soviet Union has made significant contribution to the development of the Indian Navy from a coastal defence force to a "blue water" navy. Previously, Britain had the monopoly as suppliers of ships to this country but after the 1965 war with Pakistan and NATO decision to throw its weight behind the Cento member to offset the effect of the arms embargo imposed by the US and Britain, the Soviet Union became a major supplier to the Navy Submarines were acquired in 1968 followed by fast patrol boats and the missile-boats that set Karachi aflame. Since 1971 missile carrying corvettes and long-range maritime reconnaissance and anti-submarine warfare aircraft the IL-33, had been added to the fleet. Most recently, the first of three Kashin-class destroyers arrived off Bombay, ships which can form the nucleus of very powerful task forces to protect

Indian maritime interests far across the oceans that surround us.

All this has been achieved at minimum cost to the exchequer. Similar equipment bought from western sources would have drained the economy and emptied the coffers of foreign exchange and the rate of import of inflation would have been vastly greater were it not for the rupee arrangement with the Soviet Union. We in this country know how much it has helped this country on its chosen path of self-reliance.

—C. V.

INDIAN NAVY TO BE REPLENISHED TO MEET CHALLENGES

Bombay THE TIMES OF INDIA in English 2 Dec 80 p 16

[Text] Bombay, December 1. "The Indian Navy is in the process of replenishment despite financial constraints to meet increasing threats".

This was stated by Rear-Admiral S. Mookerjee, flag officer commanding Western Fleet, in a brochure distributed to newsmen on board "INS Shakti" during a day at sea recently.

According to Rear-Admiral Mookerjee the threats came mainly from submarines and highly-sophisticated missiles. He said Pakistan had acquired a new and powerful submarine and hence the Indian Navy had to furnish herself with more submarines. He stressed the need for a "three-dimensional navy" which would effectively integrate air, surface and below the surface warfare.

Asked if India had decided to collaborate with any other country for the production of submarines, he said. "We are fully capable of absorbing the transfer of technology", adding that he was proud of the technological competence of the Indian Navy.

It may be recalled that during the last session of parliament it was stated that India had decided to collaborate with West Germany for manufacturing submarines. The Rear-Admiral had no comment to offer on this issue except to say that West Germany had always maintained the tradition of making good submarines. According to him, it takes two to three years to make a submarine.

Thrilling Demonstrations

As the skyline of Bombay faded out of sight, newsmen saw demonstrations simulating the mood of a real sea battle. For instance, there was an exercise called "anti-submarine cruising screen" in which ships, planes and helicopters searched the approaches to Bombay harbour to spot and destroy enemy submarines.

The most thrilling demonstration was seeing a submarine dive and surface, operating on diesel engines above the water level and on electric motors below the surface.

During the anti-submarine firing, frigates went into action first. This was followed by rocket firing and then a helicopter dropped charges, its sound echoing below the water. These weapons are underwater bombs which can be set off at pre-determined depths.

As the battle sounds went on and on all through the afternoon, a Dakota flew past us and the 76.2 guns on the ship's deck began to boom. Earlier, there were the usual rescue demonstrations by Alouette helicopters, missile ships and boats and jackstay operations. During this, Sagar Samrat was spotted on the radar and everyone waited for it to appear in the distant horizon. And there was considerable excitement when the oil rig came to sight for a brief while. "We are in the Bombay High region", an officer remarked.

CPI GENERAL SECRETARY TALKS TO NEWSMEN

New Delhi PATRIOT in English 6 Dec 80 p 4

[Text]

UDAIPUR, Dec 5.

GENERAL secretary of the Communist Party of India C Rajeswara Rao said here yesterday that the security of the country was threatened by the US-China-Pakistan axis.

Addressing a press conference Mr Rao said Pakistan had attacked India thrice with the help of the US which had always tried to block the industrialisation of India.

Ridiculing the assurance given by China that it would no longer assist the separatist forces in the North Eastern region of the country, the Communist leader said China had been imparting training to the separatists of Nagaland, Mizoram and Meghalaya.

He did not agree with the idea that China and the US will become friends if India broke its friendship with the USSR. As they (the US and China) had always opposed the Indian interest while the USSR had always stood with us. He was hopeful that the ensuing visit of Soviet President Brezhnev will further the industrialisation of our country. The USSR had already helped India establish 80 industrial units.

Mr Rao did not subscribe to the economic philosophy of "calculated risk" envisaged by Finance Minister Venkataraman that by giving more concessions to monopolists and industrialists the production will increase and bring about a fall in prices. He said, this policy had already helped to escalate the prices.

In this context, he cited the US example where President Carter's policy had failed resulting in an increase in the price level and unemployment.

He demanded abolition of the dual price policy and the take over of the sugar industry by the Government. He said because of this policy the sugar tycoons had made a profit of Rs 150 crore.

Mr Rao wanted that foodgrains edible oil, sugar, clothes and kerosene should be sold through the public distribution system.

The Communist leader also wanted the withdrawal of the National Security Ordinance and the Preventive Detention Act.

Condemning the recent blindings in Bihar Mr Rao demanded stern action against the police officers.

He said the Centre should provide Rs 350 crore to the State for the completion of the Rajasthan canal project.

He also called for relief measure to the drought-hit in the State.

NEWSMEN VISIT NAVAL COMMAND ESTABLISHMENTS

New Delhi PATRIOT in English 3 Dec 80 p 4

[Text] Bombay, Dec 2 (PTI). "Paddle your own canoe" has become the watchword of the men and officers of Bombay's naval dockyard as it is poised to become self-sufficient, through self-reliance, in providing material and logistic support to the Indian Navy.

This was the impression of a group of journalists who visited the establishments of the Western Naval Command on the eve of the current navy week.

The most challenging job taken on hand by the dockyard is the extensive refit and modernisation of the aircraft carriers, INS Vikrant, which is expected to emerge as one of the most modern and striking warships of its kind record time by the middle of next year.

Yet another significant step towards self-reliance is the acquisition of know-how and modern technique of manufacturing leander boilers. The naval dockyard's boiler manufacture project, setup in 1970, is in a position to make boilers for the leander class frigates under construction at the Mazagaon Dock. This phased programme has made such progress that the dockyard is now capable of manufacturing pressure parts which used to be imported till recently.

Already five leander class frigates have been manufactured indigenously and commissioned, latest being the most sophisticated INS Taragiri.

The weapon workshop of the dockyard, has acquired skills to be able to tackle almost any type of electronic and missile repairs. The weapon testing and tuning team had also earned praise for the work on the missiles fitted on rocket boats in the 1971 conflict with Pakistan by securing 100 per cent hits.

Most of the work system in the dockyard have been computerised, resulting in better utilisation of man-power and their skills and accuracy in its turnouts.

Fiery Exercise

UNI adds: An 'enemy' submarine quietly sneaked into the Indian waters and lurked there to launch a torpedo attack on the advancing western fleet of the Indian Navy.

"She is snorting", came a message and a Seaking helicopter was immediately despatched to 'kill' it. It dropped a depth charge and simultaneously patrol and missile boats closed in and fired a barrage of anti-submarine rockets.

After a three-hour operation the intruding submarine was sunk. The western fleet of Indian Navy was simulating a submarine attack, an action-packed spectacle it organised in connection with the navy week.

A party of newsmen on board INS Shakti, the Indian Navy's tanker, sailed 100 kms into the Arabian Sea to watch "a day at sea" with the western fleet.

SOVIET SCIENTIST TALKS TO DELHI NEWSMEN

New Delhi PATRIOT in English 4 Dec 80 p 7

[Text] An Indo-Soviet symposium on 'Rational utilisation and conservation of renewable natural resources for regional development' will be inaugurated on 8 December, said vice president of the USSR Academy of Sciences Yuri Ovchinikov on Wednesday.

Mr Ovchinikov is in the Capital as head of a three-man team which is attending a global seminar on the role of scientific and engineering societies in development.

Talking to newsmen, he pointed out that Soviet-Indian ties in the scientific field have been developing at a rather rapid pace in recent years, undergoing as it were, a transition from a mere exchange of views to closer ties that include joint publications and bilateral conferences.

To plan and coordinate these activities, he said, the Joint Soviet-Indian Commission for Cooperation in Social Sciences had been established.

In pursuance of long-term projects said Mr Ovchinikov, the USSR Academy of Sciences and the Indian National Academy of Sciences signed up last summer a programme of scientific exchanges and cooperation for 1980-85. The project incorporates new subjects for cooperation--radio astronomy, radioscience, pure and applied mathematics and some aspects of modern biology.

Joint research, he said, is also going on deep seismic sounding on the Hindustan shield since 1972, and from data collected as a result of this cooperation it will be possible to predict mineral deposits and seismicity of the area.

PRESS PANEL HEAD TALKS TO NEWSPAPER GROUP

Bombay THE TIMES OF INDIA in English 11 Dec 80 p 4

[Text]

BOMBAY, December 10: The chairman of the press council of India, Mr. Justice A. N. Grover, has favoured wide coverage of human interest items in newspapers.

Addressing the standing committee of the all-India small and medium newspaper association here today, Mr. Justice Grover said the print media now devoted as little as 0.72 to 1.82 per cent of their editorial space to socio-economic problems.

The bulk of the space was taken up by political affairs. "Is it only politics and politicians who impinge upon our lives", he asked.

For according a greater measure of freedom to the press, he said the council was making a review of the relevant legal provisions.

The laws of libel, privilege and contempt of court were all being studied to specify what constituted their validity.

Some of the changes suggested by the council to the government were being favourably considered by the latter, he said.

He also sought more powers for the council so that it could question the authorities in the government who were vindictive to particular newspapers.

Mr. Justice Grover did not believe in the need for a code for journalists though he suggested a framework of principles to maintain high journalistic tastes and ethics and maintenance of independence.

These would outline the right to privacy and safeguards against eruption of communal and caste feelings.

He asked journalists to eschew character assassination arising from personal vendetta.

Referring to reports of a change in the judicial system, Mr. Justice Grover said that while he was in agreement with the need for it, he was disappointed at the lack of an alternative set-up.

"I am not against the change but I should have the blueprint of the alternative system," he said, obviously reacting to those suggested the reform without providing the alternative model.

Mr. Prem Chand Varma, chairman of the association, said the press must shake off its orthodoxy and devote more space to news of society's interests. The press was given considerable importance by society and the former should discharge it with responsibility.

STATISTICS ON SETTLEMENT OF DP'S GIVEN

New Delhi PATRIOT in English 3 Dec 80 p 5

[Text] Over 80 lakh displaced persons and 1.40 lakh families, displaced or repatriated, have been settled in different parts of India since Independence, the Lok Sabha was informed on Tuesday, reports PTI.

The displaced persons and repatriates came from Chhamb, Pakistan, Bangladesh, Sri Lanka Uganda, Zaire and Vietnam, Deputy Minister of Supply and Rehabilitation P K Thungon said.

Rehabilitation of displaced persons from West Pakistan (now Pakistan) and Chhamb and repatriates from Uganda, Zaire and Vietnam was almost complete, Mr Thungon told Mr A T Patil (Cong-I) in a written reply to a question.

Mr Thungon said that 4,600 displaced persons and families displaced in the 1971 conflict in Rajasthan and Gujarat, 4041 families from former East Pakistan (now Bangladesh), about 5,000 families of repatriates from Sri Lanka and 500 from Burma were proposed to be rehabilitated during the current financial year, under various programmes like agricultural and non-agricultural occupations.

Mr Thungon gave the following figures for the number of families or persons settled up to 31 October:

Chhamb 3,737 families, Former West Pakistan (now Pakistan) 47,64,800 persons. Displaced persons of 1971 conflict 5,600 families Former East Pakistan (now Bangladesh) 32,56,465 persons, Repatriates from Burma 68,557 families Repatriates from Sri Lanka 60,376 families Repatriates from Uganda 2,000 families, Repatriates from Zaire 35 families and Repatriates from Vietnam 508 families.

In a written reply to a question by Mr C Nahata, Deputy Minister said of the displaced persons from Bangladesh, 4.64 lakh were settled in Assam, 3.49 lakh in Tripura, 74,200 in Bihar, 41,500 in Madhya Pradesh 28,850 in Uttar Pradesh, 27,700 in Maharashtra, 14,200 in Orissa 9,700 in Meghalaya, 8,600 in Andhra Pradesh, 5,500 in Rajasthan, 2,900 each in Karnataka and Manipur, 15 in Punjab and 20.95 lakh in West Bengal.

Besides 15,300 were settled in Andaman and Nicobar Islands, 13,00 in Arunachal Pradesh and 1.03 lakh at Dandakaranya.

Of the displaced persons from West Pakistan 27.37 lakh were settled in Punjab (including Haryana), 4.80 lakh in Uttar Pradesh, 4.15 lakh in Maharashtra and Gujarat 3.73 lakh in Rajasthan, 2.09 lakh in Madhya Pradesh, 9,000 in Tamilnadu, 7,000 in Karnataka, 5,000 in Himachal Pradesh and 4,000 in Andhra Pradesh, the Minister said.

Besides 5.01 lakh of them were also settled in Arunachal Pradesh, the Minister added.

He said that there was still place in the Dandakaranya project for 6,500 families to be settled.

He told Mrs Sanyogita Rane and others that 500 Burmese refugees in Bihar, West Bengal, Tamilnadu, Andhra Pradesh, Tripura, Uttar Pradesh, Assam, Orissa and Kerala were awaiting settlement in the country.

DELHI PLANNING SOLAR ENERGY UTILIZATION

Calcutta THE STATESMAN in English 5 Dec 80 p 4

[Text]

NEW DELHI, Dec. 4.—The Centre will take up a project for utilization of solar energy to provide electricity, drinking water and minor irrigation in villages, reports UNI.

The Rs 120-million-project, to be implemented over the next five years, will make use of photovoltaic systems for direct conversion of solar energy into electricity to meet the energy needs of the rural masses.

The Government has already taken up a short-term scheme to fabricate solar photovoltaic pump sets of 25 kW capacity. Field trials of these pumps are to be completed by the end of next year.

A scheme is also under way to provide 5 kW capacity photovoltaic modules for domestic and other related applications.

India's first solar power-based lighting system was installed recently at Chagismaar, a remote village in Ladakh. The system is providing electricity to light 17 fluorescent lamps in a 20-bed hospital by a 348 peak Watt solar photovoltaic array and 15 lamps in a central kitchen and a community hall by another 192 peak Watt array.

The Department of Science and Technology is now working on reducing the cost per peak Watt by developing low cost solar grade silicon material and improving the efficiency of solar cells and panels.

The public sector Central Electronics Limited has fabricated single crystal silicon cells at the laboratory scale to bring down the per peak Watt.

Solar photovoltaic modules developed by CEL are being used in the lighthouse beacon at Dwaraka port for ship navigation, for pumping water in the solar distillation plant at Awania village in Gujarat and for providing drinking water at Tijara village in Rajasthan.

Scanning auger spectrophotometer facility has been set up at the Indian Institute of Technology in Delhi for research on thin film solar cells and selective coatings.

The Government proposes to increase the use of photo voltaic systems as a substitute for petroleum products.

Present efforts are to reduce the cost of per peak Watt which is between Rs 80 and Rs 120.

DELHI BLAMED FOR WEST BENGAL MONEY PROBLEMS

Bombay THE TIMES OF INDIA in English 9 Dec 80 p 9

[Text]

CALCUTTA, December 8.

WEST Bengal's overdraft as of today is Rs. 61 crores. The finance minister, Dr. Ashok Mitra, said it was so only because the Centre had not been disbursing funds or fulfilling its commitments.

Apparently provoked by the criticism in the AICC(I) yesterday about some unnamed states not enforcing fiscal discipline and running into heavy overdrafts, Dr. Mitra said while the Centre could print as much notes as it liked to bridge budgetary deficits, the state governments could neither suspend expenditure nor stop note-printing. They were always at the receiving end in terms of criticism.

About pending Central disbursement, Dr. Mitra said the state's share of small savings (estimated at an average of Rs. 11 crores a month) had been due since June.

As regards unfulfilled commitments, he referred particularly to the question of revision of coal royalty which was now at 3.3 per cent of the value of coal raised, though such a revision, statutorily provided, had been due in August 1979 and the Centre had promised to give it by August this year. West Bengal had asked for 15 per cent royalty, which in terms of the current year's production, could yield over Rs. 30 crores against only Rs. 6.6 crores at 3.3 per cent.

Secondly, Dr. Mitra referred to the army occupying and using since 1962 substantial areas of forest land in northern districts and paying ground rent on only one-ninth of the area at Rs. 15 per hectare and nothing for the balance of holding. The state government had suggested that land under permanent occupation should be acquired by the army after paying proper compensation and for the balance suitable ground rent paid. Because of this occupation, forest department was losing nearly Rs. 1 crore every year, besides the money value for the agricultural crop which could be grown.

RISE IN COSTS OF INPUTS HITS ENGINEERING UNITS

Calcutta THE SUNDAY STATESMAN in English 30 Nov 80 p 15

[Article by M. Vinayak]

[Text] A recent study of the Association of Indian Engineering Industry reveals that all-round escalation in raw material, energy and labour costs in the '70s has considerably eroded the profitability of the engineering industry during the period.

According to A.I.E.I.'s latest data sheet on cost inflation which covered its top 100 member-companies, costs of raw materials, fuel and power labour, construction maintenance, shipping, transport including shipping, and finance have all recorded sharp increases during the nine-year period ending July 1980.

The cost-push has eroded the profitability of A.I.E.I's top 100 companies in terms of gross profit as percentage of sales from 7.3% in 1977-78 to 7% in 1978-79. A sector-wise analysis showed the aluminium industry as the worst hit with a fall in its profitability to 9.8% from 10.5%, followed by electrical machinery, apparatus and appliances, etc, (from 9% to 7.6%) transport equipment (from 7% to 6.5%) and total engineering (from 7.3% to 7%).

According to the data sheet raw materials, components, stores and spares constituted over 45% of the expenditure of the engineering companies covered by the A.I.E.I. study in 1978-79 against 43.8% in 1977-78.

With regard to raw material costs, the percentage-wise increases were up by 12.0% in aluminium, 10.4% in copper and copper alloys and 10.8% in tin during 1980 (July) over 1979-80.

In the energy sector, almost all items were hit by the cost inflation. Coal, petrol diesel oil and lubricating oils were costlier by 12%, 20.3%, 53.2% and 18.2%, respectively, in July this year over 1979-80 levels. The power-intensive industries like aluminium and electric arc furnace sectors were particularly hit hard, following the sharp increase in their energy bills.

Construction and maintenance costs have also shot up as follows:

Bricks (11.9%), paints and varnishes (8.5%) fireclay (32.2%), and limestone (6.8%).

In transport and shipping, short and long rail transport charges are now (1980-81) subject to additional supplementary charges of 15% over 1979-80. Shipping freight charges for Calcutta to New York and West Coast of India and U.S. Atlantic/Gulf Ports have gone up ranging from 38% to 80%.

Labour costs constitute roughly 14% of the engineering industry's expenditure. The A.I.E.I. study indicates a 19.2% increase under this head for the iron and steel industry during the period under reference. Surprisingly, the increase was particularly high in Bombay (12.1%), followed by Bangalore (11.8%), Madras (8.8%), Calcutta (8.7%) and Delhi (7.9%).

In the case of engineering units employing more than 1,000 workers, the increase in labour costs in May this year over the same month last year was 3.6% and 3.2% in the case of unskilled and skilled workers, respectively.

The minimum wages for unskilled workers has risen by 151% in such units, from Rs 210 per month in 1971 to Rs 526.20 this year, reflecting an annual growth rate of 16.8%.

The skilled workers' wages have gone up by 117.5% to Rs 589.20 per month this year from Rs 270.90 per month in 1971.

Wages for unskilled and skilled workers in units employing a workforce ranging from 250 to 1,000 the minimum wages have gone up from Rs 210 per month and Rs 270 per month to Rs 523.20 and Rs 585.20 per month, respectively, during the period under reference.

The wholesale price indices for the engineering industry reveals steep increases in the basic metals, alloys and metal products section during the period 1971-72 to 1980 (July). The index for steel bars and rods (with 1970-71=100) was up by 208.9% to 317 in July 1980 from 102.6 in 1971-72, ferro-silicon by 348.7% to 499.4 from 111.3, tinplates to 216 from 104, ferro-manganese by 171.7% to 271.7 from 100. steel wires by 162.5% to 293 from 111.6 steel semis by 166.5% to 309.4 from 116.1.

The index for tin showed a fourfold rise to 452.9 from 89.3, aluminium by 191.6% to 293.4 from 100.6 lead by 187.2% to 270.8 from 94.3, nickel by 124.7% to 157.3 from 70, barrels and drums by 169.7% to 274 from 101.6, non-ferrous metals and alloys by 175.9 to 274 from 99.3 during the period under reference.

The sharp increases in the costs of main factors of production as also the distribution costs would add to the inflationary pressures in the economy and weaken the industry's competitive strength in overseas markets. Erosion of profitability may slacken capital investments in the industry and thus retard expansion of capacities in critical sectors, which may add to the sectoral imbalances already plaguing the economy.

BASU DEFENDS FOOD PROGRAM ADMINISTRATION

Calcutta THE STATESMAN in English 5 Dec 80 pp 1, 9

[Text]

MR JYOTI Basu, in a letter to the President, has sought constitutional protection against "the wrong statements of the Union Agriculture Minister and his spokesmen" in regard to utilization fo foodgrain in West Bengal under the food-for-work programme. He has suggested that the issue be referred to the Supreme Court for its opinion.

Mr Basu said that the "honour and dignity of the State Government" had been affected by "the wrong statements" of the Union Minister and his spokesmen. He appealed to the President under Article 143 of the Constitution, saying that since a question of fact had arisen" which is of such a nature and of such importance" it was expedient to obtain the opinion of the Supreme Court on it.

The Chief Minister said the West Bengal Government was "deeply disturbed" our certain statements by the Union Minister for Agriculture and Rural Reconstruction. Both in Parliament and outside, the Union Minister had gone on record, suggesting that the West Bengal Government had not submitted certificates of utilization covering even 30% of the foodgrain released. Other spokesmen of the Union Government had made similar statements. "We have tried to convince the Union Minister that he was wrong. But he had not withdrawn any of them". Under the circumstances, the Chief Minister, in his letter, suggested to the President that the question whether the State Government submitted certified reports of utilization covering 50% of the foodgrain supplied to it by the Union Government be referred to the Supreme Court for determination.

At a Press conference at Writers Building in Calcutta on Thursday, Mr Ashok Mitra, Finance Minister, gave the figures of allocation, release and utilization of foodgrain under the food-for-work programme in West Bengal. He expressed that during the period between 1977-78 and 1980-81 (up to October 31) 413,272 tonnes of foodgrain were released of which 379,384 tons had been utilized. This showed that more than 91% of it had been utilized. He alleged that the Union Agriculture Minister, Ram Dhandra Singh, in reply to a question in the Rajya Sabha on June 11 had said that the amount of utilisation reported by the Government of West Bengal fell short of 30% of the quantity of foodgrain available with it during 1979-80. But the secretary of the Union Ministry of Rural Reconstruction, in a letter to the Chief Secretary, West Bengal, on June 3, had himself said that utilization report of 137,278 tons of foodgrain was received against the availability of 244,886 tons. The figure represented 84.2% utilisation according to Mr Mitra

The Minister alleged that the Union Minister for Agriculture and Rural Reconstruction "lacked integrity and what he had been telling was not correct at all." Replying to a reporter's question whether this was a deliberate attack by the Centre on the State, he said this was the character of authoritarianism.

The Centre was trying to embitter unnecessarily its relation with the State Government, he said.

WHOLESALE PRICE INDEX CONTINUES TO RISE

Calcutta THE STATESMAN in English 6 Dec 80 p 7

[Text]

NEW DELHI, Dec. 5.—For consumers, there is no respite from rising prices. The official wholesale price index for all commodities moved up for the second week in succession to 258.9 during the week ending November 22 after dropping for three consecutive weeks ending November 8.

The rise in the index was on account of an increase in the prices of non-food articles, many groups of manufactured goods, including sugar, gur and khandsari.

The Government had drawn a lot of comfort and made much of the drop in the index number of wholesale prices (base: 1970-71-100) in the two weeks ending November 8.

The all-commodity official wholesale price index had reached the peak at 265.7 during the week ending October 18, 1980. Thus, there was an increase of 20.4% in a year. However, the index came down to 262.8 on October 25, 1980 and to 258.1 on November 1, 1980. The fall in these two weeks was by 7.6 points or 2.8%.

This fall in the two weeks in succession was mainly accounted for by sudden drop in the prices of sugar, gur and khandsari. This had made the Union Finance Minister to proclaim recently both in Parliament and outside that the Government had checked inflation.

He claimed that the phenomenal rise in the price index was mainly due to the increase in the prices of sugar, gur and khandsari.

Now that the price index has risen for the two weeks in succession, it is evident that the sharp increase in the overall price level in the current year cannot be attributed mainly to the rise in the prices of the three commodities.

There have been sharp increases in the prices of many groups of manufactured goods and the trend continues.

ECONOMY ENTERS BALANCE OF PAYMENTS CRISIS

Bombay THE TIMES OF INDIA in English 2 Dec 80 p 8

[Editorial: "An Adverse Balance"

[Text] It is becoming increasingly clear that the economy has entered a period of balance of payments crises. The deficit in 1980-81 is expected to be more than Rs. 4000 crores--nearly twice the figure recorded last year and over six times that in 1977-78. Imports in 1979-80 were about 25 per cent higher than in the previous year. Data that has become available for the first quarter of the current financial year suggests that this rate of increase will be maintained. Meanwhile, the annual rate of growth of exports has fallen in the last three years to around six per cent as against the 27 per cent in the preceding three-year period. The chief causes of the crisis are well known. The outgo on crude and petroleum products has mounted to account for as much as 70 per cent of the total foreign exchange earnings. Exports are up against trade barriers. The inflow of remittances from abroad has also declined. The commerce ministry has said that bold initiatives are required to deal with the situation. It has not spelled out what these might comprise. But it has emphasised the need to expand the production of important export items and to diversify the export basket by placing emphasis on non-traditional goods and markets. The authorities have taken significant steps in furtherance of this objective. Apart from the many subsidies and incentives that continue to be provided, statutory changes have now been made to encourage production for export. The monopolies and restrictive trade practices act has been amended to exclude goods exported from the total production taken into account for determining whether a firm is a "dominant undertaking". In addition, units exporting their entire production are to be treated, for tax and other purposes, at par with those located in free trade zones.

How far measures of this kind can help remains to be seen. As the experience in respect of engineering goods exports suggests, incentives by themselves may not be of much avail in the absence of a systematic search for new markets. In spite of the need for this having been reiterated periodically by both the private sector and the government, little has so far been done in this direction. The pattern of the country's trade continues to be determined largely by history. Vast markets in Latin America and Africa remain untapped, largely one suspects, for linguistic and psychological reasons. Indeed, the country does not have enough language experts who could undertake wide-ranging negotiations. This is especially surprising in view of the expertise potentially available in the Union territories of Goa and Pondicherry that could literally "open up" the hitherto neglected regions for Indian goods. Much can immediately be done to tap this potential. For a start, the Indian Institute of Foreign Trade could be asked to expand its activities to the two Union territories.

CANADIAN TEAM OFFERS TO AID INDIAN OIL HUNT

Bombay THE TIMES OF INDIA in English 9 Dec 80 p 5

[Text]

BOMBAY, December 8.

THE high-level trade mission from the Canadian province of Alberta, which accounts for more than 85 per cent of that country's natural gas and oil, has offered India co-operation in oil prospecting and optimising yield from existing wells.

The Alberta minister for economic development and international trade, Mr Horst A. Schmid, who is leading the mission, visualises promising scope for his province's participation in India's ambitious petroleum development programme.

In an exclusive interview with "The Times of India," Mr. Schmid, said here today that India could profit from the $ 15-million Canadian line of credit to develop its petroleum industry and ancillaries.

Canada has offered that aid free of interest, repayable in 40 years after the initial 10-year moratorium. It is intended to help India develop its petroleum industry and also buy Canadian equipment.

TECHNOLOGY TRANSFER

At a later date, it might also be possible to manufacture suitable equipment for supply to Canada or other petroleum countries. The aid could also be utilised to promote technology transfer, the minister pointed out.

Mr. Schmid's opinion of India's ability to profit from the aid rests on the fact that his own country had achieved self-sufficiency within 30 years.

"When we began prospecting for crude, everything — technology and equipment — was imported from the U.S. Today, we sell $ 2.3 billion worth of natural gas and $ 1.8 billion of oil to the U.S., beside shipping out some sophisticated equipment", the minister said.

He was confident India too could emulate Canada's example, if not improve upon it.

Alberta alone drilled 5,800 oil wells last year, 400 more than the previous year. Besides, drilling contractors and experts from that province are active in oil-rich countries round the world.

Alberta's strength, according to Mr. Schmid, lies in heavy oil technology. "Light oil area is rather easy, but the heavy one is more challenging", said Mr. Schmid, supporting his contention by referring to a lot of innovative practices the Canadian engineers have adopted.

Earlier, the Alberta mission organised a seminar on Canadian oil and gas industry to familiarise Indian petroleum experts with developments in that country.

DORMANT WELLS

The seminar highlighted the role of petroleum services industry which helped to reactivate dormant wells by infusion of liquid nitrogen, cementing, acidation, foaming — all of them modern technologies.

Canada has also pressed a barge, equipped with suitable tools, into service in South-East Asia. It had helped oil countries in that region obtain more yield from the ongoing wells.

Mr. Schmid said India could substantially augment production of oil with Canadian assistance.

Petroleum experts in Canada had helped stimulate gas and oil production in 90 per cent of the North American wells, the rejuvenation had been made possible by adoption of modern technology, the seminar was told.

The 17-member delegation is scheduled to leave on Tuesday morning.

DOUBLED OIL OUTPUT POSSIBLE WITH BETTER TOOLS

Madras THE HINDU in English 8 Dec 80 p 7

[Text]

NEW DELHI, Dec. 7.

A study carried out by the Institute of Petroleum Exploration (IPE) at Dehra Dun has come to the conclusion that India's reserves of "oil in place" which can be tapped by improved production methods and secondary reserve techniques is around 2,400 million tonnes while the "producible oil" which can be produced with the existing tools and techniques is around 400 million tonnes in the currently known and explored on-shore areas.

The IPE has taken the view that in the context of the present international oil crisis when every country is stepping up oil production, it should be possible for India to produce straightway 20 million tonnes from the onshore areas as against not more than 10 million tonnes at present per year.

It has pointed out that the rate of production by the United States and other oil-producing countries shows a far bigger ratio between producible and actually produced oil and the danger of the depletion of India's oil reserves from a higher rate of oil production is much less than is feared.

The IPE has also arrived at another tentative estimate that the "ultimate oil reserves" of India are much higher amounting to as much as 15,500 million tonnes. This figure has been arrived at from a calculation of the volume of sedigestits and the source rocks.

Though the ultimate reserves are estimated to be so high, it will not be possible for the Oil and Natural Gas Commission or Oil India to produce even 10 per cent of these prognosticated reserves unless there is a big breakthrough in exploration and drilling technology.

However, there should be no despondency over the availability of oil reserves in the country's sedimentary basins of the country and the anticipated advances in exploration and drilling technology should provide India the techniques and tools required to step up its oil production to far higher levels in the years to come.

RISE IN COAL INDUSTRY PRODUCTION REPORTED

Bombay THE TIMES OF INDIA in English 1 Dec 80 p 14

[Text] New Delhi, November 30: As a result of the steps taken by the government, the coal industry has achieved a major breakthrough in production for the first time in many years.

During the first seven months of the current financial year, says an official press release, coal output has gone up by seven per cent over the corresponding period last year against an annual increase of one to two per cent during the previous three years.

Coal production during the seven months from April to October this year, touched 59 million tonnes against 55 million tonnes during the same period last year.

The rate of growth has shown further buoyancy. In the first three weeks of November, the production has recorded an increase of nine per cent over the corresponding period last year.

From the present trend of growth, the production target of 113.5 million tonnes for the current financial year, is thought to be well within reach.

The rate of growth would have been still higher but for certain constraints in the Bengal-Bihar area in inputs like power, steel, cement and the law and order problem.

To step up coal production still further, efforts are being made to increase power output which has already risen by nearly seven per cent. The government proposes to set up 5 to 10 Mw gas turbine sets in coalfields and instal captive thermal power stations to supply 60 Mw to 120 Mw to meet the demand of the coal industry.

Allocation of cement for the coal sector has been increased from 30,000 tonnes a quarter to 60,000 tonnes. Attention is also being paid to make adequate supplies of steel and mining machinery. The indigenous coalmining machinery manufacturing industry, which was languishing for want of sufficient orders, has now received a shot in the arm.

The coal stocks in the country totalled 13 million tonnes at the end of October against ten million tonnes last year. The stocks include nearly 2.25 lakh tonnes of soft coke required by domestic consumers. The problem of transportation of coal and availability of wagons is being tackled in coordination with the railways.

INDO-USSR COLLABORATION IN COAL INDUSTRY TOLD

New Delhi PATRIOT in English 9 Dec 80 Supplement p 14

[Text]

THE collaboration that the Indian coal industry is having with USSR, can be considered in two distinct phases. The first phase relates to the decade prior to nationalisation of coal mines in this country. During the pre-nationalisation decade only one public sector company was operating the coal mines in the States of Bihar, Orissa, Madhya Pradesh, Uttar Pradesh and Maharashtra. This was National Coal Development Corporation. The first phase of collaboration with the Soviets therefore, pertains to coal mines belonging to NCDC. The second phase of collaboration pertains to post-nationalisation period. This phase can be sub-divided into two sub-phases, the first sub-phase relating to collaborations entered into during 1973-74 and the second sub-phase of collaboration entered into during 1980.

In early 60s, the first protocol was signed with USSR by NCDC for development and construction of two coal mines in Madhya Pradesh—Banki and Surakachar. Both these mines were developed with total assistance from USSR. The assistance was in the form of planning and designing of the mine, providing equipments, and constructing the mine to achieve the rated capacity of production. These two mines were a sort of turn-key projects where the Soviet assistance was provided to achieve a rated capacity of 0.6 million tonnes per annum for Banki and 1.1 million tonnes for Surakachar.

In 1966, a 300 million roubles aid was agreed to by USSR, for development of coal industry in this country. Unfortunately, coal industry failed to utilise much of the aid given, owing to slump in demand of coal. A large part of aid, therefore, remain unutilised and not much of benefit could accure to the coal industry.

The coal mines were nationalised in two steps. The coking coal mines were nationalised from May 1972, whereas the non-coking coal mines were nationalised in the next year, bringing all the mines under public sector management except for a few mines belonging to TISCO-IISCO. In the 3rd quarter of 1973, a visit was made by the then Honourable Minister of Coal for USSR. This visit proved a turning point in the history of mutual collaboration between the coal industries of the two countries. During the above visit, a protocol was signed for giving financial as well as technical assistance for development of both coking and non-coking coal mines. A contract was signed between Coal Mines Authority Ltd. —the Holding Company in charge of coal mines nationalised during the second phase, and Tevetmetprom-Expert of USSR in 1974. This contract broadly included the three following areas:

(1) Development of mines in Singrauli field.
(2) Development of mines in Raniganj field.
(3) Development of mines in Bokaro-Ramgarh field.

The Singrauli field spreads over the two adjoining States of Uttar Pradesh and Madhya Pradesh. A Master Plan was prepared at CMPDI, Ranchi with the help of Soviet experts who stayed with us and collaborated with Indian engineers. This was a unique document which gave in detail the following:

— Identification of potential blocks for coal production.
— Production programme from different blocks up to 2000 AD.
— Capital investment required up to 2000 AD.

The same team prepared a feasibility report for Jayant Block of Singrauli colliery to achieve a production level of 10 million tonnes per year. The production from this block was linked with the Super Thermal Power Station to be established in future. The Government has already sanctioned investment for achieving a rated capacity of 6 million tonnes from this mine. A detailed project report was also made by the Russian experts for a Central Workshop to cater the needs of Singrauli field.

A preliminary study was carried out to identify potential areas of collaboration in Raniganj field. The study resulted in the identification of three areas where the collaboration was agreed to. These are—Chinakuri, Jhanjra and Nakra-Konda. Chinakuri mine of Eastern Coalfields Ltd., was chosen for undertaking caving for coal extraction departing from the prevalent practice of extraction with hydraulics and stowing. Dissergarh seam of Chunakuri yields the best long flame blendable coal for metallurgical purposes. This mine was suffering from problems of sand stowing, water

and humidity. It was, therefore, decided to undertake investigation so as to determine the properties of roof, floor and coal with objectives to determine the gassiness of seam, proneness of the seam to bumps and cavability of the seam. The investigation can be termed as a clasic one, because it did result in suggestion of three alternative methods of coal extraction by caving. A contract is expected to be signed shortly with a view to introducing one of the caving methods for extraction of coal in this mine.

Jhanjra Block belonged to erstwhile NCDC. Initially two sub-blocks were identified for underground mining with a rated capacity of 2.8 million tonnes and 2.5 million tonnes per annum. A feasibility report was made in collaboration with 82 Russian experts. During the detailed explorations that were carried out to gather more informations, it was found out, that the major fault that was supposed to exist as per GSI report, did not exist. As a result, the entire Jhanjra Block is being considered as one block and decision has been taken to construct underground mine for producing 2.8 million tonnes per annum. A report has already been received from the USSR suggesting introduction of caving in this mine. An offer has been made to USSR for unedrtaking construction of this mine on turn-key basis. Necessary informations have already been collected and it is expected that Soviet offer will be forthcoming by December'80-January'81 for sinking of two vertical shafts and one incline shaft for production of coal.

Kakra-Konda is a part of Jhanjra Block, Earlier it was decided to open an experimental panel of caving in this block. Now this idea has been abandoned. Instead, this block will be worked with open cast system of mining.

To mine medium coking coal from the field of Bokaro-Ramgarh an opencast was planned for 3 million tonnes per annum with a washery. The feasibility report was prepared with the help of Soviet-experts at Ranchi. The detailed project report, however, did not include washery but included proposals for mine construction to produce 3 million tonnes per annum. Washery is being constructed as a turnkey venture with indigenous expertise.

The second sub-phase of collaboration during post-nationalisation period related to collaborations entered into during 1980.

The new collaboration includes the following:

- Introduction of shield mining in Assam;
- Extraction of developed pillars in Argada seam.
- Review of Sudamdih mine;
- Open cast in Jharia field;
- Updating of existing coal washeries.
- Shaft sinking in Jhanjra.
- Spare parts for Russian equipments.
- Coal analysis.
- Strata Control.
- Collaborstion for taking up mining projects in 3rd countries.

Shield mining in Assam: A contract has been signed to introduce Shield mining in Tipong mine of Assam. Relevant informations have been collected and LC is being opened. A Soviet team is expected to arrive soon to undertake study and prepare detailed project report.

Extraction of developed pillars in Argada Seam: Soviet assistance was sought for evolving a method of extraction of developed pillars in Argada Seam of Karanpura field. A team of 9 experts (including one interpreter) worked on this project and has already submitted the preliminary report. They have suggested three alternative methods of extraction, so as to achieve a rated production capacity of 0.6 million tonnes per annum. At Argada 70 million tonnes of coal are lying locked up in pillars. Application of this method at Argada will evolve a viable method of coal extraction from developed pillars for all other areas.

Sudamdih Mine: Soviet experts have reviewed the conditions of the mine and the present methodology of working at Sudamdih mine, so as to suggest ways and means for achieving the original planned target of 1.8 million tonnes per annum. The report has already been received and is under study.

Opencast in Jharia field: A seven-member team of Soviet experts worked at the Regional Institute, Dhanbad, and have submitted their report for opening out an opencast mine in Makunda of Jharia coalfield to a depth of 600 metres in order to achieve a rated capacity of 12 million tonnes per annum. Out of 12 million tonnes, prime-medium coking coal production will be to an order of 7 to 8 million tonnes, whereas non-coking coal prduction will be 4 to 5 million tonnes per annum. A capital investment of Rs 500 crores which includes erection of washeries have been made. It is expected that coking coal production will start by the year 1985 and non-coking coal production will start from 1987. A detailed feasibility report is expected by mid 1987.

Updating of existing coal washeries: A Soviet team has already prepared feasibility report for updating two existing washeries of Kathara and Patherdih. Updating is being planned to achieve the rated capacity of these washeries which are 3 million tonnes and 2 million tonnes per annum respectively. A contract is now awaited.

Shaft sinking in Jhanjra: As already indicated above, a proposal is being made for sinking of two vertical shafts and one incline shaft on turn-key basis at Jhanjra Block of Eastern Coalfields Ltd.

Spare parts for Russian equipments: A contract has been finalised for providing spare parts for equipments received from USSR in the past. A three-prolonged attack is being made to sort out the problem. USSR has agreed to supply drawings of spares of those equipments which had become obsolete in their country. They have also agreed to assist in erection of manufacturing facilities of these spares in our country. Some spares are expected to be received from USSR. They have also agreed to advise us on replacement of such equipments.

Coal analysis and strata control: In the areas of coal analysis and strata control, concrete proposals are awaited.

Collaboration for taking up mining projects in 3rd countries: An agreement has been signed in the month of October, 1980 which will have a time span of 5 years, for collaboration in coal projects for third countries. The coal projects will be prepared with details of technical processes technical solutions and equipments required. Necessary innovations will also be provided in the report. Third country projects will also include utilisation and development of process of coal products production of gas, liquid fuel, and chemicals from coal.

Indo-Soviet collaboration coal mining industries have been very fruitful. It is expected that future collaborations will provide necessary expertise in the matter of technology transfer and its adoption in our country

STEEL IMPORTS PLANNED TO MAKE UP SHORTFALL

New Delhi PATRIOT in English 29 Nov 80 p 5

[Text] An estimated 1.4 million tonnes gap between the total requirement of steel in the country and its indigenous production will be met by imports under various schemes such as "back-to-back" OGL (Open General Licence) and "buffer imports", the Lok Sabha was informed on Friday, reports PTI.

Steel and Mines Minister Pranab Mukherjee, said in a written answer that the main factors responsible for the shortfall in production at public sector steel plants during the six months from April to September this year was of the order of 7.14 lakh tonnes.

Severe restrictions in power supply and inadequate availability of coking coal to the steel plants were the main factors responsible for the short-fall in steel production against the target. During October, contrary to the trend in the previous six months, the actual production of saleable steel was "marginally higher" than in the same month last year. Power shortage, however, continues to be a serious impediment to increased production.

The Minister said the important steps taken to augment production in the country's six integrated steel plants also included import of coking coal, maximisation of power generation from the plants' captive units, close and constant liaison with inputs supplying agencies and regular monitoring of power and coal position at various levels through inter-ministerial and inter-departmental committees.

Steps had also been taken to install additional captive power generating capacity at Dungapur and Bokaro plants.

CPI ASKS KERALA LPF FOR 'CODE OF CONDUCT'

New Delhi PATRIOT in English 7 Dec 80 p 4

[Text]

THE Communist Party of India has called upon the constituents of the Left Democratic Front in Kerala to evolve a "code of conduct" and ensure that their members strictly implement it.

This was stated by CPI Central Secretariat member N K Krishnan (directly in charge of Kerala in the CPI leadership) in the course of an interview on Saturday.

The CPI, which has played a key role in securing the emergence of the LDF by working closely with both the CPI-M and the Cong-U, is keen to see that the LDF is preserved and strengthened. That is why, Mr Krishnan said, this is a matter of crucial national importance".

In recent days differences have plagued the ruling coalition on account of high-handed tactics of some CPI-M elements who have been served with disciplinary action by that party's state leadership. In this context, the CPI's role in protecting the LDF is of exceptional and vital significance.

Mr Krishnan said that it was imperative to "see that differences arising among the constituent parties are not aired in public but are discussed inside the Front and resolved on the basis of a fraternal give and take policy."

He assured that on its part, the CPI "will do everything possible to ensure the unity and cohesion of the Kerala LDF and to defeat all attempts to disrupt this unity".

Mr Krishnan said at a time when frantic efforts were being made to subvert law and order in Kerala, West Bengal and Tripura, in order to topple those governments, "it is the paramount duty of all-India Left and democratic parties to defeat these attempts" This, he explained, can only be done by "strengthening and extending democratic unity and cohesion of the fronts in these States."

BRIEFS

HARIJAN ATROCITIES PANEL--New Delhi, 8 Dec--A nine member group of MPs has been set up to study atrocities on Harijans and Adivasis. Mr. Balkrishna Wasnik, member of the Lok Sabha from Maharashtra, is the convener of the study group set up by the Chairman of the committee of the Welfare of Scheduled Castes and Scheduled Tribes. Other group on will study the socio-economic conditions and the position in public service and employment of Harijans and Adivasis. [Text] [Madras THE HINDU in English 9 Dec 80 p 9]

EARTHQUAKE PREDICTION CELL--Shillong, 8 Dec--A cell comprising scientists and technicians has been set up here for earthquake prediction in the north-eastern region. The Meghalaya minister of state for civil defence and home guards, Mr H B Dan, said on Saturday that a working group of 12 scientists from various research institutes in the country had recommended the establishment of the cell for short-term prediction of earthquakes. He pointed out that the north-eastern region had been identified as one of the quake-prone zones in the world at a UNESCO conference held in Honolulu. Mr Dan expressed the hope that the precautionary measures now being taken and the training being imparted to volunteers in various earthquake disaster relief centres in various district and sub-divisional headquarters would help ensure timely relief and reduce hazards in the event of an earthquake. [Text] [Bombay THE TIMES OF INDIA in English 9 Dec 80 p 23]

ASSAM CABINET EXPANDED--Shillong, 10 Dec (UNI)--The Assam chief minister, Mrs Anwara Taimur, today took two more members in her council of ministers to increase its strength to ten. The governor, Mr L P Singh, administered the oath of office and secrecy to Mr Dhani Ram Rongpie, as a cabinet minister and to Mr Joychandra Nagbangshi, as a minister of state, at a simple ceremony at Raj Bhavan here this evening in the presence of the chief minister and other dignitaries. With oday's additions, the Assam council of ministers will comprise seven cabinet members, including the chief minister, and three ministers of state. [Text] [Bombay THE TIMES OF INDIA in English 11 Dec 80 p 9]

MARXIST LEADER DIES--Trichur, Dec 2 (UNI)--Mr T K Krishnan, CPI-M leader and a former member of the Kerala Assembly, died here today following a heart attack. He was 57. He is survived by his wife, Mrs Sumathi Amma, a Professor in Kerala Varma College, Trichur, and two sons. Mr Krishnan was the secretary of the All-Cochin Students Federation. Later, he worked with a news agency in Bombay, from 1949 to 1951. [Text] [New Delhi PATRIOT in English 3 Dec 80 p 4]

GROSS NATIONAL PRODUCT--The Gross National Product at current prices for the year 1978-79 showed an increase of 7.4 per cent, Finance Minister R. Venkataraman told the Lok Sabha on Friday, reports UNI. In a written reply to Mr A.K. Roy, the Minister said that the official estimate of GNP for 1979-80 was not yet available. He said the outstanding money supply with the public for the week ended 31 October 1980 (the latest week for which information is available) stood at Rs 22,599 crore. The gap between the growth rates in money supply and real gross national product was an important reason for the rise in the price level. [Text] [New Delhi PATRIOT in English 29 Nov 80 p 5]

SIKKIM GOVERNOR--Mr Homi J.H. Talyarkhan has taken over as Governor of Sikkim. Chief justice of Sikkim high court Mr Justice M.S. Gujral administered the oath of office to him in Gangtok. [Text] [BK120305 Delhi Domestic Service in English 0240 GMT 10 Jan 81]

OIL FROM COAL SCHEME--A scheme to convert coal into oil is being prepared. Instructions to this effect have been given to the department of coal. This was stated by Energy Minister Ghani Khan Choudhury while addressing the annual day celebrations of the National Project Construction Corporation in New Delhi today. He said that he will hold discussions with the World Bank president in this regard. If this scheme is implemented, India will be the second country in the world to produce oil from coal. [Text] [BK120305 Delhi Domestic Service in English 1230 GMT 9 Jan 81]

ROK RELATIONS--South Korea is to improve bilateral relations with India. In an interview with PTI South Korean Foreign Minister No Sin-Yong said in Seoul today that his country will buy more Indian goods to balance its big trade surplus. With the increase in the South Korean exports to India, it is likely to accumulate a record trade surplus of over $150 million. No Sin-Yong said more visits of trade delegations between the two countries will be undertaken after the presidential election in March next. [Text] [BK111020 Delhi Domestic Service in English 0830 GMT 11 Jan 81]

LADAKH PROBLEM--Jammu and Kashmir Chief Minister Sheikh Mohammad Abdullah has said his government would have no objection if a separate division is created for the Ladakh region and does not stand in the way of declaring Ladakhis a schedule tribe. He was talking to a group of newsmen in Jammu today. He said the creation of the new division, however, would depend upon the agreement between the people of Kargil and Leh Districts as to the location of divisional headquarters. Sheikh Mohammad Abdullah said the cabinet subcommittee comprising State Finance and Planning Minister D.D. Thakur, Works and Power Minister S.G. Shah and Revenue and Forest Minister G.N. Kochak set up to go into the demands of the people of Ladakh would begin its work tomorrow soon after its arrival in Leh. The chief minister discounted reports appearing in a section of the press that he is joining the center. There is no such move at present, he added. [Text] [BK111343 Delhi Domestic Service in English 1230 GMT 11 Jan 81]

PETROLEUM PRICES INCREASE--Petroleum products will cost more from today. The price of kerosene goes up by 10 paise per liter. Petrol, diesel oil, both high

speed and light will cost another 37 paise per liter. Cooking gas will cost 5 rupees and 3 paise more per cylinder. The prices of lubricants of different grades are up by about 45 paise per liter. The quantum of increase varies according to the grade. The price of naphtha for fertiliser use is increased by 300 rupees per ton and for non-fertiliser use by 100 rupees per ton. The price of bitumin goes up by 235 rupees per ton and that of aviation turbine fuel by 320 rupees per kiloliter. Corresponding increases have also been announced for a number of other petroleum products. The outlet price of each of these products may be actually slightly higher due to sales tax, octroi and other state levies. The announcement made after a cabinet meeting says that the raise was necessitated by the very significant increase in the OPEC prices since June of last year when domestic prices of petroleum products were last revised. The country has also borne a heavy burden by way of expensive spot market purchases which had to be made because of the conflict between Iraq and Iran and the continued blockade of oil from Assam. State governments and union territories have been advised to review the fares of taxis and autorikshaws. [Text] [BK130408 Delhi Domestic Service in English 0240 GMT 13 Jan 81]

PARTY MERGER--The national convention of the Janata-S [Party] in Varanasi yesterday endorsed the draft resolution on its merger with Janata Party. Earlier, the party national executive had a prolonged discussion. According to general secretary of the party Bhola Prasad Singh, the decision has been conveyed to Janata Party Chief Charashekhar. [Text] [BK130404 Delhi Domestic Service in English 0240 GMT 13 Jan 81]

DEFENSE SABOTAGE DENIAL--New Delhi, Nov. 27. The Minister of State for Defence, Mr. Shivraj Patil, today denied a news report that a top defence project at the solid state physics laboratory was sabotaged. Replying to a question in the Rajya Sabha, he said the allegation was without basis. "The work on development of infra-red detectors is still being continued even on a larger scale." To a question whether two scientists working on the project had been eased out. Mr. Patil said one scientist had resigned voluntarily and the other was transferred to the Institute of Armament Technology in Pune. To another query if the management information report (MIR) had recommended the removal of people responsible for sabotage. Mr. Patil said "any recommendation in the so-called MIR is not correct." He said the allegations in MIR were investigated and "nothing of substance was found in them"--PTI. [Text] [Madras THE HINDU in English 28 Nov 80 p 7]

NAXALITE ACTIVITY REPORTED--New Delhi, Nov. 27. There has been an increase in the activities of naxalites in different parts of the country since 1977, Mr. Yogendra Makwana, Minister of State for Home, said in the Rajya Sabha today. He told Mr. Jagannath Rao Joshi and two others that the increase related to membership of the movement, naxalite violence, setting up of mass front bodies and propaganda campaign. --PTI. [Text] [Madras THE HINDU in English 28 Nov 80 p 7]

CARPETS TO USSR--The Soviet Union will buy Rs 20 crores worth of carpets from India this year, reports UNI. Contracts for this were signed by Soviet foreign trade agency Novoexport with 20 Indian machine carpet producers on Friday. [Text] [New Delhi PATRIOT in English 29 Nov 80 p 7]

ANDHRA PRADESH PLAN OUTLAY--New Delhi, 10 Dec--The Sixth Plan outlay for Andra Pradesh (1980-85) will be Rs. 3,100 crores. This is more than double the Fifth Plan outlay. Out of the Rs. 3,100 crores, over Rs. 2,000 crores will come from State's own resources including market borrowing. Central assistance will be available to the tune of Rs. 900 crores. The State would mobilise additional resources of Rs. 150 crores. The draft Sixth Plan was finalised here today by Mr T Anjiah, AP Chief Minister, and Mr N D Tiwari, Planning Minister and Deputy Chairman of the Planning Commission. During the discussions the 1981-82 annual Plan outlay was also finalised at Rs. 531 crores. Out of the Sixth Plan outlay of Rs. 3,100 crores, irrigation, flood control and power have been allocated Rs. 1,600.99 crores, power sector getting Rs. 789.70 crores. The other sector-wise allocations are as follows: Agriculture and allied services (Rs 357.54 crores); cooperation (Rs. 29.51 crores); village and small industries (Rs. 30 crores); large and medium industries and mining (Rs. 75.66 crores); transport and communications (Rs. 236 crores); education (Rs. 73 crores); medical and public health (Rs. 63 crores); sewerage and water supply (Rs. 203 crores); housing (Rs. 105 crores); other social and community services (Rs. 280 crores); economic services (Rs. 28.30 crores) and general services (Rs. 16 crores). [Text] [Madras THE HINDU in English 11 Dec 80 p 1]

BUDDHIST TO MINORITIES PANEL--President Sanjiva Reddy has appointed Lama Lobzang as a member of the high power panel on minorities, Scheduled Castes, Scheduled Tribes and other weaker sections, reports UNI. Mr Lobzang is the only Buddhist member on the panel. The 47-year-old Buddhist monk is the founding general secretary of the Simant Pradeshiya Bauddha Mahasabha. He is also the secretary in charge of the Ladakh Bauddha Vihara, Delhi. [Text] [New Delhi PATRIOT in English 6 Dec 80 p 10]

INDUSTRIAL LICENSE STATISTICS--New Delhi, 7 Dec (PTI)--During the first 11 months of this year (January-November) 733 letters of intent and 439 industrial licences were issued, compared to 421 letters of intent and 324 industrial licences issued during the corresponding period of last year, showing an increase of 74 per cent and 36 per cent, respectively, according to an official release. A record number of 1,651 industrial licences applications were also disposed of during the first 11 months of 1980. Foreign collaboration applications totalling 618 were disposed of during January-November 1980 compared to 339 applications during the corresponding period of 1979. The value of capital goods approvals accorded during January-November this year amounted to Rs. 338 crores compared to Rs. 212 crores during January-November last year, representing an increase of 60 per cent. [Text] [Bombay THE TIMES OF INDIA in English 8 Dec 80 p 4]

ELECTRONIC VOTING MACHINE--Panaji, 7 Dec--The electronic battrey-operated voting machine, developed by the Electronic Corporation of India in Hyderabad, was demonstrated to the chief electoral officers, now attending their all-India meet here. The machine would cost Rs. 2,000 when produced on a large scale. Nearly five lakh such machines would be required to cover 4.5 lakh polling stations in the country. Introduction of these machines and preparation of identity cards with the candidates' photographs would cost the country nearly Rs. 216 crores, if the suggestion of the chief election commissioner to introduce them was

accepted. The secretary of the election commission, Mr K Ganeshan, said this expenditure was worth incurring taking into consideration the benefits. The expenditure would be recovered after two general elections, he added. [Text] [Bombay THE TIMES OF INDIA in English 8 Dec 80 p 6]

MEDICAL GOODS TO USSR--New Delhi, 5 Dec (PTI)--TB patients in the Soviet Union will receive anti-tuberculosis drug produced in India. A contract worth over Rs. 15 crores for export of goods, including ready-made medicine, spectacle frames and some rubber products was signed here today by Mr A Petrenko, of Medexport and the representatives of some Indian firms. With this contract, the total volume of goods to be exported to the Soviet Union under various agreements signed during the last three weeks had gone up to Rs. 280 crores. [Text] [Bombay THE TIMES OF INDIA in English 6 Dec 80 p 12]

NEW CONGRESS(I) NAME--New Delhi, 8 Dec--The Congress (I) Working Committee, at its meeting here this evening, decided that the party should be called the Indian National Congress (I)--the 'I' obviously devoting "Indira". The decision follows the massive mandate received by the party in the last elections. The nomenclature will continue until the Election Commission settled dispute between the two Congress parties, each claiming to be the real Congress. It was said that "from tomorrow" the party would be called the INC(I) and not the INC. The meeting of the Working Committee was presided over by Mrs Gandhi. A resolution on international affairs said that in regard to Afghanistan, as a result of India's efforts, there had been wider acceptance of the inadmissibility of interference in the internal affairs of sovereign States. [Text] [Calcutta THE STATESMAN in English 6 Dec 80 p 1]

NAGA LEADER KILLED--Kohima, Nov. 29.--"Major" Sungsen Konyak of the Muivahisak faction of the underground Nagas was killed in an encounter with the pro-Phizo group led by "Colonel" Singyan near Waillamsanghu village in northern Burma recently, according to a report received here from across the border, says UNI. Meanwhile about 40 people, belonging to the Khiemungan tribe from Nagaland, recently sneaked into northern Burma to join the "Colonel" Singyan group to fight the Muivah-Isak group, the report said. [Text] [Calcutta THE SUNDAY STATESMAN in English 30 Nov 80 p 9]

CALCUTTA TEA SEMINAR--Siliguri, December 1: The first international seminar on tea has been organised by the Indian Tea Association to synchronise with its centenary on January 12 and 13 at Calcutta. It will be inaugurated by the Union commerce minister, Mr. Pranab Mukherjee. Industry sources said nearly 350 delegates, including 25 from abroad, were expected to attend the seminar. The participants will include 78-year-old author of the "Indian Tea History," Sir Parcival Griffiths, the executive director of the International Tea Promotion Association (ITPA), Mr. T.S. Broca, and other high officials from the Union commerce ministry and producing states. The delegates are expected to visit the major tea producing areas. [Text] [Bombay THE TIMES OF INDIA in English 2 Dec 80 p 5]

COAL SALE REGULATIONS--New Delhi, December 1: The free sale of inferior grade of non-coking coal has been further liberalised and made applicable to more collieries. The sale will be free from all restrictions. A number of additional collieries where stocks of coal are very substantial have been identified and the coal has been placed on free sale. As a result, there are now approximately 5.5 million tonnes of stocks of inferior grades of coal which are now on free sale. This liberalisation will benefit large number of consumers. [Text] [Bombay THE TIMES OF INDIA in English 2 Dec 80 p 10]

NEW NAVAL VESSEL--Bombay, November 30: The second Landing Craft Utility Mark II will be handed over to the Indian navy by Goa shipyard tomorrow. It is one of three vessels specially designed by the Indian Navy for transporting troops, vehicles and stores and being built by Goa shipyard. The first vessel was commissioned on January 28. The third vessel, launched on March 16, is expected to be commissioned next year. The vessels designed such as to use indigenous machinery and equipment to the maximum can negotiate shallow waters and land men and material on beaches. This type of sophisticated vessels are being constructed by Goa shipyard for the first time, according to Commodore V.A. Dhareshwar, general manager. [Text] [Bombay THE TIMES OF INDIA in English 1 Dec 80 p 14]

FORECOST COMPUTER DEVELOPED--New Delhi, November 30: A computer which will forecast the likely flow in power-generating plants several hours in advance facilitate prompt removal of defects and effective plant control, is being developed by the government-owned Uptron Digitals System Limited here. The computer has been designed by the research and development laboratory of the company with purely indigenous technology. It is shaped like an almirah, but has an opening in the rear as well. The Uptron Digitals will manufacture 15 such computers a year. The production cost of each computer will range between Rs. 8.50 lakhs and Rs. 10 lakhs, depending on the size. [Text] [Bombay THE TIMES OF INDIA in English 1 Dec 80 p 14]

1980 INFLATION PREDICTION--New Delhi, November 30 (PTI): A 20 per cent inflation has been predicted for this year again by Dr. Malcolm Adiseshiah, eminent economist, who suggests that government and business base their planning on this forecast. Since the formulation of the sixth plan on the basis of the 1979-80 prices, prices have risen by over 13 per cent up to October 1 this year. This, Dr. Adiseshiah says in a midyear review of the economy for a workshop here next week to be held under the auspices of the Associated Chambers of Commerce and Industry of India, means that the public sector outlay be increased to Rs. 100,000 crores or the growth rates and targets be lowered. [Text] [Bombay THE TIMES OF INDIA in English 1 Dec 80 p 14]

FOREIGN COMPANIES DECLINE--New Delhi, November 30 (PTI): There have been a steady decline in the number of branches of foreign companies operating in India from 510 in 1974-75 to 358 in 1978-79. Similarly, the number of subsidiaries of foreign companies functioning in the country also came down from 183 in 1974-75 to 125 in 1978-79. There has, however, been an increase in the paid-up share capital of subsidiaries of foreign companies working here. It had gone up from Rs. 305.6 crores for 183 companies in 1974-75 to Rs. 360.1 crores for 125 companies in 1978-79.

The total assets of branches of the foreign companies, however, remained static around Rs. 2011.4 crores, despite the fact that the number of branches operating here had dwindled substantially during the year period. [Text] [Bombay THE TIMES OF INDIA in English 1 Dec 80 p 14]

GUJARAT REFINERY FINANCING--Gandhinagar, November 30 (PTI): Some industrialists from Dubai and an Abu Dhabi Oil Magnate, have proposed to invest "OPEC" money, over seven million for setting up a refinery-cum-petro-chemical complex in Gujarat in a joint sector company, a Gujarat government spokesman said today. The state finance minister, Mr. Sanat Mehta, has already completed the first round of negotiations with these Arab entrepreneurs in Bombay last month and he was planning to visit the Gulf countries soon for a final agreement the spokesman said. The state government has taken up the proposal with the Centre for its approval and also requested for a letter of intent to set up a Bombay High gas-based petro-chemical complex in the state government sector, he added. The Chief minister, Mr. Madhavsinh Solanki, had announced yesterday in Ahmedabad that the petroleum ministry had chosen Kavas, a village in Surat district, for a gas-cracker plant based on the Bombay High gas. OPPOSITION JOINT FRONT--Colombo, Nov. 29. For the first time since the 1977 elections, Sri Lanka's Opposition parties have decided to form a "common front" against the ruling United National Party. The front, comprising the former Premier, Mrs. Bandaranaike's Freedom Party, the Tamil "United Liberation Front, the Trotskyst Party and the pro-Chinese Communist Party, has decided to support a candidate of the pro-Moscow Communist Party at a coming by-election by not contesting themselves. --UNI. [Text] [Madras THE HINDU in English 30 Nov 80 p 12]

KNITWEAR TO USSR--New Delhi, December 1 (UNI): The Soviet Union will import Indian woollen and cotton knitwear garments worth over Rs. 60 crores during 1981. Mr. A.S. Evdokimov, deputy director general of V o Raznoexport, who is leading a Soviet delegation now in India, and Mr. V.A. Markov, deputy director of the Soviet firm "Trikotazh", signed 18 contracts with different Indian exporters in this connection here today. Among the exporters are some of the leading firms of Ludhiana like Oswal Woollen Mills, York Hosiery Mills, Hind Woollen Mills and Sind Knitwear Pvt. Ltd. Mr. Evdokimov later said at a press conference that the progress of Ludhiana's woollen industry was a vital link of Indo-Soviet friendship. Mr. Raj Chaudhry, chairman of Hosiery Exportres' Association, said that Indo-Soviet co-operation in this field has enabled the Indian economy to attain stability and growth. Mr. J.L. Oswal, chairman of Wool and Woollen Export Promotion Council, said he hoped that in 1981, the exports of knitwear to the USSR would exceed Rs. 100 crores. REASONS FOR ABUNDANCE OF GOODS IN FREE MARKET DISCUSSED

Vientiane VIENTIANE MAI in Lao 14 Nov 80 p 2

[Conversations With the Editor column: "What is the Purpose of Allocations for the Cadre and Free Stores?"]

[Text] Mr V.L. from the Ministry of Foreign Affairs wrote a letter to the newspaper VIENTIANE MAI and asked the following questions:

1. What is the purpose of allocations for the cadre and free stores?

2. [Why do] the cadre stores usually have nothing for the cadres to buy while the free stores have almost everything in stock?

Thank you.

[Answer]: Mr V.L., based on the views of the newspaper VIENTIANE MAI, I would like to answer your questions but this is somewhat difficult. However, concerning your questions, Mr Thongphet Sisouwong, the head of the Vientiane industry and trade service, has given the following views:

Concerning the separation of stores into two types, the principal aim of this was to make things convenient and easy for people who buy goods, regardless of whether they are cadres or people and to maintain the trade system in accord with the stipulations of the state. But concerning some things, after plans were made and things were implemented, some things were found to have weak points.

The primary reason was that some of our trade cadres were not familiar with things and they did not have enough experience. Thus, internal causes appeared and these negative phenomena gave rise to bad results. For example, some contraband goods flowed to the free markets. There have been complaints that trade has been divided by sector but, concerning these complaints and these phenomena that have been stated, it can be said that some of the complaints were justified while others were not.

However, the phenomena that has been criticized has been investigated by the guidance committees, especially the sector committees, in order to discover the causes. A committee has been established to investigate all trade sectors and obtain data to discover the facts in order to eliminate the weaknesses. In particular, attention has had to be given to upgrading the trade regulations where

weaknesses have arisen and to [narrowing] the gap that has given rise to criticisms. Thus, it can be said that, in the past, some trade activities have not really responded to the needs of the consumers.

When such is the case, things must certainly be improved and the weaknesses mentioned above must be overcome. Only after unified agreements have been reached can new regulations be formulated.

At the end [of his letter], Mr Thongphet also thanked those who have criticized the weaknesses in the trade sector.

As for the newspaper VIENTIANE MAI, we sympathize with the trade sector. Normally, most of us are not yet familiar with this work. We do not have to look far. We, the publishers of the newspaper VIENTIANE MAI, feel that we still have weaknesses concerning many things. We lack [certain] capabilities. In some cases, we have not satisfied the needs of the people. But, regardless of this, we have used these weaknesses as a lesson and have tried to find a way to overcome the weaknesses.

BRIEFS

CHAMPASSAK ELECTRICITY PRODUCTION--Vientiane, KPL--During the past 5 years, the workers of the Lao State Electricity Enterprise, which is subordinate to the Champassak provincial industry and trade service, have diligently emulated with each other and continually achieved good results. During this period, the workers repaired hydroelectric turbines in Paksong District, expanded the power lines around the Kmi stadium, installed water pumps in one place, finished installing power generators in Phon Thong District, generated 24,044,110 kilowatt-hours of electricity for the people, finished repairing two machines at Selabam and assembled turbines and power units 1, 3 and 4 in order to increase the power capacity from 400 to 600 kilowatt-hours. KASI BANK BRANCH--Vientiane, KPL--On the afternoon of 10 November, the Vientiane City and Province National Bank held a ceremony to open a bank branch in Kasi District, Vientiane Province. Attending the ceremony were members of the Vientiane City and Province administrative committee, representatives of the Vientiane Province national bank, members of the Kasi District administrative committee, canton administrative officials and people from the locality. On this occasion, Mr Wongsai Lothantu, the manager of the Vientiane City and Province bank, stated that, in the past period, bank branches have been established in 10 places. This has been done in order to support production, the circulation of goods and the lives of the people. The national bank branch in each district is responsible for receiving deposits from the people, state stores, state economic organizations and cooperative units. Along with this, the bank is responsible for making things convenient for the state economic organizations and the cooperative production units of the people that borrow revolving and fixed capital to support the construction of an economic base. SAYABOURY RICE SALES--Vientiane, KPL--Since October, the farmers in various localities in four communes in Sieng Hon District, Sayaboury Province, have diligently brought their surplus rice not consumed in the family and sold it to the state stores. The total amount sold was 53 tons. In this, the cadres in the district public security sector together sold 4 tons of rice that they had grown. This is considered to be an important factor in increasing government funds for state economic development. [Text] [Vientiane KHAOSAN PATHET LAO in Lao 13 Nov 80 p A4] 11943

TEXTILE PRODUCTION--Vientiane, KPL--During the past 5 years, the cadres and workers at the Lao Vieng Textile Factory, which is subordinate to the Ministry of Industry and Trade, have promoted the collective ownership rights of the working class. They have worked diligently and boldly in carrying out their tasks in order to achieve results in commemoration of the Fifth National Day on 2 December. Concerning actual achievements, during the first 10 months of 1980, they have been able to produce 240,000 meters of cloth for society, which is 90 percent of the planned quota for the year. It is expected that, by the end of November, the workers will have produced enough cloth to have completely fulfilled the quota. [Excerpt] [Vientiane KHAOSAN PATHET LAO in Lao 11 Nov 80 p A5] 11943

GOVERNMENT SEEKS TO ATTRACT FOREIGN CAPITAL

Bombay THE TIMES OF INDIA in English 8 Dec 80 p 10

[Article by Mavin Kurve: "Nepal Steps to Attract Foreign Capital"]

[Text]

KATHMANDU, December 7.

WIDE-ranging concessions to attract foreign investors and multi-national companies to Nepal are proposed in the new "perspective industrial development plan" of the government, it is learnt. It is to be announced soon.

The concessions include a doubling of the existing facilities which hitherto permit the annual repatriation in foreign exchange of ten per cent of the capital and 25 per cent of the profits.

The government of Nepal will further enter into agreements with different countries for treatment of taxes in Nepal by foreign nationals and companies to avoid double taxation.

CHEAP LABOUR

The new policy also will provide guarantees for compensation in the event of nationalisation or expropriation of any industry having foreign participation.

It appears that both the new industrial policy of 1974 and the industrial enterprises act are to be suitably amended so that commercial guarantees will be given for the repayment of foreign loans borrowed by investors for capital investment in priority industry.

At present, industries in Nepal having foreign investment are those in lead and zinc, magnesite mining and bricks, leather tanning, fruit processing, jute and textile units.

To attract foreign investors, it is pleaded that Nepal provides political stability, tremendous hydro-power potential and cheap, disciplined and easily trainable labour. It appears that the government favours private industrialists in Nepal to enter into international subcontracting system with multi-national companies.

It is learnt that over the next five years the government proposed to launch 187 small, medium and large industries and 1,800 cottage and rural industries involving an investment of Rs. 4,027 million. This will facilitate the creation of 31,000 new jobs.

TARIFF POLICY

From available information, it appears that Nepalese planners realise that so far a major deterrent to industrial growth has been the lack of a rational tariff policy which has been "inward-looking and resource-oriented rather than development-oriented".

Recently the planning commission also proposed scientific control and regulation of open border with India to protect Nepalese units.

It is now proposed to have an "innovative customs tariff policy to attract new kinds of industry with export potential and also to protect industries in Nepal".

Twenty-four new public-sector units are proposed in the next five years though experience with over 60 public undertakings in the past decade has been quite disheartening.

OFFICIAL GOVERNMENT POLICY ON ANTARCTIC REVIEWED

Christchurch THE PRESS in English 5 Dec 80 p 12

/Report by Oliver Riddell in Wellington/

/Excerpts/

The 30-year-old Antarctic Treaty is due to expire in 1990. Under the treaty, the Antarctic may be used only for peaceful purposes — mainly scientific research. Increasingly the conservation achievements of the treaty are coming under economic and political pressures, on both the continent and its surrounding seas.

Official New Zealand Government policy is:

—The extension of the Antarctic Treaty regime to encompass all possible resource exploitation.

—The careful regulation of all exploitation to afford the widest possible protection to the fragile Antarctic environment.

—To ensure that New Zealand itself benefits under such a regime to the maximum extent from the exploitation of any resources in the New Zealand Antarctic territory.

—To ensure the acceptibility of any regime to the international community at large (possibly by way of some form of revenue-sharing arrangement following the precedents already established at the Law of the Sea Conference) in an effort to head off the growing pressure from developing countries that Antarctica should be internationalised for the benefit of all mankind.

—To maintain the New Zealand Antarctic research programme at its existing level.

—To review this programme in order to direct its activity as far as possible in the direction of resource-related research, including research into the possible environmental impact of resource development.

New Zealand's efforts concerning marine life in the Antarctic have been considerable. In 1975, it canvassed the idea of preserving Antarctica as a world park free from commercial activity. The concept of a total prohibition on the exploitation of resources proved unacceptable to other treaty members.

MISSION IN SAUDI ARABIA--A permanent Sri Lanka mission is soon to be opened in Saudi Arabia. A Foreign Ministry official has just returned after making preliminary arrangements. The Saudi ambassador to Sri Lanka with residence in New Delhi, who was in Colombo in connection with the signing of the two Saudi loan agreements yesterday [8 January], said that reciprocally Saudi Arabia hoped to open its own mission in Colombo. He said this would help expedite the granting of visas both for Haj pilgrims and those seeking employment in Saudi Arabia. The issue of visas for Sri Lankans is currently handled by the Saudi consulate in Bombay. [Text] [BK120313 Colombo International Service in English 1045 GMT 9 Jan 81]

RED GAUR, MASS LINE PARTY LINK EXAMINED

Bangkok BAN MUANG in Thai 14 Nov 80 p 4

[Nui Bangkhunthien column: "The Party of the [Red Gaur] Leader"]

[Text] There has been widespread criticism about the defections of large numbers of MP's to the Mass Line Party of the head of the Red Gaurs, Major General Sutsai Hatsadin.

The Mass Line Party came into existence when the head of the Red Gaurs (not the same person who is the head of the Sieng Hai) retired from government service. Even though the newspapers have nicknamed him the "wrinkled breast leader," he is still strong and fit. He is still engaged in business activities that give him large profits and so he must continue to engage in politics.

The cabinet foresees benefits that can be obtained from him and has, therefore, passed a resolution making him the head of the Express Transportation Organization of Thailand.

The Mass Line Party has announced that it will support the government of General Prem Tinsulanon but that it will not join the government. What this really means is that it will provide support from the outside and serve as supporters or buffers.

Concerning this announcement that it is bound to the government like this, if this is considered carefully, it means that the party is ready to support the government on all matters large and small.

Small matters refer to voting with the government in parliament, carrying out tasks entrusted to it by the government and creating an atmosphere in which the government has the advantage and in which it has the political advantage over other parties and is the balance of power in parliament.

Large matters refer to the fact that if the government gets into so much political trouble that the coalition parties break away and there is no other way out, the Mass Line Party will take their place in the cabinet and cooperate with the head of the government in governing the country.

Sutsai Hatsadin has, therefore, suddenly become a very important person in Thailand. With one had, he controls the Red Gaurs and, with the other, he controls the Mass Line Party. And if he uses these two sources of power to support each other, for example, when it comes time for byelections or regular elections, it will be up to members of the Red Gaurs party to serve as the mechanism of the party system in the election campaign and in obtaining the votes of the people (in the style of the Red Gaurs) and there will be a great opportunity for the members of the party to be elected. As for the members of this party, they in turn will help the Red Gaurs through their influence, with money and through the parliamentary process in making laws.

The problem that many people are becoming aware of is:

How closely will sutsai Hatsadin follow the plans that have been made? Because, sometimes his actions are governed by intelligence while at other times they depend on the "stars."

Man is born with many natural limitations. The first thing is that all people must die. The next thing is that the minds of men are limited and they have different abilities. Some are very intelligence while others are stupid. Many men make good plans but they make little progress in implementing them.

Anything can happen. Uncertainty is the challenge and we will have to wait and see whether the "head of the Red Gaurs" is the "head" or the "toe."

PATENT CENTER TO CONTROL TECHNOLOGY TRANSFER

Bangkok SIAM RAT in Thai 22 Nov 80 p 3

[Article: "A Patent Information Center Will Be Established to Transfer Modern Technology"]

[Text] Mr Chalieo Surasit, the director-general of the Department of Science Services, stated that the Department of Science Services has seen the importance of the benefits of patent documents in transferring technological knowledge that will be used to develop the country. Thus, it has established a patent information office in order to carry out things in making patent information services more widespread. In addition to suggesting patent documents and giving advice on how to search for information needed in patent documents by using the various documents and manuals already at the center, the center will procure complete patent documents from all countries and will even procure [information] about the activities in patent circles and about new technological advances, or developments.

The director-general of the Department of Science Services stated that the Patent Information Center will benefit inventors because patent documents are a great source of technical information. They furnish more information concerning the details of product elements, the making of products, machine production techniques and product designs in industrial business circles than do other types of documents. Another thing of interest is that patent documents provide information that is different from that provided in journals. This is because the information, data and ideas appearing in recent patent documents are all new. Improvements or new methods that result from research studies are revealed for the first time in the documents applying for a patent, that is, before such information appears in journals. Thus, the information in the patent documents that the Patent Information Center has compiled is useful for development in the country's industrial business circles.

The director-general of the Department of Science Services also stated that there are two types of patents in Thailand: The patent on inventions is for 15 years and the patent for product designs is for 7 years. As for those products whole patents have not expired,

people in the country can make use of them from the standpoint of knowledge only. They cannot use them in trade. As for products whose patents have expired, anyone can use them in whatever way they want. Thus, it can be said that knowledge of the inventions revealed in the patent documents is a public asset.

Concerning patents thathave not expired, the rights protected are protected only the country where the patent was registered; such rights are not protected in all countries. Knowledgeable people in other countries can use the product for profit in business circles and do not have to pay any compensation. He also revealed that,at present, approximately 1 million new patents are issued each year throughout the world. More than 27 million patents have been issued by the various patent offices. These patents have been divided into approximately 54,000 groups based on the branch of technology.

PRESENT CONSTITUTION SEEN AS LIMITING FREEDOM

Bangkok SIAM RAT in Thai 11 Dec 80 p 7

[Article in 'Thoughts from the News' Column by Prachuap: "Problems That Should Be Solved Even More Than the Constitution"]

> [Text] Col Somkhit Srisangkhom, head of the Socialist Party [as published] in his capacity as the chairman of the working groups that are fighting to amend the constitution so as to make it democratic has made an announcement to newsmen concerning arrangements for Constitution Day, the 10th of this month. The purpose of this is to remember the date on which Thailand promulgated the kingdom's constitution and to review the importance and the usefulness of having a democratic constitution so that the people may know and understand the problem of underdevelopment of Thai democracy and to demonstrate the solidarity of all Thai who support amending the constitution so that it will have real guarantees of the rights, freedoms and interests of the people.

There are 12 major aspects of the constitution which that group is struggling to have amended. These are: 1. To have a provision of equal rights between males and females 2. Defendants in criminal cases must receive justice 3. To give freedom of speech, writing, publishing and advertizing 4. To provide freedom of association 5. To have methods of fair elections 6. To reduce the limitations on candidates and those who have the right to vote 7. To reduce the number [of members] and the role of the Senate 8. To separate professional civil servants from politics 9. The prime minister is to be elected 10. Martial Law must be approved by the [National] Assembly 11. To promote local government and 12. Do not let foreign troops violate sovereignty. If we analyze this group's thinking concerning amending the constitution to make it democratic, it appears that they are thinking along the same lines of people in general. They see that the constitution currently in force is not yet democratic and does not yet give the people the democratic rights of genuine self-government as is the case in other democratic countries. If there are differences of opinion, they are probably only on very minor details.

However, because it is specified in the constitution that the constitution may be amended by only two groups: one group from the Cabinet or one group from the Members of Parliament. For the MPs, there is the condition that not less than

one-third of the members must be involved or not less than 101 persons and the party to which those members belong must pass a resolution of recommendation.

In the past the Cabinet has concurred that constitution would be amended in the provisional sections dealing with new political parties. This would be done so as to bring into force right away the law on political parties. This includes the requirement for those who run for office to do so in the name of the political party or that when they resign from a party, their status as an MP expires.

In the National Assembly, there has also been an extraordinary committee established to study the amendments to the constitution because they consider that the present constitution was written to further the interests of the executive branch more than those of the legislative which was elected by the people. This has made it so that conduct of political affairs cannot reach the people. This committee has met many times and finally it passed a resolution to amend many provisions of the present constitution. Specifically, the first issue that everyone sees eye to eye on is the need to amend it because it makes the constitution undemocratic [as published]. This is the provisional section. For example, it is thought that the Extraordinary Commission to Draft Laws should be abolished. They are asking for a general debate on individual ministers or the entire Cabinet. This should be done at a joint session of both chambers. The sole right of the Cabinet to say whether any given draft bill is a matter of national security should be abolished. The National Assembly should consider abolishing the exceptions to regulations concerning political parties.

Aside from this there is a resolution to make changes in a great many other matters in the section on the rights of the people and in the section on the National Assembly. This would involve making the President of the National Assembly the President of Parliament, and [would concern] the nationality of parliamentary candidates. The section on the Cabinet would include reducing the number of ministers and one-half of them would have to be MPs. Before taking office the Cabinet would have to announce its policies and ask for a vote of confidence from the MPs to include having to declare [Cabinet members'] assets and debts to the President of the National Assembly in the same way as do MPs.

The discussion on amending the constitution by this committee has been completed and they are only waiting to submit [the results] to the National Assembly once again. If the National Assembly approves, the resolution will be submitted as draft constitutional amendments for consideration by Parliament, or alternatively, because at the moment most of the MPs are in support of the government, it may be necessary to submit the amendments to the government first in order to avoid problems of conflicts and in the hope of gaining cooperation from the Senate by letting the Cabinet submit the constitutional amendments in accordance with the resolution passed by the National Assembly.

In the course of discussions on amending the constitution by the Extraordinary Committee, suggestions have been received from the general population or from outsiders. But when the discussion has been completed, it is probable that no further amendments to the constitution can be made which are desired by the groups struggling to amend the constitution to make it a democratic one. Therefore, the only thing left for the latter to do is to urgently summarize their views or the aspects they wish to change and submit them to Parliament or to the Cabinet.

Thailand has had 13 constitutions since the change from absolute monarchy to democracy 48 years ago. It may be said that this is a country where constitutions are considered expendable, but the really interesting thing is that there have been a profusion of amendments and changes to the constitutions or efforts to make twists and turns in various ways aimed at making the national government more democratic. In fact, it appears that Thai democracy has steadily declined and ways must be found to amend the constitution again hoping that it will bring full democracy to the nation.

In fact, if we look at the various constitutions promulgated in Thailand, there are only two important differences: one group of those who drafted the constitutions or have had power and influence in putting their imprimatur on the constitution believe that Thailand is not yet ready to allow its people the freedom of self-government as is generally the case in democratic countries. Thus, it is necessary to have a government with absolute power without being under the control of the National Assembly. Therefore, the various provisions of the constitution are aimed at primarily reinforcing the power of the administration. An example of this type of constitution is the 1932 Constitution, the 1968 Constitution and the one currently in force.

Another factor is that those who draft the constitutions believe or understand that the reason democracy has failed stems from the fact that the constitutions have not been democratic or do not honor and support the importance of rights and freedoms of self-government by the people as much as they should have. If a constitution is written so that it will be democratic in nature, such as encouraging the rights and powers of MPs who are elected by the people directly, it would give the nation a chance to have more democracy, because then the people would take an interest in and come to play a role in governing the nation themselves without leaving it to some individuals or groups who come to determine the nation's fate instead of the people as has happened before.

Examples of this type of constitution are those of 1949 and 1974. Both of these constitutions were ripped up and thrown away by groups of individuals whose ideals or opinions agreed with the first type of constitution. They viewed subsequent constitutions as too democratic for which the people were not yet ready.

So, concerning the issue of whether the national government can be made democratic, I see that the real obstacle does not at all lie in the constitution because we have had various types of constitutions, one after another. When the time comes to draft or write another one, we cannot get away from the principles already held. When we think of taking the time to change the constitution with an eye toward making the national government democratic, I see it as just a waste of time and if it makes the people sick of and bored with democracy, it is even a greater danger.

In my view, I should like to state that the obstacle to democracy in Thailand lies more in the election process than in other reasons.

Because, as long as elections are unable to be the true instrument of the will of the majority of people what with the corrupt vote buying or the low voter turnout, and the performance of their responsibilities on the part of the MPs it is difficult to feel that it is in conformance with or desired by the majority of the

people. So when it comes to writing a constitution democratic to whatever extent, a truly democratic system for the nation will not come to pass just as before.

For these reasons I think that if we want to help each other find ways to solve problems concerning honest and fair elections for MPs that will be favored by the majority of people, it would be more useful or would provide the opportunity to bring democracy to the nation more than just sitting around thinking of ways to change this or that constitution.

PREM VIEWED AS WEAK BY COLUMNIST

Bangkok BAN MUANG in Thai 15 Nov 80 p 5

[Ta Mo Lo column: "Two Plus Two Equals Six -- the New Equation In 'Politics' Given to the Prime Minister"]

[Text] The honey has turned bitter. The people, who once had great faith in Prem are beginning to change their minds and they are daily voicing loud complaints to the effect that Prem is "worthless."

Prem is as "weak" as Jimmy Carter, a humanitarian, and he will fall just like Jimmy Carter.

Comparing the situation in which the "young turks" have been disbanded, the situation during the third Kriangsak government was much better than that of the present Prem government.

I do not know whether Prem still sleeps soundly at night or not.

The people are beginning to shift their attention from the ministers to Prime Minister Prem, saying that Prem is too submissive, that he is such a "good person" that he is weak and that he is so mild that he is like a tepid drink that is neither cold nor hot.

He has given the ministers so much responsibility that it is as if the prime minister has separated himself from the cabinet. He is like a person who takes the credit but does not have to take the blame.

I agree with this!

The truth is that Prem's present style of administration, in which he gives the ministers complete freedom in implementing the policies and full responsibility for their positions without any interference, is completely correct for a person who holds the position of prime and who is in charge of the ministers.

Many people used to complain that previous prime ministers "played ball alone" and did everything themselves and that everything depended on the prime minister.

There is a great lack of development.

I would like to repeat once again that Prem's style of doing things is correct.

But concerning what has been called good, when used in Thailand, things do not work.

The reason is that our original base is not good. Whenever something too good is used, it breaks down, just like an airconditioner does when used in a hut in a slum.

For example, there is Mr Tamchai Khamphato, the minister of commerce, who is showing signs of losing his position because of the sugar affair.

Mr Tamchai is a good, knowledgeable person but the Ministry of Commerce provides a poisonous environment. Some government officials who are addicted to corruption and profits and who have joined with the merchants are like spears prodding Mr Tamchai.

The merchants, who fight for their own interests so much that they forget their obligation to the country, use various tricks to fight, using dirty means, both in and outside the game.

And there are politicians who make things even worse.

The government officials, merchants and politicians who are attacking Mr Tamchai are all like fierce tigers and lions.

As for Mr Tamchai, he is almost finished.

Thailand's economy is an unorthodox economy whose system, mechanism and everything else is rotten.

The person who becomes the economic minister must eliminate the "rot."

And he must also act like a "cockatoo stabbing the tiger."

Even if the entire economic team of Mr Boonchu is changed and a new team is brought in, it will have to confront the rot and these tigers and lions.

If we select a type of tiger to fight the lions, the "fish" tiger that eats the meat floating on the water will be even worse.

Do not believe the eloquent talk of gifted speakers.

Similarly, changing the government will create even more problems. The country cannot have a "honeymoon" government every 6 to 8 months.

But returning to Mr Prem, the major question is what he will do about this confused situation.

What has happened shows the good qualities and coolness of Mr Prem. It also shows that governing the country by giving the ministers complete freedom in carrying out their policies and making them fully responsible in accord with their positions, which I feel is the proper way for the prime minister to govern the country, cannot be done successfully in Thailand because the base is rotten and doing things this way creates even more problems.

Do not think that I would be audacious enough to try to teach those older than I. I think, in my own way, that in governing the country, the prime minister (and each of the ministers) should use the theory that two plus two equals four and not six.

That is, "knowledge of what the other is up to" should be counted as one and personality should be counted as one more, that is, a personality that can make others afraid, regardless of whether they are government officials, merchants or politicians.

Mr Prem has two assests about him, otherwise he would probably not have "hit the jackpot" and become prime minister. But he has not used them.

The time has come when he must intervene in the problems that the ministers cannot solve and be a real Thai prime minister before someone comes and says "it is too late."

COLUMNIST CALLS FOR PREM INTERVENTION ON POLICE CORRUPTION

Bangkok BAN MUANG in Thai 25 Nov 80 p 4

[Nui Bangkhunthien column: "Smuggled Ore Influence"]

[Text] I do not know what orders General Prem Tinsulanon has given to the people responsible in the case of police at the deputy superintendent level being involved in escorting smuggled ore in Nakhon Sithammarat. This matter has become so well known that it has caused shock waves in the Ordance Department.

This seizure of smuggled ore took place more than a month ago. At that time, the newspapers did not print sensational stories and when no high-ranking person took up the matter, the matter quieted down.

But then when General Prem travelled to the south and gave specific orders to the provincial governor in the presence of others, the matter came to life for the second time.

Mr Banyat Bantadtan, the deputy minister of interior, has expressed doubts.

Since it has been over a month, the police will not be able to arrest the people who directed the transportation of the smuggled ore or even the high-ranking policemen who are known to have been involved.

Mr Banyat has confirmed that the evidence that has been examined is very clear.

Everyone feels that if General Prem had not personally gone and given orders, the matter would have ended with the arrest of only the drivers of the smuggled ore and the workers.

The influential people, both those in uniform and the "rulers" of Nakhon Sithammarat, would have gone free and continued to make money illegally.

And looking into the matter more deeply, the transportation of smuggled ore has been going on for more than a year; it did not just start. Why couldn't these people have been arrested sooner?

Those transporting the smuggled ore passed through many localities. Didn't the police and soldiers in these areas have any inkling of what was going on?

I am worried about Mr Samphan Thongsamak, an MP from Nakhon Sithammarat. His life is in danger.

Mr Samphan has openly fought to protect the interests of the country and to put a stop to the illegal activities of the influential people. He is a good citizen who is worthy of praise but how much protection and support do people like Mr Samphan receive from the government?

Many good people have died like dogs on the streets.

Many have fled.

They have been able to kill everyone because they have weapons, [men in] uniform, lawyers and much money.

Has General Prem ever considered the danger to the good citizens?

Concerning those who are patriotic and who maintain their ideals to the point where they are killed by gangsters like this, the government must find a way to help them and help them while they are still alive so that something besides their bodies remains. That is the first thing. The second thing is that they must be praised and honored. As for the third point, when such people are killed because of their patriotism, their families must be supported.

They must not be left to fight empty handed any more.

I believe that it will be verydifficult to eliminate the influential people in each area unless the government of General Prem strikes hard at the "influential people in uniform," who are subordinate to him, so that things become calm.

Clapping with just one hand does not make much noise. How can clapping the air make any noise? If the people in the government do not cooperate with each other, they will not be able to accomplish anything.

And if the "influential people in uniform" are really suppressed, in just 1 month Thailand will become peaceful, the people will live happily and we will be fully prepared to fight the enemy that is threatening us.

EDITORIAL: POLICE CORRUPTION AIDS ORE SMUGGLERS

Bangkok SIAM RAT in Thai 22 Nov 80 p 5

[Editorial: "Ore Smuggling In the South"]

[Text] It is well known that the southern region of Thailand is rich in mineral resources. It can almost be said that every square kilometer of this region, and not just on the land but over several hundred kilometers of ocean to, is filled with natural resources such as tin.

Tin is a resource used to earn foreign currency. Or it can be said that it earns a great income for the country that is equal to that earned by other types of goods.

Concerning the people who engage in the smuggled ore trade, we have heard that these people are all wealthy and very influential merchants who live in the southern provinces. They are supported by politicians and government officials in Bangkok and it is known that local government officials are their accomplices.

Among the criticisms made, at present, there are reports that from the arrest, at the end of last month, of a person who was secretely transporting smuggled ore in the south, a police officer of the rank of deputy provincial superintendent was implicated too. According to the report, several other policemen of various ranks are in collusion with the influential merchants.

We have no doubts about who these influential merchants are because it is natural for the merchants who are concerned only with profits to use tricks and to violate the laws of the country. They completely destroy the country's public assets without considering anything else. But the thing thing that shocks us is the "influence" they have over the apparatus of the state. Does this refer only to the fact that they pay bribes to government officials?

Even MP's from the south and the commanding general of the Fourth Army Area, who is responsible for maintaining peace in the south, admit that the ore smugglers who secretely transport ore out of the

country have great influence. They have nonchalantly smuggled ore out of the country and this has caused the government to lose billions of baht each year. It is this that makes us doubt whether it is just lower echelon officials in the state apparatus who are involved. The word "influence" refers to those at much higher levels than deputy provincial police superintendents.

Do not forget that tin is not some trifling thing that can be smuggled out of the country easily. Those who smuggle tin must make large investments. They must use large ships and many accomplices. Besides paying bribes to the local officials, they must also have the support of very large numbers of people. Certainly, concerning such large-scale and audacious acts, administrative-level officials in the government cannot deny things or disclaim responsibility.

We are glad that the prime minister has ordered an investigation to find out who is guilty of smuggling ore. It is hoped that this will not be a "whitewash" as some people expect. This should be done so that we investigate matters and find out for certain who the influential people behind the merchants are -- people who are continually destroying the country's resources.

There are many more problems in the south that the government must make an effort to solve. Sadly, not only is this because the government burearcracy is "twisted," but there are also many unbelievable political intrigues that give rise to various forms of influence.

Let us hope that the orders of the prime minister bear results. This case will enable us to see whether we will be able to preserve the existing resources for future generations or not.

FIRINGS INCREASE, UNIONS THREATEN ACTION

Bangkok SIAM RAT in Thai 15 Dec 80 p 2

[Text] From the way workers are being fired wholesale, especially now, things could reach the boiling point with the three latest cases. Some 15 workers were fired from the restaurant of the Royal Hotel on the 20th of last month; 18 were fired from the Loris Factory's filling department [phanek banchu]. Before that on the 16th, two workers were fired from the Isuzu Corporation.

These events appear to have reached the boiling point because the workers who were fired from all three places were all either labor union presidents, secretaries-general or important members in each location who had important roles in bargaining with the bosses.

Several labor leaders, including Phaisan Thawatchainan, chairman of the Employees' Organization Council of the Labor Council of Thailand; Chin Wutinawin of the Dock Workers Labor Union of Thailand and Ekachai Ekhankomol of the Capital Water Works Labor Union, and including Sawat Lukdot, secretary-general of the Labor Council, all evaluated the meaning of the bosses' action as the bosses' response to employees who become active in seeking their rights to their own voices by establishing labor unions and demanding better employment conditions from the employers.

However, Ekachai and Sanan Boon-ngok of the Operations Section of the KhSMK [Bangkok Metropolitan Mass Transit Authority] labor union, two judges working with the labor court on the side of the employees, have said that in accordance with labor laws, the employer may terminate the employment of workers with the payment of mandated severance pay.

"This point is a big loophole in the labor law because it gives the employers the opportunity to legally harrass the employees," stated Chin Wutinawin, another judge. He added, "The way to solve this problem right off is to change this awful law. Otherwise, the employers will utilize this legal loophole to harrass employees without letup."

Although those actions of the employers are legal, the employees are not going to take it lying down. They have begun to respond to the employers with vigorous activism among the workers.

It began with the Rangsit group in the lead with about 30 labor unions of Rangsit area factories. They called meetings of their membership at the end of November

and invited representatives from groups of workers who were fired from each of the above-mentioned three locations to present the facts.

There was a joint resolution passed which called for drafting a letter to the employers to have the fired workers return to work. Otherwise, the response would be to call a boycott of the goods and services of those concerns.

Subsequently, on 7 December, the Rangsit group invited another six groups from Phrapradaeng, Singtho, the hotels, food and beverage concerns, the Federation of Labor Unions and the students from the 19 Institutions to a meeting at the New Amarin Hotel and passed a similar resolution.

The next day, Phaisan Thawatchainan made an announcement at the Labor Union Council. This is felt to be his first appearance since the Executive Committee election on 1 June.

Phaisan stated that "the reason there have been so many firings is because employers are getting support from some individuals in the government." He also said, "The fact that the minimum wage has been increased to 54 baht and that the government will announce the revocation of the Ministry of Interior order on banning strikes and lockouts [has caused] the employers to fire workers to nip the problem in the bud."

Phaisan also referred to the frightening statistics from the Labor Department which reveal that over the last 3 months more than 15,000 workers have been fired and the firings continue apace.

Charoen Siriphan, deputy director-general of the Labor Department admitted that over the last few months before the announcement of the increase in the minimum wage, employers have been engaging in mass firings of workers and would continue to do so until the beginning of next year.

Phaisan announced that when the employees are unjustly harrassed in this fashion, it is time for them to band together to fight. He said that the first stage in the workers' response would be to draft a letter to the government to halt the employers' unjust actions. At the same time a letter would be sent to the employers to get them to rehire the fired workers.

"If the employers do not pay attention to our demands, the next step would be to boycott the goods and services of those concerns along with calling protest demonstrations in front of their businesses. If the government does not see fit to stop the actions of the employers, we will call mass rallies even to the point of calling nation-wide general strikes," Phaisan stated.

Phaisan then called a meeting of all 89 member unions of the Council on 11 December but only about 10 people showed up. So, of all Phaisan's tough measures, the only thing left was to present a letter to Deputy Minister of the Interior Kasem Sirisamphan in the evening of the same day.

Most of the Council's members went to another meeting at the New Amarin Hotel at the same time Phaisan had called his meeting. They joined together in a protest in front of the Royal Hotel, the Loris Factory and the Isuzu Corporation.

The Federation of Labor Unions which is composed of nine state enterprises' labor unions including the Metropolitan Electricity Authority, the Regional Electricity Authority, the Electricity Generating Authority of Thailand, the Metropolitan Waterworks Authority, the Port Authority of Thailand, the National Housing Authority, the Telephone Organization of Thailand, the Bangkok Metropolitan Transit Authority and the National Institute for Scientific and Technological Research, participated in another meeting in the evening of the 12th at the Metropolitan Electricity Authority's labor union.

At the meeting there was wide-ranging discussion over these matters. Statistics were brought up showing that the employers had met many times and had agreed to fire a total of 30,000 workers.

Furthermore, Ekachai and Chin proposed the view that "These acts by the employers are only the beginning of such a trend which is an indicator that the state enterprises will be the next victims because most state enterprises are operating in the red and the labor union leaders in the state enterprises will be first on the list to be raked over the coals by getting fired from their jobs."

"There have been examples of this where state enterprises have been in the red such as in the case of the Mae Mo Fertilizer Factory, the Nonthaburi Gunny Bag Factory which were closed down. Therefore, in the face of this, we should be certain of things," said Ekachai.

Thus, the conference agreed to really press ahead with this struggle by cooperating with the other six groups.

However, what is significant about this matter is that in the Council, aside from Phaisan, the other committee members (except Ekachai and Chin who are in the Federation of Labor Unions) have not really put their hearts into this matter which prompted Ekachai to remark that "What the council is doing at this time is what is set down on paper; it is not really working in the interests of the workers." On this subject, Phanat Thailuan of the Thai State Railway Labor Union whose group is in agreement with the views of Ekachai and holds executive power in the Council at this time said:

"Regarding this matter, Kasem Sirisamphan has stated that he will take care of things. So why are we worried? I don't agree."

Phaisan also spoke out with discouragement from his disappointment that fewer people than he had expected had attended his meeting. He said, "This matter has become a struggle for leadership between two groups."

Therefore, the matter of the workers who were fired from their jobs, aside from being a struggle between the employers and employees, it has become a struggle between the leaders of two groups which is what has happened on every previous occasion.

FORCED REPATRIATION OF REFUGEES DISCUSSED

Bangkok SIAM RAT in Thai 18 Nov 80 p 2

[Outside SIAM RAT column by Nincha: "The Refugees Are Being Neglected"]

[Text] There have been rather saddening reports that the Thai government may forcibly repatriate the Khmer refugees living in the border camps back to Kampuchea if the International Red Cross and UNICEF withdraw the aid in food given to these people, which they may do because of the reports that the emergency situation that arose because of the food shortage in the refugee camps has begun to improve.

The reaction of the Thai government has been a natural one and has not been at all unusual in that it looks like Thailand is becoming the one country that will have to look after the Khmer, Lao and Vietnamese people, which is what was expected to happen from the very first.

Concerning the reasons given by the International Red Cross and UNICEF, who say that the food shortage has abated and that they will gradually withdraw [their support] and let private organizations, which have little support capabilities, take responsibility for the situation, it is not certain how or where such data were obtained.

It may be that both of these large organizations feel that Kampuchea can now produce some rice (concerning this, Radio Phnom Penh has reported that [Kampuchea] can produce more rice). But there is no way that any of this rice will reach the Khmer people living in Thailand. Thus, concerning providing these Khmer people with food, there is no better way than to "force" them to return to their own country again.

The Heng Samrin government is certainly not "kindhearted" enough to send food to help these Khmer people. Because, isn't it better to keep it for its own use? Or if it really wanted to send food, vietnam would not allow this because the Vietnamese soldiers in Kampuchea need this rice too.

Thus, the plans of the International Red Cross and UNICEF lack a factual basis. That is, it is not possible to claim that the food shortage has abated.

What both of these organizations have done is equivalent to shifting the burden to Thailand.

Such action is considered to be contrary to the original principles agreed on. Thailand was to provide land for these people to live on. Food was to be the responsibility of kindhearted relief organizations that were to come in and provide help.

If the International Red Cross and UNICEF really do what they have said they will do, it is felt that there will be no other recourse but to forcibly repatriate the Khmer refugees.

I once heard officials of the United States Department of State in Washington say that the United States is glad to give total and unreserved support for this. Thus, I would like to suggest that the Thai government try discussing this with the United States to see if it will give aid as it said it would. Concerning this aid, the requests should be made through the Volunteers Office on Refugees located on Sathorn Road near the American Embassy. Or the request can be made through Mr Lionell A. Rosenblatt, the refugee coordinator of the American Embassy (he holds the position of First Secretary at the embassy). We can then see if the United States really is prepared to provide aid to compensate for that lost by the withdrawl of the International Red Cross and UNICEF.

This action should be taken quickly before the administration of Ronald Reagan takes over because if this is put off until after Reagan takes over, the new government of the United States may change its old policy; that is, it may reduce the amount of aid given to aid the Indochinese refugees.

Thus, during this period, there should still be enough time during which the Thai government can hold back from "forcibly" repatriating the Khmer refugees until it receives a definite answer from the United States.

And at the same time, the Thai government should make at least one more attempt to find provisions and money to replace the aid withdrawn by the International Red Cross and UNICEF. It should not just place the entire burden on the United States.

Only after our request, or appeal, has received an unsatisfactory reply should we decide to "forcibly" repatriate the Khmer refugees.

After they have been repatriated, regardless of what happens to them, we must remember that Thailand did not cause this problem. It was Vietnam that caused this problem.

Thus, if the Khmer refugees are "forcibly" repatriated, the execution of these people is a matter for which Vietnam and the government of Heng Samrin must take responsibility. Thailand will not bear any responsibility for this.

Yes! Sometimes a person who is too kindhearted and who takes too much responsibility will be taken advantage of by bad people.

COAL DISCOVERIES REPORTED IN NORTH

Bangkok SIAM RAT in Thai 15 Nov 80 p 3

[Article: "The Heat Value Is Similar to That of Lignite: Coal of Great Value Has Been Discovered In Several Northern Provinces"]

[Text] Mr Prawit Ruyaphon, the secretary-general of the National Energy Administration, haa revealed that coal deposits have been discovered in several more places in the northern provinces. The deposit in Haeng Village in Ngao District, Lambang Province, has approximately 23 million tons of known coal reserves. The coal has a heat value similar to that of the lignite deposits at Mae Moh. Another deposit, also in Lampang Province, is the deposit at Chae Khon in Chaeng Hom District. This is thought to be a large deposit and it is thought to be the most suitable one of the deposits just surveyed. Based on the results of the survey drilling, it has been found that there are at least 35 million tons of coal reserves, the heat value of which is similar to that of the lignite at Mae Moh.

The secretary-general of the National Energy Administration also stated that coal deposits have been found in several places in outlying districts in Chiang Mai Province such as in Hot, Sanpatong, Mae Chaem, Amkoi and Samoeng districts. The total amount of coal reserves found here exceeds 10 million tons. The interesting thing about the coal in Chiang Mai Province is that it has different characteristics from the coal in Lampang Province. It is of higher quality and it contains very little sulfur. In addition to the deposits already mentioned, from the surveys conducted by the National Energy Administration, mass deposits of coal have been found in several provinces such as Lampang, Phaya, Tak and Nan. The coal layers vary in thickness from 1.5 to 8 meters. The total coal reserves exceed 12 million tons. Concerning the various deposits where coal has been found, the National Energy Administration has made plans to develop them and use [the coal] in the energy field.

The secretary-general of the National Energy Administration stated that, at present, survey drilling continues to be carried on in

order to find more coal deposits in the northern provinces. The work is being carried on jointly with the Department of Mineral Resources since geological surveys have shown that the northern provinces still have at least 15 more coal deposits scattered throughout the various provinces.

MORE GAS WELLS FOUND, PROSPECTS DISCUSSED

Bangkok DAO SIAM in Thai 25 Nov 80 pp 3, 12

[Article: "Two More Large Gas Wells Have Been Found"]

[Text] Mr Thongchat Hongladarom, the head of the Petroleum Authority of Thailand, stated that two more natural gas wells have been found in the Gulf of Thailand in the Satun Area, where there are large quantities of gas. To date, 34 natural gas and liquid natural gas wells have been found in the Gulf of Thailand and another area in the Gulf of Thailand has been found where it is believed that there are more than 10 more gas wells that can be developed and used. As for the natural gas wells in the Gulf of Thailand that have already been discovered, they can be developed and used at least 70-80 years. Thus, it can be said that developing the natural gas that has been found in the Gulf of Thailand is a project that will yield great economic benefits for the country.

The head of the Petroleum Authority of Thailand pointed out that it will be possible to put the natural gas to use sooner than stipulated because the laying of both the sea and land gas pipelines will be completed around next June. Thus, it is certain that natural gas will go into production on schedule by 15 September 1982. Because the construction of the gas pipeline will be completed ahead of schedule, it will be possible to put gas into production ahead of schedule too and the construction of the gas turbine power plant will be completed at the beginning of next year in accord with the first phase project. This will make it possible to use the time between June and September to fully inspect the production of gas, the transporting of gas by pipeline and the use of the gas by the power plant. If there are any problems or obstacles, it will be possible to solve them immediately. The inspections mentioned above mean that it will be possible to put the natural gas into use ahead of schedule.

The head of the Petroleum Authority of Thailand also pointed out that during the first year, 1980, 200 million cubic feet of gas will be used each day. In the next several years, the amount used will be

increased to 250 million cubic feet per day and in the next 3 to 4 years, the amount of gas produced and consumed will reach 450 to 500 million cubic feet per day. In 5 to 6 years, 750 million cubic feet of gas will be produced and consumed each day. During this period, there will be widespread use of gas. It will be used to produce electricity, it will be used in the home and for vehicles and it will be used as a fuel oil and as a raw material in industry.

EDITORIAL: CABINET FORCED TO DECIDE ON OIL PRICE HIKE

Bangkok SIAM RAT in Thai 20 Nov 80 p 5

[Editorial: "Fuel Oil"]

[Text] During an interview, Mr Wisit Tansatcha, the deputy minister of commerce,who just returned from an official trip abroad concerning fuel oil, stated that the market price of (crude) oil will increase after the new year. The price will increase from $30 a ballel to $40 a barrel.

This increase in the price of (crude) oil will certainly affect the entire world and all countries will experience serious economic problems. Concerning Thailand in particular, which must purchase oil from various countries, it too will be affected. But how great the effect is depends on the capabilities of the people who govern the country, that is, the cabinet.

At present, it is recognized that the government has slowed down the rise in fuel oil prices to keep the people from being affected or troubled by the price of oil. The government has done this by paying part of the cost instead of the people who use the oil. Thus, the price of fuel oil in Thailand has remained unchanged.

But concerning the fact that the government is paying part of the cost of the oil, when the price of foreign oil increases again next year, will the government continue to slow oil prices using the same methods as before?

We do not feel that this will be possible. How much money will the government have that it will be willing to use to keep oil prices at their original levels? And the important point is that this money is budgeted money that the government must use for other things in developing the country that are more important than using the money to keep oil prices the same.

We believe that it is true that,after oil prices on the world market increase next year, it will not be possible to keep the price of fuel oil in Thailand at the same level as it is today. In saying

this, we mean that the government will have to announce a new price for fuel oil. That is, the price will rise from its present level.

And it is certain that after the price of oil has increased, the price of other goods will rise in accord with the price of oil.

When the government can no longer avoid this problem, we feel that there is only one thing to do. The government must ask understanding from the people, especially from those who use oil. That is, the government must ask the people to be understanding about the need to set new prices that are higher than before.

Concerning asking the people to be understanding, we think that, at present, the government should start taking steps now. That is, it should show the reasons for this so that the people understand why it is necessary for the government to increase oil prices. At the same time, it should look for ways to guard against and solve other problems, such as the problem of various goods increasing in price in accord with the price of oil.

We believe that if the government begins to tell things to the people so they understand what is happening in this matter and so that they can prepare themselves mentally and physically to accept the oil price situation, which Thailand cannot avoid at present, when the time arrives in the coming months, the people will understand and sympathize with the government. This is better than a sudden announcement that oil prices are increasing.

We ask that action be taken today.

NEW HYDROELECTRIC PROJECTS PROPOSED FOR SOUTH

Bangkok SIAM RAT in Thai 15 Nov 80 p 3

[Article: "Construction on the Chieo Lan Dam Will Begin In 1981. The Dam Will Help [Generate] Electricity and Aid Agriculture In the South"]

[Text] Mr Kasem Chatikawanit, the head of the Electricity Generating Authority of Thailand, has revealed that construction on a new dam in a southern province will begin next year. This is the Chieo Lan Dam in Surat Thani Province. Besides benefiting the production of electricity, this will also benefit irrigation, fishing and tourism. Construction on this project will be completed in 1986.

The head of the Electricity Generating Authority of Thailand stated that, concerning the Chieo Lan Dam project, a dam and reservoir will be built in the area of Chieo Lan Village in Khao Phang Commune, Ban Takhun District, Surat Thani Province. As for the large dam, it will be 90 meters in height and 680 meters in length and there will be three retaining walls. The dam reservoir will have a capacity of 5.6 billion cubic meters [of water]. It will have an area of 105 square kilometers. The Chieo Lan Dam will be installed with three power generators, each having a capacity of 80,000 kilowatts for a total power generating capacity of 240,000 kilowatts.

The head of the Electricity Generating Authority of Thailand also pointed out that when construction on the Chieo Lan Dam is completed, [the dam] will benefit approximately 91,825 rai of agricultural, or irrigated, land.

BRIEFS

GAS SEPARATION PLANT--The head of the Petroleum Authority of Thailand has disclosed that a natural gas separation plant will be built in order to produce cooking gas and use it as fuel oil for vehicles. Mr Thongchat Hongladarom, the head of the Petroleum Authority of Thailand, has disclosed that after construction of the sea and land pipes for transporting natural gas has been completed and natural gas has been sent from the Gulf of Thailand for use as a fuel oil in generating electricity at the gas turbine power plant at Bang Prakong, the next task of the Petroleum Authority of Thailand is to build a natural gas separation plant in order to produce cooking gas for use in the homes of the people in general. Because, normally, raw natural gas contains several types of gas mixed together. The type of gas suitable for home use, that is, cooking gas, must be separated out. It is expected that this natural gas separation plant will be completed within 2 years from now. The head of the Petroleum Authority of Thailand also disclosed that, concerning the separation of cooking gas, besides the fact that it can be used for cooking, it can also be used as a fuel for vehicles in place of gasoline. [Text] [Bangkok SIAM RAT in Thai 24 Nov 80 pp 1, 4] 11943

NEW FORCE PARTY LEADER--Mr Suthep Wongkamhaeng, an MP from Nakhon Ratchasima, in his capacity as spokesman for the New Force Party, denied the reports that General Kriangsak Chamanan, the former prime minister, will become the leader of the New Force Party. He said that this is not true and that, to date, the New Force Party has not been approached by General Kriangsak, who is still not a member of any party. The spokesman for the New Force Party stated that, according to the party's constitution, the person who becomes the leader of the party must first be a member of the party and he must also receive the approval of the party at a conference. However, if General Kriangsak becomes the leader of the party after first fulfilling the conditions mentioned above, there should not be any problems. He stated that theNew Force Party once supported General Kriangsak in his bid for election as an MP from Nakhon Ratchasima in order to show his intentions in a democratic manner. The spokesman for the New Force Party also revealed that the party will hold a meeting around the beginning of next year to choose a leader of the central committee and an executive committee. This is because the meeting originally scheduled for 11 October was cancelled because of the floods. [Text] [Bangkok BAN MUANG in Thai 20 Nov 80 p 16] 11943

NEW BRANCH DISTRICT--On the afternoon of 12 November, Mr Pratuang Kiratibutra, the minister of interior, signed his name dividing off an area of Wang Saphung District in Loei Province to form Phu Luang Subdistrict. This was done because the district was very large and the area was located far from the district seat. Also, officials could not look after things everywhere. For the benefits gained in administering things and in making things convenient for the people, the powers given by the Local Administration Act of 1932 were used to separate an area from Wang Saphung District to form Phu Luang Subdistrict, which is composed of two communes, Phu Ho Commune and Nong Dan Commune, that are under the administrative jurisdiction of Wang Saphung District. [Text] [Bangkok BAN MUANG in Thai 16 Nov 80 p 6] 11943

ALCOHOL PLANT FUNDING--A private Japanese company has proposed giving Thailand 120 million baht in unencumbered aid in order to build a plant in Khon Kaen Province to produce alcohol for fuel. Mr Thanu Wicharangsan, the secretary-general of the Commission for the Production of Alcohol from Agricultural Materials, has revealed that a private Japanese company, the Nicho Iwai Company, has proposed giving the Thai government 120 million baht in unencumbered aid to build a plant to produce alcohol from agricultural materials in Khon Kaen Province. This is to be carried out through the Industrial Finance Corporation of Thailand. Mr Thanu stated that the alcohol production plant will be built in Khon Kaen and that it will have a capacity of 10,000 liters per day. It will be possible to use the materials in production from various types of crops, including sugarcane and cassava. [Text] [Bangkok SIAM RAT in Thai 22 Nov 80 pp 1, 12] 11943

OIL CONSUMPTION PLANS--In the next 8 years, Thailand will have to reduce its consumption of oil as a [source of] energy to only 45 percent of the total amount of energy consumed. Mr Phayap Phayomyong, the head of the economic analysis section of the Office of the National Economic and Social Development Board, has revealed that, based on the targets of the National Energy Administration for reducing the percentage of oil used as energy, by 1988, Thailand must reduce the consumption of oil as energy to only 45 percent of the total amount of energy used. The present rate of consumption is 80 percent. Mr Phayap stated that because Thailand must now rely almost entirely on oil as a source of energy, Thailand's economy has been seriously affected each time the OPEC countries have raised the price of oil. Reducing the rate of consumption as mentioned above will also have the effect of reducing these effects [on the economy]. The head of the economic analysis section also stated that the alternate sources of energy that will be used in Thailand include natural gas, lignite and water power. At present, such sources are being used [to produce] less than 20 percent of the total amount of electrical power generated. [Text] [Bangkok SIAM RAT in Thai 22 Nov 80 pp 1, 12] 11943

SELF-DEFENSE VILLAGES--In 1980, the Ministry of Interior increased the number of People's Volunteers for Development and Self-Defense villages by a total of 800 villages. A report from the Ministry of Interior stated that, the Ministry of Interior began to establish People's Volunteers for Development and Self-Defense villages in 1979, and in 1980 the Ministry of Interior has held many training sessions and seminars for People's Volunteers for Development and Self-Defense. And in 1980 alone, it has established a total of 800 such villages in 38 provinces in areas infiltrated by terrorists. The establishment of People's Volunteers for Development and Self-Defense villages has political and economic goals and is aimed at making the people in the areas capable of defending themselves. [Text] [Bangkok SIAM RAT in Thai 24 Nov 80 pp 1, 12] 11943

PASSPORT SCHEME--The Bank of Thailand has seized at least 25 passports belonging to Thais during the first 6 months of this year after it had discovered that some people were in possession of several passports each hoping to take funds out of the country. News reports from the Bank of Thailand disclosed that the exchange control which is responsible for buying, selling and exchanging currency has from January to the present discovered that many persons coming in to purchase non-Thai currency to take with them overseas for expenses along the way have in their possession more than one passport. They use these passports in successive rotation to present when making arrangements to take more foreign currency out of the country than the regulations permit. The Bank of Thailand has reported this to the Foreign Ministry and has received an admission from the Foreign Ministry that there may have been some slip-ups in control. From January to June, the Bank of Thailand had seized 25 of these passports. [Text] [Bangkok SIAM RAT in Thai 11 Dec 80 p 3]

COMMANDER SUPPORTS ECONOMIC POLICIES--Gen Pin Thammasri, deputy RTA commander gave his views concerning the nation's economic problems. He said that price increases are a world-wide occurrence and that it is necessary to face reality. It is necessary to acknowledge that the oil prices which will rise soon will cause further problems. He said that personally, he agrees with Deputy Prime Minister Boonchu Rojanasathien's economic ideas, in particular the initial plans to bring natural gas from the Gulf of Thailand on stream. However, Gen Pin stated that with the problems that have arisen, it is only natural that there must be demonstrations in terms of meetings or debates. But he believes that whatever may happen, there is no cause for concern or panic and he believes that things will be done rationally and that the government is ready to listen. Gen Pin made the observation that it is easy to criticize but that he sees no one offering any solutions or doing anything. [Text] [Bangkok SIAM RAT in Thai 15 Dec 80 pp 1, 12]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

COOPERATION WITH MALAYSIA IN PALM OIL PROJECT

Kuala Lumpur BUSINESS TIMES in English 9 Dec 80 p 20

[Text]

MALAYSIAN investors are to set up a palm oil refinery in Bangladesh on a joint venture basis, the Bangladesh ambassador to Malaysia, Major-General K. M. Safiullah, said in Kuala Lumpur yesterday.

He said that a Malaysian team was already in Bangladesh for a detailed study of the project.

Malaysia will provide the technical expertise and knowhow for setting up the refinery which will be labour intensive.

Gen Safiullah told *Bernama Economic Service* that if the venture proved successful, he was sure that many more would come up in the future as Bangladesh was looking into the possibility of converting refined palm oil into edible oil.

Bangladesh is turning towards refined palm oil to meet its edible oil needs and reduce the huge expenses incurred in purchasing soya oil.

He explained that it was now becoming increasingly expensive to buy soya oil from America and that Bangladesh planned to switch to palm oil instead.

Bangladesh, he said, hoped to buy palm oil from a nearer destination like Malaysia. This would not only reduce production costs but also the cost of transportation, he added.

The Malaysian study team now in Bangladesh will also help to determine the capability of the country's present 50 soya oil mills to switch to the processing of palm oil and later for production of edible oils.

Gen Safiullah was confident that once the palm oil refinery and the switch from soya oil to palm oil became a reality, Bangladesh's import of palm oil from Malaysia would increase tremendously.

Bangladesh imported $30 million worth of goods from Malaysia from January to June this year, the bulk of which was palm oil which accounted for $15 million.

Its exports to Malaysia for the same period hardly reached $3 million.

Gen Safiullah said that his country was now embarking on oil palm cultivation.

He said that for this purpose, an order for 500,000 oil palm seeds had been placed with the government of which 200,000 seeds will be delivered the next three years.

To date, 100,000 seeds have been shipped and planting is now under way.

The only setback oil palm growers would face is the country's variable climate which might affect yield.

A study team from the Palm Oil Research Institute of Malaysia has gone to Bangladesh to assess the situation and render technical assistance. — Bernama ES

ASTUTE MOVES HELP NE WIN STRENGTHEN HIS POSITION

Kuala Lumpur BUSINESS TIMES in English 15 Dec 80 p 8

[Article by Paul Wedel]

[Text] WHEN Burmese President Gen Ne Win failed to appear in public for several weeks earlier this year, the inevitable rumours of failing health and weakening grip began to circulate.

Several Western reporters flew in to be there at the end.

Then the 69-year-old leader allowed newsmen to be present as he returned from an overseas trip, smiling and striding briskly from the plane, looking as healthy as he has in years.

Although he has his share of problems politically, Ne Win and his 18-year-old regime are healthier than ever and a recent series of astute moves has strengthened his hold on the levers of power.

First Ne Win displayed the weaknesses of his opponents and his own self-confidence by offering an amnesty that drew a number of weary communist guerilla leaders out of the hills.

Then aging, longtime foe, former Prime Minister U Nu, returned from exile to a carefully guarded retirement in Burma where he is allowed to speak to newsmen only about his religious studies.

U Nu, toppled by Ne Win in a 1962 coup, had sworn to return to Burma only to overthrow Ne Win. His return makes obvious the end of ethnic Burmese middle class resistance to the Ne Win regime.

Then Ne Win launched public debate on a new citizenship law that is expected to result in second class citizenship for naturalised Burmese and make it tougher for anyone to become citizen.

Though the draft law has not been finalised, it will undoubtedly strengthen Ne Win's hand in dealing with rebellious ethnic minorities.

The law also appears aimed at discouraging the flow of immigrants from neighbouring Bangladesh. Those immigrants, attracted to relatively richer and underpopulated western Burma increased the government's security problems in the area.

A tough law is likely to be popular among easy-going, Buddhist Burmese who distrust the fiercely religious Islamic immigrants.

Another widely-publicised new law establishing pensions for political workers has further tightened the Burmese leader's control over the carefully built-up party and government apparatus.

Since taking power in 1962, Ne Win has systematically eliminated the remnants of the bureaucracy left behind by the British colonialists.

Army officers party workers and "people's councils" now do everything from administering local government to running government enterprises and even acting as judges.

Many of these are only part-time officials, driving trucks or following a plow to earn a living.

They were supposed to serve out of patriotism, but as Ne Win asked when he introduced the pension bill, "Well, in reality will the stomach endure emptiness? Will it be sustained without eating?"

The power their positions gave them enabled the party workers to make tidy sums from those who sought to avoid numerous government restrictions and the system of citizen officials became widely corrupt.

Ne Win declared that the new pensions "will remove the cause of corruption" and end party officials' "worry about their livelihood once they go on retirement.

While few observers believe the pensions alone will stop corruption, it establishes a system of rewards that give party leaders new means to win the allegiance of party workers at the lower levels.

To top it all off, a record rice harvest and a gradually improving economy, have taken some of the pressure off the government which has been widely criticised for badly overmanaging the economy.

Burmese political observers believe one aim of the latest moves is to established Ne Win's policies so they persist after his long dominant figure is gone from the political scene.

In a system where Ne Win's pensonal power has been overwhelming, all the top people in the government owe their positions to him.

"When Ne Win calls, they jump,' a diplomatic source said of the group of four or five top men behind Ne Win.

"Since none of them have their own power base they will be forced to share control, like (former Yugoslav leaader) Titi's successors have," he said. "And with the system here so well established they can only continue Ne Win's policies for along while after he is gone." -- UPI

KAREN REBELS CONTINUE STRUGGLE WITHOUT HOPE OF VICTORY

Kuala Lumpur BUSINESS TIMES in English 16 Dec 80 p 6

[Article by Anuraj Manibhandu on Thai-Burmese border]

[Text] THE revolution turns 32 years old next month and the Karen National Union (KNU) fighting for independence from Rangoon admits that victory is out of sight. Yet, without foreign aid, the ethnic separatists struggle on.

"We are not fighting the Burmese because we hate them," KNU strongman Gen Bo Mya told *AFP* in a border camp close to Thailand's Mae Sariang district. But "unless we are free and independent, with our own land, we will always be under the heel of other people," he added.

The 54-year-old General, born of peasant stock, leads a two-million strong population settled in the eastern hills of Burma. He is president, defence and foreign minister of the KNU, and supreme commander of its military arm, the Karen National Liberation Army (KNLA), a 10,000-strong force by his reckoning.

The right-leaning rebel leader described the KNU's political view as "national democratic." "We will never come under the Communist Party of Burma (CPB)" which is Peking-backed, he stressed.

Resisting the rule of Rangoon since 1948, the KNU, rallying an ethnic minority said to be the first settlers in Burma, is demanding a separate state with a voice in the central government. This demand was put forward before Rangoon obtained independence from Britain in 1948

The KNU is demanding the eastern Tenasserim division, part of which is in its present territory, to the delta area around Rangoon and the Central Pegu division as the Karen state.

In Burma's eastern hills, today's Karen state as delineated under former Premier U Nu is "useless," Gen Bo Mya said.

Formed by a British-trained lawyer, the KNU rejected the general amnesty granted by the Ne Win government almost immediately after it was announced in May this year.

"A general amnesty is for people who have done wrong. We are confident that our cause is right and just," declared the betel-chewing Gen Bo Mya.

Over 1,[illegible]00 insurgents surrendered to Rangoon under the 90-day amnesty which ended on Aug. 25. KNU officer said they were mainly followers of former Premier U Nu, with some elements of the CPB and the Shan state.

Just over a month after the amnesty expired, Rangoon launched what KNU leaders said was the most violent suppression campaign to date.

The campaign started on Sept. 28 and was planned to last four months. But since the retreat on Oct. 5 of Burmese troops from the KNU's strategic camp at Mae Taweh, near Thailand's northwestern Tak Province, there has been in uneasy calm.

During the week, the KNU took 16 dead and 15 slightly wounded while Rangoon took almost 200 dead and 330 wounded, Gen Bo Mya recalled.

The present operation marked the second suppression drive against the KNU this year. In March, the KNU lost a security guard and a saw mill when clashes with Rangoon developed after talks failed, recalled a KNU officer.

The talks split the KNU and the then president Hunter Thamwe defected to Rangoon, taking with him "several hundred" soldiers of the KNLA's 3rd and 5th brigades.

A fierce suppression campaign followed at the end of 1963 and "we underwent a very difficult period up till the end of 1967," he noted.

Mr Hunter Thamwe, the KNU's second president, is reported to have died in Rangoon last year regretful of his decision.

Gen Bo Mya, the KNU's fourth president, said the 10,000 fighters in the KNLA are ill-armed. Officers noted that the arms in use include M-16 assault rifles, 57-mm recoilless rifles, mortars and M-79 grenade launchers.

The rebels fight guerilla-style, using tactics possibly inherited from the reputed Force 136, set up by British officers in 1945 to harass Japanese occupation troops in Burma.

At least three ministers in the KNU's 11-member cabinet were in Force 136. Gen Bo Mya himself was a member, together with fishery and farming minister Shaw Leitaw and finance minister Phu Leiwah.

Recalling their service with the British during World War II, the Karens sent a mission to London in August 1946 to present their case for Independence. But the then Burmese Premier, Mr Aung San, had already presented Rangoon's case and, along the line, claimed "amicable" relations with the Karens.

When the Aung San-Atlee agreement was signed in the following January (1947), there was no mention of the Karens and the KNU was set up the next month.

Mr Saw Ba U Gyi, a British-trained lawyer, headed the mission to London and became the KNU's first president in 1949. He was killed in action a year later.

The KNU made another appeal to London in the mid-1950s but it was rejected, Gen Bo Mya recalled. He said several Free World countries were approached for support but to no avail.

Yet the KNU has made ends meet, said finance minister Phu Leiwah. With government expenses running up to about US$10 million

per year, bills have been paid by income from Customs duties, mineral resources and mass support, he noted.

In a bid to strengthen resistance against Rangoon, the KNU under its third president Mahn Ba Zan in 1976 formed a National Democratic Front (NDF) which rallies eight minority groups.

New chaired by KNU president Bo Mya, the NDF is demanding a federate system where each minority group is given a state with a say in the central government's decisions.

Meeting on an annual basis, the NDF this year agreed to set up a permanent headquarters in KNU territory. Work on the headquarters is to begin this month to be operable by January 1981.

NDF joint secretary Soe Aung, a KNU central committee member, said the NDF's military programme includes the setting up of a permanent joint force.

The NDF's foreign policy is identical to that of the KNU which is to befriend all countries regardless of political systems, respect sovereignty and territorial integrity and co-exist peacefully with neighbours.

In the name of the NDF, Gen Bo Mya in 1977 wrote to US President Jimmy Carter offering help in narcotics suppression in return for economic aid for the minorities. But there was no reply.

Officers of the KNU, which plays no part in the narcotics trade in the Golden Triangle area where the borders of Burma, Thailand and Laos meet, say the racket can be stopped if economic aid is forthcoming.

Reflecting on the revolution which began with the battle of Insein on Jan. 31, 1949, Gen Bo Mya admitted that "victory is unforeseen."

SOVIETS OFFER MORE OIL FOR ACCEPT`BLE COMMODITIES

Kuala Lumpur BUSINESS TIMES in English 13 Dec 80 p 2

[Text]

NEW DELHI, Dec. 13

THE Soviet Union has offered additional crude oil and petroleum products to India in exchange for other commodities, Indian official sources said yesterday.

Under the Indo-Soviet trade plan for next year, the Soviet Union will supply to India 1.5 million tonnes (30,000 barrels per day) of crude and 1.9 million tonnes of products.

But the sources said deliveries would be increased to 2.5 million tonnes (50,000 BPD) of crude and 2.25 million tonnes of products if India was able to supply to the Soviet Union mutually acceptable commodities.

Such arrangements, the sources said, would then remain in force for the duration of a 1981-85 trade agreement which the two countries signed during Soviet President Leonid Brezhnev's visit to India. Mr Brezhnev left for home yesterday.

The sources said commodities which India could supply in exchange for oil were under consideration. But Moscow is known to be interested in cereals, and India already exports rice to the Soviet Union.

New Delhi had originally asked the Soviet Union to provide 2.5 million tonnes (50,000 BPD) of crude and 2.5 million tonnes of products next year because of a shortfall in supplies from Iran and Iraq. The two warring countries accounted for two thirds of India's oil imports.

India also hoped that Soviet supplies could be further increased in the following years. But the Soviet Union apparently did not commit itself beyond 1981.

Details of the new Indo-Soviet trade agreement have yet to be published. But official sources indicated earlier that the two countries would aim at boosting trade exchanges to a total US$13 billion during the next five years compared with an estimated US$6.5 billion under the 1976-80 pact.

Mr Brezhnev and Mrs Gandhi called on the countries of the region to quickly end their armed conflicts, exercise restraint and cooperate constructively for reducing tensions and restoring peace.

They said India and the Soviet Union were opposed to "all forms of outside interference" in the countries of the region — a phrase designed in the Indian view to include the Soviet presence in Afghanistan.

In Soviet eyes, the phrase will be taken as referring only to the West and China. Moscow has always denied any interference in Afghanistan and has said its forces are there at Afghan request.

The declaration said the two sides "are confident that a negotiated political solution alone can guarantee a durable settlement of the existing problems of the region."

The document also included a call for the establishment of a zone of peace in the Indian Ocean and the dismantling of all foreign military and naval bases in the area.

It singled out in particular Diego Garcia, the small British Indian Ocean island on which the United States has built a naval and air base, and condemned "any attempts to build up foreign military presence in the Indian Ocean under any pretext whatsoever."

The declaration expressed broad Indian support for Soviet disarmament proposals, and Soviet backing for India's role in the non-aligned movement.

India will host the next ministerial meeting of the non-aligned movement here in February, and according to some commentators Mrs Gandhi does not want her government to be seen as too pro-Soviet, especially on the Afghan issue.

Indian officials said a five-year trade agreement and an economic and technical cooperation agreement signed during Mr Brezhnev's visit would not be published immediately.

But official sources said the Soviet side had offered India an increase in supplies of oil and oil products in exchange for acceptable commodities, possibly cereals. — Reuter

LOWER HOUSE PASSES NATIONAL SECURITY BILL

Madras THE HINDU in English 17 Dec 80 p 1

[Text]

NEW DELHI, Dec. 16.

Opposition members walked out shouting "shame, shame" as the Lok Sabha today passed the National Security Bill providing for preventive detention.

The Opposition fought the Bill every inch and forced a division even at the third reading but lost the final battle by 74 votes to 190.

As the Speaker announced the result of the division and the passage of the Bill, most Opposition members shouted full-throated slogans against it and tore up its copies.

Even as the division had been called, one CPI(M) member asked the Speaker not to preside over the "liquidation of democracy".

Zail Singh's Assurance

The Home Minister, Mr. Zail Singh, replying to the debate during the third reading, assured the Opposition that while the Government did not accept its amendments,it would keep in view their sentiments while implementing the law.

He reiterated that the Government had no intention of using the law against political opponents.

"We will not act with vendetta for the persecution inflicted on Mrs. Gandhi", he said.

As they walked out, Opposition members shouted that "today is the darkest day for democracy" and raised slogans against the measure.

Although the Government wanted the Bill to be passed by 2 p.m. today, the Opposition members were not willing to allow the Government to rush through it without proper discussion. They insisted on their right to move all their amendments and presented for division on every clause of the Bill. Clause 3 of the Bill could be adopted by the House only after more than two hours of debate. The second reading of the Bill went on for nearly six hours.

While moving their amendments, the Opposition members sought, among other things, exclusion of political leaders including MPs and MLAs from the purview of the Bill, detention in local jails, no handcuffing or roping of detenus, and payment of maintenance allowance to the families of detenus.

The highlight of the acrimonious debate, which lasted more than 15 hours and was spread over four days, was a scathing attack on the Bill by the Lok Dal leader and former Prime Minister, Mr. Charan Singh.

The Opposition attacked the Bill from all angles — legal, constitutional, political and moral — calling it a "monstrous, draconian and black" piece of legislation.

Mr. Charan Singh warned that like MISA, the National Security Bill would also sound the death-knell for the ruling Congress.

In his hour-long speech at the third reading stage of the Bill in the Lok Sabha, Mr. Charan Singh faced prolonged interruptions from the Congress(I) Ministers as well as members, which subsided only after the Opposition benches retaliated in strength and threatened not to allow further proceedings in the House.

Mr. Charan Singh vehemently protested against the Ministers joining other party members in "barracking" him continuously.

The CPI leader, Mr. Indrajit Gupta, the Janata Party leader, Mr. Madhu Dandavate, the CPI-M leader, Mr. Somnath Chatterjee, and many more also invited the Chair's attention to the "unseemly spectacle".

After Mr. Vasant Sathe, Mr. C. M. Stephen and Mr. Buta Singh, all Union Ministers, had repeatedly and heatedly joined issue with Mr. Charan Singh, Mr. Indrajit Gupta rose to ask the Deputy Speaker (then in the Chair): Is the decorum of the House not affected when so many Ministers go on shouting like this? We can understand other members doing it, but not Ministers.

The Communication Minister, Mr. Stephen, was again on his feet to challenge Mr. Gupta's observation, asserting that "the Ministers, like any member, have every right to interrupt and ask questions".

Mr. Charan Singh said no amount of assurances or statements on oath by the Home Minister or any other Minister or even the Prime Minister was a guarantee against application of the powers under the Bill for suppressing people's movements and peaceful political protests.

Nothing less than specifically amending the Bill to ensure that it was not invoked against political agitators as well as independent organisers of movements for different political and economic causes would bring credibility to the Government, he added.

The Bill empowers the Government to detain any person at any place in the country to prevent him from acting in a manner prejudicial to the defence of India, the relations of India with foreign powers or the security of India, or to the maintenance of public order, or to the maintenance of supplies and services essential to the community. Even a foreigner can be detained to ensure his continued presence in India or to make arrangements for his expulsion from the country.

The period of detention will be for a minimum period of three months and can be extended by any period not exceeding three months at a time with a maximum detention period of 12 months.

The detenu will be communicated the grounds for detention within 10 days to afford him an opportunity of making a representation against the order to advisory boards to be constituted for the purpose.

Every advisory board will consist of three persons who are retired or serving judges or are qualified to be appointed as judges of a High Court. The Government will have to place before the boards all cases of detention within three weeks. If the boards find no sufficient cause for detention, the order against the persons concerned will be revoked and the persons released forthwith.

The Bill also provides for release of a detenu for specified periods on executing bonds.—UNI and PTI.

AUTHORITIES WORRIED BY GROWING NAXALITE INFLUENCE

BK151452 New Delhi INDIAN EXPRESS in English 12 Jan 81 p 5

[Text] Chandigarh, Jan 11 (UNI)--The law and order authorities in Punjab are feeling gravely concerned at the activities of Naxalites in the state, who are now reported to have made inroads into schools.

After having successfully infiltrated into colleges, the Naxalite activists had also found their way into the industrial training institutes in the state.

Official sources here said the educational institutions were being invaded by teachers with Naxalite leanings, primarily to influence students.

The current drive was concentrated in the districts of Bhatinda, Sangrur and Jullundur. Some parts of Ropar, Patiala, Hoshiarpur and Amritsar districts had also been included, the sources said.

The movement, the sources said, was in pursuance of the top-secret "oil spot strategy" of the Naxalites, to enlarge their area of influence.

The "oil spot strategy" was based on the fact that if oil was sprinkled on a bucketful of water, numerous oil spots were formed. The water, when stirred and allowed to rest, would have one big oil spot floating on the surface.

The strategy was aimed at creating small pockets of influence all over the state to unite them at a suitable time.

The sources, who believe that the recent students' agitation in Punjab was engineered by Naxalites, said they had "adopted" strategic pockets in the low-lying backward areas along the Sutlej Beas and Ravi Rivers.

These areas made favourable breeding ground for Naxalities owing to their backwardness. The socio-economic condition of the people there was being exploited, the sources said, adding that some of the people there were also being trained in subversive activities.

After the reported large-scale "killing" of Naxalites in Punjab in what were officially stated to be "police encounters" in the early 70's the activists had taken a low stance. They had now reorganised themselves, the sources said.

They did not rule out possession of sophisticated arms by the Naxalites, some of whom were understood to be highly educated.

Meanwhile, police were having a hard time tracing the leaders as they frequently changed their names and guise, the sources added.

CSO: 4220

MODEST GROWTH SEEN IN KEY SECTORS OF ECONOMY

Madras THE HINDU in English 18 Dec 80 p 9

[Text] NEW DELHI, Dec 17.

The Government circles are heaving a sigh of relief that with all its bottlenecks the Indian economy has started showing up in bits and pieces, although the country has still to go a long way before turning the corner and looking forward to the future with renewed confidence.

The Prime Minister has been told by her top economic advisers that compared with last year's poor performance, which was the worst year of the Janata-Lok Dal rule, the key sectors of the economy have registered modest growth this year, despite the shortages of power and raw materials, labour unrest and inflation.

Power Generation up: The total generation of power from April to November this year was 74046 GWH (Gross Watt Hours) as against 72128 GWH during the corresponding eight months last year. In October, 1980, hydel power was 1.12 per cent more than in the same month last year, and thermal power 2.3 per cent. There was a marked increase in November with the generation of 19.8 per cent more hydel power and 21.1 per cent more thermal power, which together have stepped up the availability by 20 per cent during last month.

Coal Production Below Target: Coal production from April to November, 1980, was 5 per cent more than the corresponding figure of last year-66 million tonnes as against 63 million tonnes. But the present level of coal production is far below the Sixth Plan target of 130 million tonnes per year, although a maximum of 113 million tonnes was reached a few years back before the industry suffered a severe setback for whatever reason.

Higher Steel Production: The Government claims that from October onwards the production of saleable steel has also increased over last year's corresponding figure. During November steel production was 17 per cent higher than during the same month last year. Production of pig iron throughout 1980 has been higher than in 1979 by about 60 per cent.

Fall in Rly Loading: The loading on railways registered a fall till October during this year, but in November it increased by 2.7 per cent and 5.6 per cent on both broad and metre guage over last year's poor performance. But the Railways have still a long way to go before they can meet the targets fixed for the year on the basis of earlier projections.

Consumer Items: A number of industries engaged in the manufacture of capital goods, intermediate products and consumer durables have registered increases during April-September, 1980, compared with the same period last year.

These include aluminium products, electric fans, forged hand tools, motor cycles, scooters, mopeds, autorickshaws, jeeps, pencils, tea, vanaspati, soap, babyfood, leather footwear, dry cells, metallurgical machinery, diesel engines, ball and roller bearings, machine tools, commercial vehicles, power transformers, cotton yarn and tyres.

The increase ranged from 12.8 per cent in the case of capital goods, 2.8 per cent in respect of intermediate products and 3.4 per cent in relation to consumer durables. But here again the current productivity is far below the peak levels achieved during better years in the past.

Achilles' Heel: The public sector remains the Achilles' heel of Indian socialism with its poor productivity, top heavy administration and continued mismanagement. The Government continues to defend the investments of over Rs. 15,000 crores in State-owned enterprises with the plea that it was necessary to control the commanding heights of the economy, so that the private sector could flourish in the valleys of intermediate production. Except for a few of them, the public sector units continue to remain in a bad shape.

The Prime Minister, Mrs. Indira Gandhi, wants to take up the major sectors like steel, coal, oil, power, fertilizer, cement and transport to see what could be done to improve their performance. She is still caught up on the horns of the old dilemma whether greater governmental control or increased decentralisation would contribute to enhanced production. She has been subjected from time to time to all kinds psychological pressures to opt for one of the other on the basis of onesided and often biased advice.

Mrs. Gandhi has been toying with the idea of opting for greater pragmatism with no rigid dividing lines laid down. As a shrewd politician, she is not unaware that the oft-repeated apologia that the country has yet to recover from the hang-overs of Janata misrule is not going to wash any longer, unless the present Government can give a better account of itself with superior performance. Though some of the figures of modest increases in production furnished by the bureaucracy are music to her ears, she cannot project them as part of a success story, as a starting point for sustained growth to leave the bad days far behind.

The Government is making an all-out effort to step up exports to bridge the trade gap in the face of frequent hikes of oil prices. It is planning to drastically cut down imports of even essential items like steel, cement and aluminium, if the shortage could be met even partly through increased domestic production.

The foodgrain situation in 1981 is going to be quite comfortable, but a shortfall in pulse production is anticipated which could put further pressure on prices. The edible oil position also is not comfortable, although the Government hopes to tide over the shortage partly with increased oilseed production.

BRIEFS

DELEGATION VISITS PAKISTAN--New Delhi, 15 Jan (AFP)--An important opposition political party here announced today it will send a "goodwill" delegation to Pakistan in the third week of February to promote Indian-Pakistani relations. Subramanium Swamy, general secretary of the Janata party, which claims a membership of 3 million, told newsmen that the former Prime Minister Morarji Desai was being persuaded to head the delegation. This will be the first time since India's independence in 1947 that an opposition political party delegation will visit Pakistan he said. Mr Swamy, who is also a member of Parliament, said his party strongly advocates signing of a peace and friendship treaty with Pakistan. "The proposal for a no war pact has a negative tone. It will be better if India and Pakistan sign a peace and friendship treaty with a provision that the countries will come to each others help in the event of foreign aggression," Mr Swamy said. Mr Swamy thanked Prime Minister Indira Gandhi for assuring Pakistani President General Ziaul Haq of India's support for Pakistan's "independence, integrity and sovereign status." "We sincerely hope that Mrs Gandhi's commitment is genuine," Mr Swamy said. [Text] [BK151502 Hong Kong AFP in English 1435 GMT 15 Jan 81]

GANDHI HEARS COMPLAINTS--A delegation of district congress-I presidents of Jammu and Kashmir met the prime minister in New Delhi this morning and apprised her of the situation in the state. According to PTI, (G.M. Nirlasjan), who led the delegation, later said that they have told the prime minister that Sheikh Abdullah's government is fanning regionalization and creating division among various communities of the state. They charged the Sheikh with creating a wedge between the Buddhists and non-Buddhists in the frontier region of Ladkh and encouraging RSS [Rashtriya Swayamsevak Sangh, rightwing Hindu militant organization] in Jammu region and the Jammat-I-Islam [extreme rightwing Muslim organization] in the Kashmir Valley. The delegation also told Mrs Gandhi that the Sheikh's government is misusing plan funds on nonproductive schemes instead of spending them on projects. Another member of the delegation, (Shati Shaihzda), told PTI that the delegation complained to the prime minister of the impediments being put by the ruling national conference party in the way of the opposition. KARNATAKA PLAN OUTLAY--New Delhi, Dec. 17. The Outlay for the Sixth Plan for Karnataka has been fixed at Rs. 2.265 crores. Of this Rs. 419 crores have been earmarked for the annual Plan of 1981-82. This was finalised after discussions which the State Chief Minister, Mr. R. Gundu Rao with the Union Planning Minister, Mr. N. D. Tiwari, here today. [Text] [Madras THE HINDU in English 18 Dec 80 p 9]

SUGAR EXPORTS PLANNED--New Delhi, Dec. 16. India is committed to export sugar in 1981 under the Indo-EEC agreement and against the import contract of two lakh tonnes concluded in April last, the Rajya Sabha was informed at question time today. The Commerce Minister, Mr. Pranab Mukherjee, assured Mr. Prakash Mehrotra that the Government was not going to do anything which could adversely affect the domestic situation. Mr. Mehrotra had asked whether sugar export would be stopped in view of shortage and high prices in the country. Answering supplementaries, the Minister said that sugar had been exported to Nepal and Bangladesh for political reasons. Both were getting the most favoured nation treatment. Mr. Mukherjee said that India had imported sugar at the rate of $660 per tonne. Export prices were a matter of negotiation. [Text] [Madras THE HINDU in English 17 Dec 80 p 7]

FORMER MINISTER DIES--New Delhi, Dec. 16. Dr. Ram Subhag Singh, first leader of the Opposition, died here tonight. Dr. Singh, 65, held the position after the Congress split of 1969 when the splinter Congress(O) commanded the minimum strength in the Lok Sabha to be recognised for the first time as the official Opposition to the ruling Congress led by Mrs. Indira Gandhi. He was admitted to hospital on Nov. 26, following a cerebral stroke. The Prime Minister, Mrs. Indir Gandhi, several Central Ministers including Mr. Zail Singh, Mr. A. P. Sharma, Mrs. Ram Dulari Sinha, Mr. B. Shankaranand and several members of Parliament visited the hospital on hearing Mr. Singh's death. He is survived by his wife, four sons and one daughter. Dr. Singh began his parliamentary career in 1952 and became Minister of State in 1962. He was given the portfolio of Railways in 1966 in Mrs. Gandhi's Cabinet. But at the time of the Congress split in 1969, he went over to the Congress (O). He fought the 1977 elections on Mrs. Gandhi's party ticket but lost. He unsuccessfully contested the 1980 general elections as an independent from Arrah. [Text] [Madras THE HINDU in English 17 Dec 80 p 9]

OIL PRICES, RICE CROP, BUDGET SPUR GROWTH RATE

Kuala Lumpur BUSINESS TIMES in English 5 Dec 80 p 6

[Article by Richard Cowper in Jakarta]

[Text]

A SUBSTANTIAL increase in rice production, improved exports — notably of oil — and an enlarged development budget will push Indonesia's growth rate to well over 7 per cent this year. This will make the country one of the fastest growing in Asean — a group which itself can boast of being one of the world's most impressive growth areas.

The forecast (which some economic commentators say errs on the conservative side) comes in a review of the economy by one of Indonesia's most respected economists, Dr Sumitro Djojohadikusumo, a former Minister of Finance and one-time dean of the economics faculty at the University of Indonesia.

Most economists expect real growth of around 6 per cent for 1980, although Dr Sumitro said in an interview that he felt it could be as high as 10 per cent, making Indonesia the fastest growing economy in all South-East Asia to 1980. Singapore — the star performer until now — is expected to record growth of around 8 per cent this year, while the weakest members of Asean, the Philippines and Thailand, are likely to have rates of around 5.5 per cent.

"My estimate of 7 to 7.5 per cent in my study is a cautious one. My view is that the official figures will not record the real extent of growth this year. Evidence elsewhere, particularly in research at the village level, suggests that it could end up as high as 10 per cent," Dr Sumitro says.

Whatever the official result for the year — and Indonesian statistics are notoriously inaccurate — Indonesia's economic performance in 1980 is certain to be a considerable improvement on that of 1979, when real gross domestic product, according to Dr Sumitro, grew at 5 per cent, the lowest rate in Asean.

At the heart of Indonesia's improved performance, he says, has been a sharp increase in oil prices, an expansionary budget and a record rice crop, coupled with the willingness of a normally extremely conservative group of economic planners to allow money supply to expand at a fairly high rate. In particular, the increase in oil prices in the latter part of 1979 and in the first half of this year has meant that Indonesia — the largest oil and gas exporter east of the Gulf — has, as Dr Sumitro puts it, grown rich without really trying.

The first wave of the oil profit windfall (in the second half of 1979) was accompanied by no great increase in imports. The economic planners — after having screwed down the hatches with a 33 per cent devaluation of the rupiah in 1978 — unexpectedly found themselves with the problem of deciding how to use this enormous wealth without feeding inflation, then running at around 27 per cent.

Their immediate reaction was to sit tight. The result was that the 1979/80 fiscal year saw a

50 per cent increase in the value of exports and a record balance of payments surplus on the current account of US$2 billion compared with a US$1.2 billion deficit the previous year.

In the same period, gross exports rose, according to a recently published US Embassy economic report, from US$11.3 billion in 1978/79 to US$17.58 billion in 1979/1980, while imports grew by only 15 per cent from US$9.8 billion to US$11 billion. The trade surplus soared from US$3 billion to a record US$6.5 billion.

Foreign exchange reserves also grew fast up from US$2.9 billion in April 1979 to US$5.2 billion in April 1980.

In an effort to spend some of this money and get the economy moving, the government early this year announced a 50 per cent increase in the state budget for 1980-81 to US$16.8 billion. Although all the money allocated to development is unlikely to be spent, the government has moved fast on some big projects, and a 50 per cent salary increase for some 2 million civil servants has undoubtedly helped to put new life into what last year was generally regarded as a sluggish economy.

The rice crop, which most experts now expect to be around 20 million tonnes, up by more than 2 million tonnes from last year, has also improved rural incomes. Money supply in part reflecting the growth of the foreign exchange reserves, has grown by over 40 per cent when inflation has, perhaps surprisingly, been kept at less than 16 per cent this year.

The result is likely to be a major improvement in economic growth this year, with gross domestic product at current prices set to increase from US$48.1 billion in 1979 to around US$60 billion in 1980, and gross domestic product per capita from an estimated US$353 last year to around US$430 in 1980.

The growth in economic activity is likely to be reflected in a sharp increase in imports. Forecast to go up by 37 per cent from US$11 billion in 1979-80 to around US$15 billion in 1980-81. Gross exports too are set to increase by more than 30 per cent in the same period from US$17.5 billion to more than US$23 billion in 1980-81, giving Indonesia at around US$8 billion, its largest ever visible trade surplus.

In Dr Sumitro's review, he expects Indonesia this year to record a further surplus on the current account of the balance of payments of between US$1.5 billion and US$2 billion, while he estimates that official foreign exchange reserves will increase by over 70 per cent, from US$5.2 billion in April 1980 to US$9 billion by April 1981.

But Dr Sumitro cautions against getting carried away with what he calls the "basic aggregate indicators." Indonesia — the world's fifth most populous nation — with between 145 million and 150 million people — remains one of the world's poorer countries. Living standards for the lowest income group may have improved considerably since 1966, but unemployment and underemployment have been accompanied since the mid-1970s by what Dr Sumitro calls "worsening conditions or relative inequality." The poverty in Indonesia is daunting. — FT

PERTAMINA OIL SUPPLIES STOLEN, RESOLD ON SPOT MARKET

Kuala Lumpur BUSINESS TIMES in English 6 Dec 80 p 6

[Article by Colin Bickler in Jakarta]

[Text]

THE state oil company Pertamina, one of the major forces in developing Indonesia's economy, faces its third major scandal in five years.

According to the company, Pertamina has discovered massive pilfering of its oil supplies, resold through a Singapore-based syndicate comprised largely of Indonesians.

The company says that since January it has lost at least US$12 million and some officials fear it may be only the tip of the iceberg.

The oil has disappeared on the high seas and in transport around Indonesia. Crews of ships under charter to Pertamina are suspected of transferring part of their Indonesian-destined cargo to other vessels for sale on the spot market with profits going to the syndicate.

More than 50 people have been arrested, some of them Pertamina employees. Judicial authorities say that charges against seven of them have already been prepared.

The Greek captain and Polish first officer of a Panamanian-registered vessel are facing court charges over alleged transfer at sea of cargo destined for Pertamina.

The charges alleged that about 9,000 tonnes of oil loaded in Singapore were sold on the high seas and sent back for sale in Singapore.

Foreign oil company officials told *Reuters* that this could be only a small part of the leak. Pertamina head Piet Haryono told reporters that he believed at least eight chartered tankers had been involved in the racket since January.

The scandal comes at a bad time psychologically for Pertamina. The company is already engaged in a three-cornered legal battle in a Singapore court over possession of some US$35 million deposited in a bank account of the late Haji Ahmad Thahir, who once worked for Pertamina in arranging overseas contracts.

When he died his widow, Mrs Kartika Thahir sought possession of the money held in a Japanese bank in Singapore. She said it was part of a joint account which included her husband's earnings.

Haji Ahmad's children from an earlier marriage also claimed the money while Pertamina stepped in declaring the funds actually belonged to the company and that it was held by Thahir on its behalf.

The scandals blew up while the company, responsible for both production of Indonesian oil for export overseas and the distribution of imported oil, was trying to live down the disclosure five years ago, that it was more than US$10 billion in the red.

The company had to be bailed out by the state banks and the head of Pertamina former General Ibnu Sutowo, resigned.

Under General Sutowo's leadership, Pertamina developed a reputation for getting things done in Indonesia that others could not, but a great deal of money was apparently spent in the process.

As a result, Pertamina owns a string of motels and tourist resorts and is involved in several enterprises not directly related to oil production or distribution.

Under the new leadership, the company was expected to adopt a less diversified profile while building up the energy industry.

Authorities are still investigating the impact on the company of the latest trouble and the extent of involvement by senior officials.

Nor is it clear how the racket was organised.

When it was first disclosed, Pertamina's domestic supplies director Yudo Sumbono told reporters that a 0.5 per cent cargo loss was allowed for in shipment because of evaporation.

But in the five months up to September when the racket was exposed, shipping losses were up to six per cent, a sizeable amount at the present spot market prices.

According to industry sources, investigations suggest that onshore officials must have been involved in issuing false certificates to show that the total cargo was fully unloaded.

Investigators also believe that while some tankers might have transferred cargo at sea to other vessels — involving the risk of a lot of people knowing — others might have not fully unloaded in Indonesia and perhaps returned with part of their cargo.

Investigations are being complicated by the fact that some of those thought to be involved are foreigners who are no longer in the country and thus out of Indonesian jurisdiction. — Reuter

GOVERNMENT IS MAIN USER OF COMPUTERS

Kuala Lumpur BUSINESS TIMES in English 13 Dec 80 p 6

[Article by Chakravarthi Raghavan in Geneva]

[Excerpts] BATTLE Operations Strategy System is one application of the Defence and Security Department's large Univac 1106 computer.

The Department of Public Works has a big IBM S/370-145 to cope with increasing demands for project calculations, project monitoring, inventory control and personnel applications.

And following these mammoth types, Wang broke into the scene in 1973 when it saw a market for minicomputers for small users in the Indonesian private sector.

Since the first use of the so-called third generation electronic computers in the late 1960s, a mixture of 13 manufacturers — from giant IBM to minicomputer marketeer Wang — have installed 196 systems for 173 customers in Indonesia.

The Government is the top computer user in the country. Most of the computer uses are administrative — statistics, billing and revenue calculations, personnel and logistics.

"But a close analysis of the thousands of application areas will reveal there are few activities in Indonesia that cannot employ computer technology to some degree," said Rudy J. Pesik, president of P.T. Pusat Information and former vice president of the Indonesian Computer Society (IPKIN).

In a paper on the state of computer technology in Indonesia presented during the third Southeast Asian Regional Computer Conference (SEARCC '80) in Jakarta last month, Mr Pesik says the Government is the biggest user because it is "the biggest influence on the Indonesian economy."

Apart from the armed forces and the Department of Public Works, major computer users are the Central Bureau of Statistics, the Department of Finance, the State Telecommunications Corp. (PERUMTEL), Garuda Indonesian Airways and Pertamina, the state oil company.

The private sector, however, is slow to adopt computerisation due to its relative small size.

Those that do mostly have minicomputers, such as foreign oil companies like Arco and Mobil.

Very few manufacturing industries are big enough to justify computers. Even multinationals like Unilever have only recently started using minicomputers.

Also, the availability of the Palapa domestic communication satellite launched in 1976 dovetailing with the recent major expansion of the island nation's telephone network enables the linking of various minicomputers in the provinces to the main computer in Jakarta.

However, several obstacles bar the further use of computers in the country. This includes the fear of unemployment since computers in the are not associated with labour intensive methods. The overpowering supply of cheap labour in Indonesia often competes with computerisation.

Inadequate training in data processing is another problem. This is coupled by a lack of executive interest and insufficient understanding of the information system.

The Government established an agency, BAKOTAN, to coordinate the automation (including computerisation) of the national administration . Its work is to provide guidance to government agencies and enterprises in the use of computers.

In tandem with BAKOTAN is the Indonesian Computer Users Association, IPKIN. With about 400 members, the five-year-old IPKIN has conducted two national seminars and one national computer conference, as well as playing host to SEARCC '80.

Some of the computer suppliers have for their part formed an association of national suppliers of informatics the APNI. It has sponsored a joint exhibition of computer hardware and has held several dialogues with the Government.

"Through better coordination and cooperation between computer suppliers, users and the Government, better and more satisfying results could be achieved," says Mr Pesik.

However, BAKOTAN IPKIN and APNI are still in their formative stages. It may take some time before a common computer language for use among them could be programmed.— Depthnews

SUMATRA HAS POTENTIAL AS REGIONAL ENERGY CENTER

Kuala Lumpur BUSINESS TIMES in English 2 Dec 80 p 20

[Text]

WEST and Central Sumatra have the potential of becoming an energy centre for the region in future. The area has vast energy potential from coal, oil, hydro and geothermal sources.

Recent reconnaissance surveys show that the rivers and lakes in the area are rich in hydro power. This hydro power can be converted into electrical energy, which could amount to more than 4,400 gigawatt hours (GWH) per annum at approximately 800 MW.

Latest estimates show the potential of Indonesia's main islands, including West Irian, was as much as 30,000 MW.

Dr F. Tambunan and Drs C.S. Hutasoit of Indonesia told the five-day Far East Conference in Electric Power Supply Industry that the area also had the potential for 300 MW of power from geothermal and sources and more than 1,000 MW from coal that could last 100 years. (Total coal deposits are estimated at more than 10 billion tons.)

The total energy available from all sources will permit installation of capacity yielding 17,000 GWH per year in energy, which according to the authors of the paper, was "substantial anywhere in today's energy hungry world."

The paper is entitled the prospects of West and Central Sumatra as an energy centre for the region.

Dr Tambunan and Drs Hutasoit point out that considering the hydro power and coal deposits along (good grade bituminous coal of about 300 to 450 million tons) the area had good potential to become an energy centre in the future.

(The bituminous coal has an average calofiric value of 5,000 kcal/kg that could be raised to 7,500 kcal/kg with washing.)

The authors point out that with the present technology in electric power transmission, the energy when developed could be made available for other regions, as far as Malacca in Peninsular Malaysia and Kuala Tanjung in North Sumatra.

The Lake of Singkarak with the Ombilin coal mine in West Sumatra is only about 500-600 km from Johore Baru in Peninsular Malaysia. A biopolar High Voltage Direct Current (HVDC) line with 250 KV (kilovolt) can economically transmit 600 MW over the distance.

The length of the submarine cables required for power transmission would be about 50km.

The areas though rich in power is industrially under developed. The only industry of substantial significance in operation is the P.T. Semen at Indarung, producing cement and uses coal for its kilns.

The annual production of the indsutry is projected to increase from 330,000 tons to about 1.33 million tons in 1983 with a corresponding rise in annual coal consumption from 70,000 to 250,000 tons.

Other local consumers of coal are the railways, lime stone kilns and small electric power plants. Total consumption is projected to be 600,000 tons by 1983.

Development of energy sources are being undertaken by a number of parties. Swiss and Japanese consultants were constructing a power station at the mouth of the Antokan River in West Sumatra.

The construction, financed by the Asian Development Bank, is expected to be completed in 1982. It is expected to have an annual energy production of 314.5 GWH.

GUERRILLAS COOPERATE WITH KHMER ROUGE AGAINST VIETNAMESE

Kuala Lumpur BUSINESS TIMES in English 2 Dec 80 p 6

[Article by Jim Wolf in Bangkok]

[Text]

ANTI-VIETNAMESE guerillas in Laos — the "X" in the Indo-China equation — remain a problem for Vientiane and Hanoi, but not a real threat, according to a new scholarly study.

The study, by a recognised expert, holds that the resistance is hamstrung by internal divisions, lack of political will and a lack of outside support. An advance copy of the study signed by David Stone was made available to *Agence France-Presse*.

Although it notes that China recently stepped up its broadcast references to the guerillas, a sign of approval, the paper suggests Peking will never embrace them fully.

This is because the guerillas, estimated to number at least 5,000, are nationalists and anti-communists, an unacceptable vehicle for China's overall drive to tame Soviet-backed Vietnam.

Hanoi maintains about 50,000 troops in Laos to protect the Pathet Lao government it helped create, five years ago today after the communist victories in Indo-China.

Stepped-up resistance there could force Hanoi to divert men and resources from the main event in Kampuchea, where the Chinese-backed, ousted Khmer Rouge regime remains a much more serious threat to Vietnamese domination.

To date, there has been only scattered, hit-and-miss resistance to the rule of Lao Prime Minister Kaysone Phomvihan, but recent reports indicate a toughening of resolve in the land-locked, impoverished state of about 3.4 million people.

The regime has been plagued by severe economic dislocation and a massive and continuing outflow of refugees, equal to about 10 per cent of the population — the largest per capita of the three Indo-Chinese countries.

According to reports from Lao resistance sources here, the guerillas agreed earlier in November to "cooperate fully" with their Khmer Rouge counterparts in Kampuchea in a stepped-up fight against the Vietnamese presence in both countries.

The sources said the Chinese-backed Khmer Rouge had already begun delivering arms to the Lao-guerillas close to the point where the borders of Thailand, Laos and Kampuchea converge.

They also reported the guerillas had blown up a strategic bridge at Paksan, near the Thai border, eight days before this fifth anniversary celebration of the communist takeover.

Earlier, the Lao guerillas claimed in a communique to have set up a united front at a meeting in the southern province of Champasak last Sept. 15.

But the new study, to be published this month in the Singapore-based quarterly *Contemporary South-East Asia* says the Lao rebels are hindered by a lack of the ruthlessness typical of the Indo-Chinese communists.

"They apparently cannot bring themselves to intimidate their own countrymen to a point equal to... that the government side has already attained," said the article.

The article maintains the guerillas have broad popular support but are unwilling to solidify it by provoking the government forces into the kinds of retaliatory attacks that would leave the population no option but to join them.

"This is the ends-justify-the-means kind of provocation that can force a population to choose, despite itself, to resist a government to

the point of self-sacrifice," the article said.

Referring to what it called the "cold-bloodedness of the Chinese and Indo-Chinese communists," the paper implies the Lao rebels are qualitatively different, softer and more humane.

In an interview before leaving Thailand, the author said he had spent three months travelling clandestinely inside Laos with the guerillas, apparently the longest such stretch by any Westerner.

He based his conclusions on these tours, the most recent of which was last year, and an apparently extensive network of Lao exile sources.

In the interview, the author estimated the guerillas' armed strength at 3,000-3,500 south of Vientiane and about 1,500 in north. He declined to estimate the strength of the H'mong hill people component, but said the movement overall was neither gaining nor losing strength.

The writer said there was "no possibility" of a north-south guerilla link-up because of the rudimentary road network and difficult terrain, unless an outside power lent support — up to and including air drops of supplies.

He said China apparently believed Laos would be a sufficient drain on Vietnam without outside prodding and could eventually be weaned away to a "satisfactory extent," with Thailand's "insistent friendliness to Laos as the cutting edge."

Stressing that China would only support a resistance it had created itself, the author said the most the guerillas could expect was "experimental help" probably mainly in the north.

One question mark remained the formation of a Lao Socialist Party reported earlier this year by Chinese radio. Nothing has been heard of it since, though this could prove a vehicle for more Chinese aid.

He said Thailand, meanwhile, would limit its help to intelligence gathering for fear of giving Vietnam a legitimate reason to attack, as it did briefly last June from Kampuchea.

The United States, for its part, would steer "completely clear" of the resistance because of what the author called the "timidity" of the Carter administration's foreign policy.

He left open the possibility of a change under the incoming administration of President-elect Ronald Reagan.

He dismissed as a "reflex reaction" the arrest of 300-500 people in Vientiane in October, calling it a routine purge, not indicative a serious threat to the government. — AFP

FOREIGN TRADE TIES EXAMINED

Vientiane SIANG PASASON in Lao 10 Nov 80 p 3

[Article: "The Foreign Trade of the P.D.R.L." by Khamphan Chittavong]

[Text] In the five-year period since the complete victory of the revolution production and exports of the Peoples' Democratic Republic of Laos have been organized and exports and imports have been well controlled. The annual volume of goods has increased incrementally and has strongly expanded economic relations of our country with the outside world.

Now the trading partners of the Peoples' Democratic Republic of Laos number more than 10 throughout the world including mostly fraternal socialist countries and some capitalist countries that are able to cooperate on the basis of mutual equality and benefit and mutual respect for independence and sovereignty. All this creates conditions for facilitating national economic expansion and steady improvement of living conditions of our multi-ethnic people.

Trade generally operates under the policy guidance of the party and state and specifically in accordance with the provisions of resolution no 7. The framework for our country to exchange goods with foreign countries is composed of the guidelines and principles of national economic development. Thus in building sources of exports we have organized purchase and storage of goods and production of goods of high value to be exported and sold abroad. Examples are wood, wood products, coffee, false cardamom, native handicrafts, salt, alabaster, stick lac, soda, etc.

Turning to imports we have also purchased needed imports and have secured non-reimbursable aid from socialist countries and international organizations. Examples are consumer goods for agricultural production and building a new life for the people of Laos. To carry out these duties by means of foreign aid and trade two import-export companies have been set up.

Under conditions where our country is progressing from small-scale production to socialist, large-scale production our country's trade with foreign countries has encountered numerous difficulties, for one thing because our country has no outlet to the sea. In addition our enemies have never abandoned their plots to destroy our economy.

Under the leadership of the Lao Peoples' Revolutionary Party the current management of foreign trade activities has been clearly divided between state government

and state enterprises. This arrangement makes it possible for state enterprises to conduct the business of trade with great efficiency and to make the purchase, sale, exchange, and distribution of goods more convenient. Statistics for the first six months of 1980 show that our foreign trade has progressed tremendously when compared with previous years.

Trade with neighboring countries is conducted via two methods: government-to-government--exports consist of coffee, false cardamom, wood and forest products and imports are consumer goods, medicines, etc.--and people-to-people trade which is conducted along the borders.

In socialist bloc trade we export coffee beans, wood, and wooden manufactures while the types of goods we import from fraternal socialist countries are goods used in daily life, implements for use in production and construction, and heavy machinery. Most of this is sent to us by socialist countries, in excess of the value of our exports to them, in the form of aid.

Operating under the slogan "Use trade as the harness to encourage production work!," after imported goods are received at border depots, the central trading companies sell them to provincial trading companies to be distributed for sale to cadres, combatants, and people at the production bases.

Even though in the past this work has been hampered by the lack of export-import shipping routes, thanks to the attention paid to it by higher levels, it has shown solid progress.

The entirety of this represents favorable conditions for greatly facilitating foreign trade of which the more it rises the more it will influence changes in the living conditions of the Lao masses to ever greater abundance.

STRENGTH OF PRIVATE INDUSTRY, TRADE IN SAVANNAKHET NOTED

Vientiane SIANG PASASON in Lao 7 Nov 80 p 2

[Article: "Savannakhet is Progressing" by Nopphalat]

[Text] IV Industry and Trade.

A. Industry.

Savannakhet is a province where industry has been developed. The industrial sector of the economy is divided into two parts, the state sector and the private sector. In the state sector there are 7 sawmills, a rice mill, 2 bakeries, a fish sauce plant, a vehicle repair plant, a carpentry plant, a foundry, a carbonated beverage plant, a noodle factory, a tailoring plant, a kalem plant, a chalk factory and a rubber bag factory. Besides these there are also privately-owned factories, i.e., 5 sawmills, a plowshare factory, an ice plant, 18 rice mills, a carpentry plant, a tailoring plant, 4 smoothing plants, 6 large vehicle repair shops, 3 bakeries, and 2 wooden furniture plants.

These privately-owned factories are under the direct guidance of the state and are obligated to form a portion of the capital of the state.

B. Popular Handicrafts.

After the liberation of our nation the people of Savannakhet Province who already possessed firm confidence, ambition, and creative minds worked hard in concert to restore and build production of handicrafts. Today throughout Savannakhet Province there are 364 blacksmith units, 9 pottery units, 4 boiled salt units, and 25,352 weaving looms plus silkworm raising and basket weaving, etc.

Even though the production of these factories and of the people of the province is not capable of satisfying demand it does represent partial satisfaction and a good foundation for advancing to self-sufficiency in the future.

C. Trade.

In order to achieve steady improvement in the living conditions of cadres, workers, and multi-ethnic people during the past five years the administrative authorities of Savannakhet Province and the provincial department of trade have concentrated on expanding state stores and have opened 25 new ones bringing the total in the province to 37 or an average of 4 or more in each district.

Coupled with this expansion of state trading outlets, the provincial department of trade has urged the people to establish cooperative stores widely. There are throughout Savannakhet Province 56 cooperative stores including 40 which have been established in the past five years. In Savannakhet City there is a cooperative slaughterhouse which provides daily service to the market.

D. Market Controls and Private Commerce.

In the past five years, operating in accordance with party and state guidelines and on the basis of actual conditions in the province, the administrative authorities of Savannakhet Province have concentrated on controlling and guiding private trade and have organized it into units with strict inspection and registration. Currently there are 495 private stores and 7 private markets in Savannakhet Province.

These activities have played not a small role in achieving a steady improvement in the living conditions of the people of Savannakhet Province.

PREVIOUS TAX, PURCHASING POLICIES CRITICIZED, NEW POLICY UNVEILED

Vientiane SIANG PASASON in Lao 7 Nov 80 pp 1, 4

[Editorial: "Warm Praise for Agricultural Tax and Rice Purchasing Policies"]

[Excerpt] In a few days our young Peoples' Democratic Republic of Laos will enter its sixth year. We are proud to observe that by making use of the strength, intelligence, wealth, even the flesh and blood of all classes of patriotic and socialism-loving people, such as workers, farmers, cadres, soldiers, and intellectuals, our country has overcome numerous obstacles not just to remain in existence but to make general and appropriate growth. At no previous time in history have our people had as much mastery over their country, as much honor and glory, and as much steady improvement in living conditions and has our country had such great status and roles in world political circles as they do today.

Nevertheless our highest hopes have yet to be attained. Our path is still strewn with obstacles. Poverty and backwardness, both evil legacies of the old system, still persist. The imperialists and international reactionaries who are the enemies of peace, independence, and prosperity are still seeking to destroy our efforts. We cannot eliminate these enemies with our bare hands. We have friends to aid us materially and psychologically but if we do not have internal strength we will not be able to settle basic disputes. Therefore the campaign to lift ourselves up, to sustain ourselves, and to build our own strength is a decisive element for the success of our struggle and is something for us to take pride in. There probably are many ways to accomplish this but, based on the special characteristics of our country and people, agricultural taxes and purchasing of agricultural production are the best bets. This year the collective and private farmers in our country, having been enlightened by resolutions of the party central committee, having become better trained and organized, and having gained experience from fighting natural disasters for two consecutive years, have been able to increase agricultural production above all previous years. This has brought the people happiness and deeper faith in and involvement with the new system. Our people are determined to preserve and build the new system in the form of paying agricultural taxes in accordance with their duty to the nation as well as selling rice to the state in order to gain income to improve living conditions and to expand production especially to push production during this dry season.

Although agricultural tax collections and rice purchases have been performed before, experience of the past several years confirms that localities that underestimate indoctrination and rely on issuance of orders not only are unable to

fulfill their quotas for tax collection and rice purchases but also generate harmful effects on the belief of the people in the policies of the party and state and if that is not enough they are soft spots for the enemy to take advantage of disagreements among cadres to sew division between the people and the party and the state and to confuse the situation. The organizations guiding tax collection and rice purchasing have an interrelationship with every problem and every sector and it is necessary that they all be worked on and that many problems be solved simultaneously. There must be coordination with trade plans and monetary plans. These two areas are closely interrelated as goods must be prepared and at the same time preparations must be made to have money in every locality to disburse as rice is purchased and there must be goods to sell to the people so money will circulate and preserve a balance between expenditures and receipts at a certain level. Another problem is that there must be a firm grasp of the relationship between money and trade, i.e., between collection and purchasing. For example, when all taxes are collected in a canton, the tax collection cadres must turn over all tax rice to trade officials separately and there must be absolutely no mixing of accounts for tax rice and purchased rice.

This is because tax rice is the source of local budget revenue whereas rice purchasing is a commercial enterprise. Nevertheless in the conduct of tax collection and rice purchasing the two departments must aid, support, and cooperate closely with each other.

In addition there must be better coordination with transport so rice can be hauled to granaries. There must be coordination of tax collection and rice purchasing plans with the propaganda machinery so the people can be mobilized to pay their taxes and to sell rice to the state. At the same time there must be timely countering of distorted enemy propaganda. There must be close coordination with military and peace-keeping activities and policies regarding agricultural taxes, purchase prices, and industrial goods prices to farmers must be coordinated because if these policies are not right there will be great losses. It would impact adversely on rice collection and purchasing as well as on increased production by the people.

The performance of this work is very involved. Therefore party committees and administrative authorites at all levels must make plans for their own jurisdictions so that the work will be done well. At the same time there must be effective control of collected and purchased rice. There should be absolutely no carelessness or mindlessness which result in a useless loss of state property.

SAVANNAKHET ROAD NETWORK DESCRIBED

Vientiane SIANG PASASON in Lao 8 Nov 80 p 2

[Article: "Savannakhet is Progressing" by Nopphalat]

[Text] Savannakhet is a province with an extensive road network divided into three classes with a total length of 8,095 kilometers. Strategic highways, which are the responsibility of the central government total 400 [sic] kilometers in length including 249 kilometers of route 9 and 161 kilometers of route 13 as it passes through Savannakhet. There are 12 provincial highways totalling 510 kilometers in length which are the responsibility of the provincial department of public works. There are 51 kilometers of route 11 from Savannakhet to Kengkok, 50 kilometers of route 25 from Phin District to Sepa-eum, 41 kilometers of route 28 from Savannakhet to Saravane Province, 45 kilometers of the road from Savannakhet to Kengkabao, 8 kilometers from route 13 to Nongsaphang, 47 kilometers from route 13 to Ban Dan, 27 kilometers from Kengkok to Lahanam, 40 kilometers from Lahanam to Thapasum, 42 kilometers from route 13 to Houei Mun, 18 kilometers from route 13 to Heuan Hin, 20 kilometers from route 9 to Sakhin via Khok Hinkea, and 105 kilometers from route 9 to Nhommalat in Khammouan Province. District and canton roads total 7,225 kilometers in length and are the responsibility of the people. Highways in Savannakhet Province make it possible to go from Savannakhet City to all eight districts, every canton, and about 80 percent of all the villages.

In the past five years the Savannakhet Province Department of Public Works, Communication, and Transport has constructed 67 kilometers of new road and have concentrated especially on upgrading the roads mentioned including 10 kilometers repaved with asphalt. In addition they have built 22 steel bridges with a total length of 622 meters to replace wooden bridges or ones that had been destroyed.

Of the roads mentioned, strategic and provincial highways can be counted on to carry traffic and transport all year long. Some district and canton roads can be counted on only in the dry season.

Besides land communications routes Savannakhet Province has water communications routes, namely the Mekong River, Sebangfai, and Sebanghian, and air communications routes, namely Savannakhet-Vientiane and Savannakhet-Pakse.

Based on these conditions the Savannakhet Province Transport Unit will be able to haul a total of 913,198 tons of goods a total of 11,533,045 ton/kilometers. In

addition passenger travel, which is organized as a state enterprise and a bus owners association, operates 14 land routes and 3 water routes and is capable of carrying a total of 1,227,397 passengers.

These accomplishments play an important role in improving living conditions, building the economy and spreading culture within the province.

SAVANNAKHET FORESTRY EXPLOITATION, STATISTICS REPORTED

[Vientiane SIANG PASASON in Lao 6 Nov 80 p 2

[Article: "Savannakhet is Progressing" by Napphalat]

[Excerpts] II Forestry.

Savannakhet is a province with abundant natural forests which are valuable national resources. They cover a total area of 328,300 hectares. The broadest area with the most trees is the Phu Sanghe jungle but under the old regime with reactionaries, militarists, and capitalists unashamedly competing with one another to scoop up these resources to build their own fortunes plus the ten years of terrible destruction by the American imperialists in the air war have reduced the area covered by this broadest forest to only 43 percent.

A. Preservation of Forests.

In addition propaganda has mobilized over 530 families from mountainous regions to abandon shifting cultivation and take up rice paddy farming. This has reduced the destruction of forests due to shifting cultivation techniques.

B. Surveys, Inspections and Planning.

Recognizing the value of forests, since 1976 the Savannakhet Province Department of Agriculture and Forests has been conducting an urgent inspection of forest areas which as of now has been completed over almost 100,000 hectares. Included therein are the Dong Lau Forest in Sepon District with an area of 32,182 hectares and a total timber quantity of 35,000 cubic meters composed mainly of maikacha, maibak, maila-en, maisakham, maipeui, and gurjun-oil trees and the Phu Viang Forest with an area of 50,000 hectares and a timber quantity of 43,000 cubic meters composed mainly of gurjun-oil trees, maibak and maihualon which are types of wood quite valuable for construction use.

In addition they have urged the districts to keep up with forest conditions, to set aside forest reserves, and to help inspect for exploitation.

C. Nurseries and Reforestation.

Continuing to improve and expand the two existing nurseries at kilometer post 4 and Nonglom which cover 10.5 hectares, during the past five years the provincial

forestry department has given special attention to nurseries and reforestation. As of now they have been able to raise over 762,200 seedlings and this number of seedlings has been distributed to offices, organizations, and other production units which have planted them on 105 hectares. Most have been native trees such as maikha, maikhem, maibak and teak.

Planting of trees is done in two ways: seedlings are grown in nurseries and then transplanted or they are grown in forests directly. In addition the province has set a basic policy on tree planting to get people all over the province to plant income producing trees. It also urges the districts to establish their own nurseries in order to distribute more seedlings to the people.

D. Extraction.

In the past five years operating under party and state guidance regarding making agriculture and forestry the foundation for expanding industry, the Savannakhet Province party committee and administrative authorities have urged the districts and departments concerned to gather old logs cut by capitalists and use them for production and sale. In addition, they have organized extraction of timber, with the state acting directly as the extractor, and have extracted 33,359,554 cubic meters.

E. Processing.

In order to satisfy the demands of national construction following restoration of mills and factories the workers of sawmills throughout Savannakhet Province have resolutely mastered their duties. From 1978 through June 1980 they have been able to produce a total of 5,306,085 cubic meters of finished lumber.

DEVIANT GROUPS CONFUSE JOHORE MUSLIMS

Kuala Lumpur NEW STRAITS TIMES in English 2 Dec 80 p 20

[Text] JOHORE BARU, Mon. — The Ministry of Home Affairs has been urged to take action against 20 deviant Islamic religious groups which are exerting a strong influence on the people of Johore.

These groups have tentacles reaching out into the most remote villages and settlements, said a member of the Johore Religious Council, Haji Maon Omar.

"Their number is 20 and not 12 as announced by the State Government recently," he told reporters today.

Haji Maon, who is also the State Assemblyman for Johore Lama, said most of these groups were active in Felda settlements and a few had following in towns, including Johore Baru.

He said the council was aware that many leaders of these groups had received training outside the country.

Members of these groups, he said, usually conduct house-to-house lectures and seemed to have exerted considerable influence on the people.

Confusion

He said: "The existence of so many groups is not healthy as people are confused over the correct Islam to follow.

"I am afraid this confusion will be exploited by anti-national elements to sow discord and disunity among the people."

Haji Maon urged the Government to look into the matter quickly so that action could be taken against the groups.

He said many high-ranking government officials had been known to be members.

Therefore, it was easy for these groups to conduct their lectures, as through the government officials they could easily obtain permission from the Religious Affairs Department to conduct their activities.

"It is because of this that action could not be taken against them," he added.

PETRONAS TO WORK OUT OIL REFINERY DETAILS WITH KUWAIT

Kuala Lumpur BUSINESS TIMES in English 15 Dec 80 p 1

[Text]

THE national oil corporation, Petronas, will send a high level team to Kuwait in February to finalise details on the proposed cooperation between the two countries in the setting up of an oil refinery in Malacca.

On leaving Kuala Lumpur yesterday, Kuwait's Oil Minister Sheikh Ali Al-Khalifah Al-Sabah said that he had invited the Petronas managing director, Encik Rastam Hadi to lead the mission.

According to him, Finance Minister Tengku Razaleigh Hamzah will also visit his country in March to give his Ministry's approval to the arrangement to be worked out with Petronas regarding the Malacca oil refinery.

The Kuwaiti Oil Minister said his country is interested in exploring all avenues of cooperation with Petronas. He identified the three possible areas of cooperation in terms, firstly, of Kuwait's participation in the Malacca refinery due to be completed in two years time; cooperation in exploration work and the exchange of crude oil produced by the two countries.

The Kuwaiti Minister said he preferred to work things out with Petronas before committing himself. "Oil refining is a complex business and all details have to be studied very carefully," he said.

The Minister stressed his country was willing to cooperate with Malaysia not only in the oil business but also in other areas.

One example of this is the Malaysia-Kuwait Investment Corporation established in May this year. The corporation will be used to facilitate the inflow of Arab petrodollars and the export of Malaysian goods.

Bernama adds: Kuwait has agreed to take up 20 per cent equity in the proposed oil refinery project at Malacca.

Disclosing this yesterday, Finance Minister Tengku Razaleigh Hamzah said the Kuwaiti participation would be in the form of supplying crude oil for the project.

In return, Malaysia had agreed to ensure its crude oil supply to Kuwait.

Speaking to reporters after inaugurating Pakatan Darul Naim Malaysia — a voluntary welfare association formed by the Kelantanese in Kuala Lumpur, at City Hall, the Minister said these agreements were reached in his talks with the visiting Kuwaiti Oil Minister Sheikh Ali Al-Sabah on Saturday.

Tengku Razaleigh said Kuwait had also agreed on a joint venture with Petronas to carry out oil exploration.

The other area agreed to by both sides was to work out an arrangement to swap oil.

Tengku Razaleigh said the "deal" was to ensure Malaysia's crude oil supply to meet its domestic needs.

Tengku Razaleigh described his talks as "fruitful" and he thanked the Kuwaitis for showing tremendous understanding of Malaysia's problems.

PAPER SUSPENDED FOR ARTICLE CRITICAL OF ISLAM

Kuala Lumpur NEW STRAITS TIMES in English 4 Dec 80 p 32

[Text]

KUALA LUMPUR, Wed. — The Government will not allow anyone to belittle Islam, the country's official religion, Deputy Minister of Home Affairs, Encik Sanusi Junid said today.

It would also keep a look-out for any attempt to divide the Islamic faith into such categories as Scientific Islam, Progressive Islam and Islamic Socialism.

Encik Sanusi was speaking to reporters after a seven-man delegation representing the Tanjung Muslims Action Committee from Penang called on him at his office here.

The meeting was in connection with an article which criticised Islam, published by the Tamil Malar recently.

The Deputy Minister said the Government took a serious view of the attitude shown by the paper in publishing an article which could incite the people.

Encik Sanusi said in Malaysia, an anti-Islam attitude would be construed as "anti-God, anti-King, anti-Constitution and anti-Rukunegara."

He said that Tamil Malar's apology on Nov. 29 was not its first on matters pertaining to Islam. On May 18, 1975 the paper also apologised for belittling Islam.

He added that certain people and the communists were also out to downgrade Islam.

He noted that certain people professing socialism had taken it upon themselves to come up with new theories on Islam.

The Communist Party of Malaya was also showing increasing interest in Islam and had formed the so-called "Parti Persaudaraan Islam (Paperi)."

Encik Sanusi said the Government was keeping an eye on self-proclaimed "prophets" and "messiahs" who were out to win over Muslims in the country.

He said that in 1972 a man of Indian origin identified only as "Fatah" somehow managed to find a place in public forums and rallies organised by Muslims.

The man fled when it was discovered that he was not a Muslim.

Meanwhile, two more Indian Muslim organisations have come out in support of the Government's decision in suspending the Tamil Malar.

The Selangor and Federal Territory Kerala Muslim Jama'at in a statement today, appealed to the Government to investigate the motive behind the publication of the article.

The Malaysian Muslim Indian Congress (Kimma) hoped the Government would keep close watch on Tamil Malar in future should the suspension order imposed on it be lifted.

NAVY DISCONTINUES USE OF ARMY RANK DESIGNATIONS

Kuala Lumpur NEW STRAITS TIMES in English 11 Dec 80 p 11

[Text]

KUALA LUMPUR, Wed. — Naval officers and men have reverted to their former ratings instead of using army ranks.

The move is aimed at overcoming difficulties whenever the Royal Malaysian Navy conducts joint-exercises with naval forces of other nations.

In the past, foreign naval officers had difficulty in addressing RMN officers due to their army ranks.

This is because an RMN naval Kapten is actually the rank of Leftenan. But in naval ratings, a Kapten's rank is equivalent to the rank of Kolonel in the army.

RMN officers switched to army ranks about seven years ago.

The highest ranking officer in the Navy is now known as Laksamana Muda, equivalent to a Jenoral in the army.

The ratings for naval officers with their equivalent in the army in brackets: Leftenan Muda (Lt. Muda), Leftenan Madya (Leftenan), Leftenan (Kapten), Leftenan Komander (Mejar), Komander (Lt. Kol.), Kapten (Kol.), Laksamana Pertama (Brig. Jen.)

For the sailors: Laskar Muda (Rekrut), Laskar Kelas 2 (Prebet), Laskar Kelas 1 (Lance Koperal), Ketua Laskar (Koperal), Bentara Muda (Sarjan), Bentara Kanan (Setaf Sarjan), Pegawai Waran 11, and Pegawai Waran 1.

ECONOMIC REVIEW FINDS GROUNDS FOR OPTIMISM

Kuala Lumpur BUSINESS TIMES in English 21 Nov 80 p 6

[Article by Philip Bowring]

[Excerpts] JUDGED by the exacting standards of the capitalist East and South-East Asian region in which it is situated, the performance of the Philippines economy has been weak.

In particular, critics are quick to point to an external debt now totalling nearly US$12 billion and growing at a rate of US$13 billion annually.

Certainly, the economy's 6 per cent annual average growth rate leaves room for improvement even at a time when world conditions are unfavourable.

With three-quarters of the current year gone, the figures look quite respectable. Agriculture has grown by 6 per cent and mining by 7 per cent in real terms; exports in dollar money terms were up 27 per cent compared with only 15 per cent for imports.

Export achievements were not solely due to sharp improvements in sugar, copper, nickel and gold prices. Manufactured exports were up 35 per cent, even though the performance of manufacturing as a whole continued to be a drag on GDP performance, growing at an annual rate of only 4 per cent in the nine months.

However, the full year's figure seems unlikely to be as good as for the period because it appears that agricultural output will be affected by falling coconut production as a result of low prices. Sugar output will take a season or two to show major recovery after several years of decline due to low prices.

Copper and nickel output have probably seen their best now that the metals boom early in the year has subsided. Conditions in manufacturing remain slack as consumer buying power has been affected by a tendency for oil-induced consumer prices to outrun family incomes.

Private investment is showing some signs of recovery from very low levels early in the year when companies were frightened by record dollar interest rates. At one time, credit to the private sector was expanding at a significantly lower rate than price increases, but it is still slack.

The public sector continues to act as a stimulus despite delays in project implementation. Government spending has risen by 27 per cent while revenues, held back by weak business conditions, have grown by only 15 per cent. However, there are physical limits to the government's ability to spend, not to mention International Monetary Fund (IMF) guidelines on domestic credit expansion and the size of the government deficit.

As it has been for several successive years, the most consistently bright spot of the economy remains grain production, which has been persistently outrunning the rate of consumption growth.

From being an importer of rice, Philippines is now a significant exporter, and last year the nation reached self-sufficiency in corn for the first time. The reasons have been heavy investment in irrigation, improved credit supply, fertiliser and extension work and — perhaps most important — regular increases in padi prices which have kept returns from rice growing roughly in line with general price rises.

Traditional export crops have fared less well. Sugar output suffered for several years from low prices, coconuts enjoyed a boom which has now passed and banana exports have come up against the saturation of the Japanese market.

Timber output has been static in the face of declining forest reserves and efforts by the government to aim for lower volume but higher value added in exports.

Overall volume increases in agricultural output have barely offset the losses of real income and the demand for manufactured goods caused by the fall in copra prices.

Coconuts are the most ubiquitous cash crop in the Philippines and, because of the long chain of middlemen involved in collection, milling and export, changes in export prices have a particularly acute impact on growers' incomes.

While copra has been falling, sugar has been rising. But as it does not involve so many people and as the quasi-government monopoly which dominates sugar exporting has been remarkably slow to pass on benefits to the grower, who in turn has delayed paying his abysmally badly paid labourers, output gains in agriculture have not been fully reflected in disposal incomes.

Philippines commodity exports are sufficiently diverse to ensure that there is never a time when all are up or down together. However, the nation has to face the fact that its terms of trade may have yet to bottom out.

Last year, despite the oil price increases, they actually improved by 4 per cent to reach their best level since the 1973-74 oil crises. However, that still left them 20 per cent below pre-oil crisis average, the fall almost directly matching the growth of the trade deficit.

Improvement in the terms may have continued into the first few months of this year as a result of the mineral boom. But they are now clearly declining again as oil price rises have continued to flow through while export prices, with the exception of sugar, have been static or declining. There is not much prospect of near-

term improvement.

Good first-half terms of trade and weak import demand caused by rising prices and slack private investment should see the trade deficit for 1980 not much above last year's US$1.55 billion, and below the projected US$1.8 billion.

However, the overall current deficit will be around the projected US$2 billion mark because of a worse-than-expected performance by the services. High interest rates in the Philippines, about US$5 billion in floating rate debt, have been the major cause.

But tourism growth also has slackened sharply and earnings and remittances from the Middle East have eased — and may actually fall because of withdrawal of labour from Iran and Iraq.

Early action by the government and willingness to submit to external monitoring have meant that the financing of the deficit has not been a significant problem.

At the end of last year, the Philippines served overseas development and commitments for 1980 of US$1 billion including US$300 million in a quickly disbursing World Bank "structural adjustment" loan — a euphemism for a balance of payment loan.

It also secured 410 million Special Drawing Rights (SDRs) over two years — equal to US$533 million — from the IMF's supplementary financing facility, taking it to the beginning of its third IMF credit tranche.

This year, some US$900 million of the expected increase in gross debt of US$2.8 billion will be financed by revolving trade credits, mostly related to the increased price of oil, with drawdowns on concessional and Eximbank loans that will leave only about US$500 million to be raised in medium to long-term syndicated loans. Most of that has already been arranged.

From the lenders' viewpoint, the preference this year has been for several smallish "club" loans rather than a very large consolidated borrowing programme by the central bank syndicated among a large number of banks.

Spreads on Philippines loans have been kept down to around 0.75 per cent but maturities have short-ended markedly. Money over eight-year-term is now very difficult to find.

For 1981, the Philippines hopes to be able to keep its requirements from the commercial banks at around this year's level despite an expected borrowing requirement of around US$2.5 billion to cover a current deficit of US$2.2 billion and increase in reserves of US$0.3 billion.

Less rapid increases in revolving credits can be expected, as the nation will be looking to much faster drawdowns of concessional loans — including the fast acting World Bank balance of payments loans — and an increase in Eximbank and suppliers' credit reflecting some recovery in the level of investment.

Despite the high level of borrowings, the Philippines' debt service is not yet a major problem. By the IMF's definition, it is 14.9 per cent this year, rising to 18.0 per cent by 1982.

Some consider that the IMF's assumptions on interest rates, available maturities and trade growth, necessarily based on projections from the past, could prove very optimistic.

Philippines foreign debt is now equal to over 40 per cent of GDP and increases in borrowing are not being matched either by increase in capital formation or in the efficiency with which capital is used.

However, in current world circumstances, it is probably necessary to take an optimistic view and accept the advantages that the borrower has over the lender and keep borrowing.

The Philippines does have hefty backing from bilateral and multilateral long-term lending sources and, despite the size of its deficit, is not as dependent on the whims of foreign commercial bankers as is often supposed.

As a last resort, its gold holdings, if revalued at the current price, would add US$1 billion to the nation's current US$2.7 billion in international reserves.

There is obviously a political element in the international support the Philippines has been receiving. But there are economic motives too.

Leading agencies have been genuinely impressed with the vigour with which the country has pursued its energy policy, raising prices to cut consumption and investing in a wide range of alternatives to imported oil, such as coal, geothermal heat, domestic oil, hydro-electric and nuclear power.

Industries are being encouraged to switch from oil. The company is hoping for a loan from various sources to speed the change.

The second aspect is willingness to follow IMF guidance on fiscal and monetary matters. In effect, the international agencies give the technocrats in the Philippines Cabinet added weight in persuading the President not to be too swayed by short-term considerations.

Consumer price inflation, which was nearly 17 per cent last year and will probably average around 14 per cent this year, cannot be entirely blamed on imported factors. Part of it is attributable to the belated removal of some price controls last year and some compensating wage rises.

However, with money supply so far this year expanding at a rate of only 17 per cent and domestic credit at 28 per cent, there is every likelihood that barring further oil price rises, inflation next year will fall to 10 per cent or less.

The outcome will partly depend on what the government decides to do with the exchange rate. The dollar remains the yardstick against which the peso is mostly measured, despite intentions to move towards a trade-weighted basket.

Against the dollar, the peso has fallen 1.5 per cent this year but by more against the yen. Exports are mostly measured in dollars while a large proportion of imports is in yen.

The third area where the views of international agencies has coincided with that of the technocrats is tariff reform. It may seem obvious enough. Local industry has for far too long been protected by high tariffs and import licensing. In the process, it has become a serious drag on the economy and a burden to the consumer.

But it takes political courage, or the clout of a martial law regime, to start as from January next to lift import barriers at a time when local industry is in a depressed state. Considering Filipinos' preference for imported goods, it is very difficult to assess the impact of the move on manufacturers or on the balance of payments.

Given the amount of leeway to be made up by local industry if it is to compete internationally, and given the tide of protectionism in the world, one needs to be an optimist to believe that liberalisation will have significant long-term export benefits.

But it is more than justified in terms of equity as well as economics, and at the least should benefit hardpressed consumers and thus in turn spur demand for manufacturers.

In the short run, however, it could cause the urban unemployment situation to deteriorate further. Many thousands of workers have been laid off by industry in Manila so far this year and real wages have probably started to slip back after rising last year. The employment growth rate has fallen to 2.5 per cent, well below the labour force growth rate.

But it is in the rural areas and provincial towns that most people live and it is there that employment is most needed. Government policies by and large are generating rural output and employment but spending power is yet insufficient to spur really large-scale production of many consumer items.

Meanwhile, much industry revolves around high cost production of semi-luxury items for the large urban middle class.

Government rural investment and industrial reform policies should help change that situation. But so long as the trade-dependent Philippines is caught on the oil hook, it can at best expect only very modest gains in real incomes for its rapidly growing population. — FT

GEOTHERMAL ENERGY SOURCES HAVE STAGGERING POTENTIAL

Kuala Lumpur BUSINESS TIMES in English 4 Dec 80 p 6

[Article by David Dodwell]

[Text]

THE Philippines, with meagre oil or other fossil fuels of its own, is more than usually alarmed about its soaring oil import bill. But it has one rare resource that may just prove to be its salvation — geothermal energy.

The Philippines meets more than 96 per cent of its fast growing commercial energy needs from oil. In the first five months of this year, oil imports cost almost US$200 million — and the full year total is likely to be almost double 1970 imports worth US$1.4 billion. Energy experts at the Asian Development Bank in Manila estimate that the Philippines' oil bill will account for almost 32 per cent of all imports in 1980, and will eat up almost 44 per cent of all export earnings.

Extensive searches for fossil fuels inside the Philippines have produced little. The World Bank estimates proven oil reserves to be about 25 million barrels of oil equivalent (boe). There are an estimated 57 million tonnes of coal reserves. Neither source is likely to go far in meeting commercial energy needs, which this year stand at 92 million b/doe, and are expected to rise to 124 million b/doe by 1985.

In an attempt to avoid the two equally unpalatable options of cutting back on industrial development plans or moving even more deeply into the red, the government of President Ferdinand Marcos has been forced to search out other indigenous energy sources.

Hydro-electric power plants are being built (between now and 1985, installed capacity is expected to rise from 934 MW to 2,831 MW). Local coal will be used to generate around 780 MW by 1985, while nuclear power plants may generate 620 MW. Total electricity generating capacity should rise from 4,100 MW at present to over 7,000 MW. Even wood-burning power plants and factories making sugar alcohol are to be built in a bid to reduce the country's dependence on imported oil.

But the most novel and exciting potential lies in geothermal energy. Set in the Pacific "firebelt," the Philippines has at least 15 sites where underground steam can be tapped for power generation. If estimates just made by the Asian Development Bank are accurate, then the potential of these resources is staggering; compared to current electrical power resources of more than 4,100 MW, geothermal energy could generate 38,000 MW. Less than 2,000 MW of this can be expected to be on steam by 1985, but political commitment on the part of the Philippines government could mean geothermal energy will meet a substantial proportion of the country's power needs.

Pursuing the geothermal option involves risks; the technologies used for generating electricity from this source of steam are novel and barely tested. The life of a geothermal well is uncertain, and so the overall costs of tapping underground steam are unknown. But taking all of these factors into account, energy experts from Berkeley University in the United States who have examined the Philippines' geothermal resources conclude:

"Geothermal electricity plants are clearly superior to any plant using oil and competitive with all but the most optimistic scenario for coal."

Experience of tapping geothermal energy is scant. New Zealand and Italy lead the field among the developed nations, but their experience may not be very valuable to the circumstances found in the Philippines. Among developing countries, El Salvador, Indonesia,

Kenya, Mexico, Nicaragua and Turkey have geothermal resources, but none has carried research as far as the Philippines.

Two sites on the main northern island of Luzon are already in production — Tiwi and Los Banos, while on Leyte island a site at Tongonan has been developed. Between them they provide 257.5 MW — about 5 per cent of the country's total installed electricity capacity. Experience so far has been encouraging.

Wells vary between 2,300 and 7,000 feet deep. Steam has been located at high pressures with temperatures ranging from 258 degrees Centigrade to 307 degrees. A common problem found elsewhere — particles carried in the steam which tend to damage or erode machinery — has so far been negligible. Steam at Tiwi carries 5-6 particles per million while at Los Banos, a particle content of 10,000 per million is thought unlikely to cause problems. Some wells at Tiwi are near limestone deposits that are likely to cause sealing over time. The most pessimistic estimates suggest one new well a year may have to be drilled.

Disposal of water which emerges once steam has been driven through the turbines might cause environmental problems at Los Banos, so it has been decided to reinject the water underground. Some experts argue this may shorten the life of a well by "drying up" underground steam, but there is no firm evidence as yet.

The Tongonan plant, operated with aid from New Zealand worth US$10m since 1974, is currently producing 37.5 MW of power for the nearby community at Ormac. Capacity could be boosted to 112.5 MW by next year, but it is uncertain whether sufficient demand exists to justify such an expansion. A local copper mine is the only heavy power user.

While Tiwi and Los Banos each generate 110 MW at present, they are due to boost output to a total 550 MW in due course, and could technically produce more than 1,000 MW between them.

Of the other 12 sites identified, two are due to be developed commercially — Palimpon-Bavin on Negros island and Manat, which is north of Davao on Mindanao island. Exploration is currently taking place at Batong on Kalinga and Montelago on Mindaro.

The fact the resources are so widely scattered across the archipelago — often far from centres of population or heavy industry — may well inhibit development of some sites.

Development is also being hampered by a row between the Philippines government and potential contractors because of terms being proposed in all new contracts. Since the precise costs of developing and maintaining geothermal fields are unknown, estimates of investor risk can only be approximate. New contractors are arguing that risks involved are higher than the government is prepared to accept and are therefore pressing for higher returns on investment than the government will agree to.

The government seems to be driving a hard bargain: it wants contractors to bear all exploration risks. The price of steam is to be limited to the cost of contractor expenses plus a profit margin which gives contractors an 18 per cent return on investment. The government wants to split profits 60:40 in its favour. Four potential investors are currently discussing contract terms for new development, but little progress is likely until the government shifts its ground a little. It has been rumoured that President Marcos himself is about to step in to resolve differences.

Despite the tremendous potential of geothermal resources in the Philippines, a number of practical and political factors could put a much lower ceiling on exploitation. The pressing need to find alternatives to oil as soon as possible could prompt the government to opt for coal as the main new source of electricity generation unless the pricing row for geothermal energy is quickly resolved. — FT

BRIEFS

GROWTH RATE--Economic Planning Minister Gerardo Sicat told newsmen on 3 December that the estimated growth rate of the gross national product for 1981 has been scaled down to 5.5 percent, about the same as this year. The 1981 estimate was lowered in October from 6.5 to 6 percent. The minister blamed the revision on the increasing cost of imported crude. The country needs about 235,000 barrels of oil a day and imports 90 percent of this amount. The cost was $1.44 billion during the first 10 months of this year, or 27 percent of import payments. [Kuala Lumpur BUSINESS TIMES in English 5 Dec 80 p 1]

BALANCE OF PAYMENTS--The central bank announced on 1 December that the Philippines had a balance of payments deficit of $283 million in the first 10 months of 1980. The figure is 44 percent lower than the deficit for the same period of 1979. The reduction was attributed to improved performance by the export sector. Exports were $3.92 billion and imports $5.23 billion in the first 10 months, up 24.38 percent and 14 percent over the same period in 1979. The payments deficit is expected to expand by $120 million, pushing the total to about $400 million by the end of the year. The country has an outstanding foreign debt of $12 billion. [Kuala Lumpur BUSINESS TIMES in English 3 Dec 80 p 1]

EXPORT GROWTH--Philippine mineral exports reached $1.007 billion in the first 10 months of 1980, up 185 percent from last year's $486 million. Copper concentrates accounted for $584 million, gold $196 million, and silver $132 million. Nontraditional exports, led by garments at $255 million, were up 23.65 percent to $962 million. Coconut was down 24.22 percent to $626 million because of depressed world prices, but was still the third biggest earner. Sugar exports were up 93.3 percent to $377.19 million because of high prices on the world markets. [Kuala Lumpur BUSINESS TIMES in English 6 Dec 80 p 20]

CREDIT RATING--On the basis of a worldwide survey of creditors, the firm Institutional Investors has given the Philippines a credit rating of 46.8 percent. This puts it in 59th place of the 98 countries surveyed. The global average is 52.2 percent and the average in the Asia Pacific region is 61.3 percent. In the Asia Pacific region the Philippines is in 13th place out of 16 countries. [Kuala Lumpur BUSINESS TIMES in English 9 Dec 80 p 16]

GOVERNMENT EFFORT TO ENFORCE USE OF MANDARIN

Kuala Lumpur BUSINESS TIMES in English 8 Dec 80 p 20

[Article by Paul Wedel in Singapore]

[Text] SINGAPORE is stepping up its most ambitious social engineering effort ever — an attempt to change the language of 75 per cent of its people.

Speak more Mandarin and less dialects the signs everywhere sternly, if ungrammatically command. Mandarin lessons pour out of television and radio, civil servants agonise over their language lessons and now the names of the nation's school children will be changed to Mandarin names.

Begun more than a year ago the "Mapdarin compaign" is designed to reduce a virtual Tower of Babel created in Singapore by immigrants in British colonial times who came from all over Asia, speaking varied languages.

The campaign is not supposed to affect the 25 per cent of the population who speak English, Tamil (an Indian language) and Malay, the other three official languages of the Republic.

But for the 1.7 million ethnic Chinese on the 587 square kilometre island it means replacing nearly a dozen different dialects with Mandarin, also the language of the governments in both Taipeh and Peking.

Cynics point out that Singapore plans to cash in on the modernisation of mainland China. With a technically educated, Mandarin-speaking population, Singapore will have the inside track for lucrative Chinese contracts, they say.

But Prime Minister Lee Kuan Yew gives a deeper, less commercial reason for the wrenching change.

Fearing that the confusion of dialects will force Chinese Singaporeans to become second rate English speakers without a sense of Asian identity, Mr Lee thinks Mandarin will help preserve a Chinese heritage needed for social cohesion and moral standards.

"Confucianism preserved by the Chinese heritage is of great use in solving present problems," he says.

Though of Chinese ancestry himself, Mr Lee was educated in English and did not learn Mandarin until he was in his thirties.

Now with a Mandarin tutor he speaks it nearly flawlessly. "My world views before and after I learned Chinese are completely different," he said earlier this year.

More than 4,500 government officials are following in his path with special government Mandarin courses. They have been ordered to speak with the Chinese public first in Mandarin rather the English or a Chinese dialect.

Television and radio have played a major part in the campaign.

More than 10,000 minutes of air time have been devoted to the campaign in the past year, according to Singapore Broadcasting Corporation figures.

And that does not include entertainment shows in Mandarin which replaced dialect shows to the immense disappointment of the addicts of Cantonese opera and sword films.

A Mandarin campaign song has been composed and all new housing projects will be given Mandarin names.

Taxi drivers have complained that they must speak Mandarin before their licences are renewed.

But the most personal and startling measure so far is the announcement that starting next year all first and second year Chinese school children will be called by Mandarin names, no matter what names their parents have given them.

This means that most children will no longer have the same names as their parents.

"It may give the impression that I am not my daughter's father," one clerk worried.

Some extremely family-conscious Chinese parents are uneasy about the whole campaign, concerned their children will no longer be able to speak to their parents or even have the same names.

Mr Lee has set definite goals for the massive and growing effort: that within five years most of the people will be able to speak Mandarin and within 10 years even the old will speak it.

So far the government has not used coercion to push the new language, but Mr Lee has said that "administrative measures" may be used after the first year or two.

Among the better-educated Chinese, who see their heritage slipping away through use of English the campaign has strong support even as the difficulties become more obvious.

Malay and Indian groups, however, worry whether they will be at a disadvantage eventually because they do not speak Mandarin.

So far they are not directly affected.

The campaign even has international implications.

Neighbouring Malaysia and Indonesia have substantial ethnic Chinese minorities and fear any return to Chinese nationalism, even from tiny Singapore.

But clearly the Singapore government, which has transformed the "colonial slum" left by the British into a modern state with the second highest per capita income in Asia, has considered the risks of its latest social project and is determined to push ahead for however long it takes. — UPI

PREPARATIONS MADE FOR GASOLINE RATIONING

Kuala Lumpur BUSINESS TIMES in English 3 Dec 80 p 6

[Article by Clarence Fernando in Colombo]

[Text]

SRI LANKA, which has to import every drop of oil it consumes, is preparing to ration petroleum products to tide it over an impending fuel crisis caused by the Gulf war.

A spokesman for the state-owned Petroleum Corporation said ration cards for petrol, diesel and kerosene were issued from Monday.

No date has been set for the introduction of rationing. But the spokesman said existing stocks would last only until the end of this year and rationing would become inevitable if the supply position did not improve by then.

About 40 per cent of Sri Lanka's annual oil requirements of 2.2 million tonnes (44,000 barrels per day) was supplied by Iran and Iraq before most of their oil exports were suspended.

The rest comes from Saudi Arabia which, the spokesman said, was finding it difficult to meet its commitments.

He said the Petroleum Corporation was also making spot purchases, but gave no details.

About 35 per cent of Sri Lanka's energy requirements are met by oil.

The bulk of Sri Lanka's oil imports comes in the form of crude which is processed by the country's only refinery outside Colombo.

The refinery, which handles about 5,000 tonnes of crude a day, belongs to the Petroleum Corporation, which has a monopoly for the import and distribution of oil and petroleum products.

Last year, Sri Lanka imported 1.4 million tonnes of crude, and about 530,000 tonnes of petroleum products at a total cost of 3,912 million rupees (about US$200 million).

This years oil import bill is expected to be about nine billion rupees (US$500 million), the spokesman said. Import requirements in 1981 will be about the same as this year.

The government is trying to develop other sources of energy and is speeding up a multi-million dollar World Bank-aided project, which is expected to double the country's hydro-electric power to 900 megawatts by 1984.

"There will then be a surplus of hydro-power to be exported to neighbouring India," a government spokesman said.

This Indian Ocean island of 14.7 million people, lying just six degrees north of the Equator, enjoys abundant sunshine throughout the year and has begun to tap solar energy.

Solar-powered lighting units, costing between US$125 and US$251, are being installed in mainly rural areas under a project launched by Prime Minister Ranasinghe Premadasa to modernise backward villages.

Windmills too have become very popular and methane gas units for lighting and cooking are also being set up in Colombo and rural areas.

Wood remains the second most important source of energy, mainly in rural homes where it is used for cooking. The government is now introducing *ipil-ipil*, a tree from the Philippines which grows to a height of 30 feet (10 metres) in only three years.

This fuel-wood tree will be planted over 200,000 hectares (50,000 acres) of the upper watershed of the Mahaveli River over the next five years. — Reuter

COLOMBO PAPER ON PLAN TO WATCH FOREIGN MISSIONS

BK191300 Colombo THE SUN in English 12 Jan 81 p 7

[Editorial: "The Price of Liberty"]

[Text] At long last the Sri Lankan security services have awoken from their slumber to the realities of 20th century global politics. Sri Lanka is no longer Lipton's tea garden under the protection of the colonial armour. We are independent and have to protect ourselves now. We are strictly non-aligned, therefore we must be more self-confident and assuring.

Geographically Sri Lanka is in a very enviously strategic location. And that makes us more vulnerable than others. Today international politics centers a great deal on Asia and we are the cynosure of many an Asian desk in foreign and defence offices of the major power blocs.

Therefore it is up to our own intelligence network to feel the sense of any clandestine activity against the security and sovereignty of the state.

In many instances even in recent times they have been found wanting in their duty.

For instance, a few months ago some British mercenaries arrived in Sri Lanka, stayed in hotels at Negombo and at Mount Lavinia, went to the neighbouring Maldive Islands, in an attempt to assassinate the republic's president. They returned to Colombo and went on to London but our security was blissfully ignorant of all this. What was worse is that British intelligence had given an alert to our own intelligence men about these mercenaries.

Big powers, rich countries and revolutionary organisations financially backed by them, thrive on internal chaos of another country. As a result they find like-minded groups in countries and politically minded Sri Lanka is certainly no exception.

The Defence Ministry is therefore, to be complimented for its move, even at this already late stage, to invite the attention of our foreign office to keep a tab on foreign missions in the country which are funding these so-called revolutionary groups which have no faith in the parliamentary democratic process because the people, the voters of this country have turned them out on a number of occasions.

Many leaders of these splinter organisations with the financial assistance of these missions keep the cadre militant and give the vociferous ones a few crumbs in the form of overseas jaunts while keeping for themselves the plums.

We see in neighbouring countries political turmoil of the worst kind. Democracy through elected representatives has helped Sri Lanka to keep its head up in this regional turmoil. But there are many, and the number is increasing, with vested interest motivated only by personal considerations who are not interested in representative democracy because they have been rejected by the people.

If they want to foist themselves upon an unwilling people with or without external assistance, then they must be severely dealt with. For, that our intelligence network must be more vigilant, rather than merely following their archaic practices.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

JUTE-PRODUCING COUNTRIES HOLD DACCA PARLEY

Dacca THE BANGLADESH OBSERVER in English 19 Dec 80 p 1

[Text] The three-day conference of the jute producing countries concluded in Dacca on Thursday with general agreement in principle on the establishment of an association of jute producing countries, says an official source.

Jointly sponsored by ESCAP and the Government of Bangladesh, the conference was attended by delegates from Bangladesh, Brazil, Burma, India, Nepal and Thailand and representatives from UNCTAD, UNDP, ESCAP, FAO and ITC.

The conference however felt the need for further careful consideration of the specific objectives functions and other related aspects of the proposed association by the individual governments concerned.

The conference accepted the draft constitution of the jute producing countries' association presented by Bangladesh for use as a reference by the governments to make the necessary amendments. It requested the concerned governments to circulate through ESCAP Secretariat their amended draft or other proposal if any four to six weeks in advance of the next meeting for consideration.

The conference agreed that an examination in depth of the draft text constitution of the proposed association should take place at the next session and decisions taken in what form the institutional arrangement should be established.

The conference reaffirmed the need for jute producing countries to meet as frequently as possible to discuss problems of common interest.

Meet Begins

A three-day meeting of the jute producing countries began in Dacca on Thursday under the auspices of UNCTAD.

The meeting is being participated by Bangladesh Brazil Burma, India, Nepal and Thailand. Representatives of UNCTAD, FAO UNDP and ITC are also attending.

The meeting will discuss and formulate their joint strategy for jute producing countries for the forthcoming final round of negotiations for the formation of International Jute Organisation (IJO) under the auspices of UNCTAD to be held in Geneva from January 12.

Mr. Salahuddin Ahmed, Secretary, Ministry of Jute Government of Bangladesh was elected chairman of the meeting; Mrs. Apiradi Tantraporn, executive chairman, Jute Development and Trading Corporation Kathmandu Nepal was elected vice-Chairman cum.

BANGLADESH-KAMPUCHEA COMMITTEE MEETS IN DACCA

Dacca THE BANGLADESH OBSERVER in English 20 Dec 80 p 12

[Text] The Preparatory Committee of Bangladesh-Kampuchea Peoples Solidarity Council at a meeting held in Dacca on Thursday formed the National Movement and World People's Solidarity Council (NMWPSC) reports BSS.

The meeting elected a 57-member committee of NMWPSC with Mr Enayetullah Khan as Chairman and Mr Shahadat Chowdhury as General Secretary.

Presided over by Mr Enayetullah Khan, the meeting took resolutions "strongly condemning" the invasion of Kampuchea and Laos by the Soviet aided Vietnamese forces. It demanded immediate withdrawal of all Vietnamese occupational forces from Kampuchea and Laos. Expressing full solidarity with the Afghan freedom fighters, the meeting, in a resolution demanded immediate and unconditional withdrawal of all Soviet troops from Afghanistan.

In a resolution the meeting strongly condemned the expansionist Israeli Zionism supported by the US. The meeting expressed complete solidarity with the struggle of the Palestinians for their inalienable right to a homeland in their own land.

The meeting strongly condemned India for its illegal occupation of Talpatty island.

The resolution also condemned the Bangladesh Government for "its inactivity on the question of the Talpatty islands".

The meeting in a resolution, expressed full solidarity with the Polish peoples struggle for establishment of socialist democracy. [as published] It added that the Soviet Union alone would be responsible for the consequence of intervention in Poland.

The meeting lent its support to the demand of Khmer Rouge for withdrawal of foreign troops from Kampuchea to elect a representative government through a fair and neutral elections as a democratic and justified demand. [as published]

The meeting also lent support and expressed revolutionary solidarity to the resistance struggle of the Khmer Rouge against the occupation forces in Kampuchea.

The Council decided to hold an Asian regional conference in Dacca in March 1981 to express solidarity with the Kampuchean people in their struggle to free their motherland from foreign troops.

BANGLADESH, BURMA SIGN BORDER PROTOCOL

Dacca THE BANGLADESH OBSERVER in English 19 Dec 80 pp 1, 12

[Text] Bangladesh and Burma signed a supplementary protocol on Wednesday in Rangoon on demarcation of a fixed boundary in the Naaf River, reports BSS.

According to message received in Dacca on Thursday Bangladesh Ambassador to Burma Syed Nizamuddin Hashim and the Director General of the Burmese Ministry of Foreign Affairs, Mr Tin Tun signed the supplementary protocol on behalf of their respective side.

The supplementary protocol incorporated the specific location on the newly established reference markers and description of the existing boundary points in the Naaf River in relation to the new reference markers.

The supplementary protocol was necessitated following the repair and reconstruction last year of the reference markers and beacons found missing, damaged or destroyed, subsequent to a joint survey conducted by the hydrographic survey teams of the two countries in October last year.

The original reference markers and beacons were constructed under the Naaf river protocol of April 28 of 1966.

Mr Lun Pe, Director General of the Burmese Survey Department was among those present at the signing ceremony held at the Office of the Ministry of Foreign Affairs of Burma.

DACCA, DELHI TO FORM JOINT BUSINESS COUNCIL

Dacca THE BANGLADESH OBSERVER in English 20 Dec 80 pp 1, 12

[Text] Bangladesh and India have agreed to form a Joint Business Council (JBC) for bilateral trade and industrial relations at both the public and the private sector level, it was officially learnt in Dacca on Friday reports BSS.

An agreement to this effect was reached between the Federations Chambers of Commerce and Industry of both the countries at a meeting between the two sides at the office of Metropolitan Chamber of Commerce and Industry in Dacca on Friday morning. The talks were led by Mr Iftakharul Alam President of the Federation of Bangladesh Chambers of Commerce and industry and Mr K. N. Modi, President of the Federations of Indian Chambers of Commerce and Industry, on behalf of their respective sides.

An official source told this correspondent that both government had consented to the formation of JBC which shall hold annual meetings alternatively in Dacca and Delhi to discuss ways and means for promotion of trade and industrial relations as well as to overcome problems. [as published] The agreement would be formally signed between the two sides today (Saturday).

Mr Modi, who is leading a seven-member Indian trade delegation, told BSS after the meeting that the JBC has been agreed upon as a forum for accelerating more economic and industrial relations to the mutual benefit. The FICCI chief observed that his organisation has such councils with counterpart chambers of 17 different countries and it was found very useful for closer economic relations.

During discussions with the Bangladesh industrial circles, the Indian side has shown interest in setting up joint ventures in the field of manufacturing of tractors, motor cycles, man made fibres such as nylon and polyester staple fibre based industries and machinery of jute and textile mills.

Later the FBCCI chief hosted a lunch in honour of the Indian delegation at a city hotel in which the leader of the Indian team expressed the hope that the visit of his delegation would be helpful in removing the existing misunderstanding and lack of rapport in the field of bilateral trade. Mr Modi also stressed the need for more exchange of delegations between the two countries and observed that trade and joint ventures between the two countries would increase to the benefit of both the countries.

Speaking on the occasion, Commerce Secretary, Mr M. Matiur Rahman, said that there was a lot of scope to increase imports by India from Bangladesh. Indian government

has opened a focal point in the Ministry of Commerce to monitor and supervise Indian imports from Bangladesh but expectations were yet to be fulfilled, he said. The Commerce Secretary observed that the private sector of both the sides could give a new dimension to the promotion of Indian imports from Bangladesh.

Earlier on Friday the delegation called on Chowdhury Tanbir Ahmed Siddiky, Minister of State for Commerce, and held discussion on the scope of bilateral trade and industrial relations.

The visit of the delegation is a follow up of the decision to develop institutional links between the apex national chambers of the two countries reached during the visit of the Indian Commerce Minister, Mr Pranab Mukherjee, in October last. A similar delegation from Bangladesh has also been invited to visit India.

IRANIAN DELEGATION MEETS WITH FOREIGN MINISTER

Dacca THE BANGLADESH OBSERVER in English 2 Dec 80 pp 1, 16

[Text] Mr Hojjatul Islam Muhammad Emamin e Kashani leader of the visiting Iranian partiamentary delegation had a meeting with Foreign Minister Prof Muhammad Shamsul Huq at Foreign Office on Monday says a PID handout. [as published]

He was accompanied by Mr Manoucheher Muttaqi and Mr Sadeq Ibadi Members of the Iranian Parliament. The Iranian leader explained the position of Iran in Iraq-Iran conflict.

Bangladesh Foreign Minister thanked the leader of the Iranian delegation for visiting Bangladesh and assured that Bangladesh attaches great value to the close ties between the peoples of Iran and Bangladesh which rooted in their shared history, religion and culture. In this connection he referred to the efforts of Bangladesh for ending this fratricidal war. Such efforts were being made at various levels including the Islamic Conference and the United Nations Security Council and also the personal efforts of President Ziaur Rahman.

He assured the Iranian delegation that in concert with other Islamic countries Bangladesh would continue her efforts for an early just and honourable solution of this conflict which was hurting not only Iraq and Iran but the entire Islamic world.

The two sides also exchanged views on various international issues and the possible ways of restoring peace in the Middle East.

The leader of the Iranian delegation expressed his deep satisfaction at the fraternal feeling that he found among the people of Bangladesh for the people of Iran.

PAPER GIVES DETAILS OF MESSAGES SUPPORTING PLO

Dacca THE BANGLADESH TIMES in English 30 Nov 80 pp 1, 12

[Text] President Ziaur Rahman has sent a message to PLO leader Yasser Arafat reiterating Bangladesh's total support for the exercise of the inalienable rights of the Palestinian people and the need for a just and lasting peace in the Middle East, reports BSS.

In his message on the occasion of the International Day of Solidarity with the Palestinian peoples, President Zia also reiterated that any comprehensive settlement in the area must take into account the question of Palestine which "lies at the very heart of the Middle-East problem."

President Zia said it is a blot on the conscience of the civilised world that Israel continues to violate with impunity the various resolutions adopted at the UN and in other international forum calling for the restoration of the inalienable rights of the Palestinians including their right to have a state of their own.

He said as a member of the Jerusalem Committee and also of the coordination committee on Jerusalem at the UN, Bangladesh's stand regarding complete solidarity with her Arab and Palestinian brethren is well known.

Bangladesh, the President said believes that peace through justice alone can endure in the Middle East and such a peace is yet to be achieved.

The components of any settlement that could guarantee a just and lasting peace in the Middle East must embrace the following essentials--an acceptance of the fact by all parties that the question of Palestine lies at the heart of the Middle East problem, that no solution can be envisaged without the restoration of the inalienable rights of the Palestinian people to return to their homeland as well as to self-determination, independence and territorial sovereignty, that the legitimate representative of the Palestine people, on an equal footing with all other parties is indispensible in all efforts towards a solution, that the inadmissibility of the acquisition of territory by force imposes an obligation on Israel, under international law, to withdraw completely and quickly from all the territories it occupied since 1967 including the Holy city of Jerusalem.

In his message, President Zia conveyed the deep appreciation of the Government and the people of Bangladesh to the committee on the exercise of the inalienable

rights of the Palestinian people for their commendable efforts in projecting the just cause of the Palestinian people.

Prof Huq

According to another message: Foreign Minister Prof M. Shamsul Huq on Saturday urged the world community to realise the gravity of the situation in the Middle East and cooperate fully in the immediate implementation of the United Nations resolutions and decisions requiring Israel to vacate all illegally occupied Arab territories.

In a message to Mr Farouk Kaddoumi, Prof Huq reaffirmed Bangladesh's complete solidarity with the PLO in their just struggle.

The Foreign Minister said the International Day of Solidarity was being observed on world in pursuance of a United November 29 throughout the Nations resolution adopted in 1977. [as published] The day has been earmarked by the UN to express total solidarity with the Palestinian people in their just struggle for the realisation of their inalienable national rights to establish an independent and sovereign state in their own homeland.

FOREIGN MINISTER ANSWERS MIDEAST POLICY QUERIES

Dacca THE BANGLADESH OBSERVER in English 20 Dec 80 pp 1, 12

[Text] Foreign Minister Prof Mohammed Shamsul Huq told the Jatiya Sangsad on Friday that Bangladesh had extended full diplomatic recognition to the Palestine Liberation Organisation (PLO) and always supported the cause of the Palestinian people in the different international forums.

Replying a question of Mohammed Mosharraf Hossain of Mymensingh, the Foreign Minister said that the Bangladesh Government had provided the P.L.O. with an office, residential accommodation and a car free of cost to establish its mission in Dacca.

Prof. Mohammed Shamsul Huq said that Bangladesh was one of the three-members of Jerusalem summit committee which had been working for the cause of the Palestinian rights. The other two members of the Jerusalem committee are Morocco and Guinea, he added.

Replying to a supplementary question, as to whether Bangladesh had supported the Camp David agreement, the Foreign Minister said Bangladesh did not support any agreement which was contrary to its principle and the P.L.O. cause. He said Bangladesh will not endorse any agreement that does not seek to resolve the Middle East crisis in its totality.

Prof. Mohammed Shamsul Huq informed the House that Bangladesh had signed nine agreements and seven protocols with China since 1976.

He was replying to a question to Mohammed Mosharraf Hossain of Awami League (Malek). He said that the two countries were still continuing talks to establish an link between them under an agreement signed earlier on July 23 this year. [as published]

Replying to supplementary question from the leader of the opposition Mr. Asaduzzaman Khan, the Foreign Minister said that the copies of agreement did not come before the House under constitutional agreement. Analysing he said Bangladesh had not signed any treaty with China, and signed only agreements and protocols. Only the copies of treaty if signed would have been placed before the House.

The Foreign Minister replying to a question of Shah Mohammed Abu Zafar (AL-M) said that no Bangladesh was either killed or injured during the present Iran Iraq war. He said that at present 2059 and 7157 Bangladeshi nationals were employed in government and private services in Iran and Iraq repectively. [as published] He

also said that the government had no plan to bring the Bangladeshi nationals back from these two countries.

Replying to another question, the Foreign Minister said that the Bangladeshis in those countries were safe. The information on the whereabouts of the Bangladeshis were gathered by the Ministry through the Bangladesh embassies in those two countries, he added. [as published]

The Foreign Minister told the House on Friday that the number of Pakistani citizens (non-locals) now staying in Bangladesh would be 462116, according to government statistics. He said that since 1973-74 one lakh twenty two thousand ninty three Pakistanis were repatriated to Pakistan. [as published]

He told a questioner that the government had no information yet that the United States had agreed to supply a huge quantity of most sophisticated weapons to India.

Prof. Mohammed Shamsul Huq told the Jatiya Sangsad on Friday that Bangladesh had so far established diplomatic relations with 17 countries. Bangladesh has been maintaining Ambassadorial level relations with these countries, he added.

Replying to a question by Maulana Nurunnabi Samdani (Jessore), the Foreign Minister said that of the total countries Bangladesh had resident embassies in 39 countries and had accredited ambassadors concurrently in 32 countries.

Besides, Bangladesh has two permanent missions, one at the United Nations (New York) and another in Geneva.

PETROLEUM MINISTER RETURNS FROM JAKARTA TALKS

Dacca THE BANGLADESH OBSERVER in English 1 Dec 80 pp 1, 12

[Excerpt] Petroleum Minister Akbar Hossain returned to Dacca on Sunday from Jakarta with a firm assurance that Indonesia will supply Bangladesh three lakh tons of crude oil during 1981, says BSS.

He told newsmen at the airport that he had very fruitful talks with his Indonesian counterpart Dr. Subroto on matters of mutual interest. Agreement to provide two lakh tons of Indonesian crude was signed in June this year and the bulk has already reached the country, it was learnt.

Mr Akbar Hossain who was in Jakarta to attend the 28th consultantive meeting of Colombo Plan said he was very confident of getting crude from friendly and brotherly countries. [as published] Describing the Colombo Plan meeting a very "successful" one, the Minister said Bangladesh had asked for capital investment and called for time saving in the execution of development programmes.

During his stay in the Indonesian capital, Mr Hossain called on General Sudharmono, Special Assistant to President Suharto and the Religious Minister of the country. On his way home, the Petroleum Minister visited oil refineries at Singapore.

MARXIST-LENINIST LEADER CALLS FOR UNITED FRONT

Dacca THE BANGLADESH TIMES in English 29 Nov 80 pp 1, 8

[Text] Mr Mohammad Toaha MP Chairman of Bangladesher Sammyabadi Dal (M-L) on Friday called upon all patriotic political parties to build up a united movement to form a patriotic democratic government.

Adressing a public meeting at Baitul Mukarram Square Mr Toaha observed that only such a government could solve the numerous problems that the people and the country were facing.

The meeting presided over by Mr Toaha was arranged at the conclusion of his party's national ouuncil. [as published] Among others it was addressed by Messrs Shanti Sen Asaddar Ali Prof Yakub Ali and Mrs Selina Sultana.

Mr Toaha said that the government had failed to solve the problems of the peasants, workers and all other sections of people whose condition had been deteriorating day by day. He pointed out the problems of the peasants particularly the landless ones. He also highlighted the repressions on the poor peasants by hire hoodlums of landlords in char areas during harvesting season.

Indian Attack

Condemning the Indian occupation of South Talpatty Island attacks on Muhurir Char and at Tamabeel and intransient attitude towards solution of the Farakka problem the Sammyabadi Dal chief alleged that the government had remained silent on these problems.

Mr Toaha advised the BNP and Awami League to read the writings on the wall. He particularly told the AL to abandon its role as servitors of the Indo-Soviet axis and to join the ranks of the people through admission of past crimes and repentance.

Resolution

The meeting in a resolution criticised the continued threat to the independence and sovereignty of the country following rehabilitation of the Awami-BKSALites in politics.

In another resolution the meeting expressed conern at the price spiral of necessities, deterioration of law and order situation and smuggling. [as published] It also demanded release of the patriotic political prisoners.

ZIA GREETS YUGOSLAVIA, MAURITANIA, ALBANIA

Dacca THE BANGLADESH OBSERVER in English 29 Nov 80 pp 1, 12

[Text] President Ziaur Rahman has sent the following message of greetings to Mr. Cvijetin Mijatovic, President of the Presidency of the Socialist Federal Republic of Yugoslavia, on the occasion of the National Day of Yugoslavia, says a PID handout.

The Government and the people of Bangladesh join me in extending to Your Excellency and the Government and the friendly people of Yugoslavia our hearties greetings and warm felicitations on the occasion of the National Day of the Socialist Federal Republic of Yugoslavia. [as published]

Yugoslavia's constructive and outstanding role in the non-aligned movement, its consistent efforts for the consolidation of peace and stability in the world are highly appreciated by the peace loving people of the world particularly by those of the Non-aligned countries.

Bangladesh and Yugoslavia have been closely cooperating with each other in all international forums for achieving their common goal. We are confident that our friendly relations and close cooperation in international as well as bilateral fields will continue to deepen and widen in future.

On this occasion I would like to convey our best wishes for Your Excellency health and happiness and for the friendly people of Yugoslavia greater success and peace. [as published]

Please accept, Excellency, the assurances of my highest consideration.

Mauritania

President Ziaur Rahman has sent the following message of greetings to Lt. Col. Mohamed Khouna Ould Haidalla, President of the National Salvation Military Committee of the Islamic Republic of Mauritania, on the occasion of the Independence Day of Mauritania:

"On behalf of the Government and the people of Bangladesh and on my own behalf I wish to convey to Your Excellency and to the Government and the people of the Islamic Republic of Mauritania our warmest greetings and fecilitations on the happy occasion of the Independence Day of the Islamic Republic of Mauritania. [as

published] I am confident that the bonds of friendship and cooperation which so happily exist between our two countries will be further strengthened in the years to come.

"I avail myself of this opportunity to extend my very best wishes for Your Excellency's personal health and happiness and for the continued peace, progress and prosperity of the great people of Mauirtania". [as published]

Albania

President Ziaur Rahman has sent the following message of fecilitations to Dr. Haxhi Lleshi President of the Presidium of the People's Socialist Republic of Albania, on the National Day of Albania: [as published]

On the occasion of the Liberation Day of the People's Socialist Republic of Albania, the Government and the people of Bangladesh join me in conveying to Your Excellency and the people of Albania our sincere felicitations and warm greetings. I also wish to take this opportunity to express our best wishes for Your personal health and happiness and continued peace and prosperity of the people of Albania.

JAPAN INVESTS, AIDS IN DACCA FOOD PROGRAMS

Vice Foreign Minister Arrives

Dacca THE BANGLADESH OBSERVER in English 3 Dec 80 pp 1, 12

[Text] The Vice Foreign Minister of Japan Mr. Kazuo Aichi said in Dacca on Tuesday that in the changed climate for foreign investments in Bangladesh "things will move favourably", reports BSS.

Mr Aichi was talking to newsmen at the Kurmitola airport on his arrival in Dacca on a three-day goodwill visit to further strengthen the mutual relationship between the two countries.

Mr. Aichi told a questioner that the Japanese private sector had some reservations about investments in Bangladesh in its initial years caused by nationalisation of industries.

That situation was changing and the things will now move faavour ably. [as published]

He said that during his stay in Dacca he would sign three exchange notes for grants for promotion of food production in Bangladesh and for food assistance.

Mr. Aichi said there was a "great scope" for advancement of relations and cooperations between Bangladesh and Japan who, he said, were similar in many ways. Japan also is over populated, having scarcity of land and resources, he added.

He said Japan is eager to help people of Bangladesh develop their economy and society.

Foreign secretary Mr S. A. M. S. Kibria received Mr Aichi.

During his stay in Dacca Mr. Aichi and Foreign Secretary Mr Kibria will have talks covering the bilateral cooperation between the two countries.

Mr. Aichi said that the Japanese Foreign Minister was due to pay a visit to Bangladesh in August which he said could not take place and added "so in his place I am here."

He expressed "deep thanks" on behalf of the people of Japan to President Ziaur Rahman for his attending the funeral of the Late Prime Minister Ohira in July.

Replying to a question on the Afghan and Kampuchea situations Mr. Aichi said that his country was always opposed and protested invasion of one country by another.

"We protested such invasions" he said and added Japan was making efforts to restore peace in Afghanistan.

He said "we wish the people of Kampuchea peace in their own homeland" and added Japan is trying to play an important role for restoraison of peace in the area. [as published]

On bilateral cooperation Mr. Aichi said that during his stay in Dacca he would take the opportunity to discuss the Japanese aid programme.

He said that there was scope for exchange of people and cultural and economic exchanges between the two countries.

"We welcome the recent moves of Bangladesh to attract foreign investments," he added.

Agreements Signed

Dacca THE BANGLADESH OBSERVER in English 4 Dec 80 pp 1, 12

[Text] Japan will provide three grants worth Taka 38.08 crore yen (5.33 billion) to Bangladesh during the current fiscal year, under separate exchange notes signed in Dacca on Tuesday, for food production projects and also as food assistance, reports BSS.

The visiting Japanese Vice-Foreign Minister Mr. Azuo Aichi and the Secretary External Resources Divison, Mr A. M. A. Muhith signed the three exchange notes on behalf of their respective governments.

After the signing of the notes Mr. Aichi in a brief statement told newsmen that Japan intends to continue its cooperation "as much as possible" for the development of the economy of Bangladesh.

Bangladesh, he added, is the largest recipient of Japan's grant assistance programme. The grant already extended or to be extended during this fiscal year will total ten billion yen (nearly Taka 76 crore) Mr. Aichi said.

Thanking the Government of Japan for the aid Mr. Muhith said the funds provided were for the "extremely important" agriculture sector of Bangladesh. Most of the grants, he added, were related to agricultural production. He said till today exchange notes for five grants have been signed and two are to be concluded in the near future.

The first exchange note signed on Wednesday is for a grant of yen 2.9 billion (Taka 20.71 crore approximately) for raising food production.

Bangladesh Agricultural Development Corporation (BADC) will utilise Taka 10 crore of the grant for purchasing fertilisers and the remaining amount for shallow tube-well equipment.

The second note is for a grant of yen 1.7 billion (Taka 12.14 crore) which will be utilised by the Ministry of Food for Procurement of rice from Japan an additional amount of yen 230 million (Taka 1.64 crore) will also be provided under the grant for meeting the cost of transportation of the rice. [as published]

Another grant of yen 500 million (Taka 3.57 crore) will be utilised for procurement of telescopic steel tubla poles and cross arms for improvement of power transmission and distribution system by Power Development Board. [as published]

Under the terms of the tied grants the proceeds will be disbursed within coming March and the commodities will be procured from Japan.

Mr Aichi hoped that the friendly relationship between the two countries will be enhanced and the economic cooperation will continue.

THIRD WORLD INDUSTRY MINISTERS HOLD DACCA MEETING

Rahman's Opening Speech

Dacca THE BANGLADESH OBSERVER in English 3 Dec 80 pp 1, 12

[Text] President Ziaur Rahman stated in Dacca on Tuesday that Bangladesh would welcome effective foreign participation in her industrialisation programme through transfer of technology skills and resources. He felt that the solidarity meeting of the ministers of industry would show the developing countries the way for a more durable constructive and cooperative arrangement between and among them.

He was inaugurating the four day "Solidarity Meeting of the ministers of Industry of the Developing Countries" at the Bangladesh Institute of Engineers. The meeting sponsored by the United Nations Industrial Development Organisation ((UNIDO) in cooperation with the Government of Bangladesh was being attended by the representatives of the developing countries. [as published]

In his inaugural speech the President stressed the need for cooperation among the developing countries on various common issues and called for continued and vigorous efforts on their part to ventilate their resentment over the apathy of the developed and industrialised world for a new and just international economic order. "Every opportunity must be exploited and every occasion utilised to make our voice heard" he observed.

About the solidarity meeting, the President maintained that it represented an important segment of the Group of 77 who had collectively played a key and decisive role in its dialogue and negotiation with the North for a new and just international economic order. "This meeting is being hosted by a country which is one of the least developed for whom the need for a separate programme of action for the eighties has been recognised", he said. He noted that the occasion of the meeting should also be profitably utilised to reiterate the demand of the Third World and the Least Developed Countries for their due share in the total productive capacity of the world, for a greater share of the world resources and for doubling the official development assistance to the less developed economies.

President Ziaur Rahman gave a detailed background of the process of socio-economic development in the country and observed that the nation had recently embarked upon her Second Five-Year Plan to offer her deprived people a better future and a ray of hope in their dark horizon and to assure them respite from hunger, poverty and disease which had so long engulfed them. He termed the development tasks ahead

the nation as herculean in view of the population pressure, high degree of dependence in agriculture, extremely limited resources and a high rate of illiteracy. [as published] "The greater is the challenge, the more determined we are, the heavier the odds, the greater is our resolution to overcome them", he observed in this connection.

He said that the nation "is fully aware and conscious that our balance of payments will not register significant improvement unless our dependence on export of primary goods is reduced and share of manufactured goods rapidly increased". The country's endowment of natural gas, limestone, coal and hard rock, agricultural produce like jute, sugarcane, fruits and vegetables, bamboo; soft-wood, agricultural waste of jutesticks, rice and wheat straw, molasses etc. make excellent raw materials for further processing for domestic use and export markets, he added.

Industrial Revolution

President Zia observed that the massive industrialisation programme which the country had now embarked upon was aimed at bringing about an industrial revolution for supporting modernisation of agriculture, improving transportation, providing rural housing and extending to the people the basic necessities and amenities of life. "While we plan to utilise fully the existing public sector agencies towards reaching this goal, we are convinced that without active association of the people without tapping the resources and entrepreneurship of the private sector our dream to industrialise the country will not materialise", he felt.

He pointed out that the Government as a matter of its firm policy would continue to welcome external participation in national industrialisation programme in both private and public sectors while noting that the industrial strategy had been designed in such a manner as it would support and supplement our efforts to achieve over all economic progress. He said that the country's dependence on foreign aid however would be well-matched with the 'total mobilisation of our own resources both human and material.' He referred to the massive national canal digging programme mass literacy drive and population control strategy in this connection.

The President hoped that the deliberations at the Solidarity Meeting would bring in 'better appreciation of our industrial strategy and pave the way for greater inflow of assistance.'

Earlier, Mr. Jamaluddin Ahmed Deputy Prime Minister holding the charge of the Ministry of Industries welcomed the participants in the solidarity meeting. In his address of welcome, he recounted the recent efforts of the country to improve the industrial production capability and performance in both the public and private sectors. While noting a great deal in operational performance of the public sector corporations over the last few years, he observed that the private sector had also been assigned new a greater, effective and dynamic role in the industrialisation process [as published]

The Deputy Prime Minister reiterated Bangladesh's total commitment to the concept of solidarity and cooperation among the developing countries while stating that the developing countries among themselves 'have the resource endowment, reasonable technological base and know-how and some investible surplus and a vast potential market."

Dr. Khane

In his opening address Dr. Abdel Rahman Khane, Executive Director of UNIDO said that the Solidarity Meeting is structured to allow us to discuss proposals where the nature and extent of assistance will be spelled out in clearly identifiable terms.' [as published] He observed that the spirit of solidarity would be strengthened and fortified by the idea that developing countries had something to offer to each other, even at this relatively early stage of their development. "With each passing day, it is more widely recognised that the experience and knowledge of each developing country is highly relevant to others in view of the similarity of their situations", he said.

The UNIDO Executive Director observed that the fact that developing countries located at distances apart 'are represented at this meeting is in itself an impressive indication of the determination of the Third World to fight a common battle and to win a common future." [as published]

Lt. General Golam Hossain Khan Federal Minister for Industries of the Islamic Republic of Pakistan offered the vote of thanks at the inaugural session.

2 Dec Proceedings

Dacca THE BANGLADESH OBSERVER in English 3 Dec 80 p 1

[Text] The delegates of the participating countries in the fourth Solidarity meeting of developing countries for co-operation in industrial development expressed on Tuesday their earnest desire to foster wider co-operation among themselves.

The first working session of the four-day meeting being held under the auspices of the United Nations Industrial Development Organisation (UNIDO) and the Ministry of Industries, began on the day with the election of Mr. Jamaluddin Ahmed Deputy Prime Minister in charge of the Ministry of Industries, as its Chairman. The leader of the Turkish delegation Mr. Shahap Kotchopeu Minister of Industry and Technology was elected the Vice-Chairman of the meeting.

Sree Vardene, Deputy Executive Secretary of ESCAP made a statement before the beginning of the session. Bangladesh Planning Minister Dr. Fasihuddin Mahtab presented the key-note speech at the session. He explained in detail the industrial development strategy of Bangladesh during the Second Five-Year Plan (1980-85) and underlined the need for effective co-operation among the developing countries for an effective industrial development programme within the conceptual framework of Economic Co-operation among the Developing Countries (ECDC) and Technical Co-operation among the Developing Countries (TCDC). The Planning Minister brought into focus at the session the economic problems faced by the country and the efforts made by the government for overcoming the obstacles to accelerated growth and development.

The delegates from India, Republic of Korea, Yugoslavia, Turkey and Indonesia made their general statements at the first working session of the day which continued fo. about two hours.

The delegates from Pakistan, China Malaysia the Philippines Kenya Iraq and Sri Lanka presented their papers at the second working session of the day in the afternoon which lasted for about an hour and forty five minutes.

In all, 13 countries including Bangladesh took part in the day's deliberations at the meeting. The participating developing countries offered bilateral technical assistance according to capacity of each in several area of industrial development in Bangladesh particularly in the fields of textiles sugar leather mini hydro-power generation bio-gas paper and pulp, development of agricultural tools and implements, processing of fruits and vegetables. [as published]

They were appreciative of President Zia's inaugural speech at the meeting and lauded the efforts of Bangladesh for speedy economic growth and development.

The Solidarity meeting sources told the newsmen that the participating countries made positive proposals, promising both technical and economic co-operation in industrial projects being undertaken by the government of Bangladesh. Technical assistance for training purposes were also proposed by the delegates in which their respective countries have expertise.

About the specific and concrete proposals, India promised at the meeting a technical assistance worth Taka 10 million for feasibility studies on industrial projects in Bangladesh. The Indan proposals for joint collaboration with Bangladesh covered the areas like sponge iron, soda ash, cement, paper, softwire for development of small-scale industries in the country. [as published] On her part China placed proposals for joint collaboration in the field of mini hydro-power generation, rice bran oil extraction mills, etc.

Meanwhile, the authoritative sources told this correspondent that bilateral talks between the delegates of participating developing countries and the officials of the External Resources Division of the government of Bangladesh would begin today (Wednesday) to sort out specific areas of co-operation. Bangladesh, to mention here, submitted a list of 42 specific projects, seeking the co-operation of the participating countries at the Solidarity meeting.

A total of 19 countries are taking part in the Solidarity meeting. Among the 21 invited countries, only Thailand and Kuwait are yet to send any delegation to the meeting.

Bangladesh Asks Aid

Dacca THE BANGLADESH OBSERVER in English 3 Dec 80 pp 1, 12

[Text] Bangladesh on Tuesday introduced 44 industrial projects in both public and private sectors where it will "welcome financial and technical" assistance from "friendly" developing countries, reports BSS.

The total foreign exchange component of the projects will be around 636.67 million dollars which according to portfolio of projects circulated in the four-day Solidarity meeting of Industry Ministers from 21 developing countries, Bangladesh expects in equity participation as well as in grant form. The projects include enterprises both based on local and imported raw materials as well as oriented to meet needs of the domestic and export markets.

The documents also indicated that the government in certain cases would welcome technical assistance only as an alternative to the financial assistance. It was

also explained that the projects in the public sectors would have to be backed up by detailed feasibility study in certain cases if financing was bilaterally agreed upon "in principle". The Government of Bangladesh also expressed its readiness to initiated discussions on collaboration and financing of industrial projects from within and outside the portfolio.

The projects are two cotton spinning mills, one jute carpet factory, Rangpur, two jute mills machinery and spare manufacturing plants, one weaving wood manufacturing plant (Tongi), one soda ash plant (Chittagong) one polyester plant, one tripple superphosphate plant (Khuma), one polythelene plant, one cigarette paper manufacturing plant, one pulp and paper mills, four sugar mills (Natore) Nilmoniganj, Jhikargadha, and Jhenidah, two fruits and vegetable processing and canning plant (Rajshahi and Rangamati), two distillery plant (northern region), one cattle seed plant (northern region) one sponge iron complex, one electric cables plant, one aluminium extrusion plant (Sylhet) two leather manufacturing plants (Chittagong and one dye stuff plan (Rongpur) four cold storase plants Bogra and Rajshahi) one tobacco redrying plant one shoe manufacturing plant one solvent extraction plant one jute yearn manufacturing plant one cigarette manufacturing plant one starch and glucose manufacturing plant and one cottonspinning mills. [as published]

Earlier while speaking in the inaugural function, Deputy Prime Minister for Industries Mr Jamaluddin Ahmed stressed the "greatest merit and relevance" of the economic and technical cooperation among the developing countries.

Reflecting his government's attitude to these two aspects Mr Ahmed said "the developing countries among themselves have the resource endowments reasonable technological base and some investible surplus and a vast potential market. Bangladesh he said has a total commitment to the concept of solidarity and cooperation among the developing countries. [as published]

The Bangladesh leader also urged the ministers and delegations to deliberate on the mechanism of transfer of investible surrplus and identify concrete steps to establish workable and practical mechanism for sharing technological know how and thereby facilitating transfer of appropriate technology on a continuing basis. [as published]

Indian Offer

Dacca THE BANGLADESH OBSERVER in English 3 Dec 80 p 1

[Text] India has offered to provide technical and economic assistance worth Taka one crore to Bangladesh, reports BSS.

The Indian State Minister for Industry Dr. Charanjit Chanana and the leader of his country's delegation on Tuesday said this at the UNIDO sponsored solidarity meeting of Industry Ministers of developing countries.

At the end of the two closed door sessions held on Tuesday an Indian delegation spokesman told BSS that the technical assistance was meant for undertakening feasibility study of projects identified in the UNIDO portfolio. [as published]

Dr. Chanana who spoke at the first working session of the solidarity moot in the morning said Bangladesh and India had "a long and satisfying history of economic cooperation. [as published]

Giving a resume of the cooperation between the two countries, Dr Chanana said his country would provide soft-ware assistance for the development of small scale industry here. He said the two countries were cooperating in some joint venture projects.

Explaining his country's limited capacity to provide assistance Dr. Chanana said being a capital importing country, India's major constraint is the paucity of financial resources. Nevertheless, he added his country will endeavour to provide as much resources as it can afford for the UNIDO identified projects under mutually acceptable terms and conditions.

3 Dec Proceedings

Dacca THE BANGLADESH OBSERVER in English 4 Dec 80 pp 1, 12

[Text] The delegates of the participating countries in the Fourth Solidarity Meeting of the Ministers of Industry in the Third World had a detailed round of discussions on matters relating to economic and technical co-operation in several concrete fields with the Bangladesh authorities on the second day of the meeting on Wednesday. The delegates were divided into 16 working groups to carry out the negotiations with the relevant government agencies and public sector corporations.

A spokesman of the meeting, sponsored jointly by the United Nations Industrial Development Organisation (UNIDO) and the Government of Bangladesh, told the newsmen on Wednesday evening that the outcome of the discussions had been "quite positive, fruitful and constructive". There was a great deal of keen interest on the part of the fellow developing countries to extend cooperation and support to Bangladesh in her efforts for industrialisation, he observed.

The 19-nation Solidarity Meeting in its second day on Wednesday had been successful in identifying many areas of techno-economic cooperation and collaboration between Bangladesh and the participating developing countries, the spokesman said.

The specific offers for assistance, both technical and economic, were made by India, Pakistan, Republic of Korea, the UAE, Rumania, Iraq, Peru, Yugoslavia, China, Malaysia and Turkey. Sri Lanka, Algeria, the Philippines and Kenya also expressed themselves clearly in favour of more meaningful and positive cooperation with Bangladesh, while some of the participating countries with whom Bangladesh has already some kind of cooperation in the economic fields made concrete proposals to widen and extend the same. The other participants put forward proposals to the Bangladesh authorities for exploring the potential fields of collaboration in the industrial sector.

India, on her part offered technical assistance worth Taka one crore to carry out feasibility studies for some of the projects listed in the investment portfolio which Bangladesh placed before the Solidarity Meeting. The projects would include TSP, paper and pulp including newsprint, manufactuirng of basic electronic compoments, soda ash, sponge iron units. Out of this allocation, Taka three

million have been proposed for small and cottage industries to develop two or three rural work shops, demonstration-cum-production units in the fields of handloom, cement made of rice-husking, mini paper mill etc.

The Indian delegation had further indicated the possibility of technical assistance for setting up mini sugar mills in the private sector and also of soft loans for establishing regular sugar mills in the public sector. Besides, India had made assurances about consideration for funds worth Taka 2.5 crore for the purchase of rehabilitation equipment for sugar mills.

Pakistan offered technical cooperation in the fields of leather, engineering, machine tools and textiles. She had suggested for collaboration between the two investment advisory centres in the two countries and stressed the need for encouragement to the private sectors in both the countries to set up joint venture projects. Pakistan had also offered the proposal for setting up of a sugar plant in Bangladesh on credits to be offered by the former.

The Republic of Korea expressed her keeness to promote joint industrial ventures either through public or private sector in Bangladesh. The areas of cooperation suggested by her in this connection, included the following fields: ceramics, clinkers, ship-building, wagon and railway carriages, PVC sheet fabrcation. [as published] The ceramic unit would alone have an indicated cost of around three million US dollars and the Korean side had stated that if the equity participation could not be obtained for it locally, it would arrange loan-financing from its financial institutions.

Korea had also offered a technical training programme for cotton spinning cement and catching and canning of sea food. A joint working group with Bangladesh had been suggested by Korea for the study of the fishing industry in the country.

The Iraqi side showed interest in jute carpet, cotton spinning, sugar mills, fruit processing and canning and any other project enlisted in the portfolio. Its offers pertained exclusively to public sector projects. Besides, Iraq reiterated its firm desire to continue its support to the on-going projects being assisted by her.

Rumania showed interest in trolley bus component manufacturing unit, manufacturing of rigs, and PVC manufacturing units. The new areas of technical and economic cooperation, proposed by her, included the fields of distillery, cold storages, soda ash, cement etc.

The UAE delegation stated that they were prepared to consider any project in the public sector in Bangladesh. The specific projects for which Bangladesh sought assistance from the UAE covered the Joypurhat Limestone Mining Porject, Jamalgani Coalmine Project, Biman hanger complex paper and pulp mill based on jute cuttings and jute stock, TSP plant etc. The two sides underlined the need for the formation of a joint investment company for promotion of collaboration between the private sectors of the two countries.

The Philippines agreed to consider assisatnce for setting up of small sugar plants against loans. [as published] She agreed to offer cooperation in the field of production of high-yielding varieties of sugarcane in the country. She further indicated her desire to import shrimps from Bangladesh.

Indonesia expressed her readiness to cooperate in 22 listed projects. She also offered 155 man-months of training in the form of technical assistance to Bangladesh within the existing framework of technical cooperation agreement between the two countries. The assistance would cover the fields of sugar mills, leather, chemicals, processing and canning of fruits, sea-fish processing, small sponge iron units, electrical cable, pulp and paper mills, cattlefeed, cigarettes, cement etc.

Kenya showed interest in importing jute technology from the country. She also expressed her desire to buy tea machinery from Bangladesh.

Turkey offered consultancy and engineering services in sectors like aluminium extrusion cement cotton spinning sugar mills etc. She expressed her desire to promote collaboration in the private sector between the two countries in jute carpets poliyster electrical cables, jute yarn paper and shoe manufacturing fields. [as published]

China offered cooperation in rice bran extraction plant and mini hydro-electric plant. She also agreed to allow Bangladesh the concessional facility of importing equipment worth ten million US dollars from other than China against that allocation made to the country out of the Chinese contributions to the UNIDO fund.

Malaysia offered technical assistance including feasibility studies and training and fellowship in engineering and rubber plantation sectors. She had also indicated the possibilities of cooperation in rubber plantation production and marketing as well as palm oil farming and extraction.

Sri Lanka expressed her willingness to offer technical assistance in the manufacturing of ceramics glass etc. Her offer further included collaboration proposals in the private sector for fruit and milk processing.

Yugoslavia indicated her preparedness to finance for mango and pineapple processing units. She suggested further help for silo storage capacity in Bangladesh. She felt that Bangladesh and herself should join hands for carrying out construction work in the [as published]

Algeria offered proposals for further strengthening of technical assistance programme for Bangladesh. The specific commitments from her side to different industrial projects would be made after a detailed scrutiny of the proposals by the relevant authorities in Algiers. "Absence of any specific commitment should not be taken as a negative attitude" the Algerian delegation told the Bangladesh authorities.

Peru placed offers for cooperation in the field of paper mills sugar industry fish preservation technology etc.

Before the working groups sat in separate meetings on the day the delegates from Peru Algeria Rumania and Saudi Fund for Development made general statements at the solidarity meeting. The Saudi Fund delegate told the partipants that they would see the developments in the solidarity meeting and would sit later with the Bangladesh authorities to discuss bilateral economic cooperation.

Press Conference on Meeting

Dacca THE BANGLADESH OBSERVER in English 6 Dec 80 pp 1, 12

[Text] Deputy Prime Minister Mr. Jamaluddin Ahmed in-charge of the Ministry of Industries stated in Dacca on Friday that the fourth Solidarity Meeting sponsored by the United Nations Industrial Development Organisation (UNIDO) in cooperation with his Ministry had succeeded to provide a stable framework for economic cooperation between and among the developing countries. "We are overwhelmed by the encouraging and very satisfying responses of the participants in the meeting to the proposals made by us for techno-economic co-operation to support our industrailisation" he observed.

Mr. Jamaluddin Ahmed who was the President of the fourth Solidarity Meeting of the Ministers of Industry of the developing countries was addressing a Press conference at a city hotel. Mr. Abd-el-Rahman Khane Executive Director of UNIDO also adressed the Press conference. [as published]

The Deputy Prime Minister told the newsmen that an inter-ministerial body comprising of the representatives of the Ministry of Industry the External Resources Division and the Planning Commission would be set up immediately to take appropriate follow-up action with a view to fulfilling the bilateral commitments made by the developing countries at the Solidarity Meeting. About the outcome of the meeting he noted that the commitments were received from different participating delegations for all the 42 projects listed in the project portfolio which was circulated among the concerned developing countries by the Government at the meeting. Besides some commitments have been made for projects not listed in the portfolio he said.

Replying to a question the Minister said that the formalities in connection with related bilateral arrangements for co-operation and collaboration would be completed within the next two months' time. He contended that the onus of materialising the bilateral deals in connection with the proposed industrial ventures with the technical and economic cooperation from the fellow developing countries would now lie "solely on our side".

Mr. Jamaluddin Ahmed termed the fourth Solidarity Meeting of the Ministers of Industry of 20 developing countries as an important milestone for strengthening solidarity and cooperation between and among the developing countries which the UNIDO had been trying to pursue as its noble cause. "Bangladesh, one of the least developed countries in the Third World has been able to put across her views hopes and aspirations to a cross section of developing countries" he said while noting that the country's industrial development strategy had been appreciated well by the participants at the meeting. "Our industrial development process has now been internationalised" he felt.

He noted with great optimism that the total commitment of the participants in the Solidarity meeting to share their experiences, technology and investible surplus of Bangladesh in an ungrudging manner was "a priceless achievement for us". He was very much appreciative of the sentiments of the participants in the conference, some of whom came from long distances spread over three continents of the globe.

The Executive Director of the UNIDO told the newsmen that the Solidarity meetings, being sponsored by his organisation, were something of a new approach towards

technical and economic cooperation among the developing countries. This aproach is gaining momentum, he said while stating that as far as his organisation was concerned there was still a long way to travel to achieve the extent of solidarity which it wanted. [as published] He felt very satisfied at the outcome of the fourth Solidarity meeting, which concluded in Dacca on Friday.

Mr. Abdel-Rahman Khane lauded the role of the Government of Bangladesh in creating the right kind of atmosphere for the success of the solidarity meeting. About the need for follow-up action to translate the pledges and commitments by the participating countries at the meeting to the process of industrialisation in the country, he observed that the greater part of the responsibility would now lie with the relavant Government agencies in Bangladesh. [as published] On its part, UNIDO Secretariat would assist the Government to keep up the momentum with the concerned countries in this connection.

The Executive Director of the UNIDO observed that the capital of sympathy which Bangladesh "has in the developing Third World makes it amply clear that everyone would be ready to render all possible assistance for her needs".

Replying to a question, Dr. Abdel-Rahman Khane said that the UNIDO had a some kind of machinery of its own to review the outcome of the solidarity meetings and to monitor the progress relating to the implementation of the recommendations at such meetings. [as published]

Deputy Prime Minister Mr. Jamaluddin Ahmed told a questioner at the Press conference that the quantification in terms of money of the specific commitments made by various participating countries at the solidarity meeting was neither wise nor feasible at this stage. Replying to another question, he observed that the proposals for joint industrial ventures in Bangladesh would need to be vigorously pursued from Bangladesh's side in particular.

Meanwhile, the conclusions and recommendations which were adopted unanimously at the closing session of the meeting on Friday noted the solidarity of all the participating countries with Bangladesh. The participants affirmed their willingness to render the technical and other assistance which they may be in a position to provide to the country in the industrial fields. "The offers of assistance included provision of loans on soft terms export credits for the purchase of machinery and equipment, steps for promotion of joint industrial ventures, undertaking of feasibility studies and preparation of bankable project profiles, provision of consultancy and engineering services, provision of experts, training facilities etc", the Press release on the commendations of the Solidarity meeting said.

DACCA URGES MORE ASIAN TECHNICAL COOPERATION

Dacca THE BANGLADESH OBSERVER in English 6 Dec 80 pp 1, 12

[Text] Bangladesh has urged the eighth Asian and the Pacific Labour Ministers' Conference to formulate regional programmes for increased technical cooperation and training.

Talking to BSS on his return from the conference held in the Philippines capital Manila Labour and Industrial Welfare Minister Mr. Reazudin Ahmed on Friday said that the regional moot had agreed to identify the fields for such cooperation and training.

He said there were many fields in which some advanced and developed Asian countries could provide excellent cooperation within the framework of the Technical Cooperation among Developing Countries (TCDC).

Mr. Reaz said that he had also strongly urged the conference to recommend measures for formulating labour policies in the Asian countries keeping in view the rural bias of their economy. He said efforts should be made to bring rural avocations within the fold of labour laws.

The Labour Minister said that the Bangladesh delegation along with others from the developing countries expressed deep concern at the growing trend of protectionism among the developed countries which hindered industrial growth in the region.

The Labour Ministers' conference which concluded on December 1 also recommended to the International Labour Organisation to take realistic steps toward easier access of the indutrial products from the developing countries into the markets of the developed world Mr. Reaz said. [as published]

He said the conference had formed four committees on regional technical cooperation labour migration protectionism and working conditions and environment to deal with the matters relating to labour and industrial welfare in region. The committees would recommend measures to the ILO for policy formulation.

Bangladesh was unanimously made Chairman of the Labour Migration Committee at the four-day conference participated by 28 countries.

SOURCES SAY FOOD DEBT TO USSR SOON TO BE CLEARED

Dacca THE BANGLADESH OBSERVER in English 3 Dec 80 p 1

[Text] Bangladesh will soon clear off her debt of two lakh tons of foodgrains that she had borrowed from the Soviet Union to meet her serious food crisis in 1974, reports ENA.

According to reliable sources, Bangladesh already returned 1,20000 tons of wheat out of two lakh tons to the Soviet Union in three instalments out of five, beginning in 1977. [as published] The remaining two instalments each of 40,000 tons, will be returned by end of the current fiscal year.

It is learnt that Bangladesh has offered rice, instead of wheat, to the Soviet Union for return of the remaining 80,000 tons. The Soviet Union, it is known has agreed to the proposal and is now examining the quality of rice she will take.

According to the sources an international tender would be called to this effect for return of the last two instalments of grains to the Soviet Union.

It may be recalled here that the Soviet Union had diverted two lakh tons of wheat to Bangladesh from her huge purchase-pipeline when the then Bangladesh government approached the Soviet government for the food debt to meet the "famine situation" in 1974.

Bangladesh also returned 40,000 tons of wheat out of another two lakh tons foodgrains borrowed from India last year to meet her exigency.

The sources said India had also been offered rice in return for her wheat.

It was learnt that India is "examining" the varieties of rice she will take.

It may be mentioned here that India sent last year two lakh tons of foodgrains in pursuance of the agreement reached between former Indian Prime Minister Morarji Desai and President Ziaur Rahman during the former's visit to Dacca in March last year.

PETROLEUM MINISTER SAYS OIL PROSPECTS 'BRIGHT'

Dacca THE BANGLADESH OBSERVER in English 3 Dec 80 p 12

[Excerpt] Lt. Col. (Rtd) Akbar Hussain Minister for Petroleum and Mineral Resources told the Jatiyo Sangsad on Tuesday that there was bright possibility of striking oil in Bangladesh. He said that if the geological survey of Burma and India is correlated with the findings of our survey there should be oil in Bangladesh.

Replying to a question by Mr. A. B. M. Taleb Ali the Petroleum Minister said that the work in Bakhrabad-Chittagong Gas Line started in June last and it will be completed by 1982. He told a questioner that an amount of 170 million US dollars would be required for completing the project and the fund would be provided from the following sources: World Bank 80 million dollars Japan 30 million dollars Kuwait 25 million dollars and OPEC 10 million dollars.

Replying to a question by Mr A. K. M. Akhtaruzzaman Alamgir the State Minister for Petroleum Mr. Sunil Gupta told the House that no decision had yet been taken to export gas to India. He said that the final decision would be taken after examining the economic and technical aspect of the proposal earlier given by India to import gas from Bangladesh. Replying to a supplementary the Petroleum Minister said that Bangladesh had a reserve of over 10 trillion cubic feet of gas and at present rate of consumption at the rate of 0.042 trillion cft annually the country can run with the reserve for 240 years. He however said that with the improvement in the rate of consumption the period would come down. Replying to a question by Mr M. A. Matin State Minister for Petroleum Mr. Sunil Gupta told the House that there are 10 gas fields in the country. These are: Haripur Chhatak Titas Habiganj Kailashtila Bakhrabad Rashidpur Shimutang Begumganj and Kutubdia. The gas reserve in these fields are as follows: Haripur 0.2398 trillion cft. Chhtak 0.0193 trillion cft. Titas 2.0647 trillion cft Habiganj --12410 trillion cft. Kailashtila --0.6000 trillion cft. Bakhrabad --2.7800 trillion cft Rashidpur --1.0600 trillion cft. Shimutang --0.0300 trillion cft. Begumganj --0.0600 trillion cft and Kutubdia -- 2.000 trillion cft. [as published]

The Petroleum Minister told a questioner that by 1985 all the eastern districts of the country would be supplied with gas.

Replying to a question by Mr Mosharrai Hossain Mr. Sunil Gupta told the House that LPG as substitute of petrol and C.N.G. as substitute of diesel can be used in different vehicles and for the purpose an experimental project has been taken up.

Replying to another question the Minister said that the drilling in Singra Gas Feld in North Bengal was going on. [as published]

BANGLADESH, ALGERIA SIGN JUTE AGREEMENT

Dacca THE BANGLADESH OBSERVER in English 4 Dec 80 p 1

[Text] Bangladesh will export about 10,000 (ten thousand) metric tons of raw jute to Algeria annually under a three-year agreement signed between the two countries in Algiers recently, says a PID handout.

This was stated on Wednesday by Mr. Salahuddin Ahmed, Secretary, Ministry of Jute, on his return to Dacca after leading a five-member Bangladesh jute delegation to Algeria from November 26 to November 29.

The other members of the delegation which comprises members from both public and private sectors, are continuing their explorative and fact-finding mission in some north-west African countries such as Tunisa, Ghana, Nigeria Guinea Ivory Coast Senegal and Cameroon. [as published]

The Jute Secretary said that the newly signed agreement which would continue upto 1983 has placed Bangladesh raw jute exporters in direct contact with the consumers of raw jute in Algeriaa, namely Sonitex Corporation for Jute and Textiles, for the first time. [as published] Earlier he said Algeria used to get Bangladeshi raw jute on adhoc and sporadic basis through other sources operating from out side Bangladesh which did neither ensure timely shipment nor competitive price and quality.

The Jute Secretary said that the visit of the Bangladesh delegation has opened up wider possibilities of raw jute trade between the two countries.

JUTE MINISTER REPORTS TO HOUSE ON PROFIT, POLICY

Dacca THE BANGLADESH OBSERVER in English 19 Dec 80 pp 1, 12

[Text] Jute Minister Mr Habibullah Khan on Thursday reiterated the Government determination not only to retrieve jute but also to restore it to its proper place says BSS.

The Government efforts had resulted in earning a profit of Taka 116 crore last year by the jute industry for the first time since independence, the Jute Minister said.

Mr Khan expressed the hope that the Government would be able to rectify the lapses that had crept into the jute sector for historic reasons and ensure that this sector did not incur loss anymore in future. In this context, he told the House that the jute sector incurred a loss of Taka 360 crore during the last eight years.

The minister was winding up the discussion on the private member's resolution brought by A. B. M. Taleb Ali (wami League-Malek) for fixation of the statutory minimum price of jute at Taka 200 per maund. [as published]

The Jute Minister assured the Opposition that the Government would leave no stone unturned to sustain jute in the years ahead. He appealed to them to keep jute above politics emphasising that any unfounded criticism at home would jeopardize the interest of jute in the global Market. Our politics should be directed to the restoration and sustenance of our golden fibre in the international market in the teeth of stiff competition the Jute Minister cautioned.

Mr Habibullah Khan listed the Government measures to decentralise and diversify the use of jute and increase production in the mills and factories. The success of all these measures would enable us to fix the statutory minimum price of jute at Taka 200 per maund and even more in future, he said adding that fixation of this price at the moment as demanded by Mr. Taleb Ali in his resolution was not tenable as it involved many factors including the cost economics.

Referring to the Opposition criticism that it was not the growers but the farias, middle men and businessmen who were getting fair prige for jute the Jute Minister pointed out that the 1962 ordinance providing for the appointment of jute trade licence-holders in the vaious categories could not be knocked out by a stroke of pen overnight. [as published] Majority of these jute trade licence-holders made their inroad in jute trade before 1975, he added.

Referring to the Opposition demand for fixing statutory minimum price of jute Mr. Habibullah Khan said that the statutory minimum price was prevalent in the country for the last several years. There was no guarantee that only by fixing statutory minimum price could the price to the growers be ensured, he said.

Refuting the contention of JSD member Mr Latif Mirza that the international jute trade was now under the control of India the Jute Minister told the House that Bangladesh share in he international jute market constituted 61 per cent today. [as published]

He informed the House that of the 65 lakh bales produced in the country, 30 lakh bales were consumed internally by Bangladesh Jute Mills Corporation (BJMC). Efforts were underway to utilise 40 lakh bales of jute by the mills, he added.

Referring to the Government efforts to diversify the use of jute, Mr. Habibullah Khan said that measures were being taken to produce pulp for newsprint from low quality jute.

He agreed with the Opposition charge that more workers had been recruited in the jute mills than their requirements to the detriment of jute industry and said that employment in jute mills was increased since 1972 without creating employment opportunities. Instead of retrenching this large number of workers overnight, the Government was trying for their better utilisation by introducing three shifs thereby increasing production in jute mills, he said. [as published]

The Jute Minister said it was not correct that the price of synthetics was increasing with the rise in the price of petroleum. He said with the use of by-products the developed countries were producing synthetics at a lower cost and as such they were offering the synthetics at a lower price. He pointed out that in Bangladesh the people were also using paper bags and plastic bags instead of jute bags due to lower price of synthetics.

After the Minister's statement the resolution was put to vote. The resolution was rejected.

FOREIGN MINISTER SAYS DACCA-MOSCOW RELATIONS NORMAL

Dacca THE BANGLADESH OBSERVER in English 18 Dec 80 p 1

[Text] Foreign Minister Prof. Muhammad Shamsul Huq on Wednesday described the bilateral relations between Bangladesh and the Soviet Union as "normal" reports BSS.

Replynig to a call attention notice of Mr. Salahuddn Quader Chowdhury (Muslim League) at the Jatiya Sangsad, the Foreign Minister said the foreign policy of Bangladesh was guided by the principles of sovereign equality, peaceful co-existence, territorial integrity, and non-interference in the internal affairs of others. [as published]

Prof. Huq said that Bangladesh's bilateral relations with all countries including the Soviet Union were based on this policy.

Under normal diplomatic practice any two states can exchange views on bilateral, regional and international matters, the Foreign Minister said.

Accordingly, he added, Bangladesh also exchanged views with the Soviet Union on such issues including the Afghanistan problem.

The Foreign Minister said that it would not be proper to describe "such exchange of views" as creating pressure by one state on another.

Mr. Salahuddin Quader Chowdhury had said quoting a news paper report that the Soviet Union was creating pressure on Bangladesh in various ways.

The Opposition member quoting an ITTEFAQ report lifted from a foreign newspaper said the Soviet Union was creating strong pressure against the principled stand of Bangladesh on the Afghan question.

The Foreign Minister categorically said that [word illegible] the papers had "totally failed to reflect the real situation."

Refuting the comments in the newspaper report, the Foreign Minister said under the present government's all-out drive to boost the country's exports, Bangladesh exported her traditional commodities like jute, tea, telephone and electric cables, jute carpet and other items to different countries including the Soviet Union.

The Foreign Minister said among the major items that Bangladesh imported from the Soviet Union were kerosene, diesel, M.S. billets, iron ore, steel equipment and spares.

The Foreign Ministre contradicetd the comments in the report that the Soviet Union was trying to build pressure to compel Bangladesh to export jute, tea and leather. [as published]

The newspaper report also said that the Communist parties of a number of countries, including the Soviet Union, had launched a propaganda for the release of the arrested members of the Bangladesh Communist Party. It added that PRAVDA and the media of the other Communist countries had made allegations of repression on the "progressive elements" in Bangladesh.

Replying to these, the Foreign Minister said that if any country took legal steps against its citizens according to its constitution it cannot be described as "repression".

The report lifted by the ITTEFAQ from a foreign newspaper had also said that the Communist countries themselves consider the activities for which some of the members of Bangladesh Communist Party have been arrested as "anti-state".

BILL TO SET UP EXPORT PROCESSING ZONES PASSED

Dacca THE BANGLADESH OBSERVER in English 18 Dec 80 pp 1, 12

[Text] The Bangladesh Export Processing Zones Authority Bill-1980 was passed in the Jatiya Sangsad on Wednesday evening. The House earlier rejected a number of proposal for circulating the Bill for eliciting public opinion by Opposition members. [as published] The House also rejected a total of 41 amendments proposed by five Opposition members by voice vote.

The Bill seeks to attract foreign investors in export oriented industries in Export Processing Zones in the country.

Professor Mofizul Islam moved 20 amendments, withdrew 10 and did not move 14 amendments. Mr. A. B. M. Taleb Ali moved 2, Mr. Assaduzzaman (Awami League Malek) moved 3, Mr. Shudhanshu Shekhar Haldar moved 14 and Mr. Rafiqullah Chowdhury (Ganofront) moved 2 amendments.

Mr. A. S. M. Solaiman (Ganofront), Mr. M. A. Matin (MI-Sabur), Mr. Rezaul Alam Khondakar (IDL) and Mr. A. B. M. Taleb Ali (AL Malek) participated in discussion on proposal to circulate the Bill for eliciting public opinion.

Before taking up amendments Professor Mofizul Islam on a point of order said that if the House passed the Bill it will be illegal as the standing committee in its report to the House had recommended to adopt the Bill 'as amended' by the committee. He said that the committee can only propose amendments and cannot amend the Bill. The Deputy Prime Minister Mr. Jamaluddin Ahmed who piloted the Bill opposed professor Islam. However, Prime Minister and leader of the House Shah Azizur Rahman said that the point of order raised by Prof. Islam was valid and suggested to amend the report accordingly to avoid violation of rules of procedures. Mr. Sultan Ahmed Chowdhury, Deputy Speaker who was in the chair accepted the suggestion made by the leader of the House.

Mr. Assaduzzaman Khan, leader of the Opposition, Mr Muzaffar Ahmed (NAP), Mr. Salauddin Yusuf (AL Malek), Mr. Almas Hossain (ML Sabur) participated in general discussion on the Bill. Mr. Asaduzzaman Khan observed that the Bill was an effort of the present government to establish capitalism in the country which was contradictory to the state principles. [as published] He held that through this processing zones only those who will participate in joint ventures will enjoy benefits and the poor people of the country will not benefit from it. He said that the government started spending money and acquired land for the zone by passing the Parliament and has now brought the bill before the House.

He also said that constitution of the authority was another proof of the government's despotic character.

Mr. Muzaffar Ahmed said that the objective of the bill was good but may be very harmful if not handed carefully. [as published] He suggested strict regulation of the activities of the multi-national corporation so that "this country does not become another Afghanistan".

Participating in discussion while moving amendments a number of members alleged bureaurucratic control in the processing zone authority as proposed in the bill. [as published]

Mr. Jamaluddin Ahmed, Deputy Prime Minister assured the House that the government would gurantee against entry of any multinational company which may be a threat to the independence and sovereignty of the country. [as published] He however said that government would welcome investment because the flow of capital, technology and market will be helpful for industrialisation of the country.

Regarding beaurucratic control he said that the Awami League government also handed over all wealth in the hands of the beaurucrats. [as published] He observed that beaurucracy was the strongest force in the country. [as published]

The Deputy Prime Minister also said that there are two Export Processing Zones in India. Refuting allegation that this government was trying to establish capitalism in the country he said that Awami League government in the past also tried to declare Chittagong port as free port.

After passage of the bill the House was adjourned till 11 a.m. today (Thursday).

AGRICULTURE MINISTER: FOOD OUTPUT TO DOUBLE

Dacca THE BANGLADESH TIMES in English 19 Dec 80 pp 1, 12

[Text] Mr. Nurul Islam, Minister for Agriculture and Forests told the Jatiya Sangsad on Thursday that food production of the country expected to be doubled by 1987-88 next. [as published]

Replying to a question by Principal Md. Nazrul Islam of AL (Malek), the Agriculture Minister said that 1979-80 had been taken as the bench mark year in regard to the objective of doubling food production. The year had been considered a normal crop year in which food production had been estimated at 135 crore tons, he said.

In reply to question by Mr. Farhad Ahmed Kanchan of BNP, Mr. Islam said that average per acre yield of high yielding variety of paddy was 2557 maunds during the years 1978-79 and 1979-80.

He said that there had been an "encouraging yield" of paddy during the current season. Additional measures had been taken during 1980-81 to increase per acre yield, he said adding that the measures include intensive Transplant Aman Production Programme (ITAP), intensive aus production programme and intensive rabi crop production programme.

Acreage Data

Replying to a supplementary by Mr. Asaduzzaman of AL (Malek), the Agriculture Minister said that the data in regard to acreage under different crops during the previous governments including Awami League were erroneous. He said that in 1973-74, the HYV boro acreage was shown as 14 lakh acres as against 10 lakh acres in the previous year. In the next year, HYV aman and HYV atts acreages were raised to 20 lakh and three lakh acres respectively as against 14 lakh acres and one lakh acres of the previous year.

He said that a task force constituted by the Government in 1977-78 for HYV aman had found that only 5.66 lakh acres were actually under HYV aman.

Referring to increase in the irrigational facilities during the present Government, the Agriculture Minister said that 36,730 low lift pumps (LLPs), 7,453 deep tube wells (DTWs), and 6,447 shallow tube wells (STWs) had been fielded in 1977-78 as gainst 35,374 LLPs, 1494 DTWs, 1,928 STWs in 1974-75. [as published]

Replying to another supplementary question, Mr. Islam said that a record number (38,000) LLPs were fielded during the last boro season. Beside the canal digging programme, the Government intends to field 40,000 LLPs during the ensuing boro season, he said.

The Agriculture Minister replying to a question by Mr. S. A. Khaleaque of BNP, said that the survey and investigation section of the Bangladesh Agriculture Development Corporation had found that a total of 52,000 LLPs could be fielded in the country. Programme had been taken to field 51,000 LLPs in 1984-85, the last year of the Second Five Year Plan of the country, he said.

He told a questioner that 3000 to 4000 tons of pesticides worth Taka 10 to 12 crores in foreign exchange were imported to meet the pesticide requirement of the country.

The Agriculture Minister in reply to a question by Mr. Md. Mozammel Huq (IDL) said that agricultural production of the country had not decreased despite increase in the prices of fertilizer, pesticide and diesel.

He said that despite increase in the price of fertilizer the sale of fertilizers during November 1980 was almost equivalent to that of November, 1979.

MINISTER REPORTS 47 FOREIGN VOLUNTEER GROUPS

Dacca THE BANGLADESH TIMES in English 18 Dec 80 pp 1, 12

[Text] State Minister for Manpower and Social Welfare Mr Atauddin Khan told the Jatiya Sangsad on Wednesday that there were 47 approved registered foreign voluntary organisations in the country.

In a written reply to a question by Mr A S M Solaiman of Ganofront, Mr Khan said that applications from another 15 foreign voluntary organisations for approval were under consideration of the government.

The names of the approved organisations: concern, Care, Balm International Oxfam, Bangpur-Dinajpur Rehabilitation Service, Finish Foreign Mission, Swalez in Danmark the Swalez Association Asian-American Free Labour Institute Terrides Homes, United Towns Organisation, the Salvation Army Voluntary Service Overseas, Save the Children Fund (UK), International Voluntary Service International Union for Child Welfare Mennonite Centre Committee, Terrides Homes International Federation, Terrides Homes (Switzerland), Christian Reformed World Relief Committee World Vision of Bangladesh, Inter Pers, Swedish Free Church Aid Under Privilaged Children Education Programme (UCEP) Danish Bangladesh Leprosy Mission Save the Children (USA) Community Development Foundation, Hellen Killer International Radda Barnen Families for Children, Rangpur self-help aid project Ramkrishna Mission Canadian University Service Overseas, World Missionary Avenselism, the Society for those who have less, Swedish Free Mission, Newzeland Baptist Missionary Society, Church of God Mission, Bangladesh Mission Royal Commonwealth Society for the Blind, Japanese Missionary Fellowship, Bangladesh Lutharen Mission (Finland) Missionary for Charity, Jhalchhatra Hospital and Leprosy Control Project Association of Baptists, the Path Finder Fund S O S Children Village International in Bangladesh. LICENSES OF 14 LABOR RECRUITING AGENCIES CANCELED

Dacca THE BANGLADESH TIMES in English 18 Dec 80 p 12

[Text] The Government has so far cancelled the licences of 12 to 14 agencies engaged in recruiting people for employment abroad.

Replying to a question at Jatiya Sangsad Mr Atauddin Khan State Minister for Manpower Development and Social Welfare said this on Wednesday.

He said that the Government was also examining allegations of corruption against a good number of such recruiting agencies.

The State Minister said that the recruiting agents who functioned under the immigration Act 1922, cannot select or recruit people without prior permission of the Government. They also have to collect clearances from the Government before sending recruits abroad.

The Government took disciplinary measures by way of cancellation of licences, confiscation of deposits and other legal measures like jail or fines if the agents disregarded the procedure or harassed candidates, he said.

Vagrants

There are 1,917 vagrants in six vagrants rehabilitation centres in the country now of them 213 are males 819 females 701 boys and 164 girls. [as published]

Replying to a question by Mr Md Asaduzzaman Advocate at the Jatiya Sangsad Mr Atauddin Khan said this on Wednesday.

The Minister said that the vagrants were being provided with training facilities in different trades to enable them grow up as worthy citizens. [as published]

He said that the vagrants centres were Dhala in Mymensingh district, Pubail, Kashimpur Mirpur Godnail and Baleswar in Dacca district.

TEXT OF DISCUSSION PAPER ON GANGES TALKS

Dacca THE BANGLADESH TIMES in English 30 Nov, 1 Dec 80

[Paper presented by B. M. Abbas A.T. entitled: "The Meandering Course of Ganges Talks" presented at the discussion seminar held at the Institute of Law and International Affairs, Dacca, 10 Nov 80]

[30 Nov 80, pp 5, 9]

[Text] Bangladesh is situated in the delta of two great rivers the Ganges and the Brahmaputra. These rivers flow to Bangladesh through India, meet within Bangladesh and, joining lower down with another big river the Meghna, flow into the Bay of Bengal.

The Ganges rises in the south slope of the Himalayas and traverses through India receiving the flow of a number of big tributaries. Three of these, the Karnali (Chagara), the Gandak and the Kosi flow from Nepal and together contribute 40 per cent of the annual flow and 70 per cent of the dry season flow of the Ganges. The river Bhagirathi-Hooghly on which the port of Calcutta is situated takes off from the south bank of the Ganges a short distance above the point of entry of the Ganges into Bangladesh. After crossing the Indo-Bangladesh border, the Ganges forms the boundary of the two countries for a distance of about 80 miles. Then it flows for another 70 miles wholly through Bangladesh before it joins the river Brahmaputra at Goalundo.

India has constructed a barrage on the river Ganges at Farakka, eleven miles upstream of its border with Bangladesh. The barrage blocks the perennial flow of the river Ganges and diverts its water through a feeder canal into the Bhagirathi-Hooghly river for the purpose of flushing the silt of the river Hooghly to improve navigation for the Calcutta Port.

Bangladesh as a lower riparian objected to and protested the Indian scheme of diversion of water from the river Ganges. The centuries old flow of the Ganges has shapped the ecological, environmental, economic, social and cultural pattern of Bangladesh. [as published] Although Bangladesh has too much water during the wet season from June to October, it has too little during the dry season from November to May. Bangladesh is dependent on the waters of the Ganges for irrigation, navigation, drinking water, fishery, forest and industry. The river flow also helps in keeping back the saline water from the Bay of Bengal.

After a quarter century of protracted negotiations regarding the construction of the barrage at Farakka, Bangladesh and India on the 5th November, 1977, entered into an interim agreement for the sharing of the waters of the Ganges and promised to seek a long term solution of the problem.

The problem preceded the establishment of Bangladesh in 1971 by almost two decades. When India was partitioned and Pakistan was created in 1947, the eastern part of Bengal, now Bangladesh, formed part of Pakistan (East Pakistan). In 1951, the Indian plan for diversion of Ganges water by constructing a barrage on the Ganges at Farakka was reported in the press. In anticipation of the effects of the proposed barrage on its the then eastern wing, Pakistan protested against the plan and a series of protracted negotiations at various technical and official levels followed between Pakistan and India. In 1957 and 1958, Pakistan proposed, a) securing advisory and technical services of a United Nations body to assist in planning for the co-operative development of the eastern river systems and, b) examination of the projects of the two countries jointly by the experts of the two countries before their implementation. Neither of the two proposals was accepted by India. In 1960, nine years after the issue first came up, it was agreed that experts of the two countries would meet to exchange information and data on projects of mutual interest. However, even this exchange of data was limited to the Farakka Barrage Project of India and projects of the then East Pakistan. India did not agree to furnish any information on its other projects on the river Ganges upstream on the plea that these were situated far away to affect Pakistan.

The experts of the two countries met on the 28th June, 1960 in New Delhi and on the 1st October, 1960 in Dacca. On the 30th January, 1961, India informed Pakistan that it had started work on the Farakka Barrage. The issue was taken up by the President of Pakistan with the Prime Minister of India. The Indian Prime Minister did not agree to the Pakistani proposal for a meeting of the ministers of the two countries to discuss the issue but said that this could be done after 'full' data were available. Further meetings of the experts took place on the 28th April, 1961 in Calcutta and on the 27th December, 1961, in Dacca. The next and the 5th meeting at experts' level did not take place till the 13th May, 1968 in New Delhi. In the meantime India and Pakistan went to a war of short duration in 1965.

In 1968, Pakistan raised the issue in the United Nation's General Assembly. [as published] It noted that no political discussion with a view to a settlement had taken place in seventeen years of effort which had resulted in only five meetings at the technical level. It charged that India wanted to present it with a fait accompli. India expressed herself against internationalising the issue, which it asserted was purely bilateral in character. It alleged that Pakistan had refused to furnish the required technical data. Pakistan refuted this allegation and pointed out that continued Indian insistence on the supply of technical data was an obstacle to the two sides coming to grips with the substantive issue of the exact amount of water that India would be prepared to give to Pakistan on a regular basis. India contended that the problem was technical and practical rather than juridical and insisted on holding more talks at the offical and technical level. It offered to meet the ministerial level if "the need for it ever arose".

The meetings between the two countries were raised to the level of Secretaries of the two Governments in December, 1968 and five meetings at that level were held.

The last of these meetings held in New Delhi in July, 1970 could only agree that i) the point of delivery of supplies to the then Pakistan of such quantum of water as may be agreed upon will be at Farakka and, ii) constitution of a body consisting of one representative from each of the two countries for ensuring delivery of agreed supplies at Farakka is acceptable in principle. Meanwhile, India having started construction of the Farakka barrage in 1961, completed the barrage in 1970. The Feeder Canal, however, remained to be done.

In negotiations with India at these stages, Pakistan was in a disadvantageous position. Apart from being a lower riparian, the then East Pakistan had to contend with the backlog of centuries of neglect. Till partition, practically no development was done in this region and information about the major rivers, land and soil were lacking. These data were gradually built up and schemes were prepared to develop different areas and the requirements of water for irrigation established. But India argued against Pakistan's claim for the waters of the Ganges stating that East Pakistan's problem was excess of water and not lack of it, that diversions at Farrakka would not result in any shortage of water for "East Pakistan's" "genuine" requirements and, that the amount of water that would be generated in the river between Farakka and Hardinge Bridge in 'East Pakistan' would be adequate for Pakistan's requirements. India regarded the Ganges as an 'almost Indian' and not an international river and would not recognise Pakistan's rights on the waters of the Ganges.

The Pakistan side refused all these arguments. It pointed out the lack of water during the dry season and 'East Pakistan's' urgent need of extensive irrigation for increased food production to meet the demands of its people. Regarding possible regeneration of water in the river, studies made (on the Bangladesh side) showed that this was a highly uncertain factor and, if at all there was some regeneration, the amount was not likely to be significant. About the international character of the river Ganges, there could be no doubt on the point as the Ganges traverses through the territories of four countries China, Nepal, India and Bangladesh.

It was also pointed out to India that the water required by it was all for long-standing existing uses whereas she wanted water for a few use which was for the wasteful method of flushing silt from a river. [as published] World renowed experts like Arthur T. Ippen who made a study of the problem gave the opinion that the proposed diversion of sweet water into the Hooghly river would not have a beneficial effect on the problem of Calcutta Port, on the other hand, the introduction of sweet water into a tidal channel was likely to accentuate the shoaling problem, and that the problem of Calcutta Port was not due to progressive reduction in the spills into the Bhagirathi river from the Ganges but to the inherent nature of an estuary to deteriotate with respect to navigation unless it was effectively maintained. [as published] It was suggested that the method of dredging followed at the Calcutta Port should be improved and the dredged silt from the river should be deposited on land instead of leaving the dredged silt in the river which got washed back into the dredged channel. An eminent Indian Engineering Mr Kapil Bhattacharya had also pointed out that decreased flood discharge and controlled flows of the Damodar and Rupnarayan rivers were the causes of the deterioration of the Hooghly river. [as published]

Different opinions had been expressed in India itself regarding the quantity of water to be introduced into the Hooghly to arrest the deterioration in the

navigation condition of the lower Hooghly. While approving the Farakka Barrage Project, the Indian Planning Commission noted the general concensus of technical opinion that the scheme was technically sound even inspite of the full suspension of withdrawals in periods during March-May. [as published] The approved project made provision for only "upto 20,000 cusecs (as available)" for this period. [as published]

With the emergence of Bangladesh in December, 1971 there was a radical change in the situation. Bangaldesh and India decided in March, 1972 to establish the Indo-Bangladesh Joint Rivers Commission comprising experts of both countries on a permanent basis to carry out a comprehensive survey of the river systems shared by the two countries and to develop waters of these rivers on a co-operative basis. However, when the statute of the Commission was drawn up, it's scone was restricted and its activities were limited to projects of flood control and drainage in areas around the border of the two countries. [as published] The question of the sharing of the waters of the Ganges and the Teesta rivers was kept outside the purview of the Commission, being left to be decided by the Prime Ministers of the two countries.

In the meantime, a sustained publicity was carried out in the Indian Press for at least 40,000 cusecs for the Calcutta Port. On the 16th August, 1972 Dr K. L. Rao, the then Union Minister of Irrigation and Power made a statement in the Indian Lok Sabha regarding the Farakka Project. In this statement he referred to the hydraulic model studies on which India based its demand for water for the Calcutta Port and observed as follows: "Due to difficulties of simulation, model tests, specially for large rivers, have serious limitations in giving any precise quantitative answers to problems and can at best be indicative. It is difficult to quantify precisely at this stage as to what is the discharge required to meet the needs of Calcutta Port. The exact amount of water can best be determined by observation in the prototype itself".

The Ganges Waters dispute was discussed at a ministerial meeting held in New Delhi in July, 1973, at which the parties agreed that a mutually acceptable solution would be arrived at before operating the Farakka Barrage Project. This agreement was confirmed in a joint communique issued during the visit of the Indian Minister of External Affairs to Dacca in February, 1974. At a later meeting held in New Delhi in May, 1974, the Prime Ministers of Bangladesh and India recognised that during the periods of minimum flow in the Ganges there might not be enough water to meet the needs of Calcutta Port and the full requirements of Bangladesh and therefore, the fair weather flow of the Ganges in the lean months would have to be augmented to meet the requirements of the two countries. The Indo-Bangladesh Joint River Commission was asked to study the matter and to make suitable recommendations on the best means of augmentation of the dry season flow of the Ganges to meet the requirement of both the countries. The two sides also expressed their determination that before the Farakka Barrage was commissioned, they would arrive at a mutually acceptable allocation of the water available during the periods of minimum flow of the Ganges. This declaration of the two Prime Ministers made an agreement on the allocation of the Ganges waters obligatory before the commissioning of the barrage.

The Indo-Bangladesh Joint Rivers Commission took up consideration of proposals for augmenting the dry season flow of the Ganges at its 8th meeting held in Dacca in June, 1974. The two sides put forward two entirely different schemes viz:

a) Augmentation through storages in the Ganges basin--proposed by Bangladesh.

b) Augmentation through diversion of water from the Brahmaputra to the Ganges at Farakka by a link canal--proposed by India.

The Commission examined the avaibility of water in the Ganges at Farakka and the requirements of the two countries. The minimum demand of Bangladesh was 55,000 cusecs and that of India for the Calcutta Port 40,000 cusecs. The total demand thus came to 95,000 cusecs against the availability of 55,000 cusecs at Farakka during the leanest 10-day period of 21st to 30th April. This left a shortfall of 40,000 cusecs.

According to Bangladesh, there was enough water in the Ganges to meet the present as well as future requirements of the two countries if its surplus monsoon water was stored for use during the dry season for which there were enough storage sites available in India and Neapl. According to India, additional storage possibilities in India were limited and the question of storage in Nepal, at third country, was outside the Commission. [as publshed] Bangladesh was of the opinion that the requirements of the situation did not warrant transfer of water from the Brahmaputra to the Ganges because there was enough water in the Ganges. The Indian proposal of the link canal was totally unacceptable to Bangladesh as it would also produce far-reaching adverse consequences and cause permanent damage to Bangladesh. As alternative solutions to the problem, Bangladesh suggested amending the pattern of diversion of the Ganges water into the Hooghly to obviate the shortage in the lean period and also referred to an earlier Indian scheme for constructing a direct navigation link from the Calcutta Port to the sea through the Sundarbans. India would not consider either of these suggestions. The Commission could not come to an agreement on the subject of augmentation and submitted its report containing the differing views of the two countries, to the two Governments in June, 1975.

Further talks were held at ministerial level in February, 1975, in New Delhi and in April, 1975 in Dacca. India proposed at the latter meeting that while discussions regarding allocation of fair weather flows of the Ganges during lean months in terms of Prime Ministers' Declaration of May, 1974 were continuing, it was essential to run the feeder canal of the Farakka Barrage during the current lean period. Bangladesh agreed to the proposal but insisted that only a limited amount of water should be diverted for the test running of the feeder canal. It was ultimately agreed on the 18th April, 1975, that India may run the feeder canal of the Farakka Barrage during the remaining dry season from 21st April, 1975, to 31st May, 1975, with discharges increasing from 11,000 cusecs to 16,000 cusecs in 10-day periods ensuring the remaining flows to Bangladesh. The agreed period of diversion ended on the 31st May, 1975, but India continued to divert water from the Ganges at Farakka to the full capacity of the feeder canal i.e. 40,000 cusecs.

The effect of India's continued large scale unilateral diversion of water from the Ganges at Farakka began to be felt in Bangladesh after the monsoon season was over and a critical situation developed for it during the dry season of 1975-76. From December, 1975 the Ganges at Hardinge Brigde began to record drastically low water levels and discharges. [as published] By end of January, 1976, the discharge fell to 54,000 cusecs against the normal of about 95,000 cusecs. On the

23rd March, 1976 the water level came down to 16.5 feet compared to an average of about 22 feet at this time of the year. The minimum discharge reached a record low of 23,200 cusecs as compared to the normal average of 64,000 cusecs. The repercussion on agricultural production was severe and so was the effect on salinity, fishery, forestry, navigation industry, health and ecology. The salinity line moved inland from the normal 170 miles to about 270 miles i.e. about 100 miles further inland. The desperate situation forced Bangladesh to bring up the matter in internatinal forums including the United Nations in order to enlist world opinion in persuading India to desist from the unilateral diversion of the Ganges water to the detriment of Bangladesh.

After repeated protests by Bangladesh against the continued massive unilateral withdrawals of Ganges water at Farakka, India agreed to discuss the matter and several meetings between the two countries were held at experts and ministerial level but to little effect. Further negotiations on the issue broke down in September, 1976. Bangladesh decided to take the matter to the United Nations. The General Assembly decided to include the item in the agenda of its 31st Session and allocated it to the Special Political Committee.

Raising the question of sharing the waters of the Ganges in the United Nations created a historical precedent. For the first time, such a dispute involving two countries was included in the items of the General Assembly. There was no direct breach of the peace or threat to the peace but disputes over sharing of scarce water resources affected many countries and there were strong lobbies for both upper and lower riparians. Many felt that unequal relation among states should not militate against the smaller neighbour in the determination of rights. There were about 200 river basins in which bilateral agreements had been reached on less than half. Disputes over competing uses of scarce water resources was an area where the potential for dispute was very great. The need for progress in the rule of law and conduct governing such uses was manifest. Bangladesh's case was an unique recognition of this lacuna in the development of the law.

In the Special Political Committee, India challenged Bangladesh's move to internationalise the matter and contended that the issue was intrinsically bilateral. It contended that because of lack of co-operation on the part of the Government of Bangladesh, India had no option but to continue to withdraw water in accordance with the 1975 agreement. Bangladesh, on the other hand pointed out that the 1975 agreement was an interim arrangement, in which there was no provision for any withdrawal beyond May 31, 1975. It introduced a draft resolution which, interalia, requested the Secretary General to assist the parties concerned in the immediate resolution of the dispute. This resolution was, however, withdrawn later in place of a consensus statement which was the result of an initiative taken by some non-aligned nations. Agreement was reached between Bangladesh and India on the text of the concensus statement on the 24th November 1976 before it was adopted by the Special Political Committee and recommended to the General Assembly. The General Assembly on the 26th November 1976 adopted the Special Political Committee's recommendation by concensus. According to the concensus statement, the parties agreed, interalia, to meet urgently at Dacca at the ministerial level for negotiations with a view to arriving at a fair and expeditious settlement.

[1 Dec 80, pp 5, 7]

[Text] Negotiations at ministerial level began in Dacca on the 6th December, 1976 and were continued in New Delhi in January, 1977. These did not produce any tangible result. In March, 1977 a general election in India returned a new political party to power. In the next ministerial meeting held on the 16th April, 1977, in Dacca, for the first time in the negotiation between the two countries, the question of an agreement and the essential points to be incorporated in it were discussed and drafts were exchanged. On the 18th April, 1977 at Government level, an understanding was reached, the details of which were decided to be worked out at a meeting of the officials of the two governments. The understanding was with regard to the shares of the two countries of the Ganges waters during the last 10 days of April, the leanest period of the year. It was agreed that out of the total availability of 55,000 cusecs of water at Farakka during this period, Bangladesh will get 34,500 cusecs and India 20,500 cusecs.

The official level talks began in New Delhi on the 5th May, 1977. The major issues that had to be settled by the official were: a) the total period of the dry season for which the shares will be fixed. b) the actual shares for the different 10-days periods other than the leanest period for which an understanding had been reached. c) machinery for implementation of the agreement and for settlement of disputes. d) long-term measures. e) duration of the agreement. Bangladesh was also concerned about the quantum of flow that would be continuously available at Farakka and about guaranteed delivery of its share below Farakka through the long common reach of the river.

India had maintained that the difficult period was only the lean period of the months from mid-March to mid-May. Bangladesh did not agree with this and wanted the sharing for the entire dry season from November to May, specially as the dry period had now advanced following withdrawals at Farakka and consequent reduction in Ganges flows in Bangladesh. Ultimately, it was agreed that the period of sharing will be from January to May.

India proposed the shares to be worked out according to availability; without reference to month or period or the established pattern of flow. Bangladesh did not agree to this as this would have left India free to withdraw any amount of the Ganges water upstream. India was also against any limitation on its use of water upstream or downstream of Farakka. Bangladesh pressed for regulating the unrestricted use of water by India which would reduce the share of water for Bangladesh. Both India and Bangladesh were keen on long-term measures though they had different ideas on these. Bangladesh wanted to ensure also that its proposal on storage dams in Nepal could not be objected to by India as done before. It wanted to incorporate such a provision in the agreement itself but as it related to a country which was not a party to this agreement, the two sides agreed to cover this by separate side letters to the agreement incorporating such assurances.

Three rounds of official level talks held between May and September, 1977 resulted in a detailed agreement which was initialled by the leaders of the two delegations in New Delhi on the 30th September, 1977. The agreement was formally signed in Dacca by Ministers of the two countries on the 5th November, 1977. Two side letters were also exchanged at the time of signing the agreement. These side letters contain an understanding between the two Governments to the effect that

the schemes to be proposed by either government under the provision of the agreement on long term arrangements will not exclude any scheme for building storages in the upper reaches of the Ganges in Nepal.

India for a long time had maintained that the Ganges was "overwhelmingly" an Indian and not an international river. Indian publicists asserted that in accordance with customery international law, a state has exclusive control over the waters of international rivers which pass through its territory. [as published] By the Agreement of 1977, India recognised the international character of the river Ganges and agreed to the concept of equitable apportionment of the waters of an international river.

The preamble of the agreement also expressed the desire of the two Givernments of sharing by mutual agreement the waters of the international rivers flowing through the territories of the two countries. [as published] The Helsinki rules include an international river in the term "international drainage basin" which has been broadly defined as "a geographical area extending over two or more states determined by the watershed limits of the systems of water,...flowing into a common terminus." The river Ganges, which traverses through the territories of China, Nepal, India and Bangladesh clearly falls within this definition.

Bangladesh pressed for its rights to the waters of the Ganges not only because of its historic flow through Bangladesh but also because of Bangladesh's overwhelmingly dependence on the river. Consequently, Bangladesh contended that it was entitled to the "natural flow" of the Ganges, at least in the dry season. However, the Farakka Barrage presented Bangladesh with a fait accompli. In the interest of good neighbourliness and in a spirit of co-operation, Bangladesh agreed to sacrifice its entitlement of the historic flow temporarily with the hope that a long term solution will not only restore this flow but also augment it to enable Bangladesh to meet the increasing needs of water for full development of the area dependant on the Ganges. [as published]

The purpose of the Agreement is two fold: to share the waters of the Ganges at Farakka and to find out a long-term solution of the problem through the augmentation of the dry season flow of the Ganges. The duration of the Agreement is five years and may be extended for a specified period by mutual agreement in light of the review or reviews as provided for in the Agreement. The first review is to beat the expiry of three years and another six months before the expiry of the Agreement or as may be agreed upon between the two Governments.

The Agreement provides for the sharing of the Ganges waters at Farakka from 1st January to 31st May every year. Allocation of water has been fixed on the basis of flows reaching Farakka based on 75% availability calculated from the recorded flows of the Ganges at Farakka from 1948 to 1973. The release of waters to Bangladesh is to be by 10-day periods in quantum shown in the schedule annexed to be Agreement. [as published]

The minimum flow is calculated as 55,000 cusecs between April 21 and April 30. During this period India will withdraw 20,500 cusecs and release to Bangladesh 24,500 cusecs. The Agreement stipulates that if the availability of water at Farakka during any 10-day period is higher or lower than the quantum shown in the Agreement, it shall be shared in the proportion applicable to the period,

provided further than if during a particular 10-day period, the Ganges flows at Farakka come down to such a level that the share of Bangladesh is lower than 80% of the stipulated share, the release of waters to Bangladesh during that 10-day period shall not fall below 80% of the quantum shown in the Agreement. Bangladesh's share has thus been protected. The Agreement also provides that there will be no reduction in Bangladesh's share as long as it is in force. It is also stipulated in the Agreement that the waters released to Bangladesh at Farakka shall not be reduced below Farakka except for reasonable uses of waters, not exceeding 200 cusecs, by India between Farakka and the point of the Ganges where both its banks are in Bangladesh.

The Agreement provides for a joint committee of the two Governments to oversee observation and record at Farakka the daily flows below Farakka barrage and in the Feeder canal as well as at Hardinge Bridge in Bangladesh. The Joint Committee is responsible also for implementing the arrangements of sharing and resolving any difficulty arising in the matter and in the operation of the Farakka Barrage.

The Indo-Bangladesh Joint Rivers Commission set up in 1972 is entrusted under the Agreement with the task of finding a solution to the long term problem of augmenting the flows of the Ganges during the dry season and is required for this purpose to carry out investigation and study of schemes relating to the augmentation of the dry season flow of the Ganges proposed or to be proposed, by either Government. The Commission is to submit its recommendation in the matter within a period of 3 years.

Differences and disputes regarding the Ganges waters agreement are to be settled bilaterally. The test of the Agreement lies in the faithful observation of the provision that it will be implemented by the parties in good faith.

The conclusion of the Ganges Water Agreement reaffirms the obligation of states to negotiate and conclude a treaty in case of a conflict of interests regarding international rivers.

In the ultimate analysis, although the Farakka dispute reflected a lower riparian's relative helplessness, the fact of the Ganges Water Agreement also indicates that even a relatively strong party in the negotiation has to keep with the current trends in international relations and law and its relative strength alone does not determine its posture in negotiation.

The Agreement was hailed at the United Nations and the international community expressed its readdiness to render technical and financial assistance to any joint projects that might be proposed by the countries of the region India, Nepal and Bangladesh for the Development of its water resources. [as published] King Birendra of Nepal in a speech at the plenary session of the Colombo Plan Consultative Committee in December, 1977 had proposed regional co-operation for joint utilisation of the water resources of the region for irrigation, power generation, flood control and navigation.

The Indo-Bangladesh Joint Rivers Commission was raised to Ministerial level in December, 1977. It met in Dacca for its fourteenth meeting on January 20, 1978 after gap of two and a half years and took up the same assignment on which it had reported its failure at its last meeting held in Dacca in June, 1975 i.e. to find

out the best means of augmentation of the dry season flow of the Ganges. At the fourteenth meeting, the Commission decided that the two countries would submit their proposal on the long term scheme by mid-March, 1980. Proposals were accordingly exchanged in Dacca on the 25th March, 1978. As could be anticipated, the two countries reintroduced their earlier proposals viz Bangladesh for augmenting Ganges flow by constructing storages in Nepal and India proposing diversion of Brahmaputra water to the Ganges by means of a link canal through Bangladesh.

The two proposals wtre taken up for consideration by the Commission in New Delhi at its fifteenth meeting in July, 1978. [as published] India proposed initiating the study of the two proposals and for this purpose to set up joint teams. Bangladesh pointed out as it did at the previous meeting also that its proposal which involved construction of storage dams in Nepal required association of that country in the study. India was against this and suggested that the proposal might be studied on the basis of whatever data were available in the matter with India and Bangladesh. Bangladesh said that such data would ont be adequate and further that what was required was not only collection of data but exploration of feasible storage sites in Nepal which could not be done without the active association of that country in the matter. [as published] India said that the work could be started and the matter could be examined further later on. This was not acceptable to Bangladesh as it would mean ruling out the Bangladesh proposal at the very outset and only the Indian proposal holding the field. The Commission then set up a joint committee to prepare draft terms of reference for jointly approaching Nepal. But the Committee also failed to agreed on the matter. [as published] Attempts to narrow down their differences did not succeed.

In January, 1980, there was again a general election in India in which the party in power was defeated and a new Government took over. There were further meetings of the Joint Rivers Commission but with no progress on the long-term scheme.

As per provision of the Agreement, Ministers of the two Governments began the review which was due at the expiry of 3 years of the Agreement on the 5th November, 1980 in Dacca. The meeting as adjourned to meet in New Delhi again towards the end of the December, 1980.

The concern caused by the failure of the Joint Rivers Commission to make any headway on the long-term scheme has been increased by another matter of equal if not greater concern. This is the gradually dwindling dry season flow of the Ganges at Farakka. There was a drastic fall in the quantum of flow in the river at Farakka during the last dry season of 1980 causing a much reduced share of water for the two countries. The flows were abnormally low throughout January to April. In the last 10 days of March, it was 40,000 cusecs against 61,000 cusecs availability as shown in the schedule annexed to the Agreement. In the first 10 days of April it was only 39,000 cusecs against 59,000 cusecs of the schedule. Such extreme low flows can be only partly due to drought. It is mainly the result of large scale withdrawals of water from the Ganges in the upper reaches of the river lying in Uttar Pradesh and Bihar in India.

The Govt. of India sanctioned for this region a number of irrigation projects. In addition to this there is increasing uplanned withdrawals of water from the Ganges. [as published] The pattern of filling the many reservoirs created on the tributaries of the Ganges is also a factor to be considered as the antecedent

post-monsoon flows have a definite bearing on the dry season flows in the river. The unregulated withdrawals of waters from the Ganges is causing siltation and raising of the river bed, reduction of flows in the lower reaches of the Ganges and lowering of water levels in the river during the dry season.

The United Nation's Conference on Human Environment at Stockholm in 1972 recommended strict control and integrated water resources planning. [as published] This calls for planning on the basis of the entire basin and handling of water within the basin as the property of all the peoples of the basin. Unless this is done only partial appraisals of the problem and its piecemeal treatment will permanently damage a vital resource and cause suffering to the people of the lower basin.

The best interest of the peoples inhabiting the Ganges basin demand the optimum development of the natural resources of the basin. It's abundant water resources should not only be harnessed to yield multiple benefits including increase in the dry season flows of the river but also to ensure co-ordinated planning of its use to serve the needs of all the peoples of the region. [as published]

With regard to the long term scheme, it is hard to find justification of the Indian proposal of constructing a 1/2 mile wide and 30 feet deep link canal to transfer 100,000 cusces of water from the Brahmaputra river to the Ganges river to augment the dry season flow of the latter. The dry season flow of the Brahmaputra is not adequate to develop the land in its own basin. As enunciated by the International Commission on Irrigation and Drainage, the internationally accepted basic principles of inter basin transfer of river water are a) the present & future requirements of the exporting basin must first be met or safeguarded. b) the requirements of the basin or region in which the water is to be imported should be reduced to the minimum by tapping alternate sources of water. c) impact on account of such mass transfer of water in the region from where the water is to be exported on river regime, ecology, environmental pollution etc. are minimum. The adverse economical, ecological, social and political impact on Bangladesh of the construction of such a huge canal involving acquisition of valuable agricultural land and displacement of a large number of people would be very great.

An annual run-off of 372 million acre feet is available in the Ganges. Much of this occurs during the monsoon season. Thus the development of large reservoirs to store the monsoon flow of the tributaries of the Ganges is the main key to the solution of the problem of shortage of water during the dry season. Exploitation of the water resources potential in the tributaries of Nepal is most important in this matter as not only these tributaries are the nearest to the lower Ganges but they also receive the highest precipetation as compared to other tributaries. [as published] Studies made so far of possible storage sites on the tributaries of the Ganges in Nepal by reputed international Engineering Firms have established that is is possible to increase the lower Ganges dry season flow to the extent of 140,000 cusecs or more over and above the present natural dry season flows which are used in Nepal and India. This will also develop continuous hydropower generation of the order of 9,000 M.W. or more with installed capacity of about 15,000 M.W. at the sites studied so far and will provide substantial reduction of flood flows which devastate large areas every year. Other direct benefits will ge substantial improvement of navigation, recreation and environment. [as published]

The present stalemate in the search for a long term solution should not make us lose hope or impatient. [as published] Water disputes have occured and continued for many decades before solutions could be found on many rivers in different countries of the world and even between states of the same country as in India. [as published]

However, it is now evident that any agreement on the allocation of the residual Ganges flows at Farakka between India and Bangladesh or future augmentation of the dry season flows of the river will be of little avail unless effective action is taken to check the increasing depletion of the flows reaching Farakka. It is, therefore, urgently necessary that India and Bangladesh review this situation and agree on a basin wise inventory of the water resources the requirements of the countries and budgeting of the water use by regions and reaches of the river. Unless this is done, there may in the future be little water coming to Farakka for Bangladesh to get a share of.

Admittedly, there are difficulties inherent in the complex nature of the problem. The technical proglems are heightened by social, economic and political factors in which the sensitiveness of the peoples concerned is particularly acute. However, what stands out in this case is the interdependance of the co-basin states of the Ganges river basin. [as published] We must therefore, recognise the imperative of an integrated approach to the problem and to develop the water resources of the river basin keeping in view the total demand on the scarce water whose use must be regulated in the light of the requirement of all the claiments. [as published] There is a basic compulsion that should urge us forward. This is the future well-being of all our peoples. The problem can be solved with political will.

MINISTER GIVES DATES OF 1982 ELECTIONS

Dacca THE BANGLADESH OBSERVER in English 18 Dec 80 pp 1, 12

[Text] Mr. Abdul Halim Chowdhury Minister for Local Government Rural Development and Cooperatives disclosed in the Jatiya Sangsad on Wednesday that the elections to Union Parishads and Pourashavas would be held in January and August, 1982 respectively.

Replying to a question from Principal Md. Nazrul Islam (Al-Malek) the Minister said that there was no reason why the elections to these bodies would not be completed immediately before the end of the current tenure.

In reply to a question from Advocate Shahadat Hossain Chowdhury the Minister said that the possible time for election to District Parishads could not be announced as government was thinking more regarding this. The last elections to District Parishads were held in 1966's, he said. [as published]

Replying to a question from Sheikh Selim (Al-Malek) the Minister said that till now no fund was allocated for the formation of Grain Sarkars. No money was spent so far for the formation of Gram Sarkars, he added.

PRESIDENT SPEAKS ON MEET-THE-PEOPLE TOUR

Dacca THE BANGLADESH OBSERVER in English 28 Nov 80 pp 1, 12

[Text] On Board Special Train Nov. 27:--President Ziaur Rahman said on Thursday that the Union Parishad election will be held in January, 1982. He dismissed the possibility of any mid-term polls.

Talking to OBSERVER on board the special train during his two-day meet-the-people tour from Dacca to Chittagong President Zia said there was no reason to hold the mid-term polls. When asked about the possibility of mid-term polls he posed a counter question "Why, what is the issue?" He pointed out that his party had an absolute majority in the Parliament and there is no need of holding mid-term election.

President Zia said that the functional relationship between the Union Parishad and Gram Sarker will be determined by natural adjustments through a gradual process. Nothing will be done hurriedly.

During his two-day whirl-wind tour President Zia addressed 24 largely attended meetings in different railway stations. In his speeches President Zia cautioned the people against Baksalites who were propagating "foreign ideals" and reminded them that the imposition of foreign ideals resulted in foreign domination in the past. He asked the people to be imbibed with Bangladeshi nationalism.

He also asked the people to double food production, arrest baby boom, remove illiteracy and to conserve water for irrigation. The jubilant crowd in all the meetings responded to his messages spontaneously and pledged to work hard to build a self-reliant nation.

When asked why he was cautioning the people against foreignism so emphatically, he said people should be warned against various interacting forces--both national and international. He hoped that through this process the people will remain united against any conspiracy.

He was happy to note that the nationalist forces were now better organised and stronger adding that there are three political forces in the country--the nationalists anti-nationalists and re-actioneries. [as published] He observed that the number of anti-nationalists was very meagre and there are nationalists among the re-actioneries. [as published]

Replying to a question on the successes of his meet-the-people tour President Zia said the people are now aware of their responsibilities, feels the urgency of conserving water for irrigation, adopting family planning and increasing crop intensity.

When asked if his messages were fully backed by implementation programmes, he said "It is not possible at the moment to give total back-up. We are trying and it is improving."

President Zia happily mentioned in all the meetings that the united efforts of the people had started paying the nation.

He said the food stock will stand at 16 to 17 lakh tons by June next year. Replying to a question President Zia said storage problem was the biggest problem before us.

Due to storage problem a small quantity of foodgrain and fertilizer will be exported. When asked if the seller nation will soon be turned into buyer nation, he said the export was due to storage problem and the donor nations had been consulted on this issue. He, however, said that the country has now enough food to face drought or flood.

People against Politics of Slogan

President Ziaur Rahman said that there is only one politics in the country now and that is politics of production and development on the basis of Bangladeshi nationalism. He further said that people do not want politics of slogan anymore.

He also urged the people to discard foreign ideals which may lead the nation to foreign domination. President Zia said that Baksalites were trying to establish foreign ideals in the country.

He made this call in his speech at railway station on the second day of his fourth meet-the-people tour by trains. On Thursday he addressed 12 public meetings at different railway stations.

President Zia who is also the Chairman of the Bangladesh Nationalist Party covered 740 miles during his tour by train in seven days beginning on October 5. He addressed 105 public meetings during these four train tours.

He began his tour today at Comilla and addressed the first public meeting at Laksam junction in the morning. He also addressed public meetings today (Thursday) at Nagalkot, Gunabati in Comilla, Feni and Fazilpur in Noakhali, Chinki Astana, Miresarai, Sitakund, Barabkunda, Kumira, Fauzderhat and Chittagong Railway Stations in Chittagong.

He returned to Dacca from Chittagong by a special flight of the Bangladesh Biman. President Zia was accompanied by Railway Minister Mr. Abdul Alim, Dr. Quamrunnabar Zafar, Deputy Minister for Cooperatives, Mr. Ferdaus Ahmed Qureshi Joint Secretary-General of BNP, President and Secretary-General of Bangladesh Federal Union of Journalists Mr. Ahmed Humavun and Mr. Reazuddin Ahmed.

resident Zia called upon all to work unitedly for the development of the country's economy. He said that only then we can achieve prosperity which will be enjoyed by our children. He said the nation fought the liberation war to get rid of foreign domination and economic emancipation.

President Ziaur Rahman also said that the reason of our backward economy was idleness. He observed that political leaders also do not work. The leaders live in cities after the election was over and engaged themselves in trade to earn money. The BNP Chairman said that this type of politics is no longer acceptable to the people. He said that the BNP would organise the people to achieve the objectives of the peaceful revolution of production. BNP leaders and workers shall participate in development work in rural areas.

Calling upon the people to politically eliminating the Baksalite elements from the society President Ziaur Rahman stressed the need of establishing the ideals of Bangladeshi nationalism.

Earlier on Wednesday night while addressing the members of the Comilla Bar President Zia said that his Government wants to consolidate the country's manpower through a democratic process. He said democracy only can bring solution to our problems, regimentation was no solution. He also said that no foreign political theory was suitable for our country because that cannot meet our needs. Nation demands a political system which would meet the needs and that again will come out of the soil of the country.

He further said that politics of nationalism pursued by BNP was a positive and constructive programme which can solve national problems. He said his Government was trying to put an end to the imbalance in society, industry and other fields.

In his speech at the Bar Association President Zia said that the rise in price of commodities was mainly due to rise in price of oil. In 1975-76 oil worth Taka 150 crore was imported whereas this year the oil bill would be nearly Taka 1000 crore. Moreover on the plea of oil price increase price of machineries also were raised. He said that the Government can give subsidy which is no solution. He further observed that politics on the basis of subsidy would lead the country to ruination. He emphatically said that this was the reality and as this Government was an elected one we have no fear to say this straight.

PLAN TO AUGMENT BRAHMAPUTRA DRY SEASON FLOW TOLD

Dacca THE BANGLADESH OBSERVER in English 28 Nov 80 p 10

[Text] Fulchhuri (Rangpur) Nov 26:--Projects will soon be taken up to augment the dry season flows of the Brahmaputra to meet the requirement of water for irrigation and other needs of the people dependent on the river, Mr. L. K. Siddiqui, State Minister for Power, Water Resources and Flood Control said here on Sunday, reports BSS.

Addressing a largely attended public meeting in a school ground close to the river, Mr. Siddiqui said that the Brahmaputra flow during the dry season was one laks cusecs less than the water required by the people dependent on it.

The State Minister said that there was not a single drop of Brahmaputra waters which could be wasted or spared in any way. He added that half of the country's population and cultivable land was dependent on the Brahmaputra waters.

A programme, he said has been chalked out under the National Water Plan for augmentation of the dry season flows of the Brahmaputra to meet the demand.

The State Minister said that keeping the salinity front at a safe distance also needed water so that more cultivable land and sweet waters of the river were not destroyed by saline intrision from the Bay. [as published]

Water requirement of the country for irrigating land already on the increase because of meeting food shortage, Mr. Siddiqui said, will go up considerably in the coming years. The nation was already facing shortage of water and will be hard pressed for it in the coming days, he added.

The State Minister said that survey work already undertaken for the projects to augment the dry season Brahmaputra flows was progressing will. [as published] The Minister inspected the survey work accompanied by the Chairman and water resources experts of the Water Development Board.

The State Minister said that suitable hydraulic structures would be built for augmenting the dry season flows of the river so that the farmers' irrigation needs could be fully met.

He said that the Government was fully conscious of the erosion problem caused by the river and added measures were underway to check it (erosion) on both its banks.

Replying to local leaders, Mr. Siddiqui said that a cross dam will soon be set up to protect Fulchhuri from the river's erosion.

Local leaders said, a large chunk of land was eroded during the last flood from the area, rendering many people homesless and without their cultivable land. [as published]

The meeting was also addressed by Mr. Serajul Islam, MP, District Development Coordinator of Rangpur, Mr. Rustam Ali MP, and Mr Mustafizur Rahman, Chairman, Water Development Board.

The local leaders said that but for the prompt actions taken by the WDB, more areas would have been eroded by the river during the last flood.

PAPER REPORTS PROVISIONS OF DISTURBED AREAS ACT

Dacca THE BANGLADESH TIMES in English 2 Dec 80 pp 1, 8

[Text] Home Minister Mr Abu Saleh Mohammad Mustafizur Rahman on Monday introduced the Disturbed Areas Act 1980, in the face of stiff opposition in the Jatya Sangsad.

The Opposition Bench members, who termed the Bill as "worse than a Martial law", staged a walkout when the Deputy Speaker refused to allow more than two Opposition Bench MPs to speak opposing the introduction of the Bill. The Deputy Speaker followed a convention of the Indian Lok Sabha in allowing two of the Opposition MPs to oppose the introduction of the Bill. Several Opposition MPs demanded that they be allowed to address the House.

According to the statement of objects and reasons, the Bill is to make better provision for the restoration and maintenance of public order in the disturbed areas "for matters ancillary thereto or connected therewith."

Objective

The Bill seeks to make provision for declaration as a disturbed area of any part of Bangladesh so as to deal with any abnormal law and order situation or insurgent activity existing therein which cannot be effectively contained under the existing laws of the bill defined "unlawful activities" as "any action (taken whether by committing an act or by words, either spoken or written or by visible representation or otherwise) which is (a) prejudicial to the sovereignty or territorial integrity of Bangladesh (b) which is prejudicial to the security of Bangladesh or the maintenance of public order" etc., it lays down:

If the Government is of opinion that any part of Bangladesh is in such a disturbed or dangerous condition that the use of defence services in aid of the civil power is necessary for the restoration and maintenance of public order, it may by notification in the official GAZETTE, declare that part of Bnagladesh to be a disturbed area.

Any officer of the defence services or any Magistrate or any officer of the Police not below the rank of Sub-Inspector of Police or any officer of the Bangladesh Rifles not below the rank of Havilder may, in a disturbed area,--

(a) if he is of opinion that it is necessary so to do for the maintenance of public order: after giving such warning, if any, as he may consider necessary: fire

upon; or otherwise use force, even to the causing of death, against any person who is engaged in any unlawful activity or acting in contravention of any law or order for the time being in force in the disturbed area prohibiting the assembly of five or more persons or the carrying of weapons or of things capable of being used as weapons or of fire-arms; ammunition or explosive substances;

(b) if he is of opinion that it is necessary so to do, destroy any arms, ammunition or explosive dump: prepared or fortified position or shelter from which armed attacks are made or any structure used as a training carp for armed volunteers or utilised as a hideout by armed gangs or absconders wanted for any offence; [as published]

(c) arrest, without warrant, any person who has committed a cognizable offence or against whom a reasonable suspicion exists that he has committed or is about to commit a cognizable offence and may use such force as may be necessary to effect the arrest;

(d) enter and search without warrant any premises to make any such arrest as aforesaid or to recovery any person believed to a wrongfully restrained or confined or any property reasonably suspected to be stolen property or any arms, ammunition or explosive substances believed to be kept unlawfully or for unlawful activity in such premises, and may, for that purpose, use such force as may be necessary. [as published]

Any person arrested and taken into custody under this Act shall be made over to the officer in charge of the nearest police station at the earliest opportune moment; together with a report of the circumstances occasioning the arrest.

In this section: an officer of the Police shall include an officer of Ansar embodied in the Police.

Power for detention.--(1) A District Magistrate may, it satisfied with respect to any person that with a view to preventing him from doing any unlawful activity in a disturbed area, it is necessary so to do make an order directing that such person be detained. [as published]

If a District Magistrate is of opinion that any person is engaged or likely to be engaged in any unlawful activity in a disturbed area he may, by order in writing, restrict the movement of such person to such extent as may be necessary.

Any person aggrieved by an order made under sub-section (1) may: within thirty days of the making of the order make an application to the Special Tribunal and on receipt of the application, the Special Tribunal shall; after giving the parties an opportunity of being heard: decide the question.

Subject to any rules that may be made under this Act, the procedure to be followed by the Special Tribunal in disposing of any application made under sub-section (2) shall, so far as may be, be the procedure laid down in the Code of Civil Procedure; 1908 Act V of (1908), for the investigation of claims and the decision of the Special Tribunal shall, subject to the provisions of this Act, be final. [as published]

Whoever (a) takes part in or commits an unlawful activity in a disturbed area; or (b) advocates, abets, advises or incites the commission of any unlawful activity in a disturbed area:

shall be punishable with death, or tarnsportation for life or with rigorous imprisonment for a term which may extend to fourteen years and shall also be liable to [word illegible]. [as published]

When a person is sentenced to death under this Act, the sentence may be executed by hanging him by the neck till he is dead or by shooting in the prescribed manner till he is dead as the Special Tribunal may direct.

The Government may, by notification in the official GAZETTE, make rules to carry out the purposes of this Act.

MINISTER REPORTS ON NEWSPAPER MANAGEMENT BOARD

Dacca THE BANGLADESH TIMES in English 16 Dec 80 pp 1, 8

[Text] Information and Broadcasting Minister Mr Shamsul Huda Chowdhury told the Jatiya Sangsad on Monday that Government had no plan to dissolve the Government-owned Newspaper Management Board and transfer the newspapers under it to private ownership.

The Information Minister was replying to a question by Maulana Muhammad Abdur Rahim of Islamic Democratic League (IDL).

In reply to another question by the same member, Mr Chowdhury said that the Government had not provided any subsidy to the newspapers managed by the Newspaper Management Board during 1977-80. But, he said, he Government had sanctioned an interest-free loan of Taka 22,40,000 to the DAINIK BARTA, a Daily published from Rajshahi. [as published]

Replying to a question by Mr. A. B. M. Taleb Ali of AL (Malek), the Information Minister said the DAILY BANGLADESH OBSERVER had received Government advertisement worth Taka 6,49,095 lakh during first three months of the current fiscal year while the DAINIK BANGLA received advertisements worth Taka 5,19,082 during the same period.

Replying to a supplementary question, the Minister told the House that the DAILY ITTEFAQ and he DAILY SANGBAD had received Government advertisements worth Taka 2.70 lakh and Taka 1.07 lakh during the first quarter of the current fiscal year. [as published] He also told a questioner that DAINIK DESH had received Government advertisement worth Taka 2.84 lakh during the same period.

In reply to supplementaries by a number of Opposition members, Mr Chowdhury said that Government did not interfere in the distribution of advertisement by the corporations. The Corporations released their advertisements to the newspapers according to their commercial viewpoint, he said.

The Information Minister said that the basic policy of the present Government was that it favoured the growth of newspapers in the country. He said that the Government had to give advertisement to a number of dailies and weeklies to keep them alive.

Mr. Chowdhury said that the Government had to face many odds to bring the number of newspapers to existing 479 from only four in 1975. He said that the newspapers

excepting four, had been closed down in 1975 and journalists of the annulled newspapers were thrown out of their jobs.

He said that the Government owned four newspapers in the country and it was the responsibility of the Government to keep these newspapers alive.

The Information Minister while replying to a question by Mr Mohammad Mohsin, AL (Malek) that Government had a plan to set up a 100 kilowatt transmitter at Rajshahi Radio Centre which will be implemented in 1982-83.

DEPUTY PRIME MINISTER REPORTS NEWSPRINT PRICES

Dacca THE BANGLADESH TIMES in English 16 Dec 80 pp 1, 8

[Text] The prize of newsprint had been raised seven times since Liberation. [as published]

This was stated by Deputy Prime Minister Jamal Uddin Ahmed at the Jatiya Sangsad on Monday in reply to a question by Mr Shahjahan Siraj, a JSD Member from Tangail.

The Deputy Prime Minister said that the cost newsprint reel was Tk 1198 per ton while that of sheet per ton was Tk. 1313. These were being sold at Tk 9966 and Tk 10466 per ton respectively now, he said.

However, the Deputy Prime Minister said, the price had been reduced by Tk 1000 per ton for newspapers only.

Mr Jamal Uddin Ahmed said that since Liberation newsprint had been exported to 14 countries. These countries are: India, Singapore, Hongkong, Nepal, Japan, Egypt, Sri Lanka, Burma, Indonesia, Iran, Pakistan, Malaysia, Thailand and China.

The Deputy Prime Minister denied that the export price was much lower than the home price.

JOURNALISTS UNION HOLDS CHITTAGONG PARLEY

Dacca THE BANGLADESH OBSERVER in English 6 Dec 80 p 12

[Text] Bangladesh Federal Union of Journalists (BFUJ) has demanded a separate wage board for journalists in commensurate with their professional dignity, distinctiveness and risks, reports ENA.

It also demanded that the proposed board should immediately declare an award in keeping with the present cost of living.

In a series of resolutions adopted at its three-day biennial conference held in Chittagong beginning November 9 the BFUJ observed that the award of the 1977 wage board did not recognise the importance, distinctiveness and dignity of the profession. As such, it had obstructed the growth of journalism in the country.

Even the facilities and opportunities extended by the 1977 wage board, the BFUJ said, had become virtually meaningless because of price spiral of the essentials.

The conference observed with concern and resentment that a section of newspaper owners in Chittagong, Khulna and Bogra had refused to implement the 1977 Wage Board Award even after three years of its declaration. In violation of the Factory Act, many of the owners are not issuing appointment letters to the working journalists and denying them minimum wages and other benefits.

On the other hand, the same newspaper owners are getting regular advertisements and other facilities from the government. It condemned the actions of those newspaper owners and demanded immediate implementation of the agreed minutes and the award.

It demanded immediate formation of a Press commission with a view to bringing an end to what it called, "a state of anarchy now prevalent in news paper industry". It recalled that there had been a series of negotiations and discussions with the government in this regard but to no effect.

It noted that in the absence of a clear government policy with respect to newspaper a state of anarchy was now prevalent in the industry. As a result newspapers are being utilised as "an instrument of whims of a section of individual owners", it added.

The conference in a separate resolution demanded introduction of house rent ceiling for journalists as extended to the employees of different autonomous bodies.

The BFUJ deplored that the BSS had been totally brought under control of the government by promulgating a series of ordinances. Still worse, it said, such ordinances contained provisions which denied the facilities and opportunities extended to the journalists under Wage Board Award.

It demanded repeal of the BSS Ordinance so as to make it totally free from government control. It declared that BFUJ was opposed to government control of newspapers. BSS would not be able to reflect the hopes and aspirations of the people in a free and fair manner if it remained under government control, it said.

The conference also demanded guarantee of freedom of the Press to express and publish all opinions without distortion, abolition of the Management Board formed under a black law, handing over the management of government-owned newspaper to unit trusts of respective papers, repeal of the circular prohibiting the government servants to divulge information to Press and removal of all obstacles in the way of defunct newspapers.

CSO: 4220

JOURNALIST UNION EXECUTIVE COUNCIL MEETS

Dacca THE BANGLADESH TIMES in English 16 Dec 80 pp 1, 8

[Text] The Bangladesh Federal Union of Journalists (BFUJ), will observe January 10, 1981, as demand day to press its 8-point demands, reports BSS.

The decision was taken at the two-day meeting of the newly-elected Federal Executive Committee (FEC) which concluded in Dacca on Monday, a BFUJ Press release said.

The meeting presided over by Mr Ahmed Humayun, President of BFUJ, after detailed discussion on various problems confronting the journalist community and problems of national importance, adopted a number of resolutions.

Following are the resolutions:

(1) All existing black laws should be repealed forthwith. The Disturbed Areas Bill should immediately be withdrawn. (2) Unit Trusts should be formed for all the Government controlled newspapers and news agency and Board of Management for Government Controlled Newspapers should be abolished. (3) Press Commission should be formed. (4) A separate wage board for the journalists should be constituted. (5) House rent ceiling should be introduced. (6) Agreed Minutes should be implemented in all newspapers establishments. (7) Night Allowance should be paid at the rate of 50 per cent of the basic salary for each night. (8) The provisions laid down in the Newspaper Employees (Condition of Service Act) must be observed in all newspaper establishments.

CSO: 4220

BRIEFS

NEW SWEDISH AMBASSADOR--Mr. Peder Olof Hjalmar Akesson Hammarskjold has been appointed Ambassador of Sweden to Bangladesh it was officially stated in Dacca on Wednesday reports BSS. Mr. Hammarskjold was born in the Hague on July 3, 1923. after completion of his education he joined the Swedish foreign service in 1949. [as published] He served in different missions of Sweden abroad in various capacities. At present he is the head of the Swedish Embassy in Santiago De Chile with the rank and status of a Minister. Mr. Hammarskjold is married and has two daughters. [Text] [Dacca THE BANGLADESH OBSERVER in English 18 Dec 80 p 12]

GREETINGS TO BAHRAIN--President Ziaur Rahman has greeted Shaikh Isa bin Salman Al-Knalira; Amir of Baharain, on the occasion of the National Day of Bahrain, reports BSS. In a message to the Amir president Zia said on behalf of the Government and the people of Bangladesh and on my own behalf, I convey, to your highness our heartiest greetings and felicitations on the auspicious occasion of the National Day of Bahrain. May the cordial relations so happily existing between our two brotherly countries continue to grow in the years ahead for the benefit of our two peoples. I avail myself of this opportunity to convey to your Highness my very best wishes for your personal health and happiness and for the continued peace progress and prosperity of the brotherly people of Bahrain.' [as published] [Text] [Dacca THE BANGLADESH TIMES in English 18 Dec 80 pp 1, 12]

GREETINGS TO BHUTAN--President Ziaur Rahman has sent the following message of felicitations to His Majestry King Jigme Singye Wangchuck, King of Bhutan, on the occasion of the National Day of the Kingdom of Bhutan, says an official announcement. [as published] The Government and the people of Bangladesh join me in extending to Your Majesty our sincere greetings and felicitations on the happy occasion of the National Day of the Kingdom of Bhutan. I hope that the friendship and cooperation which so happily exist between our two countries will be further strengthened in the years ahead to our mutual benefit. I wish Your Majesty long life, good health and happiness and continued progress and prosperity of the friendly people of Bhutan. [Text] [Dacca THE BANGLADESH TIMES in English 18 Dec 80 p 1]

AUSTRALIAN WHEAT--Australia will provide Bangladesh 80,000 tons of wheat as grant under a memorandum of understanding signed in Dacca on Wednesday, reports BSS. The grant is part of Australian food aid programme for Bangladesh in 1980-81. Official sources said that 30 per cent of the wheat, which is likely to be available for shipment by March next would be utilised for Food-for-Work Programme. The Ministry of Food will make arrangement for shipment and distribution of the wheat under this grant. Mr Mack Williams High Commissioner of Australia in Bangladesh signed the memorandum with Mr Mohammed Ali Joint Secretary External Resources Division at the latter's office. [Text] [Dacca THE BANGLADESH TIMES in English 18 Dec 80 p 12]

COMMISSIONER TO BARBADOS--The Government of Bangladesh has decided to accredit concurrently Mr K M Kaiser at present Permanent Representative of Bangladesh to the United Nations in New York as High Commissioner to Barbados, says a PID handout. [Text] [Dacca THE BANGALDESH OBSERVER in English 4 Dec 80 p 12]

MESSAGES TO THAILAND, FINLAND--President Ziaur Rahman has greeted King Bhumibol Adulvadej of Thailand on the occasion of his birth day reports BSS. In a message to the King President Zia expressed confidence that the very cordial relations existing between the two friendly countries would continue to be strengthened in the years to come for the mutual benefit of the two peoples. The President also expressed his best wishes for the long life, health and happiness of King Bhumibol and for the well-being and prosperity of the friendly people of Thailand. President Ziaur Rahman has felicitated Finish President Dr. Urho Kaleva Kekkonen on the occasion of the National Day of Finland. The President in a message expressed his best wishes for the health and happiness of President Kekkonen and for the continued well-being and prosperity of the people of Finland. [Text] [Dacca THE BANGLADESH OBSERVER in English 6 Dec 80 p 1]

COMMISSIONER TO MAURITIUS--The Government has decided to accredit concurrently Mr. Abul Ehsan, at present High Commissioner for Bangladesh in New Delhi as High Commissioner to Mauritius says a PID handout. [Text] [Dacca THE BANGLADESH OBSERVER in English 20 Dec 80 p 3]

MONGOLIAN VISITORS--A five-member Mongolian Parliamentary delegation will arrive in Dacca today (Saturday) on a five-day visit to Bangladesh, according to a Press release of the Jatiya Sangsad, reports BSS. Led by Mr Bazarya Shirendev, Deputy Chairman of the Great People's Khural (Parliament) of the Mongolian People's Republic the delegation will be received at the airport by Deputy Speaker, Mr Sultan Ahmed Chowdhury and Members of the Jatiya Sangsad. The other members of the delegation are: Mr Tserendashi in Namsari, Mr Bugyn Nasanjargal, Mr W. Wanchindorj and Mr Ts. Erdenebold. During its stay the delegation will call on President Ziaur Rahman, Vice-President Mr Justice A. Sattar, Prime Minister Shah Azizur Rahman, Health Minister Dr M. A. Matin, Deputy Speaker Mr Sultan Ahmed Chowdhury leader of the opposition Mr Asaduzzaman Khan and State Minister for Science and Technology Dr R A Gani. The delegation will attend a Parliament Session on Monday. [as published] [Text] [Dacca THE BANGLADESH OBSERVER in English 20 Dec 80 p 12]

AID FROM PRC--Bangladesh and China on Thursday finalised technical details for the construction of Taka 158 crore urea fertilizer factory to be set up with Chinese loan. Under the programme finalised at end of discussion between visiting Chinese high-powered technical delegation and Bangladeshi experts, China will supply plant machinery and technical know-how while Bangladesh side would be fully responsible for execution of the project. According to Bangladesh Chemical Industries Corporation sources this will be for the first time that the Bangladesh experts had been given responsibility to handle execution of a major industries like this. [as published] The factory will have an annual production capacity of one lakh ton, will be completed by December, 1984. [Text] [Dacca THE BANGLADESH TIMES in English 19 Dec 80 p 1]

MALAYSIAN DELEGATION--A 19-member Malaysian officials team now in Dacca on a three-day visit in connection with the celebration of the 15th century Hijrah, called on Religious Affairs Minister Mr Abdur Rahman, at his chamber in the secretariat on Saturday, reports BSS. The Malaysian team led by Datuk Haji Abdul Hamid Egoh, State Secretary Sabah, discussed Islamic Affairs with the Religious Affairs Minister. They also exchanged views on further strengthening Islamic brotherhood. Particulalry the existing friendly and fraternal relations between Bangladesh and Malaysia. NEW PACT ENVISAGES MASSIVE EXPORTS TO USSR

New Delhi PATRIOT in English 18 Dec 80 pp 1, 7

[Text] The long-term Indo-USSR trade agreement for 1981-85, signed during the Soviet President L. I. Brezhnev's visit envisages massive Indian exports to USSR as well as diversification of products, reports PTI.

The agreement, which was signed by Soviet Deputy Prime Minister I. V. Arkhipov and Minister for Commerce Pranab Mukherjee affirms that the two countries would continue with the present rupee payment system for the next five years.

Both countries have undertaken, under the agreement, to consult each other for the exploration of new avenues in the fields of industrial cooperation as well as for further utilisation of existing and the creation of additional production capacities in each country on a mutually beneficial basis with a view to bring about further increase in bilateral trade.

A significant clause in the agreement stipulates development of cooperation between industrial and commercial enterprises in the two countries for pooling their resources and knowhow with a view to jointly cultivating markets in third countries and meeting their needs arising from the programmes of industrial development in third countries.

Under the agreement, USSR will continue to supply machinery, equipment and spare parts for the mining, construction, power and other industries, crude oil and petroleum products, fertilizers, chemicals and pharmaceutical products, steel, non-ferrous items like zinc and nickel, cotton, asbestos, refractories, newsprint, woodpulp and pedigree sheep.

Over 100 Items

From the Indian side, more than a hundred items are expected to be exported yearly. Among agricultural products are tea, coffee, pepper, cashew, groundnuts, tobacco, fruit juices, fresh and canned fruits.

India is also expected to export fresh and dehydrated vegetables, including onions and garlic. Among minerals, the major items of export will be mica, alumina and pig iron.

India is also expected to export a wide variety of chemicals and allied items and these will include medicines and pharmaceutical preparations, paints, dyestuffs,

castor oil, sandalwood oil, detergents, cosmetic goods, linoleum, vacuum flasks and wire enamel.

A major thrust in the export of Indian leather and leather manufactures is also envisaged. Among the textile and other items to be exported in the next five years are printed cotton cloth, industrial fabrics linen and other materials, readymade garments, knitwear, carpets, jute goods and coir products.

OPEC ACTION RAISES INDIA'S CRUDE OIL PRICE

Bombay THE TIMES OF INDIA in English 17 Dec 80 p 1

[Text] Bali, December 16 (UNI).

India's crude oil import bill will go up by at least Rs. 500 crores per year as a result of the latest OPEC oil price hike announced here today, according to authoritative oil industry sources.

The increase in the prices, expected to be effective from January, works out at an average of ten per cent in the case of countries from where India is importing.

The new OPEC oil prices range from $32 to a maximum of $41 a barrel. Existing OPEC member country prices vary from $30 to $37 per barrel.

The price of marker crude (Arabian light) produced by Saudi Arabia has been raised by two dollars per barrel to $32.

Study Planned

Announcing the new price decision at a press conference, the OPEC secretary general, Mr. Rene Ortis, said prices would be reviewed at the OPEC ministerial conference scheduled to be held in Vienna on May 25, 1981.

OPEC's new president, Dr. Subroto, who is Indonesia's minister for energy, said oil importing developing countries would be assisted "as much as possible."

India could hopefully expect substantial financial assistance to meet its balance of payment difficulties on the basis of the latest OPEC proposals. OPEC will finalise these proposals in the new year on the criteria of low per capita consumption of oil and per capita income.

The oil ministers, at their two-day session here, decided to authorise its secretary-general to conduct a feasibility study for setting up an institute for higher education in science and technology for developing countries.

India's oil import bill officially estimated at Rs. 5,000 crores earlier in the current financial year was expected to touch Rs. 5,500 crores because of spot purchases following the disruption in oil supplies from Iran and Iraq.

With the latest price hike, the import bill will go up to Rs. 6,000 crores in foreign exchange.

The government is expected to raise domestic petroleum prices by at least ten per cent in the new year.

India plans to import over 16 million tonnes of crude and seven million tonnes of petroleum products in 1981-82.

INDIA, UK WORK OUT HARRIER DELIVERY SCHEDULE

Bombay THE TIMES OF INDIA in English 17 Dec 80 p 7

[Text] New Delhi, December 16 (PTI): The delivery schedule for the jump-jet Harriers for the Indian navy has been worked out between the British Aerospace and the defence ministry.

The first squadron of the veritical and short take-off and landing naval jet planes with fixed wings would be delivered to the Indian navy sometime next year.

The squadron would also include two trainer aircraft required for training naval pilots.

The Indian version of the Harrier would be known as FRS-MK-51.

The aircraft would be able to operate from the Indian navy carrier, INS "Vikrant," which had recently undergone significant changes.

The Harriers have been modified to meet the requirements of the "customer country."

The Harriers will be single-seater close support and tactical reconnaisance aircraft fitted with a Pegasus engine.

The trainer will be a two-seater version, retaining the full combat capability of the single seater in terms of equipment and weapon carriage.

The advance version of the Harrier now incudes a "ski-jump" launching ramp designed to boost the short take-off performance of vectcted thrust aircraft. [as published]

The single-seat Harrier can fly for about seven hours and cover the range of 5,560 km.

It can fly at a speed of 1,186 km. per hour at a low height.

CPI(M) INVITED TO SEND DELEGATION TO PRC

Calcutta THE STATESMAN in English 22 Dec 80 p 9

[Text]

THE Chinese Communist Party has invited a CPI(M) delegation to visit that country. It is expected that a high-level CPI(M) team will go there to resume talks on the establishment of a party-to-party relationship between the two.

The CPI(M) leader, Mr Promode Das Gupta, said in Calcutta on Sunday that there was nothing new in the move to have this kind of relationship. At its seventh party congress in 1964, the CPI(M) had decided to send its political documents to all the Communist parties so that they could make their assessments.

He said there were differences within the international Communist movement, but there was one common point on the stand against imperialism. A party-to-party relationship could help in maintaining a dialogue on this issue. Although the CPI(M) had always stressed the importance of such party-to-party relationship, it was the Chinese who had now shown some interest in having links with the CPI(M).

Mr Das Gupta said that the establishment of such a relationship would not mean that "they can dictate to us or we can dictate to them". The current situation was such on account of the "uneven development of mass movements" that each Communist Party must make its own assessment of the situation in its country. One party could not simply follow another.

He said that by following the Soviet line, the CPI became isolated during the Emergency. Similarly, the Naxalities by following the Chinese had now broken up into many groups. "They used to call Mao Zedong their chairman. Now even in China that position is changing. Unless you apply your intelligence, it will lead to trouble".

The CPI(M) leader denied that his party had maintained a position of "equidistance" from both Russia and China. He said the term was a coinage of newspapers. It had no meaning. "Equidistance from what?" he asked, "not from Marxism-Leninism?"

He said the establishment of a party-to-party relationship with China would make no difference to the CPI(M)'s present position. The Chinese party had made many mistakes and the CPI(M) had many differences with it, but the CPI(M) believed that China was still a socialist country. Moreover, the Chinese were trying to correct the mistakes they had made in the past.

BENGAL CPI LEADERS CONCERNED OVER CONGRESS TRENDS

New Delhi PATRIOT in English 17 Dec 80 p 7

[Text] Calcutta, Dec 16--The State executive of the CPI expressed its deep concern at the anti-democratic trend displayed in the recently held AICC-I session.

The executive was concerned that "a large number of members including prominent Central Ministers spoke in favour of dismissing the Governments of West Bengal and Kerala".

It said that the mounting struggles of every section of the people against the steadily worsening conditions of life and for their just demands and democratic rights were described as anti-national attempts to create instability and chaos.

Introduction of Presidential form of Government in place of the present system was also freely achoed in the AICC-I session, it said.

The CPI warned all the citizens of West Bengal to be aware of this danger and build up powerful united protest of all-left and democratic forces against this threat and trend.

The executive committee also welcomed "the movement of the broad sections of the peasant masses including the agricultural workers that is sweeping across the country".

It added that the remunerative price of the agricultural commodities shall not automatically result in rise of price of the consumer goods and daily necessities.

For according to the State party "it is the traders and middlemen financed by the blackmoney and monopoly capital who, while cheating the peasants of reasonable price of the commodities they produce, fleece the common people by charging exorbitant price for the same commodities".

While the State party appreciated the West Bengal Government's decision to step into the market and purchase a large quantity of paddy, it regretted that price fixed by the Government, is Rs 109 per quintal, instead of what the peasant organisations had demanded.

It called upon the State Government to fix the paddy price at Rs 130 per quintal and the price of potato at Rs 100 per quintal.

FRENCH FIRM CONTRACTS TO BUILD ALUMINUM PLANT

LD131449 Paris LE MONDE in French 11-12 Jan 81 p 14

[Dispatch by Patrick Frances: "Agreement on Construction of Aluminum Plant by Pechiney Worth FR6.8 Billion"]

[Text] New Delhi--During President Giscard d'Estaing's visit to India in January 1980 several draft agreements were signed including the one of the aluminum complex in Orissa--a state situated on the country's eastern side south of Bengal. The agreement was part of a huge aluminum production program in which France was to head the technical, industrial and financial spheres. At the time Mr Deniau, then foreign trade minister, described the program as a "pilot project" in bilateral cooperation between the two countries.

The final contract between the French aluminum company, Pechiney--a branch of Pechiney Ugine Kuhlmann--and its state-owned Indian partner the National Aluminium Company was signed in New Delhi on Friday, 9 January, after several months of negotiations. After 5 years of studies and work the complex thus installed is to extract 2.4 million tons of bauxite annually from which 800,000 tons of alumina will be extracted with which 218,000 tons of aluminum will be produced in 1987--a figure higher than current Indian production which is around 200,000 tons.

In 1979-1980 India imported 76,000 tons of aluminum, which represents for that country a currency loss equal to 1.1 billion rupees (Note: 1 rupee equals around FR0.6).

The finance for this project, totaling $1.5 billion (the biggest investment ever made in India in the sphere of nonferrous metals) will be provided partly by $400 million from the French treasury (half in export credits and half in government-to-government credits), and also by a Euro-currency loan totaling $680 million granted by a consortium of French banks (Banque National de Paris, Societe Generale and the Bank of America-Paris), joined by the Central Bank of India. The rest will be contributed by the Indian Government.

In French economic circles the signing of this contract is regarded as a "major event," on the one hand because of the amount of money invested and on the other because of the use of advanced French technology in India. While the financial effort made by France is stressed, it is pointed out that this project will have positive effects on French industry (purchase of equipment), and it is pointed out that other factories which will use the aluminum produced should be installed around the development zone thus created in Orissa.

GANDHI SPEAKS TO DEFENSE MINISTRY COMMITTEE

Bombay THE TIMES OF INDIA in English 17 Dec 80 pp 1, 9

[Text] New Delhi, December 16.

The Prime Minister, Mrs. Indira Gandhi, said here today that India was not interested in destabilising Pakistan but the danger was that the leadership in that country might try to divert the attention of the people and for that "India is always there".

She told the members of the consultative committee of parliament attached to the ministry of defence that there were many problems in Pakistan, on its borders and inside the country.

Replying to a member who referred to the "liaison" between Pakistan and a West Asian country, Mrs. Gandhi said that did not make much difference to the geo-political situation in the Persian Gulf. The situation in the gid area was unstable even before the Iran-Iraq war.

A survey officially circulated to the members of the committee said the recent events in the region around India had a direct bearing on this country's security. The government was justifiably concerned over the recent moves to augment Pakistan's military capability. Such induction of arms could convert South Asia into a theatre of great power confrontation and threaten India's security.

The survey said the government had expressed concern that such developments could decelerate the process of normalisation of Indo-Pakistan relations. India's effort had been to take steps to defuse this situation. The Simla agreement had to be the basis of the efforts to normalise Indo-Pakistan relations.

India's geo-political and geo-strategic environment had become more complex and complicated because of big power confrontation into its immediate neighbourhood. The survey said the risk of the war between Iran and Iraq escalating further and, in the process, enlarging the area of confrontation had to be guarded against.

Mrs. Gandhi said while building up indigenous production India must go all out to get the latest technology. Agreeing with the suggestion of a member that India must strengthen its defence potential in terms of convential weapons Mrs. Gandhi said the government was keeping a watch on the new developments around the country, including in the nuclear field. "We have to be alert on our borders, including our long coast line," she said.

The minister of state for defence Mr. Shivraj V. Patil, told a member that retro-fitting of the Centurion tanks still with India was not an economic proposition. Retro-fitting would cost per piece about Rs. 19 lakhs and make the tank operational for seven more years. Against this a new tank would cost about Rs. 9 lakhs and be usable for 15 to 20 years. Experts were against retro-fitted Centurions, he said.

Mr. Patil assured the members that care had been taken to see that the tanks sold by Inida did not reach undesireable distinations. [as published] The spares of Centurions India had sold had been with this country for 20 to 22 years. The sale proceeds were much higher than their scrap value.

Detailing the various measures being taken to get reemployment for about 60,000 armed forces' personnel, including 900 officers, who retire every year Mr. Patil said one of the proposals under consideration was to create a national ecological development force and recruit ex-servicemen in a peace-keeping force.

He said several steps were being taken to improve the equipment used by troops deployed in high altitude areas.

DEFENSE PRODUCTION INCREASE PLAN APPROVED

Calcutta THE STATESMAN in English 15 Dec 80 p 1

[Text]

NEW DELHI, Dec. 14.—The Government has approved plans to increase by three to five times the indigenous production of aircraft, warships and sophisticated electronic equipment in the next five years, reports UNI.

Reliable sources say that year-to-year targets have been set for Hindustan Aeronautics, the Mazagon Docks, Bharat Electronic and the six other Defence public sector undertakings.

The plan seeks to increase the present level of HAL's annual production of Rs 170 crores to Rs 500 crores by 1988 and the Mazagon Docks' production level of Rs 60 crores to Rs 300 crores.

The plan takes note of Pakistan's massive build-up after the 1971 defeat and envisages the acquisition and development of contemporary technology in manufacturing items of bulk requirement. Discussions with some countries in this regard have either been completed or are nearing finalisation.

Pakistan has doubled its armed strength since the 1971 conflict and over Rs 3,000 crores of war equipment has been supplied to it free of cost by a West Asian country. At the same time, it has acquired the latest Crotale and Roland missile systems from France, which continues to supply modern aircraft to it.

The Indian plan, considered important by experts, will replace several of the obsolete items purchased during the 1964-68 period, like the Sukhoi SU-7 aircraft. But this time, the emphasis is on indigenous development rather than direct acquisition although technology for a particular system may be acquired.

In accordance with the plan, the Mazagon Docks is evolving a new missile boat design, integrating the Soviet and the Western systems. Such a concept has already been used by it in developing the British-origin Leanders, construction for which has started.

NORTHEAST CHIEF MINISTERS MEET AT BURNIHAT

Bombay THE TIMES OF INDIA in English 22 Dec 80 p 9

[Text] Shillong, December 21: The chief ministers and some opposition leaders of Meghalaya, Manipur, Nagaland and Mizoram yesterday appealed to the Assam agitation leaders and the Union government to find a solution of the "foreign nationals" problem expeditiously so that peace and normalcy could return to Assam and other parts of the north-eastern region.

The chief ministers and opposition leaders, who met at Burnihat, near Gauhati, adopted a resolution calling upon the agitation leaders to abjure violence and abstain from anti-national activities.

A committee comprising the chief ministers of Meghalaya, Manipur and Nagaland was constituted at the meeting. It had been entrusted with the task of contacting the concerned leaders in a bid to solve the "foreign nationals" problem.

The Meghalaya chief minister, Mr. B. B. Lyngdoh, who convened the meeting, told newsmen later that the chief ministers and opposition leaders of six states and Union territories in the region and offered their services for finding a solution to the problem.

While expressing concern over the sufferings of the people of the region because of the Assam agitation, the leaders decided to apprise the Prime Minister, Mrs. Indira Gandhi, of the deliberations of the Burnihat conference.

The chief ministers left for New Delhi today to attend a special meeting of the north-eastern council. They would raise the matter at the NEC meeting with a view to exploring avenues for ending the impasse in Assam.

INFORMATION MINISTER SPEAKS TO BIHAR NEWSMEN

Bombay THE TIMES OF INDIA in English 22 Dec 80 p 9

[Text] Patna, December 21: The minister for information and broadcasting, Mr. V. P. Sathe, yesterday repeated his advice to journalists not to sensationalise incidents like the Bhagalpur blindings or the Moradabad riots.

Inaugurating a conference of the Bihar working journalists' union, he said what had happened in Bhagalpur was very abominable but still the press should not go on repeating the same story.

He said exaggerated accounts of atrocities by the police only weakened the morale of the police force. Nothing should be done to make the guardians of law and order feel small.

He said there was need for discipline in society. No nation could progress without self-imposed discipline. Everybody must realise that, in a democratic society, there was greater need for discipline that in a totalitarian regime. [as published]

He announced that two transmitters each of 100 kw. would be installed in Bihar to strengthen the radio network in the state. The vividh bharti programme, which at present was relayed from one kw. transmitter in Patna, would in future be relayed from a more powerful transmitter of 20 kw.

NEWSPAPER REVIEWS INDIA'S PROGRESS IN SPACE

New Delhi PATRIOT in English 15, 16, 17, 18, 19 Dec 80

[15 Dec 80, pp 1, 7]

[Text] "No country will part with rocket technology for love, money or politics", says Dr V. R. Gowariker, director of the Vikram Sarabhai Space Centre at Thumba--Trivandrum in Kerala. What that means is that India, the seventh nation to send its own satellite into orbit atop its own rocket from its own base has had to develop the technology ab initio of industrial support, Indian space scientists still look forward to being able to launch their own geo-stationary multipurpose satellite, comparable to the best in the world, by the end of the 1980s. Our Special Correspondent, who recently toured Indian Space Research Organisation's bases at Shriharikota, Thumba, Ahmedabad and Bangalore, reports on the country's space progress.

Bangalore:

Space scientists treat rockets as babies. And when they themselves have given birth to these babies, the excitement and enthusiasm can become really infective. More so now when Indian space scientists confidently project that by the end of 80's, India would have:

--launched as many as 23 satellites with payloads up to 600 kg;

--launched two SLV-3 vehicles every year from March 1981;

--by 1986 build and launched its own 600 kg remote sensing satellite (IRS-One) in a polar orbit aboard a ultra-modern PSLV rocket with additional strap on rockets; [as published]

--a geo-stationary satellite aboard a still undisclosed multistage gigantic booster in the early 1990s that will bring India into the "state of the art" super space club, now dominated only by the US and the USSR. Astronauts, cosmonauts, space-labs and inter-planetary research would then become just a question of logistics.

Not a mean achievement, this, for a nation that gingerly stepped into space by firing a now primitive Nike-Apache rocket borrowed from the US from the coconut

groves of distant Thumba near land's end in Kerala, in 1963. Within six years it fired its own puny 10 kg rocket, sent the Aryabhatta into space on board a Soviet rocket a decade and a half later, and has only this year (in July) successfully orbitted the Rohini satellite, stop the indigenous SLV-3.

The Indian Space Research Organisation with its headquarters in Bangalore, is set with its Rs 800 crore, 10 year perspective plan in high technology self-reliance. And according to ISRO chief Prof Satish Dhawan, his senior space managers and the 10,000 scientists, engineers and technicians on the staff will achieve the target.

GIANT LEAP

The technological infrastructure has been expanded and geared up for the 'giant leap' and vigorous expansion is projected for all units of ISRO—the Vikram Sarabhai Space Centre at Trivandrum, where rockets are developed, the Space Applications Centre at Ahmedabad which designs uses for the satellite; the ISAC at Bangalore which designs satellites themselves; and the Sriharikota island launching range which occupies the entire island to launch, monitor and control rockets and satellites with the most sophisticated technology.

The effort, according to Prof Dhawan, is to create total self-sufficiency in research and engineering of rocket fuel, the rockets themselves the launch, the satellites and their ultimate exploitation in its entire field, including military possibilities. All these are highly sensitive in international geo-politics, and therefore demand total self-reliance at all stages.

MANY HURDLES

After a fortnight and a few thousand kilometres with space scientists at all the ISRO centres it seems clear that the ISRO programme has been able to progress at a rapid pace despite a near total lack of support in ancillary activity from the electronics and chemical industries paucity of funds for pure research and the inability of other governmental departments like the P and T the Agriculture Ministry and the I and B to schedule their projected programmes in pace with the ISRP progress.

There is considerable heartburning among senior scientists also to lack of governmental support to their projects at many levels and what some allege to be "positive reluctance to let us develop fully". As chief of the Space Applications Centre Prof Yash Pal bemoaned: "We can build all the ground stations needed for the Indian National Satellite to be launched by NASA in the US from Cape Kennedy space base but government still wants to import many of them."

There are also indications of simmering labour problem among technical staff and semi-trained labour. The large number of highly-trained junior and middle level scientists, as also a section of the handful of top-level science managers, complain of stagnation and atrophy in some of the research projects. But all of them agree that the frustration and professional problems in the ISRO are infinitesimal when compared to other organisations like the Bhabha Atomic Research Centre or electronics research.

According to Prof Dhavan, efforts are being made to ensure that such discontent is identified and remedial actions taken. A process has been initiated to let junior scientists approach the top man direct if they feel their research is being throttled by their immediate superiors. "Our 1500 scientists are our greatest asset and resources", says he.

Briefing newsmen at the end of their space centre tour, Prof Dhavan said the 10-year profile created by Vikram Sarabhai to give a direction to Indian space research had been followed, and exceeded. The next 10-year profile has also been created, and awaits execution. Sanction is also awaited for some of the more ambitious projects, including powerful multi-stage rockets for geo-stationary orbit launches and the mammoth liquid-stage rockets that are imperative for high-orbit satellite launches.

MANY MORE YEARS

Prof Dhavan denied that India's space effort was veering off at a tangent. "We are on proper course", he said. He, however, admitted that there was a large gulf between India's capacity and technology in developing sophisticated satellites and its booster technology. "It will take many years before we can use our own rockets to put our own satellites in geo-stationary orbits", he said.

Research, he said was going on at a high pace in all three spheres of ISRO's activity—launch vehicles, satellites, and application, apart from pure research. He denied that pure research was getting a disproportionate funding or that India was succumbing to international pressures which wanted it not to develop rocketry to its full potential.

In the 10-year scheme enunciated by Prof Dhavan, who is also Secretary to the Government in the Department of Space, the imminent next step in space is the launching of the APPLE satellite which will be boosted into space together with a European payload while sitting on the European Space Agency's ARIANNE rocket from Couron French space base in Latin America. APPLE, fabricated at ISAC at Bangalore, underwent rigorous tests on its sensitive sensing and recording equipment as well as its control rocket systems. The launching has been repeatedly delayed because the European rocket developed trouble but when launched in the first or second quarter of next year, APPLE will provide interesting data on water in the atmosphere.

From March 1981 onwards, the SLV rocket will become operational after a couple of developmental flights. Twice every years thereafter, the SLV series will put payloads into orbit, carrying a series of monitors and sensors now being developed for earth resource monitoring, climatology and the like. The payloads will be heavier than the 45 kg Rohini satellite which was shot up by SLV-3.

ISRO's ace-up-its sleeve is the 600 kg indigenously built Indian Remote Sensing Satellite (IRS-I) scheduled for launch in 1983. Not only will the most sophisticated of its kind, its launch

rocket, the Polar Satellite Launch Vehicle, will be the heaviest and most complicated so far, incorporating two 'strap-on' rockets with the main vehicle. In other words, it will be almost like three SLVs glued together for more power. The technology, however, is not simple, and the mathematics of the project are still being worked out.

POLAR ORBIT

The Polar orbit planned for IRS-1 is a complicated one, as it involves the satellite revolving around the earth from north pole to south pole, instead of along the equator, east to west. This requires high power, but because of its orbit which maintains its place with respect to the sun in space, it offers a wider scope of mapping the earth.

According to Prof Dhawan, on the success of the PSLV-IRS combination will hang the future of the most amoitious project of them all — the coveted geo stationary orbit. Geo-stationary orbits have to be put into space at a distance of 36,000 kilometres. At that height, and moving at speeds of over 23,000 km per hour, they look as if they are stationary when seen from any point on the surface of the earth covered by them. This is essential if they are to be used for communications, constant weather forecast, telephones or television broadcasting on an all-India basis.

It is learnt that Government has taken a policy decision to sanction the project also.

While India is buying the INSAT satellite from NASA and paying for its launch next year, it will send up Bhaskara-II later next year atop a Soviet rocket to save time and money. The USSR has agreed to launch it free of cost under an agreement signed in June last year.

Bhaskara-II will look like its first namesake, but will have modified TV and other systems to prevent the type of 'blindness' that struck Bhaskara-I whose camera failed. Solar energy and other experiments are also planned.

Prof Dhavan said India was launching INSAT — total cost exceeding Rs 80 crores — so that it did not lose 'parking space' allotted to it in the geo-stationary orbit. This space is allotted by the UN sponsored International Wireless Authority to ensure that the space is not monopolised by a few. Countries wanting space have to apply beforehand and have to put in their satellites within a few years, or the space is given to someone else. India has so far not been able to get the best position in the orbital parking lot, but what it has been given is still very good, Prof Dhavan said.

The space chief also disclosed that both Indonesia and Britain had shown interest in the fast developing rocket launch facilities in India, and were asking if they could launch their satellites from ISRO's facilities.

[16 Dec 80, pp 1, 8]

[Text] Trivandrum:

With "bigger, stronger better" as their motto, Indian rocket scientists are experimenting with radically new fuels, construction materials and sophisticated guidance and control gadgetry to bridge the gap between the country's booster technology and its satellite sophistication.

A large chunk of highly trained manpower and funds is being used to provide ultra-modern test and research facilities, and fabrication "clean rooms" clear than most operation theatres for the purpose of the Vikram Sarabhai Space Centre on Veli Hills near Trivandrum and Thumba and the lush tropical island of Sriharikota off the Andhra coast north of Madras, called SHAR. [as published]

Working totally on their own and starting from first principles, the ISRO launch vehicle, auxiliary propulsion package engineers and fuel chemists have made many breakthroughs that are not as spectacular perhaps as the launching of the SLV in July last year, but far more important to the future of rocketry in the country.

The current goal of much of this research is the gigantic Polar Satellite Launch Vehicle (PSLV), a complex multi-stage rocket needed to put a heavy satellite into orbit around the earth's poles instead of the simpler equitorial orbits generally used. The polar orbit, though requires high energy in its boost rockets, offers tremendous advantages for earth observation because of its peculiar movement around the earth in a circle that keeps it always in line with the sun even as the earth rotates beneath it.

[illegible] system

The development of a rocket system demands parallel research in three differing branches of science--chemistry for the fuel compositions, metallurgy for the [illegible] structures and rocket bodies, and electronics for the "brain" of the rocket. In contrast to popular imagination that all the "brains" in the rocket are in its nose, pay-load or satellite, every "stage" of the rocket has its on-board integrated system of processors and timers that monitor pressure and temperatures, [illegible] and angles and take instant corrective action.

Among the developments that have been successful are a new variety of polymer fuel made not from petroleum, but from castor oil, apart from fibre-glass technology for rocket tanks and motors and for antennas, high technology machining apart from the entire casting of huge rocket motors in a single high-precision [illegible].

The [illegible] perhaps would have been much faster if Indian industry, specially the [illegible] and electronics group, had a research and development area which could [illegible] the rocket scientists of primary and time-consuming developmental activity [illegible] other fields. As it is, though the engineering industries are coming up [illegible] way to supply sophisticated and cumbersome equipment and fabricating [illegible] test and launch facilities, scientists still have to produce--from cost [illegible] pilot plant stage--everything else they need.

[illegible] is the worst offender, and most space-rated components, cheap or [illegible], still have to be imported, according to the scientists. The director [illegible] the Vikram Sarabhai Space Centre, Prof Gowriker, and chief of the SHAR [illegible] facility Colonel Pant are unanimous in their opinion that [illegible] industry [illegible] up with their R and D things would go much faster.

[illegible] is the main centre for research and development of rockets. [illegible] primarily as a gigantic launch pad, carries on significant [illegible] [illegible] the initial research has been completed. Both SHAR and Thumba, or [illegible] Thumba Equitorial Rocket Launching Station) as it is called, have highly [illegible] launching pads and huge antennas linked to computers to track and monitor [illegible] and issue them commands from the ground. Unlike Thumba, SHAR also has a [illegible] in keeping track of satellites.

[illegible] when the sleepy fishermen's hamlet of Thumba was chosen [illegible] launch [illegible] it was. Just on the magnetic equator of the earth--the pathway [illegible] the north pole and the south pole as pointed out by the needle [illegible] a [illegible] compass. With scientists working their offices out of a disused church and [illegible] stage, which still stand, India entered the space age when a [illegible] rocket was fired in 1963. [illegible] published. In 1969, Thumba saw the [illegible] the first Indian made rocket--[illegible] ten kg in weight, but [illegible] the fore-runner of the 17-tonner SLV-3 of 1980.

2

[illegible] and tremendously, and today employs over 5,000 men and women. [illegible] research and development, a Space Science and Technology Centre [illegible] set up in the complex in 1965. Today there are six main centres [illegible]

activity within the complex. They are, apart from SSTC, the Rocket Propellant Plant (RPP), the Rocket Fabrication Facility (RFF), the Propellant Fuel Complex (PFC), the Reinforced Plastics Centre (REPLACE) and the Ammonium Perchlorate Experimental Plant (APEP).

The main continuing projects at VSSC include the Rohini Sound sounding rocket programme for probing the earth's atmosphere, the Monex experiment series sponsored by the UN in which Soviet rockets are fired every Wednesday and development of the future generations of the SLV rocket and the PSLV.

How exactly is a rocket developed? It begins on the drawingboard in the Avionics group headed by Dr Abdul Kalam, chief for the SLV-3 project. Aeronautics and avionics combine to calculate the shape and how the rocket will stand up to the strenuous business of flying off in the face of gravity. Theory has to be repeatedly verified, and the centre boasts of highly complex testing facilities that practically tear a rocket apart before passing it for the actual launch. Most equipment for this is made at the centre itself, or under its supervision.

This includes a hypersonic wind tunnel which can develop air speeds many times the speed of sound. As also a gigantic shaker that can jolt every nut, bolt and welded joint out of kilter. Such tests are needed for developing the stabilisation system for rockets and to prove that every component will live through the launching.

The centre has also developed sophisticated telemetry and control systems, both for equipment on board the rockets and for ground monitoring.

FUEL EXPERIMENT

Its most challenging, and the most dangerous, work is of the fuel selections. Working through remote control and seeing through closed circuit television monitors, they experiment with different plastic and solid fuels and highly corrosive liquids, each gram of which can explode with blasting force. At every stage, repeated tests are carried out in actual models of the rockets.

As a result of this activity, VSSC scientists have created high-energy propellants name by a confusing array of acronyms, including HEF-20, PBAN, CTBP and CMDB. UDMH, a widely used storable liquid fuel has now been licensed to a public sector manufacturer. The centre is looking for more manufacturers to take bulk production of many fuels while it continues further research.

With the fuel available, the VSSC also casts the smaller rockets itself in huge machines. The bigger rockets are cast at SHAR where they also undergo similar tests.

At Thumba, the space centre actually fires its rockets in test flights. Thumba is also a major international facility for environment and climatology experiments and is freely used by many nations.

The Government has reassured that there are no plans to shift the focus from VSSC and Thumba. On the other hand, they are in for further expansion. The assurance comes in the wake of protests from staff unions who feared that facilities and equipment were being shifted from Trivandrum.

The other rocket area is SHAR, an island that has stepped from nude tribal age straight into the space age, and promises to become one of the biggest space centres in the world. Having an entire island is a great advantage, and ISRO is using it to the full. SHAR was chosen because it is on the east coast. Space-going vehicles are launched in an easterly direction so they can use the force of the earth's west-to-east movement also. The firewood jungle growth has now given place to compact buildings separated from each other by miles of jungle as much for security as for safety because of the highly explosive nature of the activities going on there.

SHAR made the world map when its launch pad was used on 18 July 1980 to launch SLV-3 which put the Rohini satellite into orbit. The satellite is alive and well, says Colonel Pant, the chief and promises to send data for many more months.

Located on the island are factories for manufacturing rocket propellants, for static ground testing of large rockets and flight tests of other rockets developed at VSSC.

CONTROL ROOM

SHAR, with a huge computer system, is also the nerve centre for tracking and communicating to satellites. For this, it has a highly sophisticated control room.

For launching of rockets, which is its prime activity, SHAR boasts of a universal launching pad and F-4 launchers as part of its launch complex. No man can go near the pad when a rocket is in position, and the block house has equipment to monitor and control all activities automatically, including the moving away of a huge pre-fabricated shed weighing 200 tonnes. In bad weather, the huge building covers the launch pad, but just prior to countdown, it is towed away by a huge winch.

SHAR's computers have their information cables connecting all major facilities on the island for instant decision making. They take over the last ten minutes of the launch, when only electronic machines can keep track of many thousand of different equipments at the same time. The actual countdown, "T MINUS ONE MINUTE .... Ten, nine eight ... three, two ... one" is spoken by an engineer in the block house more for the benefit of the human listeners.

Once the rocket, and hopefully its satellite, are aloft, the complicated and extensive antennas of the telemetry system take over. The record the journey of the

rocket, its health and the information that it relays. Once the rocket is spent and the satellite is in orbit the antennas keep track of it, receive the data it sends—5 million "bits" of information at a time, perhaps—and relays commands to it for opening a camera, or making a specific experiment.

The primary tracking station ISTRAC is located at SHAR, and forms a crucial link with the Ahmedabad ground station, the Car Nicobar and Trivandrum systems—and a new one coming up in the Fiji islands in the Pacific—for letting scientists know what is happening to a rocket or satellite at any given moment.

[17 Dec 80, pp 1, 8]

[Text] Ahmedabad:

India's satellite-makers are in an embarrassing quandary. [as published] They have done what they were asked to, at record speed, but are discovering that they will have to wait quite some time because everybody else, their foreign collaborators and Indian users including, have still to catch up.

India built the APPLE satellite, a fully indigenous experimental communications satellite meant to be put in a geo-stationary orbit by the Arianne rocket of the European Space Agency. APPLE (for Arianne Payload Experiment) was tested rigorously in India, and again in Toulouse in France. It was then taken to the Courou launch pad in French Guiana in Latin America to be "mated" to the Arianne rocket. [as published] APPLE was the middle satellite in a package of three--the other two European--which Arianne would put in a "parking orbit" over the earth. From there on, the three satellites were to be on their own, and India itself was to control APPLE's further journey into a geo-stationary orbit.

The entire project has gone into a long, and suspenseful wait because the European rocket has hit unsuspected snags. Its first test launch was successful, but the second launch met with a diaster. For the third launch, various target dates were fixed, but none has been kept. It is still uncertain when APPLE will be sent aloft--perhaps in March or June—and according to one pessimistic opinion, only towards the end of next year. Scientists are keeping their fingers crossed, because much hope rides with APPLE, which is to test Indian space technology and a host of equipment in deep space.

A different form of wait is on for the first Generation Indian National Satellite System INSAT-I being build by Ford Aerospace and scheduled to be launched from NASA's Cape Kennedy by their own rockets for a total payment of about Rs 50 crores. The satellite is to be launched either by a Delta rocket or the reusable futuristic space shuttle vehicle of NASA.

It has been designed as a joint project of the Indian Space Research Organisation, the P and T, the Communications, Agriculture and Information and Broadcasting Ministries and the meteorological office. It would help the Communications Ministry expand telephone and microwave grids, the met office to forecast weather and the I and B people to give every village a television if they desired.

Space scientists however fear that most of the users will not have the infrastructure nor the readiness to use the facility when it becomes available. The worst off is the Information and Broadcasting Ministry. A Cabinet committee has now been set up to coordinate the activity of the Ministries.

Scientists are also sore at what they say is the reluctance of the authorities to let them go full steam ahead with building of ground stations for INSAT and its succeeding satellites--the fuly indigenous one being ready in a decade. The Department of Space finally decided it will import only four ground stations. Scientists maintain that even this import is not necessary.

The two centres directly involved in making and exploiting satellites are the Space Applications Centre (SAC) near Ahmedabad headed by Prof Yash Pal and the ISRO Satellite Centre (ISAC) stationed in a series of industrial hutments in Punea near Bangalore.

The difference between the two is that while ISAC actually builds the satellites and tests them for space-worthiness, SAC has to develop the technology to make the satellite serve the nation's use. SAC also involves itself in the technology for on-board monitors, cameras and sensing equipment and acts as a liaison with satellite users, providing them ground stations, training and the like.

Both of them are gearing themselves for the country's satellite programme which began when Aryabhatta went into orbit atop a Soviet rocket. On 7 June, 1979, Bhaskara was also launched into orbit, again from a Soviet cosmodrome. Bhaskara had been totally fabricated by ISAC and SAC. ISAC was responsible for the over-all management of the satellite, while SAC provided the two main application payloads--a TV camera system and a microwave imaging system to map weather, climate and geological profiles of the Indian land-mass.

After the successful launching of Rohini on the Indian vehicle SLV-3 this year, ISAC posted the APPLE craft to France. It is now working on the Satellite for Earth Observation (SEO). SEO-II, as it is called, is a modification of Bhaskara, and is expected to be launched some time in the second half of 1981. It will concentrate on mapping the water content in the atmosphere for predicting famines and monsoons, floods and droughts.

SEO-II is near complete, and ISAC has moved ahead with the Indian Remote Sensing Satellite (IRS) which is being designed to carry even more sophisticated equipment, including multi-spectral scanners and linear imaging self-scanning systems, for photographing the earth. The target is the polar satellite of the 1990s.

The point about ISAC is its utilisation of Indian capability in non-space technoloy towards the making of satellites, says director U R Rao. [as published]

While ISAC is oriented towards technology and space engineering, SAC at Ahmedabad is a multi-discipline unit where sociologists and film makers, TV producers and story-tellers have equal pride of place. This is because SAC deals as much in the solf-ware of space as in its hardward, according to Prof Yash Pal, the ebullient director who has no patience with departments that cannot keep pace with India's space progress.

SAC, set up in 1972 on a futuristic garden complex designed by Vikram Sarabhai, the father of Indian space research, shows in every brick the foresight of the pioneers at indigenous space endeavour--Nehru, Bhabha, and Sarabhai.

SAC has many sectors of activity, including communications, remote sensing and software projects, apart from highly modern technical services, test and evaluation

organisations and the clean-room for fabricating the actual space-going payloads. An incongruous facility is a small television studio which has been set up to prove that colleges, universities and evey Doordarshan can set up a TV studio on a humble scale with only about 2 to 5 lakh of rupees, without compromising on quality.

Sociological research on the impact of mass communications is a major activity at SAC, which was deeply involved in the Satellite Instructional Television experiment in 1975.

Scientists and technicians at SAC have developed ground receiving and telecommand equipment to keep in touch with satellites, to tell them what to do, and to receive information they send for processing and use.

As part of this activity, they have developed many payload components, including cameras and radio-equipment. A ship-borne communications terminal is being constructed and a large number of mobile antennas have already been completed. In the more complex research activity they have developed multi-spectral scanners and an image processing in which a satellite image can be instantaneously colour coded to tell what crops are being grown where, what are the temperature zones, and where it is likely to rain.

SAC is the real link between the space craft and the common man. It has developed a complete computer based system for converting the space data into usable information. As an example of this, Prof Yash Pal cites the example of the Kerala Idduki Project in collaboration with the State Land Board. The SAC trained personnel, and prepared land-use, geological and other maps of the district. The maps were presented to the Kerala Chief Minister in October last and will be of tremendous use for planning various projects in the area.

A little known aspect of SAC is its soft-ware involvement. The software group called SSG is over-all in charge for programmes ranging from TV plays and educational films to social research on how science interacts with society, developing low cost communications hardware and other equipment models.

At present, it produces a 30-minute TV programme every day for the Kheda area in Gujarat. It is continuing research in the post-SITE activity and its social scientists have published a series of detailed analysis on how the coming of TV affected the 2,400 villages covered by the SITE experiment in which a borrowed satellite was used to bring television to the country's hinterland.

[18 Dec 80, pp 1, 7]

[Text] Trivandrum:

What does a Malabar pearl fisherman have in common with a heart surgeon, an anthropologist with the University Grants Commission and a district collector in the coastal Andhra area with a resident of a village in the Uttarkhand area of UP?

They are all benefiting from the activities of India's space scientists who have issued a general invitation to entrepreneurs and industry to come take up for production the many innovations that have successfully done at ISRO's centres in

Ahmedabad, Trivandrum, Bangalore and in laboratories all over the country. [as published]

For instance, the Vikram Sarabhai Space Centre (VSSC) here has done tremendous research in fibre-reinforced plastics which they use in rocket cones as heat shields and in satellites as fuel tanks. The same material they have used to make high-strength and indestructible floats that are being used in the sea-cultivation of oysters. They can also be used for fishermen's boats and anywhere else where the corrosiveness of the sea poses a threat.

For the heart surgeon, the ISRO satellite centre at Bangalore has developed an intravenous blood pressure device that measures even minute changes in the pressure even as a heart surgery is in progress. The device is a direct off-shoot of highly sensitive "transducers" developed for gauging all sorts of pressures on board rockets and satellites. The medical transducer can be sterilised, is comparatively cheap and promises to become an integral part of the equipment of all operation theatres, scientists say.

The anthropologists and archaeologists have been more aware of the developments at ISRO's physical research laboratory where not only are moon rocks sliced and studied, but major emphasis is laid on the carbob-dating unit. [as published] The unit, which helps archaeologists to accurately find out the date of cultures and ancient men by analysing pieces of wood or shreds of other artifacts, has already done many surveys, including one on the pre-history of the Kashmir valley.

For the farmer and the deputy collector, the spin-off from space is of a more vital nature. Bhaskara for instance has been sending photographs of the snow on the Himalayas--how it melts and how much it melts, information which can determine how much water will the rivers have and if there is danger of landslides.

The coastal district collector can benefit from early warning about cyclones, and about monsoons, and can plan evacuation strategies or fertiliser and pest control measures to help the farmers. However, much still needs be done on the ground to make the disaster forecast really effective, because the slow moving traditional procedures have not got used to the space speed. "At our own island base at Sriharikota, which is prone to cyclones, we can take precautions within hours of a warning, but it is a moot question how long it will take for entire villages to be evacuated even if the satellite sends a warning", said a concerned scientist.

And finally, ISRO's lasting contribution to the general development of science and technology in the country is its fruitful colaboration with the UGC and laboratories in various institutions for pure research and science education, says Prof Yesh Pal. [as published]

ISRO has a very active unit for technology transfer at the VSSC, whose only grudge is that it is not getting more clients. In a two-way transaction, ISRO promises technical help for production of various items, and then promises to buy them back so that it does not have to divert its energies into production of ancillaries.

In collaboration with the Hindustan Aeronautics, ISRO has supplied technology and is training personnel in telemetry, fabrication and other sensentive chores. [as published]

In the power sector, ISRO and the Kerala State Electricity Board are jointly developing infra-red sensors for remote-detection of cable faults. With the HMT and the Central Machine Tools Institute, ISRO is developing special machine tools for its future rocket programme.

ISRO signed agreements with the Gujarat Communications and Electronics for close circuit television, as also with Keltron for various sophisticated equipment. As an aside, it is helping two industries to manufacture highly effective fire-fighting chemicals, including a dry extinguisher.

Trial marketing has also started for ISRO Polyol, a polymer developed from castor oil.

The VSSC has also designed and developed silos for grain storage and fibre-glass slotted pipes for tube-wells which will neither rust nor decay even in hostile conditions. Cheaper than steel pipes, they can be used on all types of soils.

ISRO research has also finished the need to import impeller blades for the chemical industry plants. These blades, used in pumps of various sorts, become inoperative very fast because the chemical eats away the metal. The high-strength fibre glass substitutes are as strong, and last many times longer.

An exciting prospect lies in the development of using fibre-glass technology for protuded sections, which are likely angle-irons and can be used in prefabricated structures. [as published] The pricing is still a problem because the ingradients have a high excise levy, but the Government has been approached to help private entrepreneurs set up industries to manufacture the item. [as published]

ISRO takes pride in its link with the educational and research institutes and the University Grants Commission. It is subsidising research in scores of laboratories all over the country in diverse fields.

A UGC-ISRO coordination committee was constituted towards the end of 1976 for joint cooperative programmes on teaching, training and research at the universities and academic institutions in the broad areas of space sciences, applications and technology.

ISRO plans to make its centres a training ground for university scientists in applications of space technology and its spin-offs.

[19 Dec 80, pp 1, 7]

[Text] Sriharikota:

This island in the Bay of Bengal is known as Shar in the jargon of India's space scientists. Like many other places (Ahmedabad's Satellite Applications Centre for instance), it was almost personally chosen as the site of India's ultra-modern rocket base by Vikram Sarabhai himself long before India had even launched its first puny home-made rocket.

Sarabhai's credo about India's self-sufficiency in science and technology permeates the space-base, as it professedly does the handful of men, many picked personally by him, who are in charge of the Indian Space Research Organisation and its projects.

SRO, with the Physical Research Organisation, forms part of the Department of Space, directly under the charge of the Prime Minister. Under ISRO are the four centres--the SAC of Ahmedabad, the Vikram Sarabhai Space Centre of Trivandrum, ISAC at Bangalore and the launchpad at Shar.

Each of the centres has a director, who together form the ISRO council headed by Prof Satish Dhawan which oversees the functioning of the various units, formulates guidelines for execution of Government policies and ultimately is responsible for the country's space endeavour.

The persons heading the various units share many things in common, although their basic fields of training or studies differ widely--from pure physics to engineering to the army. Fiercely committed to the concept of self-sufficiency, they display a childlike enthusiasm as they talk of the achievements, major or minor. Each one, also, is an internationally known scientist in his own right.

Prof Satish Dhawan, the ISRO chief and secretary to the Government of India in the Department of Space, is an aeronautical engineer, who also holds an MA degree in English literature. Trained at Minnesota and the California Institute of Technology, he received a Ph D in aeronautics and mathematics in 1951. Beginning his career as a senior scientific officer at the Aeronautics Department of the Indian Institute of Science at Bangalore, he rose to be its director in 1963, and continues to hold the post.

In June 1972, he was appointed chairman of ISRO and secretary in the Department of Space. He is also the chairman of the National Committee for Space Research, a member of the National Committee on Science and Technology, the Aeronautics Research and Development Board and president of the Indian Academy of Sciences.

He has authored many research papers on fluid mechanics and issues of super-fast flight. Much honoured by Indian educational institutions, he was awarded the Padma Shri in 1966, and the Padma Bhushan in 1971.

Prof Yash Pal, who this year was awarded the Marconi International Fellowship award, heads the Space Applications Centre at Ahmedabad where he is directly in charge of not only what instruments are put aboard a satellite, but also about how the satellite can be used for the betterment of the people's lot. A Padma Bhushan, Prof Yash Pal is a physicist who received his doctorate from Massachusetts Institute of Technology and has conducted extensive research on cosmic rays, fundamental particles and infrared astronomy.

A professor of physics at the Tata Institute for Fundamental Research at Bombay, he has been active in initiating a programme of curriculum development in school science. He was also deeply involved in the Satellite Instructional Television Experiment in 1975.

An enthusiast on the software aspects of space research, Prof Yash Pal is a member of the Film and Television Institute Academic Council and chairman of the National Council of Science Museums. He has been appointed the secretary general for the second United Nations Conference on the Exploration and Peaceful Uses of Outer Space to be held in 1982.

Dr Vasant Gowariker heads the Vikram Sarabhai Space Centre at Trivandrum and is responsible for developments in booster technology and research in rockets. A Ph.D in chemical engineering from Birmingham, UK, he was a senior scientist with the UK Atomic Energy Authority before coming to India. He headed the propellant engineering division at ISRO from 1967, and took over as director of VSSC in 1979. At ISRO, Dr Gowariker has been responsible for the establishment of the Solid Propellant Space Booster Plant, the Ammonia Perchlorate Experiment, the propellant fuel complex and the latest polymer complex.

The head of the ISRO Satellite Centre (ISAC) at Bangalore is Prof U Rao, the man actually responsible for the fabrication of Indian satellites. Educated at Benares and Madras, he joined the Physical Research Laboratory in 1954 and worked under Dr Vikram Sarabhai in the field of cosmic rays.

Going for a teaching assignment to the US, Prof Rao was the principal investigator scientist for the cosmic ray experiments which were successfully flown on the space crafts Pioneer 6, 7, 8 and 9 deep space probes and Explorer 34 and 41 satellites, his researches being hailed as pioneering efforts bringing new insights into interplanetry physics.

Prof Rao joined the PRL in 1966 and continued his investigations into X-ray, cosmic rays and baloon, rocket and satellite payloads. He was asked by Vikram Sarabhai to organise the satellite systems division at VSSC in 1970 and when ISAC was established he took over the charge of designing, fabricating

and launching all ISRO satellites. In fact, the 'house-hunting' for the SHAR island was done by Prof Rao with Prof Chitnis.

Prof Rao is a winner of the NASA group achievement award as well as a medal of honour by the USSR Academy of Sciences. He was awarded the Padma Bhushan in 1976.

The director of the SHAR Space base in Col N Pant, former army officer with a degree in advanced physics. Deputed from the Army to the Department of Atomic Energy in 1965, he specialised in satellite communications. He was the chief systems engineer for India's first commercial earth station at ARVI.

A former Professor of wireless at the Military Academy, Col Pant is responsible for the actual launching of satellite bearing vehicles, tracking them during flight and then communicating with the space craft.

CSO: 4220

FAILURE OF FIRST ROCKET BLAMED ON SOLENOID

New Delhi PATRIOT in English 15 Dec 80 p 7

[Text] WHY did the first launch of The satellite Launch Vehicle (SLV) fail? Considerable controversy still shrouds the answers although a high level technical committee appointed by the Indian Space Research Organisation has already submitted its report after going through the research data the blue-prints of the rocket and innumerable replays of the video-taped launch from Sriharikota earlier this year.

"SLV-3 E-1," as the ill-fated rocket was called (SLV) in the name of the rocket class, and E-1 for experimental rocket one its ISRO designation) plunged into the Bay of Bengal about 300 KM from its launch pad on the island of Sriharikota in Andhra Pradesh. There have been no efforts to salvage it from the turbulent depths of the bay, and there it lies, keeping its secrets to itself.

The enquiry report however puts the blame on a "solenoid," an electro-magnetic device that acts like a valve for the liquid fuel used in a ring of small control rockets on the second stage of the massive vehicle. The fuel used was the highly corrosive red fuming nitric acid and hydrazine, with the acid helping as an oxidizer for the hydrogen in hydrazine to burn.

Each stage of the four stage rocket has these control systems to keep it on course. As the rocket goes upwards, the control mini-rockets come into play to offset wind buffeting on minor malfunctions which can sway the long main rocket and take it off its course.

"It was a silly thing," says the Head of Rocket Research Dr Gowarikar at Thumba. The second stage failed because there was no fuel in the control rocket system. Why was there no fuel? 'Because it had all leaked out when the valve failed and no one knew.' Why did the valve fail? "Because a speck of dust may have jammed its pistons which have so close tolerance that even a particle of microscopic dimensions can stop them. They do not use lubricants as they have to work in space vacuum."

And why could no one notice the fuel running off although there were reports that, ground scientists saw an un-explained puff of smoke belching out of the rocket fuselage as it stood on its launch pad just six minutes before take off?

According to ISRO Chief Satish Dhawan, the test launch was not a failure as its first stage worked perfectly and 85 per cent of the systems on board had sent back relevant date. But, as he pointed out, a lakh of components and scores of kilometres of wiring went into the vehicle, and though repeatedly tested any one thing could have malfunctioned.

"We could have aborted the launch, and faced a possible explosion on the pad itself. We decided to go through with the launch," said Prof. Dhawan.

He said the enquiry report had found that the solenoid was to be blamed. About eight minutes before lift-off —or 'T minus Eight and counting', as it is called in the count-down jargon — the computer which was finally in control send a pulse to open the valves so that catalysts could activate the hydrazine and prepare the hydrogen fuel gas for the mini-control rockets.

The computer than sent another pulse to close the valves. All of them closed, barring one. The computer data coming into control room denoted some fall in pressure in the fuel vessel on stage two, "but it was within the control limits" and at first glance did not dictate drastic action, Prof Dhawan said.

(The last 10 minutes of the countdown are taken over by the computer as no human being can take decisions for the 6,000 parameters that have to be continuously checked).

Ideally, the countdown should have been stopped at this stage, and efforts made to find the fault, scientists say. Prof Dhawan demurred. "We would have faced an explosion", he said though agreeing that the control scientists could take over from the computer if the programme director so ordered.

The decision for lift off was maintained. The rocket lifted off and the first stage fired beautifully. After the first stage separated after burning out, the second stage also fired in the proper manner. Then the rocket went out of control. It veered to one side, went into a bullet like trajectory and fell into the sea. The control system had just not worked.

The scientists involved in the solenoid development hotly contest that their equipment failed. "The solenoids worked", said a senior scientist. "It was a human error", he maintained.

The scientists subscribing to the human error theory say, the safety parameters had not been calculated properly, otherwise the drop in pressure if 12 litres of acid drained out of its bottle could have become immediately noticeable and the launch could have been delayed till the mistake was corrected.

However, much has flown from the E-1 failure, which will mark the SLV-3 series of launchs

which are projected to take off successfully. The D-1 and successive series, developmental in nature before they become classified as "operational" for routine take-offs, have incorporated many modifications.

The major modification is in the solenoid which has now been fitted with a very fine filter system. The parameter limits for the pressure gauges have also been narrowed down so that minor changes in the fibre-glass vessel lined with indestructible teflon plastic bottles can be noted and taken care off.

However, scientists say, more pressure gauges to find out the pressures inside the bottles and in the surrounding envelope have still not been put in.

SPACE DIRECTOR REVIEWS PROGRESS, PROBLEMS

Madras THE HINDU in English 15 Dec 80 p 7

[Text]

MADRAS, Dec. 14.

The ten-year objectives of the Indian space programme, as envisioned by Dr. Vikram Sarabhai, has been exceeded on all accounts, through the application of technology for the use of the common man needs to be developed.

Dr. Satish Dhawan, Chairman of the Indian Space Research Organisation, told a party of visiting journalists recently that the basic infrastructure had been established over the last 15 years, during which the focus was on learning and working with potential users.

Elaborating, he said the country first learnt about managing programmes based on the Satellite Instructional Television Experiment and the Satellite Telecommunication Experiment with borrowed satellites.

The ground stations, which were set up during this time, also understood how to cope with various problems that would be thrown up when the country acquired its own satellite. This had given the scientists and engineers a lot of self-confidence, he said.

Dr. Dhawan lamented that the industrial back-up had not developed adequately. For example, rockets and satellites had to be built by ISRO and not by the aircraft industry as is the practice elsewhere.

There was also a mismatch between ISRO and the user. For instance, even if cyclones could be predicted accurately, there was no proper groundwork to evacuate the people and provide assistance to them. This was one of the reasons why the space programme had to develop gradually.

If the Government wanted to expedite the space programme, the necessary equipment could have even been bought off the shelf. "But at what cost?" he asked. The developments, though slow, helped in building greater amount of self-reliance. Should any country completely stop giving India the technology, the scientists would still be in a position to develop it indigenously.

Military Implications

Asked why the rocket technology in the country had not kept pace with the developments in satellite design and fabrication, Prof. Dhawan said rocketry also had military implications, and hence no country was willing to share its knowledge with anyone. And without industrial support, even basic chemicals required for rocket fuel had to be produced by ISRO itself.

But the situation had improved considerably of late, he said. The technology for various items was being transferred to industry on the assurance that the products would be consumed by ISRO. Gone were the days when the country had to import most of the items used in rockets and satellites. Now, nearly 80 per cent of them were being manufactured indigenously, he said.

The support from academic and research institutions was also being strengthened. Several lakhs of rupees was being diverted annually for universities to do research on topics in which ISRO was interested.

All this had paid dividends and the planners had been educated on use of the data which the Indian National Satellite (INSAT) and the Indian Remote Sensing Satellite (IRS) would generate.

The use of land, types of crops and pests affecting them (some of which cannot be identified on ground quickly), existence of mineral deposits etc. would be got from satellites. The telecommunication network would be greatly improved and there was a possibility of better television coverage using INSAT.

Referring to the question of job satisfaction offered by ISRO, Prof. Dhawan said newer challenges were being thrown up at the scientists and more projects evolved. Periodical reviews were also being conducted and scientists were encouraged to write to the chairman if they had problems.

Would India be in a position to launch satellites of other nations? Yes, he said. In the next six years India would have acquired a lot of knowhow in launching and might one day help other countries send up their satellites. Already, the knowhow acquired by ISRO was being transferred to friendly countries which sought help, he said.

On the question of Russia offering to train an Indian cosmonaut, Prof. Dhawan said he personally did not think the space programme would derive any benefit from this. Several countries were thinking of setting up stations in space for materials processing and scientific experiments which would require a large body of trained personnel. But this did not fit in with the objectives of the Indian programme, he said.

Space Programme for Peaceful uses

The successful launch of the Rohini satellite early this year has automatically bracketed the country with those that have acquired the Intermediate Range Ballistic Missile capability, a fact which was accepted by Dr. Satish Dhawan. "Any country which can place a satellite in orbit can develop an IRBM", he said shortly after the launch. The Government has been quick in allaying the fears of other countries that it would be used for military purposes. The 10-year profile, drawn by the late Dr. Vikram Sarabhai, lays stress on the use of space for peaceful purposes.

Experts say that solid fuel for missile technology (it was used in SLV-3) is not very reliable. Four stages, which have to ignitee one after another at the proper time, leave too many chances for problems to develop. Better control and guidance systems, improved quality of heat shield and a reliable re-entry system have to be designed and developed if rocket technology is to be used for military purposes.

While giving shape to the space programme, the Indian Government, unlike the Chinese, picked the least expensive route of putting a satellite into orbit, skipping the more important rocket technology, which would be needed if our aims were purely military.

Pressmen who visited the four centres of ISRO recently found that the amount of work done on liquid fuel war not much. Even the little work that is being done is with reference to use in future types of launch vehicles for peaceful purposes. Scientists, however, admit that given the green signal, they could develop the necessary technology for military purposes in two years.

But as it is, the country will be developing a series of launch vehicles designed to take heavier payloads (40 kg to 700 kg) and numerous satellites including one for communication and another for remote sensing.

The country's latest launch puts India in exclusive company.

CSO: 4220

STUDY OF MULTINATIONALS, CONGLOMERATES REPORTED

Bombay THE TIMES OF INDIA in English 16 Dec 80 p 18

[Text] New Delhi, December 14 (PTI): A study on conglomerates and multinationals in India says that the government's industrial and licensing policies have been unable to check the disproportionate growth of larger industrial houses.

Time study, sponsored by the Institute of Economic Growth, Delhi, deals with the investment and profit behaviour of firms belonging to the Birla and Tata conglomerates and the Indian subsidiaries of the foreign firms operating in the engineering and chemical industries.

Mr. C. N. Hanumantha Rao, director of the innstitute, points out in a foreward to the study that the larger firms had "the best of both worlds--they not only enjoyed higher profitability compared to the smaller ones but also were able to simultaneously reduce fluctuations in profits." [as published]

Among the larger business houses, Birla and Tata accounted for 41 per cent of the paid-up capital, and 40 per cent of the total assets of the larger houses, according to the study made by Mr. N. S. Sidharthan.

Despite the indianisation programme in the engineering and chemical industries, the multinational not only maintained their already larger market share but were also able to improve it. Multinational investment also went with profitability--they were not willing to go into areas where profitability was low.

Mr. Rao notes that the results of the study further indicate the possibility of firms diverting their resources into wasteful expenditures on staff and management during periods of control on profits and management. "Multinationals have multiple objectives and control of one objective by the government could result in its substitution by others."

The study says that the market structure of most commodities produced in the corporate sector has been by and large non-competitive, large conglomerates often controlling a substantial portion of the total corporate assets. The dependence on multinationals in high technology industries such as engineering and chemicals has not shown any decreasing sings. [as published]

Market Structure

The top four producers accounted for 80 per cent of the commodities (excluding food and textile products). Only 20 per cent of the products produced by the

corporate sector had more than four firms producing them. Further in 95 per cent of the commodities, the share of the top four firms accounted for more than 75 per cent of the total output.

In an evaluation of the industrial policy, which has been revised from time to time, the study says that it does not take into account the influence of market structure on the behaviour of conglomerate firms.

It treats the firms belonging to a given industrial house but functioning in different market structures uniformly as if they are homogeneous groups.

If the variables that influence the investment and profit decisions of the conglomerate firms functioning under different market structures are different, a uniform policy will not be effective in influencing the investment decisions of all the firms.

On the other hand, a discriminatory policy which takes into account the objectives of the firms explicitly may prove more effective.

NEEDS OF IRON AND STEEL INDUSTRY TOLD

Calcutta THE STATESMAN in English 15 Dec 80 p 15

[Article by Sunil Bhattacharya]

[Text] THE role of iron and steel in India's development needs no elaboration. The country is gifted with abundant of raw material resources for production of iron and steel.

Industrial development in this field commenced with the setting up of the Bengal Iron Company at Kulti towards the end of the 19th century and the Tata Iron and Steel Company at Jamshedpur early this century. The Indian Iron and Steel Company with which the Bengal Iron and Steel Company was amalgated started its activity in the same Kulti-Burnour area immediately after the First World War. However, steel producing in the public sector began with the unit at Bhadravati (Karnataka) in 1923.

The urge for development in this industry was intensified immediately after independence when the Industrial Policy Resolution (1956) was formulated. The later part of the fifties saw the commissioning of the modern steel plants of the public sector at Durgapur, Rourkela and Bhilai. These were followed by recent addition of the steel plant at Bokaro, and taking over of the IISCO by the Government for better management. At present steel producing capacity of the six integrated steel plants is nearly 11 million tones. The individual capacity of the plants are given in the following table:

Production Capacity

Plants	Rated Capacity Ingot Steel (in '000 tonnes)	Saleable Steel (in '000 tonnes)
Bhilai	2,5000	1900
Durgapur	1,000	1230
Rourkela	1,800	1225
Bokaro	1,700	1355
IISCO	1,000	800
TISCO	2,000	1600

Apart from the production of mild-steel, an alloy steel plant with a capacity of nearly 100,000 tones of ingots has been set up in the public sector, at Durgapur, to cater to the need of special steels. Arrangements for further production of alloy and special steels have also been made at the Visweswaraya Iron and Steel Plant at Bhadravati where the capacity of alloy and special steels is about 72,000 tons and that of mild steel ingot 48,000 tones.

A number of mini-steel plants (about 150) are also in operation in the country which help to augment the total steel production. They use medium or small sized furnaces and scrap as the raw material. At present their total output is about 1.5 million tons. Our need for steel is continuously increasing, the target of production by 2000 A.D. being 75 million tons, and nearly half of that by the middle of eighties. To achieve these targets introduction of new steel plants as well as expansion of the capacities of the existing plants is needed. Bhilai and Bokaro steel plants are being expanded to increase the capacity by about four million tons. Expansion of the Bokaro Steel Plant is expected to be completed by the end of 1982, and that of Bhilai by the middle of 1983. Introduction of improved technology is also under consideration to cope up with the rising demand, two more integrated steel plants, one at Hospet (Karnataka) and one at Visakhapatnam (Andhra Pradesh) are going to be erected in the public sector. The Government has also a proposal to erect a plant at Paradeep in order to facilitate export in this sector. The following table gives the targets of production of steel ingots and pig-iron from all the plants by the end of the sixth Plan.

Plants	Steel Ingots (in '000 tons)	pig-iron (in '000 tons)
Bhilai	4,000	5,200
Durgapur	2,000	2,600
Rourkela	1,800	2,340
Bokaro	4,500	5,850
IISCO	1,500	1,950
TISCO	2,000	2,600
Other plants	21,000	27,400

A total outlay of Rs 2,547 crores is envisaged for the public sector steel plants during the Sixth Plan of which nearly 60% is intended for normal running of the existing schemes. The rest is for additions, alterations, modifications and introduction of new schemes. The Government has set up the Steel Authority of India (SAIL) to coordinate the development of iron and steel industry both in the public and private sectors and to strengthen the involved systems for better potentialities.

The ambitious plans regarding production of iron and steel is supported by ample reserves of iron ores (hematitic and magnetic) which is nearly 10,000 million tons. Nearly half of this amount belongs to the proved category.

Major iron ore deposits are located in Madhya Pradesh, Orissa, Bihar, Karnataka and Goa, although the occurrences of Tamil Nadu, Maharashtra, Assam Rajasthan and Himachal Pradesh are not negligible. Near surface occurrence of the iron ores, in most cases, has rendered them easily recoverable by open cast mining methods. During mining of the ore about 60% comes as the lump variety and the rest as the powdery fines. The lump ore being the traditional feedstock in the extraction of iron the part of powdery fines posed a problem since long regarding its disposal. The production picture is indicated in the following table:

Year	(in tons)	(in '000 Rs)
1960	16,609,397	140,361
1965	23,873,785	206,160
1970	31,366,315	369,118
1975	41,794,389	766,971
1978	38,445,265	932,851

Thus production of iron ore shows a steady rise. The present production is of the order of nearly 40 million tons. The production is expected to rise to 75 million tons by the end of the Sixth Plan. In the meantime our exploration activity will certainly indicate augmentation of our reserve position. The known reserves are likely to persist for about 100 years at an assumed rate of 75 million tons of extraction a year. Therefore, India is certainly in a comfortable position regarding the reserve of this chief raw material.

Prior to the setting up of the steel plants in the public sector, during the post-independence period, a major part of the iron ore production used to be exported. The internal consumption has been continuously increasing to meet the demand of the iron and steel plants already set up in the country. Thus, the consumption of our iron ore is directly linked with the level of iron and steel production in India. It has already been mentioned that a large fraction of the iron ore production is exported every year for earning a good amount of foreign exchange. However, the country imports a small quantity of spathic iron ore which is utilised in connection with refining of vegetable oils.

A progressive step has recently been taken to solve the problem of the powdery fines. A considerable amount of the mined ores, in the powdery form, used to be treated as a rejected part in the earlier days. Modern technological improvement in ore-preparation has enabled us to make agglomerated products out of these fines known as sinters and pellets which have found utilization in the feedstock of the furnaces along with the lump ores.

At present nearly half of the ore production is exported. The table below gives the figures of the quantities of ore exported since 1960.

Year	(in '000 tons)	(in '000 Rs)
1960	9,080	326,228
1965	11,364	386,078
1970	21,206	1,186,210
1975	22,796	2,064,610
1978	19778	2,189,156

The chief buyers of Indian iron ores are Japan and some European countries. India has purchased a lot of finished products concerning iron and steel from these countries. Thus, our policy of export has been able to maintain good relationship with those countries.

Most of the iron ore resources are located far away from the ports. However, the shipping points of Goa, Ratnagiri Mangalore, Kandla and Paradeep are not far from the iron ore deposits. The bulk of the export trade of the iron ores belonging to eastern and central India is made through the ports of Calcutta, Visakhapatnam and Madras. The ports of Bombay, Cochin and Mangalore act as the exporting centres for the southern and south-western States, and the ports of Kandla and Bhavnagar on the western coast serve Rajasthan and Gujarat.

Although this country enjoys a comfortable position regarding the iron ore reserves, the amount of export should be gradually reduced. There is a good sign of increasing demand in the internal market whereby India can secure her position as self-sufficient in finished products. In the next stage we should find external market for finished and semi-finished products. The time has come to review and reorient the policy of export in this sector.

The aspect of quality and grade in iron ore export should also be reviewed. The high grade ores of which a huge amount has already been exported, should be conserved as far as possible. We have certainly improved our position now regarding the technique of ore beneficiation, and attempts should be made for ungradation of the low-grade ores in a large scale which may also find a market in the export trade.

The huge quantity of powdery ore which had so far been dumped as waste material now finds use in agglomeration, either by sintering or pelletization. Preparation of pellets or sinters on a large scale will not only help the country in conservation of the iron ore resources but also fetch some foreign exchange in course of export business.

India has by now acquired a fairly good degree of technological expertise regarding iron and steel industry and is qualified not only to manage its own plants or expansion but is capable of erecting new plants. The country is in a position to lend its expertise to other less developed countries.

Although the iron and steel industry is quite developed it needs technological improvement in ore-preparation, utilization of raw material in a more efficient process, search for substitutes among the raw material, and qualitative improvement of the finished product in more economic ways. All these call for research. Initiation in this direction has been made in some plants and in some of the National Laboratories.

FIRST SPONGE-IRON PLANT TO OPEN AT PALONCHA

New Delhi PATRIOT in English 15 Dec 80 p 7

[Text] The country's first sponge-iron plant to be commissioned at Paloncha in Andhra Pradesh on 31 December would considerably revolutionise steelmaking in India, steel secretary S Samaddar told newsmen on Sunday.

The Paloncha plant, a pilot unit with 30,000 tonnes capacity will be run on a semi-commercial basis and if the process stabilises on this scale, another such plant of 120,000 tonne capacity would be set up in Bihar. Already a letter of intent has been recommended and a memorandum of understanding concluded between the Bihar State Industrial Corporation and Lurgi Chemie of West Germany, which have provided the technology for the Paloncha plant.

Research in India for steelmaking through sponge-iron has been going on for the last 17 years, and commercial break-through has been achieved only now. The process has come not a day too soon as coking coal is in short supply, with known reserves at the present level of use not expected to last more than 40 years.

The new process is also expected to have a positive dispersal effect since it uses inferior coal found in all parts of the country. In contrast, the traditional method of iron-ore and blast furnace technology forces concentration of integrated steel plants in the Bihar-Bengal Coal belt, where required grade, coking coal is chiefly found. Even so Indian coking coal is not of prime quality and has high ash content that adversely affects the blast furnaces.

However, sponge-iron production involves uses of electric arc furnaces, 500 of which are dispersed throughout the country, and have potential of free coordination with non-coking coal which is also available almost everywhere.

Sponge-iron steel can be easily made by mini-steel plants also, which traditionally use scrap-iron. Scrap is also in short supply, leading to a major problem in capacity utilisation in the mini-steel plants. Sponge-iron is not only considered a superior substitute for scrap, but is also cheaper. Scrap costs Rs 1700 a tonne against Rs 1300 of sponge-iron.

The capacity of electric arc furnaces in the country is about three million tonnes, but the availability of melting scrap is only 1.7 million tonnes. If the sponge-iron is substituted for it, the production could nearly double, other variables remaining constant. Electric furnaces are also said to provide higher productivity than blast furnaces, and consume less power.

The Paloncha plant uses Singareni coal and Bayaram (Andhra Pradesh) ore. Sponge-iron could also be made from natural gas, but gas-based plants necessarily have to be restricted to Gujarat, Assam and Tripura where gas is found.

The new plant is owned jointly by the Public Sector Sponge Iron India Ltd (SIIL) and the Andhra Pradesh government. The total cost is about Rs 16 crores with a foreign exchange component of about one third the cost being met by the UNDP (United Nations Development Programme). UNDP has also provided technical assistance of the UNIDO (United Nations Industrial Development Organisation).

STATISTICS ON EDUCATED UNEMPLOYED GIVEN

Madras THE HINDU in English 15 Dec 80 p 9

[Text]

NEW DELHI, Dec. 14.

There are at least 72.97-lakh educated job-seekers on the live registers in the Employment Exchanges in the country as on June 30 this year.

According to official sources, the educated unemployed included 1.11.837 post-graduates, 13.03.154 graduates, 19.11.438 undergraduates and 39.70.541 matriculates.

West Bengal had the largest number of educated unemployed. Of the 11.04.754 educated job-seekers on the live register, 5.193 were post-graduates, 1.87.840 graduates and 4.70.389 were undergraduates, besides 4.41.332 matriculates.

Uttar Pradesh, the biggest State had the second largest number of educated unemployed. Of the 7.79.735 educated job-seekers, 1.87.840 were graduates and 5.193 were post-graduates.

One of the backward States, Bihar, had the third largest number of educated job-seekers with a total of 7.11.619 on the live register.

Kerala and Andhra Pradesh were the other two States which had a fairly large number on educated unemployed. Kerala had 7.10.856 educated job-seekers including 66.839 graduates and 4.947 post-graduates while Andhra Pradesh had 6.01.587 educated unemployed including 1.06.527 graduates and 10.476 post-graduates.

Maharashtra had 5.94.245 job-seekers, while Karnataka had 3.63.288 educated unemployed.

Among the job-seekers in Maharashtra, 91.699 were graduates and 9.314 post-graduates.

In Karnataka, 70.684 were graduates and 5.394 post-graduates.

The total number of job-seekers, both educated and uneducated as on June 30, was 1.51 crores.

Tamil Nadu had 4.77 lakh of educated unemployed.—PTI.

CSO: 4220

CRACKDOWN ON ECONOMIC OFFENDERS CONTEMPLATED

Madras THE HINDU in English 15 Dec 80 p 1

[Article by G. K. Reddy]

[Text] New Delhi, Dec. 14.

The Prime Minister, Mrs. Indira Gandhi, is reported to be contemplating a series of deterrent steps, with her characteristic secrecy and determination, to curb the economic malpractices which are assuming unmanageable dimensions in the wake of two-digit inflation.

The latest income-tax raids in several cities on film magnates are only the starting point for a countrywide crackdown on the big offenders who have amassed enormous fortunes through black money operations, making a complete mockery of all governmental controls on the monetary system.

It has been brought to her notice that in a place like Bombay, the country's financial capital, some luxury apartments have lately changed hands for as much as Rs. one crore each with three-quarters of the payment made in black money or bogus business transactions. The new rich, thriving on the present permissive atmosphere, have been purchasing imported cars for as much as Rs. 10 lakhs under the very nose of the Government.

The Prime Minister, who will be completing in another month the first year of her current tenure, is keen on combining punitive measures with regulatory steps to deal firmly with the big sharks, while encouraging normal economic activity to step up production and ease the pressure on prices. She wants to disprove the charge that she is heading a government that does not work, relying on a bureaucracy that has lost all professional zeal for better performance, and looking around for alibis to justify her own inability to cope with the mounting challenges.

Serious Situation

Though the Finance Ministry has been painting a reassuring picture of the economy to mollify the hard-pressed people, it has been telling the Prime Minister in private memos about the seriousness of the present situation. The Government has learnt the hard way that the old facile theories--that a succession of good crops plus a comfortable foreign exchange position were the best guarantee against price inflation--stand disproved in the light of the current Indian experience.

As a capable and conscientious colleague, the Finance Minister, Mr. R. Venkataraman, has been telling her that the Government has to act with firmness and imagination to restore the missing sense of direction in the higher management of the country's resources. At this time of the year, when the Government is engaged in the first phase of the budget exercise, the Finance Minister has to give serious thought to problems of economic revival within the parameters of Congress (I) socialism.

But it is basically the Prime Minister's responsibility to decide how far the Government can afford to go politically in administering some degree of shock treatment to put the economy on the rails again. She is, therefore, seeking the advice of several experts on what exactly could be done, without rocking the boat too hard, to revive the economy by generating a new psychology of liberalisation along with a sense of retributive justice for exceeding the limits of tolerance.

PM's Worry

But Mrs Gandhi's big worry at the moment is how to carry out any such plan of action, in the face of bitter opposition from the politically influential vested interests, with the badly run-down administrative infra-structure at her disposal, whether it is at the Centre or in the State. The policy of promoting favourites and punishing others who have fallen from grace has played havoc on the morale of the services.

The Central and State Governments have arbitrarily retired, transferred or downgraded so many senior officials for political reasons that not many of the newly promoted ones are prepared to take any hard decisions for fear of being held personally accountable. The sad state of the bureaucracy is only a disconcerting reflection of the poor calibre of the Central and State Governments.

The Prime Minister has tried to rebut this criticism with the claim that the present Central Cabinet consists of as many as six former Chief Ministers, but she has not been able to proffer such an argument in support of the Congress (I)-run State Governments. The fact remains that the present administrative machinery in the country cannot be geared at short notice to cope with the consequences of a major economic shake-up even if the Government possesses the necessary political will to punish the big offenders and compel them to disgorge their ill-gotten wealth with harsh fiscal and monetary measures.

The Prime Minister is reported to be quite worried about the corrupting impact of party fund collections, because the evil has now reached such proportions that it has become an integral part of the political system. It is impossible to catch the big sharks in this permissive atmosphere in a country where some of the richest pay no income-tax or pay only nominal amounts with no fear of prosecution.

Govt.'s Dilemma

A few of the top economists have been suggesting a series of drastic measures including demonetisation to curb the evil of black money, but the Government continues to shy away from such pleas for fear of creating more serious problems by destroying the public faith in the country's monetary system. The real problem of the Government is how far to go, and where to draw the line, in deciding upon some stern steps to get the economy under control before the country is faced with bigger bouts of inflation.

The proposed economic crackdown is also linked up, in one way or the other, with the Prime Minister's efforts to improve the quality of government, at the political as well as the bureaucratic levels, both at the Centre and in the States. The second year of her tenure will inevitably witness some major changes in the composition of the Central and State Cabinets, without the appearance of a sudden political shake-up or an abrupt let-down of trusted party colleagues, to give the impression that Mrs Gandhi means business and dispel the growing public disillusionment with the faltering performance of the Government on the economic front.

CPI(M) POLITBURO SCORES FARMERS' ARREST

Calcutta THE STATESMAN in English 22 Dec 80 p 9

[Text] New Delhi, Dec. 21.--The CPI(M) has demanded the withdrawal of all "repressive" measures against farmers agitating in Maharashtra and the release of the leaders arrested, reports UNI.

In a statement released here today, the party's Politburo said the arrests "clearly show that the Maharashtra Government is determined to crush all manifestations of popular protest against its policies".

However, the Maharashtra Government had to admit that the demands of the farmers were just and therefore it was compelled to request the Union Government to raise the prices for certain agricultural produce. "It shows, therefore, that the steps taken against the morcha are vindictive", the statement said.

The CPI(M) Politburo also mourned the death of the former Soviet Prime Minister, Alexei Kosygin.

In its condolence resolution the Politburo of the party praised Kosygin's role in restoring peace between India and Pakistan at the Tashkent conference and his contribution to the defence of world peace through the process of detente.

INCREASED ORISSA SIXTH PLAN OUTLAY APPROVED

Calcutta THE STATESMAN in English 22 Dec 80 p 9

[Text]

NEW DELHI. Dec. 21.—The Planning Commission has fixed Orissa's Sixth Plan outlay at Rs 1,500 crores, which is Rs 375 crores more than that of the interim plan.

Our the total outlay of Rs 1,500 crores. Central assistance will be of the order of Rs 725 crores. The State's share of Rs 775 crores includes additional resources mobilization of about Rs 250 crores.

The State's Chief Minister, Mr J. B. Patnaik said the size of the Plan would be Rs 4,500 crores. This is because nearly Rs 2,000 crores would be invested in the State through Central projects, including a proposed steel plant and an aluminium complex, development of infrastructural facilities like the new rail links and an investment of Rs 1,000 crores expected from the private sector.

Mr Patnaik said that although sectoral allocation would be made later emphasis would obviously be laid on irrigation and power development. The State Government planned to have 3,000 MW of power generation in anticipation of new industries.

The Chief Minister said that a Rs 300-crore phosphatic fertiliser plant in the Central sector would be set up in the State. Industrial projects in the pipeline envisaged an investment of Rs 600 crores. The paper plant would alone cost Rs 100 crores, he added.

UNI adds: Mr Patnaik said two charge chrome plants, nine spinning mills one polyester fibre plant, one rayon plant and one paper plant would come up in the State in the next few years. They would provide employment to more than 30,000 people.

Mr Patnaik said the State Government was serious in implementing the new scheme to rehabilitate the rural poor. Already 25,000 such families had been covered under the scheme out of 60,000 identified. Their rehabilitation would be ensured through allotment of land, in fisheries and dairy industries and small business activities. The families would be selected by the village itself. More than 130,000 acres had been allotted for the programme.

ENERGY MINISTRY CRITICIZED BY HOUSE COMMITTEE

Calcutta THE STATESMAN in English 18 Dec 80 p 9

[Text] New Delhi, Dec. 17.--The Union Energy Ministry was severely criticized by members of the consultative committee of Parliament attached to it for the unsatisfactory production of coal and under-utilization of capacity in coal washeries and inefficient operation of the State-owned Coal India and its subsidiaries.

Among the members was Mr Kalyan Roy (CPI), who said that the underground production of coal was going down and neither Eastern Coalfields nor Bharat Coking Coal had been able to reach the production level of 1975-76.

It was pointed out at a meeting of the committee here that ECL had produced 26.18 million tons in 1975-76. It had produced 20.53 million tons in 1979-80. The increase in coal production was only in the open cast mines. Therefore, it was difficult to believe that the contry would achieve the target of 113 million tons fixed for the current year. [as published]

The CPI member said the capacity utilization of the washeries of Coal India had declined. The Rs 14-crore Sudamdih coal washery had been found defective.

The Minister for Energy, Mr A. B. A. Ghani Khan Chaudhary, admitted that the underground production of coal had gone down and that the Sudamdih washery had been found defective. He informed the members that he had instructed the Additional Secretary for Coal and the Chairman of Coal India proceed to Sudamdih and other washeries and take steps to improve their operation.

The Ministry was criticised by some members for the increase in the overtime bill of Rs 35 crores for raising coal and for forcing miners to work for seven days continuously in violation of the Mines Act.

In his reply to the Congress (U) member, Mr S. W. Dhabe, Mr Chaudhary expressed his regret for the incomplete audited accounts of Coal India.

The Minister informed the committee that India and Nepal had reached an agreement for an investigation of the Karnall hydro power project.

The Cabinet had approved the team, headed by the Energy Minister, to investigate the project.

Mr Chaudhary told the members that the hydel project, when completed, would generate 4,000 MW to 5,000 MW "at one place". A decision on the financing of the project would be taken as soon as its investigation was through.

MOVE TO REVITALIZE JANATA PARTY REPORTED

Calcutta THE STATESMAN in English 18 Dec 80 p 9

[Text] Several leaders of the Lok Dal and Janata (S) have expressed their desire to return to the Janata Party. Among them is Mr S. N. Mishra, who was the External Affairs Minister in the Charan Singh Cabinet. He met Mr P. C. Sen, Mr P. C. Chunder and other Janata leaders in Calcutta recently and discussed the possibility of bringing together members from other parties, excepting the Congress (I) and the Communist parties, under Janata. It was suggested that the name of the new party could also be changed to Janata Congress.

According to informed sources, Mr Mishra is no longer as close to Mr Charan Singh as before. He had indicated that although he was still in the Lok Dal, he would not hesitate to leave it if the Janata Party was revived.

A senior Janata Party leader said in Calcutta on Wednesday that Mr Raj Narain had also indicated that he would wind up the Janata (S) and join the Janata Party. Mr Chandra Shekhar has welcomed this move. The Janata source said that the fact that Mr Raj Narain was once instrumental in breaking up the party would not be held against him. He said for the sake of a greater national interest, it was better to forgive those who were willing to rectify their past mistakes. Some Janata leaders had insisted, however, that if Mr Raj Narain was serious about joining the party, he must first wind up the Janata (S). Otherwise, that party was likely to continue to maintain a factional identity even after the merger with Janata.

According to present indications, while almost the entire Janata (S) was likely to join Janata, a sizable section of the Lok Dal might desert Mr Charan Singh. The Janata source said that the departure of Chaudhury Brahm Prakash and other had shown that Mr Charan Singh was losing his grip on the Lok Dal.

Among the other former constituents of the Janata Party, there has not been any overture as yet from either the Bharatiya Janata Party or the Socialists. However, the Janata source made it clear that if anyone from the BJP wanted to Join Janata, he must accept clause 5 in the party constitution which prohibited "dual membership". This was one of the issues which led to the break-up of the party. The attitude of the Socialists, some of whom are in the Lok Dal, is not yet clear. It is well known, however, that some Janata leaders have strong reservations about people like Mr Madhu Limaye.

CONTINGENCY PLANS FOR OIL GOODS CONSUMPTION URGED

Calcutta THE STATESMAN in English 17 Dec 80 p 7

[Text] The Centre has asked the State Governments to prepare contingency plans for controlled consumption of petroleum products on the basis of a 50% cut of their existing allotments. The contingency plan is to be prepared on the basis of priority and minimum demands of different sectors. The instruction has been issued by the Oil Coordination Committee of the Union Petroleum Ministry, it is learnt.

The committee has also asked the State Governments to prepare a five-year demand projection of petroleum products on a monthly basis. The demand projection is expected to be made on the basis of a five per cent growth rate. The committee is also considering a proposal to bring light diesel oil, which is still freely available, under some controlled distribution arrangement.

Meanwhile, the West Bengal Government is concerned at the fact that its monthly petroleum products allotment is not being fully released because of some technical difficulties at the Maurigram installation of the Oil India. The difficulty is particularly being faced with regard to the release of additional monthly allotments made by the Centre. As for example in November the total allotment was 54,000 tons, but the actual release was only 48,260 tons.

The drop in the supply of petroleum from the Haldia refinery is said to be the reason behind the difficulties of the Maurigram installation. Since the Barauni refinery is not receiving a drop of oil from Assam, Haldia has been asked to release more oil through the Haldia-Barauni pipleine to meet the demands in Bihar and Uttar Pradesh. As a result, the supply to Maurigram has dropped to some extent, it is officially learnt.

The Budge Budge oil installation, which receives oil from ships, is not, however, able to come to the aid of Maurigram as it has got only two bays, compared to 16 at Maurigram, and not all the oil firms have domestic distribution arrangements at Budge Budge. The State Government is likely to take up the matter with the oil coordinator of the area for an early solution of the problem so that the State can obtain its full allotment for December.

It is learnt that the Centre is likely to raise the initial allotment of 51,900 tons for the State for December by another 5,000 tons. Last year the off-take in December was 57,000 tons, against an allotment of 62,000 tons.

CENTRAL AID RECOMMENDED FOR DROUGHT-HIT STATES

Calcutta THE STATESMAN in English 18 Dec 80 p 9

[Text] New Delhi, Dec. 17.--The Central teams have recommended Rs 28.75 crores for two drought-affected States--Andhra Pradesh and Rajasthan--the Rajya Sabha was told today.

Of this, Rs 7.56 crores is proposed for Andhra Pradesh and Rs 20.19 crores for Rajasthan. Besides, a short-term loan of Rs 12.5 crores has been sanctioned for Rajasthan for purchase and distribution of agricultural inputs, according to Rao Birendra Singh, Union Minister for Agriculture.

The Minister, who was making a statement in response to a call-attention motion, said that 13 districts had been affected by drought in Andhra Pradesh. But the entire State of Rajasthan, excepting one district, had been affected by severe drought.

The Centre was "deeply concerned" about the drought in Andhra Pradesh and Rajasthan. "The situation is being kept under constant review and all assistance to the affected States will be provided", Rao Birendra Singh said.

He said that in Andhra Pradesh most of the rainfall was received in the months of June, July and August, 1980 while in September, a crucial month for ripening of the crop, the rainfall was deficient--as much as 46% in Rayalseema and 28% in Telengana region. Out of 13.6 million acres normally sown under kharif crop, 1.5 million acres were left unsown and crops under 4.2 million acres were damaged for want of sufficient rainfall. The total loss of kharif production was reported to be about 700,000 tons. The north-east monsoon, essential for rabi crops, was also erratic and deficient in the Rayalseema region and parts of the Telegana region. As a result, most of the area under rabi crop had been left unsown and where the crops had been sown, they withered due to lack of moisture. This had resulted in loss and deprivation to small and marginal farmers and landless labourers in 13 districts of the State. Problems of drinking water supply and scarcity of fodder were also coming to the surface.

The State Government had asked the Centre for Rs 159.33 crores for employment-oriented works, drinking water supply, fodder supply, public health services, contingency agricultural programme, nutrition programme and loans to farmers. A ceiling of expenditure of Rs 27.56 crores had been recommended by the Central high-level committee for approval of the Ministry of Finance. The State Government had

also been sanctioned Rs 20 crores for short-term loan--Rs 14 crores during kharif season and Rs 6 crores during rabi season for purchase and distribution of agricultural inputs. In addition, the Ministry of Rural Reconstruction allocated 63,000 tons of foodgrain to Andhra Pradesh earlier this year under the Food-for-Work programmes. Under the national rural employment programme another 42,000 tons of foodgrain and Rs 7.39 crores had been allocated to the State Government recently, the Minister said.

For providing drinking water, a ceiling of expenditure of Rs 6.84 crores had been recommended, which included flushing or repair of bore wells, boring of new wells, deepening of open wells and installation of power pumps. The State Government had 39 rigs in the drought-affected districts and proposed to engage 80 private rigs. The Ministry of Works and Housing was mobilizing as many rigs for the State Government as possible.

PAPER SCORES 'MUDDLE' IN RAILWAY OPERATIONS

Calcutta THE STATESMAN in English 17, 18 Dec 80

[17 Dec 80, p 9]

[Text] New Delhi, Dec. 16.--Every time a Railway Minister is appointed, senior officials quickly look at the new incumbent and mentally draw a red line from Delhi to the Minister's constituency or the capital of the State he comes from.

There might well be a railway link between Delhi and the Minister's hometown, but this has seldom checked his enthusiasm to do good for his State. Successive Railway Ministers in the past, with notable exceptions in the early years, have all been guilty of it.

There is no wonder then that officials are awaiting directives from the new Railway Minister, Mr Kedar Pandey, about a possible new passenger train--would it be a super-fast express to Patna. He has already been quoted as thinking of setting up another Railway zone in Patna which, according to his line of thinking, means more jobs for the people of his State.

Seasoned Railway officials say that every time a new passenger train is introduced on a busy or saturated trunk route, it sweeps away two freight trains.

The state of affairs now is anything but happy. Hauling freight ought to be the main concern of the Railways for that is the bread and butter of the undertaking. The Railways hauled a total 74 million tons of freight, excluding what it moved for its own maintenance. The graph showed a gradual increase until 1964-65 when it touched 134 million tons.

In the past 15 years, the freight carried by the nation's largest transport undertaking hovers around 200 million tons. Last year the haulage totalled 193 million tons. This year in the first six months, there has been a shortfall of 13.64 million compared to the proportionate target, leading to a loss of Rs 49.34 crores in revenue.

If the planners' earlier visions had been fulfilled, the production of coal and steel, among other things, would have been much higher than at present and the Railways would have been called on to haul between 300 million and 350 million tons. One can well imagine the chaos that has been avoided by lesser-than-anticipated production in some of the key sectors.

Experts feel that the Railways should consider themselves happy if they are able to reduce the shortfall of 13 million tons by by three million tons. [as published] For to increase the freight by 1.3 tons during the year, about 500 more wagons a day would be needed for the rest of the four months of the year. Or, 5,000 wagons to meet the shortfall of 13 million tons.

The total loading in October (broad guage) has been 2,289 tons by the Central Railway, 5,523 tons by the Eastern Railway, 2,064 tons by Northern Railway, 1,016 tons by the Southern Railway, 1,642 tons by the South Central Railway, 7,983 tons by the South-Eastern Railway, and 1,833 tons by the Western Railway. [as published] Against this, the outstanding demands for loading in the same month are: 39,665 tons in the Central, 48,813 tons in the Eastern, 12,144 tons in the Northern, 4,000 tons in the North-East Frontier, 2,652 tons in the Southern, 18,631 tons in South Central, 25,206 tons in South Eastern and 12,047 tons in the Western Railway.

The Railways at present have 415,000 broad gauge wagons. Wagons on the sick and overhaul list should not exceed 4%. But for over a year it has been more than 5%. However, the Railways hope to add 11,500 more wagons by March.

But, as a senior Railway official put it, success in such an operation involves putting the wagons on the move and reduce their turn-around time. In this context, one of the major bottlenecks has been in the movement of coal. Railway officials say that the charge against them on this score is highly exaggerated since the production of coal itself has gone down.

It is true that coal sector might not be able to achieve its target, but production would still be around 110 million tons, 4 million tons more than last year's production.

The Tundia-Agra-Mathura line is cited as an instance of overcrowding of passenger trains. With constant shunting of bogies, attaching or detaching from one train or another, the lines are constantly engaged, giving little time for moving freight.

A retired official says that politicians have a wrong notion that by putting more passenger trains, they would be helping the common man. But in reality this has a reverse effect since more passenger trains mean less freight trains which, in turn, results in lesser production and he has to pay more for essential items.

[18 Dec 80, p 9]

[Text] New Delhi, Dec. 17.--Varanasi has no coal depot. And yet the citizens' coal needs are met. How? From Mughalsarai, which is next door, of course. Mughalsarai is reputed to be not only the biggest railway yard but also the centre where the most goods are pilfered from the Railways.

The story about Varanasi not having a coal depot may be apocryphal, but the reputation of Mughalsarai is not. The knowledgeable say that the "chor bazaars" of Bombay or Calcutta are insignificant compared to the one at Mughalsarai. It is also said that almost all the items sold at Mughalsarai are pinched from Railway yards. This might be an exaggeration, but it is not totally untrue.

Mughalsarai is but one of the many notorious centres. So bold are the regular criminals who manage the yards at Mughalsarai and elsewhere that railway protection staff, for fear of their lives, are said to often ignore the mischief that goes on.

It is well known that gangs which operate in railway yards have a well-oiled system of draining out sealed wagons of foodgrain or what have you. The method is simple--a loaded wagon is hit about the middle with a sharp hook. From the hole thus punched the cargo, usually wheat, rice, sugar or pulses pour out into gunny bags.

Last month a special train comprising 59 wagons loaded with wheat bags was sent from Patti in Punjab, to Subzimandi. On arrival, the sealed wagons were opened but it was found that 305 bags of wheat and loose wheat weighing about 833 quintals valued at Rs 1,08,277 were missing.

There are other forms of corruption. Not so long ago, the then chariman of the Railway Board, who was sent out in unhappy circumstances, lamented that he was paying the price for trying to smash corruption in the allotment of wagons. He hinted that his efforts had hurt some bigwigs in the ruling party and the Government.

The situation has not changed much since. When there is so much talk of shortage of wagons, those in the private trade know their way around--they can get a wagon reasonably quickly.

An old railway hand says that a private sector thermal plant manages to get all the coal it needs--the right quality and quantity--without any hitch.

/All the stations en route, from the coal dump to the destination, give something like a "red alert" for the train carrying the precious cargo to the private unit. All this magic happens as a result of what has come to be known as "speed money"--if you want anything done speedily you pay something extra./ [in boldface]

The speed money also gets things done on the platforms of major stations. The charts might tell you that there is no seat available, but there are station staff and touts who could get you a berth or a few berths, at practically no notice at all. In Calcutta, as published in this newspaper some time ago, a veritable parallel reservation system operates. The story is similar in Bombay, Delhi and other busy junctions.

A senior retired officials says that employees' indiscipline is often the cause of corruption. [as published] Some time ago, the station superintendent of an important junction was ordered to be transferred by a junior Railway Minister on complaints from some of the unions that the official harassed workers. After some days, the order was cancelled.

The official is reported to have called his staff, specially those in the parcel booking office, and asked them to increase his share of the daily pay-off. His argument was that he had to pay several thousand rupees to the union leaders who had earlier asked for his transfer. The union leaders had, in turn, gone in a deputation to the senior Railway Minister and insisted that the official's transfer would create chaos in the station.

The same Railway Minister was known to have a soft corner for the employees at the lower levels. On one occasion when a senior officer complained to him that he had been slapped by a junior employee, the Minister is reported to have virtually asked for the officer for an explanation--for giving so much provocation to the junior.

On the plea of union work, several of the "leaders" are known to do no work but, collect their pay and "production bonus" from the workshops they are engaged in. What effect this has on others can well be imagined.

"The labour mafia must be hounded out", says an official. Where there is corruption and indiscipline, robberies and dacoities cannot be far away.

According to official statistics, in the past four months there were nine robberies and two dacoities in the Central Railway, six robberies and six dacoities in the South-Eastern Railways, four robberies in the South-Central Railway, three robberies and three decoities in the North-East Frontier Railway, three robberies in the Southern Railway, 10 robberies and three decoities in the Northern Railway, four robberies and four dacoities in the Western Railway, 16 robberies and 11 dacoities in the Eastern Railway, 24 robberies and six dacoities in the North-Eastern Railway. [as published]

This might be a reflection of the general deterioration in law and order, but the Railways have a responsibility to ensure that passengers can travel safely, even as they cannot shirk the responsibility of seeing that passengers are not fleeced by touts and corrupt station staff and consignees do not have to use "speed money" to get their cargo moved.

GANDHI PRESENTS JNANPITH LITERARY AWARD

Bombay THE TIMES OF INDIA in English 16 Dec 80 p 1

[Text] New Delhi, December 15 (PTI & UNI).

The Prime Minister, Mrs. Indira Gandhi, said today that the Nobel peace prize had been politicised.

Mrs. Gandhi was speaking after presenting the 15th Jnanpith award for 1979 to 56-year-old Dr. Birendra Kumar Bhattacharyya for his "Mrityunjaya", an outstanding Assamese novel dealing with the Quit India movement of 1942 in Assam.

The world was poorer by ignoring writers of this continent, she said apparently referring to Nobel prizes.

In India, she said, literary resurgence had grown hand in hand with national renaissance.

The Prime Minister felt that India had too many inter-provincial bickerings with authors also contributing to it to some extent.

"I am not suggesting any code for writers. Authors must be free to write," Mrs. Gandhi said adding that they at the same time also had a sense of responsibility.

Authors, Mrs. Gandhi pointed out, were open to judgment by others. Personally, she was not in favour of banning any books except in cases when issues such as communal harmony were involved.

Turning to Assam, Mrs. Gandhi said that the agitation there had caused pain to others.

She was hopeful that a solution could be found if a "give-and-take" approach was adopted and people saw in a wider perspective the issues involved.

Earlier, Mrs. Gandhi presented a copper scroll, a statue of Vagadevi, the award symbol, and a cheque for Rs. 1 lakh to Dr. Bhattacharyya.

The citation described "Mrityunjaya" as "an outstanding novel dealing with the Quit India movement of 1942 in Assam. It is an intensely human presentation of this movement on the common man in Assam, his aspirations and his agonies, his

disenchantment and unconquerable hope. The novel sumps up in miniature, as it were, what was happening all over India at that time." [as published]

Described as "the gentle rebel", he is the youngest recipient of the Jnanpith award, just as at the age of 37 he was the youngest Indian writer to get the Sahitya Akademi award.

Two other celebrated novels of Dr. Bhattacharyya, "Iyaruingam" and "Pratipad", also crystallised the contemporary political consciousness, the problem of tribal awareness and labour.

He has also struct a new path in Assamese poetry and done commendable work as a short story writer and biographer.

Accepting the award, Dr. Bhattacharyya said art must aim at remaking man. "Man is not undimensional but multi-dimensional. Unless we have a new vision of integrated man, we cannot place him at the centre of our art or being."

Urging all writers, whether they be from Meghalaya or Kerala, to write as Indians, he said there was something lacking in modern Indian literature. "No modern work has endeared itself to the masses as the Mahabharata or the Ramanaya did one. Those of us who are concerned with the realist in literature do not seem to be realistic enough. It is time we learnt from our literary tradition the secret of that art for our millions."

Dr. Bhattacharyya said this was all the morenecessary "as we have before us the great task of building up the base simultaneously with the superstructure, the body with the mind." [as published]

Describing himself as always having felt "as one with rebels," he said this was because wherever they are, "like the artist, they want to reform the chaotic world by imposing on it a form of material unity."

Dr. Vinayak Krishna Gokak, chairman of the selection board, in his address said "Mrityunjaya," as also "Iyaruingam" and "Pratipad" contained "unforgettable dramatic situations, brilliant character sketches and moving descriptions of nature scattered throughout the novels. The world is caught in a moment of crisis and all the pageantry and variety of life are built around that moment.

An audio-visual programme based on "Mrityunjaya" was also staged on the occasion.

Dr. Bhattacharya is the 15th recipient of the award, instituted in 1965. Prominent among the previous recipients are: G. Sankara Kurup, Umashankar Joshi, Sumitranandan Pant, Firaq Gorakhpuri, Bishnu Dey, Ramdhari Singh Dinkar, Ashapurna Devi, K. Shivrama Karanth, and S. H. Vatsyayan-"Ajneya."

INDIAN BOOK EXPORTER RECEIVES ORDERS FROM PRC

Bombay THE TIMES OF INDIA in English 16 Dec 80 p 18

[Text] New Delhi, December 15 (UNI): India has for the first time entered the book market in China through the efforts of a leading book exporter here.

Mr. Amar Nath, who was the first Indian book exporter in the last two decades to visit China in August, has been receiving frequent orders for books from the country since his return.

The exporter, who visited China on the invitation of the China Publication Import Corporation (CPIC), told UNI that with the launching of the modernisation drive, China had allowed import of books with a view to acquiring varied knowledge to speed up its development.

The subjects in which the Chinese have evinced particular interest are engineering, medicine, agriculture, electronics, economics, industry and urbanisation.

Mr. Amar Nath says the U.S. and Britain are at present the main suppliers of English language books to China. He has submitted a report to the federation of Indian publishers suggesting how India could cultivate the Chinese market for its book exports.

According to him, China will be more inclined to import books from India rather than the U.S. and Britain for two reasons.

First, the books from those countries are too expensive to be purchased by the Chinese individuals whose earnings are low. Secondly, the Chinese are not in a position to grasp the much advanced knowledge of those countries and books from the developing countries like India could serve their purpose better.

Mr. Amar Nath, who has reached an agreement with the CPIC--the only book importing concern in China--to supply all types of Indian books in the next three years, says he will hold an exhibition of 1,000 titles in China in August next year to promote the sale of books of Indian publishers.

The exhibition will be the first to be held in Peking. Later, it will be taken to five or six other centres of China for which the Chinese government has promised him full publicity campaign as an incentive.

He has called upon the Union government not to treat the exports of books like any commodity export but take it as a cultural promotion effort and extend incentives to the book trade industry accordingly.

BRIEFS

AUTOMATED TELESCOPE--Ahmedabad, December 21 (PTI): An infra-red telescope, claimed to be unique in the world, is to be installed at Gaurishikher atop Mount Abu for seeing plenty of infra-red stars which do not emit any visible light. Control, computer and data-acquisition system for this telescope of 1.2-metre diameter were prepared at the physical research laboratory here. This telescope will be the first of its kind in the world in the sense that it will be operated fully automatically through a multi-processing technique, Mr. H. S. Mazumdar, head of the electronics division at the PRI, told PTI. Latest micro-processors are used in designing the telescope so that its complex control functions digitally. Different processors would perform different jobs simultaneously for increasing the flexibility and speed of the instrument. [Text] [Bombay THE TIMES OF INDIA in English 22 Dec 80 p 13]

HELP IN GOLDHUNT--Visakhapatnam, December 21 (UNI): The Geological Survey of India (GSI) in collaboration with Soviet scientists will embark on a detailed investigation of gold deposits in Orissa, Bihar, Madhya Pradesh and the Saurashtra area of Gujarat, Mr. M. K. Chandra Chowdary, deputy director-general, GSI (eastern region), said yesterday. He told newsmen here that the Soviet scientists had developed special methods for detection of even low deposits. He said the Soviet experts would be associated in the exploration of non-ferrous metal deposits in the Bhilwara region of Rajasthan. Considerable deposits of lead, zinc and streaks of silver had been found by the GSI in Ajmer and Fatehnagar areas, he said. [Text] [Bombay THE TIMES OF INDIA in English 22 Dec 80 p 13]
